I am having good success this year raising Brown Leghorn chicks. I feed them with dry curd, made by heating the lobbared milk until the curd is hard, until they are one week old, and then giving them the curd for one meal and wheat the next. I have tried all kinds of ways to raise them other years, but with such poor luck that I was almost discouraged; but I am very much pleased with the result from the curds. For the laying hens we have kept a tab full of shorts, wheat or barley, well wet with sour milk, and they have laid excellently. My hens are Plymouth Rocks and Brown Leghorns, with two pure blood roosters of each kind.

MRS. J. HILTON.

Los Alamos.

Chaff.

Says "Rambler" in the San Jose Mercury: I was passing down Santa Clara street Friday afternoon, when I saw a granger driving along a big pig, with a reasonably fair mixture of success and exasperation. A well-known citizen who was driving down the street at the same time shouted to the granger as he passed: "Hello, there! Isn't it strange to see one hog drive another?" "Well," replied the granger, "I don't think it is so funny as it is to see a hog drive a horse."

INSANITY BY ABSORPTION.—"And how did Birkins become insane?" "By absorption. He slept three nights beneath a crazy quilt."—Boston Transcript.

Poets who submit their verses in person to magazine editors want to look a little odd. Some fellow has invented a new "magazine gun" containing 10 or 12 cartridges, and warranted to be more destructive than any other similar weapon in the market. Such a gun in the magazine editor's hands doesn't give the poet much chance to get downstairs and around the next corner.—Norristown Herald.

Sydney Smith, hearing a little girl read, who persisted in reading "partridges" for "patriarchs," said: "She is determined on making game of the patriarchs."

The attention of the passengers in a Canadian smoking-car was riveted on a strangely behaved negro. He rocked himself from side to side without ceasing. "What's the matter with you?" asked a traveler who was in the car. "Does you know Dan McGary?" "Yes." "Well, sah, he sold me a silver watch for twenty dollars," continued the negro, still swaying from side to side; "an ef I stops movin' dis here way, de watch don't go no mah."

YOUNG FOLKS' COLUMN.

Tangles.

Enigmatic Snarls, Hard and Easy, for Young People of all Ages to Untangle.

19—A CAUTION.

20.—ENIGMA.

Where happy children romp the green (1)
In times of peace I'm found,
Yet at the mast in arms I'm seen (2)
'Mid battle's fiercest sound;
And on the land where cannon roar
I hold the deadly ball (3).
And many a vessel seeks the shore
On me again to call (4).
Again 'mid busy haunts I'm found
Where rings the hammer's peal (5),
Or fiery furnace burns the ground (6),
Or swings the burnished steel (7),
Or where the mine its treasure heaps (8),
Or forests yield supply (9),
Or sentry round me vigil keeps (10)
In prison where I lie,
About the stable oft I'm found (11),
Again at palace door (12),
I reach the spacious earth around
Repeated o'er and o'er (13);
And with the silent dead remain
When earthly friends forsake (14),
Or in Orion's shining train
A golden trio make (15).

21.—CAN YOU TELL?

In a room there were 1 grandmother, 2 mothers,
2 aunts, 4 sisters, 4 daughters, 3 cousins, 3 nieces
and 3 granddaughters, all from the same family.
How many persons were there in the room?

FLORENCE BARNETT.

22.—BEHEADMENTS.

Far o'er the sea, to distant lands,
O'er snowy mountains and trackless sands,
To whole the message Christ has taught,
That it may next last soul He bought,
The earnest missionary goes,
Proclaiming life or deadly woes;
Salvation free he offers all
Who hear the word, accept the call,
But threatenings dire to Adam's race
Who do reject the words of grace.

18—Microscope.

Rob Wiltz's Scrape.

[Written for the Rural Press by ADAM F. BATELLE.]

Perhaps it was not my fault in the least, but as Rob Wiltz got into trouble helping us, I feel very much to blame. Poor fellow! I am afraid he vowed never again to take pity on friends in distress.

To begin at the beginning, mother had not been well all summer, and, in spite of our urging, she would not rest. In the latter part of August I insisted on taking her up to Aunt Mattie's for a visit.

There was the usual scene at the station, the whole family saying good-by and loading me with injunctions as to what to remember. My sins of omission have been so many that they were almost afraid to trust the little mother to

so heedless a body. But I made many promises of carefulness, and, to prove my ability to travel, insisted on going alone to get our trunks checked.

"A man pushed in and said: 'Mine first.'"

"This lady is waiting," said the baggage-master.

"I came first," retorted the man.

My opinion of baggage-masters as a class rose when this one said: "The age of chivalry isn't yet over; I'll check this lady's trunk first."

We had a pleasant seat, and after settling mother comfortably, I amused myself by studying faces and imagining all sorts of things about my fellow-passengers. This favorite pastime of mine is discouraging in one way. It proves that I am no judge of human nature, for my surmises are seldom correct.

As we passed from one train to the other in changing cars, two little boys came hurrying along carrying a large valise.

"Is this the train to Oregon?" one of them asked.

I told him where our train was bound for, and we hurried on.

"We ought to have seen to the little fellows," said mother when we were seated in our car. "How can people let such little children travel alone and so far? To Oregon—it's a shame!"

Just then the little boys came in and found a seat, so we concluded that some one had directed them, but continued to express our pity.

Not long after, among the names of small towns shouted unintelligibly was one that I understood. It was Oregon! We looked out and saw a group of some half-dozen houses and the Oregon hotel. We could only laugh and think of our wasted pity.

We were to change cars at Parkson, a town four miles this side of aunt's; but when I helped mother into the waiting-room, I saw that she was not able to go even so short a distance.

When she drank some water and felt a little better, she walked, with my help, to the hotel, a few steps from the station. Her willingness to go there and rest, as I urged, showed me how badly she felt. I asked for a room, and persuaded her to lie down and let me bathe her face and hands. Unused as I was to sickness, I saw that a fever was rising, and became thoroughly alarmed. Had I known some simple remedies, all would have been well. Isabel would have known what to do, but I never liked to fuss with medicine and was helpless as a baby.

I started downstairs resolving to send for a doctor, though I knew mother would disapprove if she knew. Hurrying through the hall, I ran against a man, and, looking up to apologize, was overjoyed to see Rob Wiltz. He and Isabel went through the High School together, so I felt acquainted with him. He said that he came in on the noon train, and was waiting for his uncle to meet him. Rob offered his assistance when I told him of mother's sickness, and volunteered to go for my aunt instead of for a doctor.

"I will have her here in less than an hour," he said, stepping into the office to ask that a team be sent at once from the livery stable.

Of course I tried to thank him, but cried so I could not, and ran up very thankfully to mother. She seemed to be asleep, and I sat down by the window and saw Rob drive away. He had a pretty black horse and a low buggy, and I was sure that, with such an outfit, he would not be gone long.

The hotel was on a noisy street, and from my seat by the window I could hear a commotion. The landlord was talking in a tone evidently intended to soothe. Probably his quiet tone was unavailing, for the other man swore dreadfully, and I could catch the words "stolen" and "constable" over and over. The landlady came up to see about mother, and explained that a horse and buggy had been stolen, only a little while before, from the hotel.

"Your mother seems resting easily," she said as she left the room.

"She seems better," I replied, "and I have sent for my aunt."

Rob started out of Parkson with a nice "rig," as he called it, and, having a good road, it did not take him long to reach aunt's home. At aunt's there is a shed to drive into, and while Rob stood in this shed watering his horse, he noticed two men who drove by together. They went as if on a race. Rob had better cause to remember those men than he then thought.

As Rob and my aunt started back to Parkson, they passed two boys in the road, and heard one of them say: "I'll bet my hat that's the fellow they're after." Rob said it made him feel as if he were an elephant, escaped from a menagerie, for the boys were watching him. The teams they saw on the road were going very leisurely, but just before they got into Parkson they heard a fast horse behind them. Like most boys, Rob does not enjoy being passed on the road, and he hurried his horse and got to the hotel before the horse behind them did.

Aunt went directly to the landlady, who brought her to mother's room.

Rob had tied his horse, when (just imagine his feelings!) these two men came up and one of them said: "Young man, it's my duty to arrest you unless you can explain yourself."

Rob was so surprised that he only said: "To arrest me? What for?"

"For stealing this horse from before this hotel an hour ago."

Rob tried to tell the constable about it, and

that dignitary said: "Only one thing makes your story seem true—your coming back."

The owner of the horse and buggy was so excited that he would not give Rob a chance to go on, but talked very fast and loud about "hoodlums."

"They've tried that trick too many times—didn't steal my horse—oh, no, but they got a free ride, and this fellow shall pay for his."

"The ladies in room—" Rob began, "in room—" and stopped. He did not know the number of our room, and as we had not registered, he did not know what to do, and tried to describe us. He thought our evidence might clear him.

I don't know what they might have done with Rob if a new actor had not appeared on the scene. Rob's uncle drove up and greeted his nephew heartily. The horse-owner and the constable knew Mr. Kinley, who owns a large farm near Parkson.

Mr. Kinley laughed at Rob because he had not explained carefully about taking the livery team. And there was the horse and buggy from the stable, waiting all that time at another entrance.

Mother was so much better that we went home with aunt on the late train that evening.

Mr. Kinley was very pleasant to us, but I did not like his teasing Rob about the scrape.

Mother and I will always be very thankful to Rob, and sorry that his kindness received no other reward than an arrest.

GOOD HEALTH.

THE TRUTH ABOUT THE MIND-CURE.—Now, in view of what has been done in curing disease by the aid of mental influence, the public has a right to demand that our physicians shall give us the benefit of this healing agency. Mental influence is a pleasant and inexpensive medicine; it cures in some cases where drugs fail, and it shortens the term of sickness and lightens its pain in many other cases; furthermore, it has no injurious incidental effects. But the mind-cure should be taken out of the hands of the untrained and irresponsible visionaries and the impostors who now practice it, or it will add a terrible amount of suffering and death to what it has already caused. These enthusiasts, carried away by their seeming successes in a few cases, insist that the mind-cure is the only treatment that is worth anything in all diseases and for all persons. They know too little about the nature of disease to recognize symptoms which indicate the fitness of this agency, too little of science in general to realize that a means suitable to remove one condition may be entirely inadequate or unsuitable to counteract another.—*Popular Science Monthly*.

A DANGER PECULIAR TO RESIDENCE IN FLATS.—The *Lancet* (London) raises its voice of warning to apartment-house occupants, which is worth considering. An ordinary householder has access to every portion of the building in which he lives, and should he suspect a defect, he can ascertain how far his suspicion is correct and remedy it. But in the case of flats, while the actual apartments rented may be free from all risk of evil, the tenant is, in point of health, almost entirely at the mercy of his landlord and of the occupiers of the basement, in so far as the drainage of the premises is concerned. If this latter be wrong, the whole mansion is apt to be filled with foul air from below upward. A number of cases have come under our notice in which tenants have only been too glad to pay what was demanded of them in order to get out of the premises with the least possible delay. While no one should take a residence without skilled advice as to its sanitary state, this precaution is more than ever necessary in the case of flats, where the entire premises, including, above all things, the basement, should be thoroughly overhauled.

DANGER FROM BITING THE FINGER-NAILS.

"A novel incident resulting from a habit of very common prevalence among nervous people was brought to my notice recently," said a leading physician of Philadelphia to a reporter the other day. "A young lady presented herself at my office and complained of a constant irritation in her throat. Two weeks previously she had been taken with a very severe attack of sore throat, which was treated by the family physician. Under his care, she said, the inflammation quickly subsided, but there still remained a sensation of irritation. Examination revealed a small, fleshy-looking object about the size of a kernel of wheat adherent to the tissues posterior to the left tonsil by the one end. The other parts of the throat were normal. The little mass could not be detached by a cotton-covered probe, but by the use of forceps it was easily removed and on examination proved to be a piece of finger-nail which had become imbedded in a cheesy deposit. A broken piece of the nail was also removed from under the mucous membrane at the same spot by a sharp-pointed probe. The lady then confessed to the habit of biting her finger-nails, and moreover could remember that a day or two previous to her throat trouble a piece of nail she had bitten off had become lost in her mouth, but after it had caused a fit of coughing she had forgotten all about it until reminded by the discovery."

WRINKLES.—The following paragraph would seem to do away with the old theory that wrinkles are produced by worrying: "It is customary to say that wrinkles come from wor-

rying, but the truth is that most of them come from laughing," says a well-known physician. "To know how to laugh is just as important as to know when to do it. If you laugh with the sides of your face the skin will work loose in time, and wrinkles will form in exact accordance with the kind of a laugh you have. The man who always wears a smirk will have a series of semi-circular wrinkles covering his cheeks. When a gambler who has been accustomed to suppressing his feelings laughs, a deep line forms on each side of his nose and runs to the upper corner of his mouth. In time this line extends to the chin and assumes the shape of a half-moon. A cadaverous person, with a wax-like skin, is very apt to have two broadly marked wrinkles, one running up from the jaw and the other under the eye. These meet at right angles at the cheek-bones and look as though they formed a knot at the apex. The scholar's wrinkles form on his brow, while the scheming politician's come round his eyes, where they look for all the world like the spokes of a wheel."—*Mail and Express*.

LENGTHENING LIFE.—An English newspaper has been making collective investigation regarding the questions given below: "1. Does your experience suggest to you that the race of Englishmen is degenerating physically? 2. Do you think that the great advance in the healing art is responsible for keeping alive much weak life that will in time affect the whole race injuriously? 3. Do you think that the increased indulgence in physical sports has, on the whole, a good influence on health? 4. Has it ever struck you that probably the great attention paid to health in these days may be producing an anxiety about bodily ailments which is a disease in itself?" Answers have been received from a long array of practitioners, among whom are the names of eminent London physicians. The general view taken, according to the *Medical Record*, is that Englishmen are not degenerating, but that, on the whole, the race is improving in vigor.

DOMESTIC ECONOMY.

OATMEAL MUFFINS.—Two cups of oatmeal, one cup of flour, one large spoonful of butter, the same of molasses, one small teaspoonful of soda; enough milk to make a batter.

SARDINE SANDWICH.—Wipe and bone the sardines, lay them on the bread and squeeze a lemon over them very lightly, taking care not to make them too wet or the bread will be soggy.

SMOTHERED RICE.—Boil for ten minutes one cup of cold boiled chicken chopped fine, two cups of cold boiled rice and one pint of chicken broth, seasoned with salt, pepper and butter.

GINGERBREAD.—One cup of molasses, one-half cup of brown sugar, one-fourth of a cup of butter, one cup of sour milk, one egg, one teaspoonful each of cream tartar, soda, ground ginger and cinnamon, flour enough to make a medium batter.

POTATO CROQUETTES.—Season cold mashed potatoes with pepper, salt and nutmeg, beat to a cream with a tablespoonful of melted butter to every cupful of potatoes. Add two or three beaten eggs and some minced parsley. Roll in small balls, dip in beaten egg, then in bread-crumbs; fry in hot lard.

TONGUE TOAST.—A very nice dish is prepared from cold boiled or potted tongue. Slice the tongue and cut each slice into small, fine pieces, heat it in a pan with a little butter. To prevent burning, moisten with warm water or clear soup. Add salt and pepper; stir into it two beaten eggs. When set, arrange neatly on toast.

WHITE MOUNTAIN CAKE.—Two cups of sugar, one cup of butter, one cup of sweet milk, four eggs, four cups of flour, two teaspoonfuls of baking powder. Cream butter and sugar together, add the beaten yolks, then the milk, flour with the baking powder sifted through it, and last the beaten whites. Flavoring. Bake in one loaf.

MAYONNAISE DRESSING.—Put the yolks of four eggs in a bowl, set in a cool place, then pour in, a few drops at a time, some good salad oil, without ceasing to stir the mixture; when one tablespoonful of oil is well mixed with the yolks, add, in the same manner, one teaspoon of white vinegar; add oil and vinegar until the sauce is of the consistency of thick cream; add salt and white pepper to taste, and mix well.

BROWN BREAD.—Two cups each of corn meal and graham flour, four cups of water or milk, one cup of molasses, one teaspoonful of soda dissolved in a cup of water, a tablespoonful of salt. Mix all well together, put in a pan or jar with a tight cover, set into boiling water and steam for four hours. As the water wastes, fill up with boiling water, and do not let the water cease to boil from the time the bread is put in till it is taken from the kettle.

CHEAP FRUIT CAKE.—One pound of flour, three-quarters of a pound of sugar, half a pound of butter, one pound of raisins, one pound of currants, half a pound of citron, one teaspoonful of mace, one nutmeg, five eggs, one even teaspoonful of soda, half a pint of sour milk; flour the fruit well, cream the butter and beat the eggs light, separately, and, no matter in what order you may put in the ingredients, your cake will be light; only, after soda is added, the baking should begin forthwith.

The Week.

The prevailing talk is concerning crops. The rains can be counted to have helped grain more than they have hurt it, though some local losses may be considerable. Reports of the fruit outlook are somewhat contradictory, but though some sections report certain fruits large, others seem to have lower estimates on the same fruit to offset them. All accounts agree, however, on lower yields of cherries and apricots than usual, and in cherries the popular canning sorts seem to have suffered most.

Shortage in cherries and apricots has naturally filled the country with buyers, and growers' views are therefore high. If proper freight rates on canned goods can be assured in time, it is probable that prices for fruit will go far to compensate growers for smaller crops. Plums and prunes seem to have prospered best of all fruits, and we hear of abundant prospects. There is much contradiction in reports on peaches; in some parts the yield will be very light and the whole crop will run below the last two years. Pears have dropped badly and grapes promise well, but are hardly out of the woods yet.

The rains will give us a verdant landscape later than usual this year, which will delight

the tourist, the flower-hunter and the grazing animals. The State is still at the height of its beauty, fit to delight the eye and fill the heart.

The Heavy May Rains.

We generally have heavy rains in California, but they are usually only heavy enough to record their impress on the dust of the early summer. Sometimes greater weight of water falls and some injury is done in soaking hay and lodging over rank grain. This year the rains have been unusually heavy and wide reaching and have been accompanied with unwonted wind force. The result has been damage to hay and lodging of early sown or summer-fallow grain, which will perhaps double the cost of harvesting even if the effect on the yield is not large. With such moisture a few hot quiet days would develop much rust, so that in some parts of the State there is danger of after effects which cannot yet be measured.

There has been some injury to small fruits which were ripe in the early parts of the State, but the greater injury has been the prostration of orchard trees, which in their full leaf and in soft-soaked soil could not withstand the wind. Still this evil, counting the State as a whole, has been small, and any ill to tree fruits generally will be more than compensated for by the improved size of the later fruits, which had it not been for this spring gift of water might have thirsted before autumn, for the general aggregate of the winter rains was not large, though a desirable improvement upon last year's record.

The wet ground and low temperature prevailing gives the vine-growers apprehensions of frost, and it will be desirable to watch the thermometer and have fresh piles of dry litter for smoking. This safeguard against frost effects is now quite generally attended to in the small valleys where frost is most to be apprehended, and the smoke cure is most readily applied. If attention and protection are given for a few days now, the vines will be counted safe for the year and their present promise of generous fruiting may be realized.

To show how general have been the May rains and how respectable the season's figures have become at various points in the State, we give the following table derived from telegraphed reports from observers at the stations of the Southern Pacific railway. Our southern counties have been well favored this year, and though there are of course drier regions at the south than those reported, the figures for the year are in gratifying proportion everywhere:

"California on Wheels"

Has been heard from as far East as Albany, N. Y., where a new floor had to be laid in the exhibition car, the one it started with having been utterly worn out by the footsteps of myriads of visitors.

To illustrate the interest which this display of our State products has aroused along the route, the manager mentions that they reached Schenectady, N. Y., in the midst of a heavy rainstorm. Nevertheless, over 600 people visited the car after nightfall, and it was found necessary to keep the doors open until 10 P. M., instead of closing at the usual hour—9 o'clock.

The roving exhibit is next to be taken through New England and afterward to New York City.

West American Oaks.

We have received, through the courtesy of Prof. Geo. Davidson, a copy of a monograph on "West American Oaks," the history of the preparation of which is as follows: Dr. Albert Kellogg, a distinguished pioneer botanist of this State, confided to some of his friends, before his death, all his papers on botany. They were incomplete and there was apparently no hope of their being finished or published. J. P. Moore and W. G. W. Harford consulted with Prof. Davidson, who addressed a letter to Jas. M. McDonald explaining the matter to him. The result was that Mr. McDonald cordially undertook to bear the expense of publication and gave his check for the required amount. He also asked for an estimate of the cost of publication of a similar monograph of the Coniferæ. Prof. Edward Lee Greene of the University of California wrote the text and the drawings were made from the originals by Dr. Kellogg.

Dr. Kellogg was one of the original seven founders of the California Academy of Sciences, and one of those mainly instrumental in giving it a reputable standing in the scientific world. He was an enthusiastic botanist, ardently devoted to research in the new field of the Pacific, and a singularly unselfish man, assisting with his knowledge and experience all who sought his advice.

In the sketch of the life and work of Dr. Kellogg, which Prof. Davidson has written for the monograph, occurs the following paragraph: "He was the embodiment of modesty in manhood. His heart was as gentle, as sweet and as innocent as a woman's. His speech was clean and refined; always for the right, the needy and the struggling. He was startled at an attack on religious purity, and then his words rose swiftly in force and directness. His soul revolted against chicanery, intrigue and petty meannesses of the trickster, the back-biter and the prevaricator, and his condemnation was unhesitating and piercing. He shrank from the charlatan and the sham; to him they were an unnatural growth in morals or science. His sense of justice and purity was so inborn that he instinctively knew the presence of the offender. His moral life charmed the young and innocent and was an example to the best."

The term "West American Oaks" is used for the work because all the oaks east of the Rocky Mountains have been published as East American oaks. There are now known to botanists at least 300 kinds of oak, of which 50 are indigenous to North America, north of Mexico. The 50 North American species are about equally divided between the eastern and western sides of the continent; and there is no oak common to Atlantic and Pacific America. The greater part of the species belonging to the Pacific States and Territories were more or less fully illustrated by Dr. Kellogg's pencil. The 24 different drawings of his in the monograph represent all the more important species of the extensive commonwealth of California particularly, as well as several others; and the editing of these plates has resulted in a virtual monograph of the Pacific North American oaks; so the volume may be found to contain about all which, up to this date, is known of our West American oaks. The plates are of lasting value. The engraver has been scrupulously faithful to the drawings; and no artist was ever more strictly and conscientiously true to nature than Dr. Kellogg.

The bibliography of the oaks is specially complete. The text is intelligently and plainly written and scientifically correct. Botanists everywhere owe a debt of gratitude to Capt. McDonald for his generosity in publishing this work. The work is a credit in every way.

WATER FOR ARID LANDS.—An important meeting was held on Tuesday at the rooms of the State Board of Trade, where Senator Stewart of Nevada spoke at considerable length in regard to reclaiming the arid regions of the country. We will endeavor to give a further account of it in our next issue.

FIRST APRICOTS.—The Fruit-Growers' Association of Vaca valley shipped the first apricots of the season East on Saturday, 4th inst. The crop is light. The first apricots received in this city by Allison Gray & Co. came from L. W. Buck's orchard and sold for half-a-dollar a pound.

Conspirators Nonsuited.

Some months ago the Pacific Factor Company, alleged to be a corporation engaged in a general commission business, brought suit against A. A. Adler, to recover \$5625 for breach of contract.

It appears that a scheme was concocted a year ago to corner the grain-bag market of California for 1889, and on the 16th of May, 1888, that Adler agreed to give the said P. F. Co. the exclusive sale of all grain bags or burlaps from which bags could be manufactured, in any way under his control, up to Jan. 1, 1889, amounting to 187,500 bags, and to accept for said bags or burlaps the average price the company might obtain for all grain bags or burlaps it might sell between the date of the contract and Jan. 1, 1889. Defendant further agreed to pay the plaintiff, as liquidated damages, in case he should fail to comply with the terms of the contract, the sum of three cents for each bag of the entire 187,500, which he refused or neglected to deliver.

The complaint stated that the defendant refused to deliver the bags according to contract.

The defendant's answer was mainly devoted to showing up the abortive bag-trust engineered by plaintiff and others. It averred that the directors of the P. F. Co. had devised a plan to control the sale of all grain bags in the State or to arrive before Jan. 1, 1889, for the purpose of increasing the price and compelling the farmers to purchase at prices in excess of the real value. The consumption of grain bags in the State was from 32,000,000 to 35,000,000. The calculation was that there were in the State, or in transit, 42,000,000 bags, and if the plaintiff could secure control of a majority of these, competition would be removed and the price could be raised to figures which would satisfy the greed of the speculators. Contracts were then entered into with the defendant and many others, all of a similar nature, by which the plaintiff could secure control of 30,000,000 bags.

Defendant also charged that the plaintiff had contracted with its president and vice-president to sell 4,000,000 bags belonging to them in advance of sales to be made for defendant and others. The defendant then claimed that the combination was against public policy and that the contracts were void.

The case came up in Superior Judge Lawler's court on Tuesday of this week, and David Freidenreich, attorney for the defendants, moved for a nonsuit, which the court granted on the ground that bags were a necessity to the farmer, and a combination of the character indicated by the pleadings was against public policy, and the agreements under it void—a decision which will be heartily commended by the honest producers of California, and for that matter by honest people everywhere.

The Flower Show.

We have already referred to the first Flower Show of the State Floral Society which will open at Irving hall in this city on Wednesday, May 15th, and continue three days and evenings. It will have this distinctive character over the many excellent floral displays which are being held for charitable purposes in that this is to be, so far as possible, an exhibition on approved scientific plans. Flowers are not to be massed for general effect, but are to be shown in single specimens correctly named, so that the flower-lover may study closely individual characteristics and associate these with the proper appellation of the bloom. Though the display will be naturally beautiful, and though there will be delightful social features, the fair is to be primarily for educational purposes and for the advancement of intelligent floriculture. The exhibition is in charge of a committee of which John H. Sievers of 25 Post street, S. F., is chairman, and from him, or from the secretary of the society, Emory E. Smith, 126 Kearny street, copies of the premium list and regulations for the exhibition can be had. The schedule is made out to meet the requirements of both large and small growers, and we hope that both those having large collections and those having but a few choice varieties may aid the exhibition.

FOREST FIRES have been raging widely in Northern Wisconsin and Minnesota for the past week. Great destruction is reported, and it is feared that some lives have been lost.

Improvements in Lime-Burning.

Lime is of such universal industrial importance, and as the occurrence of lime rock and the means of reducing it to available form interest so many people, we have thought a portrayal and brief description of a notable recent improvement in lime-making in California would be acceptable to our readers.

At the works of the Guadalupe Lime Company an extensive business is carried on, the kiln being a perpetual one, and a decided improvement on the old-fashioned pot kiln. The works of this company are situated upon the eastern slope of the Almaden section of the Santa Cruz mountains, about ten miles southwest of San Jose and 2½ miles from Guadalupe Station, Santa Clara county, on the New Almaden branch of the Narrow Gauge Railroad. This property was first developed about the year 1864, and the lime burned in kilns on the banks of the Guadalupe creek.

The principal quarry of this company is situated at the height of about 900 feet above sea level. It is a circular opening, and was connected by a tunnel with other workings about 150 feet below, but the tunnel has now caved in. The limestone in this quarry is about 45 feet thick, and dips to the southwest at an angle of over 30 degrees. It is a dark-colored bituminous limestone, many samples of which smell strongly of petroleum when freshly broken. Both above and below the limestone are strata of shale.

The present workings appear to be confined to smaller openings, most of which are at a lower elevation. In some of these the limestone is of a light color, but the formation presents the same general characteristics as the former. The accompanying engravings and the description, we take from the report of the State Mineralogist. Inquiry has been made by those using the old-fashioned kilns concerning the improved ones. The cuts will give those interested a good idea of the "perpetual kilns."

The limekiln, which is situated about 400 feet below the upper quarry, is supplied with limestone by trucks worked by a gravity pulley from the quarries above. The kiln is an upright circular furnace about 60 feet high, tapering from a circumference of about 100 feet at the base to about 40 at the top. It is surmounted by a smokestack 60 feet in height. This kiln is connected with an outer wall of ordinary brick and an inner one of firebrick, the space intervening being filled with concrete, altogether forming a wall of about six feet thick.

The trucks from the quarry are lowered to the charging platform, which leads to the door of the furnace. About 20 feet beneath the charging platform, the kiln is surrounded by a firing floor. On a level with this floor are three fireplaces, placed at equal distances in the main body of the kiln. The ash pits beneath the grates of the fireplaces extend directly down through the wall of the kiln, leading separately and directly to the ground or drawing floor, about 20 feet below. The space in the kiln between the level of the fireplaces and the ground floor constitutes a cooling chamber, the line being drawn from three openings at the bottom of the kiln. This kiln is charged by filling the cooling chamber with waste rock up to the level of the fireplaces, above which 18 truckloads, equal to about 30 tons, of limestone are dumped. The fires are then lighted, being fed with four-foot sticks of redwood.

After burning three days, a charge equal to 24 barrels of waste rock is drawn from the draw-holes at the bottom of the kiln, just as though it were burnt lime, and fresh limestone added at the charging door to keep the charge at the proper height in the kiln. After six drawings, which now take place in 24 hours, the waste rock is all drawn out, and the lime begins to make its appearance. The lime is sorted and shoveled into rawhide baskets, and hauled to the depot, where it is shipped in bulk. This kiln consumes from 4½ to 5 cords

of wood in 24 hours, producing 160 barrels of lime in that time.

Co-operative Dairying.

[Written for the Rural Press by COL. R. P. MCGILROY.]

Within the past two or three months several parties in different portions of the State have

to be in the flush of milk when the pastures are short and dry, and then supplement the dry pasture with ensilaged corn fodder, alfalfa or other forage crops that can be readily grown, together with cornmeal, shorts or bran. By this arrangement, the cows will be yielding a good flow of milk when butter is high, which

VIEW SHOWING FIRING DOOR AND DISCHARGE DOOR.

written me, asking if I believed that co-operative dairying could be made to pay. I have answered that I did not doubt it, especially if good butter or cheese was the product of the

usually is the case during the summer and fall months.

I do not apprehend that there would be any surplus butter, as there is not now enough pro-

TOP OF KILN SHOWING CHARGING PLATFORM.

creamery or factory. I have every reason to believe that it will pay as well here as it does in the Central-Western States, where for a number of years it has been successfully carried on. It will require, however, good cows—that is, cows that yield a good supply of milk, rich in butter fats if butter is to be made, or rich in casein if cheese is to be the product; well fed and otherwise cared for; the milk and cream properly handled, and a market established for the product. Neither of these requirements is hard to fill, or at least ought not to be. The system can be successfully followed, and if butter is to be the product, the dairymen should have their cows come in in May or June so as

duced in the State to meet the requirements of consumers, for if I am correctly informed, not only does Oregon ship large quantities of butter to California, but also the Eastern States have to be drawn on to supply the wants of butter consumers. And just here I would like to inquire if all the butter shipped into this State is really butter, or is the greater part of it oleomargarine, suine or a compound of hog's lard and cotton-seed oil, churned in sweet milk to give it the butter flavor, and which the United States Government requires to be sold under a special license? No doubt much of the so-called butter sold in this State is one or the other of these vile compounds, and the unsus-

pecting public is swindled every time it buys an ounce of the stuff. California should join her sister States and prohibit the sale of these compounds, except under severe penalties. [California already has a law which would check such sale if it were enforced.—Eds. PRESS]

Apropos of co-operative dairying, I quote the following which I recently found in an Eastern paper. I am personally acquainted with the creamery and most of the farmers connected with it, and believe that a careful perusal of the figures will convince any one that the business will pay. The following is the statement of the treasurer of the creamery for the year 1888:

Whole amount of milk received for the year	2,102,187 lbs.
Butter manufactured	84,342 lbs.
Average net price of butter	\$24.58
Total sales	\$22,554.96

The dividends paid to the producers of milk were as follows by months:

January	\$1.38	July	\$1.62
February	1.15	August75
March	1.14	September95
April87	October	1.11
May70	November	1.55
June60	December	1.35
Average dividend per 100 lbs. milk	\$1.01 ¼		

By comparing the amount of butter made with the amount of milk received by the above creamery, it will be seen that it required almost 25 pounds of milk to produce one pound of butter. Now, I believe that owing to the dry atmosphere of California during a large portion of the year, a better yield can be obtained; certainly the cheese yield here is better than in the Eastern States.

The creamery above alluded to received from the farmers the whole milk, from which neither any portion of the cream nor the stripings had been withheld, and separated the cream by centrifugal force, thus leaving the skim milk sweet, to be returned to the farmer, who could use it for feeding pigs and calves.

It would be interesting to know how many cows were required to furnish the amount of milk at that creamery, and also the breed. I have an idea that they were a mixed lot, with a predominance of native stock.

Another interesting point would be to know the cost of producing 100 pounds of milk. It certainly costs more where that creamery is located (Northern Illinois) than it would in California, owing to the long, severe winter and the extra amount of grain required there to keep up the animal heat.

There is thorough organization among the dairymen in the Central Western States, and co-operation is more successfully carried on there than anywhere else that I know of, and by this very organization co-operation is made successful. The creamery referred to is owned, managed and operated by farmers only, and is but a sample of what has been, and is being, done by the dairy farmers of Illinois, Wisconsin and the neighboring States, and should be an incentive to others elsewhere. The conditions of success seem to be more largely in favor of California dairymen than those referred to, and it might well be worth their while to attempt to follow the lead of those who ventured and succeeded.

GOVERNOR RUSSEL ALGER, speaking of the extent and superiority of the Washington Territory fir, says: "For several years, appreciating the fact that Michigan and Wisconsin pine lands were being exhausted, I have had my eye open for new fields, and three years ago I visited the Washington region, making a personal examination of the field. I think I am a fair judge of timber, and I don't hesitate in pronouncing the product of those regions in every way superior to our Northern pine, and other countries recognize the fact. While I was in Tacoma I saw nine vessels, bound for England, Germany and China, loading at the wharves."

A STINGAREE that weighed 165 pounds was caught in San Diego bay last week.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

HARVESTERS IN DEMAND.—San Leandro *Reporter*, May 4: The demand for the Best harvesters continues: On Tuesday four were sold to the following-named gentlemen: W. J. McIlwain of Dixon, W. S. Peddrick of Dixon, Lepenger, Fox & Co., also of Dixon, and P. H. Palmer of Pope valley. Out of the 28 harvesters constructed for this season, all but six have been sold.

HESSIAN FLY.—Mt. Eden Cor. *Oakland Enquirer*, May 2: A great many of the farmers are experiencing considerable trouble with cutting volunteer hay. The Hessian fly has done irreparable damage to the grain in this vicinity. There has been hardly a field but he has visited. The prospect for a large barley crop is very good. The wheat crop will be a comparative failure. What is left from the Hessian fly is being destroyed by the rust. The prospect for a large yield of volunteer is excellent, but the weather is not satisfactory for a successful curing.

Butte.

SIAMESE-TWIN EGGS.—Chico *Enterprise*: G. W. Graves has at his drug store on the corner of Main and Second streets a curiosity consisting of two eggs joined together by a soft ligament at the small ends. The eggs are soft shell, preserved in alcohol. After the hen had deposited the eggs, she commenced to pick them, but was scared off by the owner, who preserved the freak and brought them to town. They are separate and distinct, and only attached by the ligament.

THE FLEMING DITCH.—Gridley *Herald*: Surveys have been completed and maps made demonstrating beyond question the feasibility of thoroughly irrigating 200,000 acres of the choicest valley lands in the county with water taken from Feather river and brought by this ditch within easy reach of every land-owner in Gridley and Hamilton townships. It is proposed to take the water from the river at a point about one mile below the Thermalito hotel in a canal 60 feet wide and six feet deep, thence along Hamilton slough southwesterly. Lateral ditches will be constructed at various points to convey the water from the main canal in various directions as far north as Nelson and south to Sutter City. Two of these laterals will be located, if the scheme is carried out, between this city and the river, one along the river road to Marysville, the other about on the line between the ranches of V. P. Richards and R. E. Taylor. Another will cross the railroad north of this city and follow the Gridley ridge, while another will traverse the "dobe lands six miles west of this place. This is a synopsis of the scheme as set forth by the projectors.

El Dorado.

EIGHTH DISTRICT FAIR.—Placerville *Republican*, May 2: A meeting of the Fair Directors was held last Friday evening. The date of the fair was fixed for the five days beginning Tuesday, September 3d. Four special premiums will be offered as follows: For best general display of fruit, \$150; 2d do., \$75; best general display of vegetables, \$100; 2d do., \$50. Those who receive these special premiums will not be allowed to compete for other premiums offered in the same line. Premium lists will be ready for distribution in about two weeks. The following officers have been re-elected to serve for the ensuing year: Pres., Thos. Fraser; Sec., W. H. H. Fellows; Treas., Jas. Blair. At a meeting Tuesday night the directors also offered a prize of \$30 for the best display of county minerals and \$20 for 2d best.

TWENTY-DOZEN CHICKENS.—Eds. *Press*:—We have another incubator full of chicks, out to-day, and for a fine hatch I do not think it can be beaten. Three weeks ago to-day we placed in the machine 280 eggs, and at the first testing took out 8 and at the second 12, leaving 285 eggs in the incubator, and to-day we have 240 live chicks in first-class condition. Would be pleased to hear from some one who can show a better percentage than the above.—F. S. B., *Kelsey*, May 3d.

Fresno.

EDITORS *Press*:—We have had the usual winds and hot weather since April 25th. The damage is variously estimated by different farmers. Some think late grain only is seriously hurt. On April 20th our prospects for a crop were as fine as Fresno county ever had. As a rule, the work is done more thoroughly than formerly. Farmers are waking up to the fact that what will pay to do at all, will pay to do well. Summer-fallow twice plowed is the rule, and usually well done.... May 5th we had a good rain (.60 of an inch) which will correct the effect of the warm weather to a great extent.... There has been a large quantity of hay cut this spring. Most of it is yet in the field, and that of course will be damaged.... We are much interested at present in preparations for irrigation in the Madera Irrigation District.—E. S. R., *Madera*, May 6th.

Humboldt.

ENGLISH SPARROWS INCREASING.—Eureka *Times*, May 2: Unless some steps are soon taken to get rid of the English sparrows, which are increasing so rapidly in numbers in this city, they will become a pest. The first were brought here some years ago and turned

loose, and now large flocks can be seen on any of our principal streets. They are extending to other towns in the county and will soon be a nuisance where fruit is raised. They are of no particular benefit in any locality that we know of, and in many places in the East there is a bounty paid for their extermination. We attribute the vast increase in the number of house-flies during this and last season in a great measure to the fact that the sparrows have driven the swallows away.

Los Angeles.

IRRIGATION POPULAR.—Anaheim Cor. *Chronicle*, May 3: The election to-day for the purpose of deciding whether an irrigation district should be organized under the provisions of the Wright bill resulted almost unanimously in its favor. Four precincts in the district gave a total vote of 347, of which 334 are in favor of the district and 15 against it. One precinct remains to be heard from, but the result cannot be changed. There is great rejoicing among our citizens. Property valuation in the valley is increased by millions. Thousands of acres never irrigated before are brought under one splendid system of irrigation, and thousands of dollars of capital are now ready for investment. J. P. Zeyn, J. P. Greeley, John Hunter, T. A. Darling and Prudencio Yorba are elected directors; Max Nebelung, assessor; H. D. Polhemus, collector, and F. H. Keith, treasurer.

Nevada.

COUNTY EXHIBIT.—*Foothill Tidings*, May 3: The committee appointed to arrange for an exhibit of county products at the State Fair met at Nevada City Saturday afternoon. It was decided to exhibit at the State Fair only, and Jas. R. Nickerson was appointed to make the collection and have charge of the same at Sacramento. In addition to the premiums such exhibits may take on special entry at the State Fair, the committee will award premiums for the best jellies, preserves, dried and green fruits—\$15 for first, \$10 for second and \$5 for third premium in each of the four classes named. The committee will meet again Saturday, June 29th.

Placer.

DISTRICT NO. 20.—Auburn *Republican*, May 1: The new Directors of the Agricultural Association met in Auburn last Wednesday afternoon, all being present except Hollis Newton, who declines to serve. Jo Hamilton was elected Pres., T. J. Nichols Treas., and F. D. Adams Sec. for one year. The terms of office fell as follows: G. W. Towle and J. C. Boggs, four years; W. M. Baker and Jo Hamilton, three years; H. T. Power, two years; W. D. Perkins and W. B. Lardner, one year. The Board recommended E. J. Sparks to fill Mr. Newton's vacancy. Messrs. Hamilton, Lardner and Perkins were appointed a Committee on By-Laws; Baker, Boggs, Towle, Hamilton and Lardner on Finance; Boggs, Lardner and Adams on Printing; Boggs, Perkins and Lardner, Location of Pavilion. The next meeting will be held May 18th.

PINO PICKINGS.—The Armsby, Hatch and Porter orange groves are now all cultivated and present a nice appearance. Of the two ten-acre groves set out near here last year, less than one per cent failed—in one, eight trees in a thousand and in the other seven. All our peach orchards near here have a full crop, and we are now thinning them out. Almonds are near full size, and some black figs are beginning to color. Cherries are coming in quite freely to the new fruit company, and the growers seem happy. The first shipments paid the grower \$4 for ten-pound boxes.

EARLY CHERRIES.—Newcastle *News*, May 1: The first regular shipment of Black Tartarian cherries was made by Geo. D. Kellogg on Friday last. They were from the famous Hector cherry orchard. While cherries of other varieties had been shipped from here for some days previous to this, the shipment of Friday was the first, we believe, of the Black Tartarian variety.

San Joaquin.

BUBACH HARVEST.—Stockton *Independent*, May 4: Supt. Ladd of J. D. Peters' bubach plantation is gathering his forces for the annual pick of the bubach flower, which is now ready to be gathered. It takes a force of 150 men several weeks to pick and sack the flower for shipment to the mills in this city.

Santa Clara.

HORSES SOLD.—San Jose *Mercury*, April 27: D. J. Murphy's sale of horses at Agricultural Park yesterday attracted quite a number of buyers. Forty-two animals were put up, and the prices secured were reasonably good. Killip of S. F. acted as auctioneer. The buyers were mostly local men, though several persons from other counties were present. Among the more notable of these were Sec. Smith of the State Agricultural Society and J. D. Carr of Salinas. The horses offered consisted of seven trotting yearlings, three two-year-olds, six three-year-olds, eight trotting mares and eighteen draft horses. The colts sold at prices ranging from \$40 to \$75. The three-year-olds and trotting mares sold better than the yearlings. There was a particularly good demand for draft horses, and all of them brought good prices. Jesse D. Carr bought a gray gelding Jack, sired by Prince Albert Jr., out of a dam by an imported Percheron Norman horse, for \$162.50. Another of Prince Albert Jr.'s colts, Sallie, sired in 1886, was sold for \$175.

GUINEA FOWL.—Gilroy *Advocate*, May 4: Guinea fowls from Kentucky have been import-

ed here by O. W. Palmer, dealer in fancy poultry. This fowl is considered very profitable on farms where the range is wide, as they destroy innumerable insects and do not scratch up seeds. A hen will average 100 eggs annually and begin to lay in May. The eggs take a month to hatch. The proper number of eggs at a sitting is 16. The eggs are rich and regarded by some people as a delicacy. The birds are good eating, tender and juicy when properly prepared.

Shasta.

AGRICULTURAL ASSOCIATION ORGANIZED.—Redding, May 3: The citizens of Shasta county held a most enthusiastic meeting here to-day and organized Agricultural District Association No. 27. Judge C. C. Bush was chosen chairman; P. F. Pinkham, Sec'y; Fred Grotenfels, cashier; C. C. Bush and H. T. Ross of Millville, T. W. H. Shanahan of Anderson, C. J. Becker of Cottonwood, E. A. Reid of Buckeye, A. C. Brigman, Jerry Culverhouse and Henry Clinesmith of Redding were elected directors. A County Fair will be held this fall.

Solano.

DIXON DOTS.—*Tribune*, May 4: The last heavy storm had a bad effect on such fruit trees as peach and apricot in a few orchards in this vicinity. Bartlett pears and prunes are hardier trees and are thrifty.... There are several large lots of old wheat in the warehouses, upon which the owners will have to pay taxes.... Hay is plenty. It is selling loose in the field at from \$5 to \$6 a ton, and for \$7 delivered in Dixon. Barley is so low that it is likely a great deal of it will be cut for hay.... There are thousands of acres in sight of Dixon upon which the grain is standing waist high, and is as even as though it had been leveled with a lawn-mower. It is a sight that ought to make glad the hearts of the farmers.

Sonoma.

A WONDROUS APPLE-BLOSSOM.—Sonoma *Index-Tribune*, May 4: Mr. S. H. Shaw discovered a freak of nature in the shape of a wonderful apple blossom on one of his trees last Wednesday morning. The blossom, which resembles a large-sized rose, measures 9½ inches in circumference and is what may be termed a second-crop blossom. The twig containing it was brought to this office, and is an object of much curiosity to visitors. Immediately alongside the blossom is a cluster of small apples about the size of a thimble. An ordinary apple blossom contains five petals, while this one has 30 or 40.

ORCHARD EXTENSION.—Mrs. K. F. Warfield of Ten Oaks Vineyard has planted out this season 2000 fruit trees of the choicest varieties, the greater number being French prunes, Kelsey Japan plums, Mammoth chestnuts, and peaches. Eight varieties of Japanese persimmons were also set out.

Tulare.

IRRIGATED WHEAT.—Tulare *Register*, May 3: Wm. Brown has furnished this office with some samples of wheat that show a good prospect. Some of it grown on land that was irrigated two years ago is nearly six feet in length and fully two feet higher than that which has never been irrigated. This shows the lasting effects of irrigation and is another argument for winter irrigation. Mr. Brown says the difference is quite marked in the two pieces where they come together, the stalks on the irrigated piece standing high above the other within 30 feet of it. Some of the heads of this grain are fine looking and will fill without additional rain.

BARLEY, OATS AND APPLES.—Visalia *Times*, May 2: Samuel Halstead, who farms a ranch on the North fork of the Kaweah river, 35 miles northeast of this city, on Saturday last brought to the *Times* office a sample of the beardless barley growing on his ranch, the stalks of which are over five feet in length, and contain well-filled heads that measure over four inches in length. Accompanying the barley was a bunch of stalks of wild oats that measured nearly seven feet in length. Mr. Halstead also presented a sample of green apples that he had kept over winter, and which he says he will have until green fruit comes in again this year. The apples were of two varieties—the Winesap and the Limber Twig, and were not in the least dried up.

THE RAVAGES OF THE CUT WORM in the orchards, vineyards, alfalfa and wheat fields of this county have somewhat abated in the past three or four days, the supposed cause being the extreme heat of the sun. I. H. Thomas estimates that they have destroyed young trees in his nursery to the value of at least \$1500, while the "Delta" nursery of Jacobs & Co. has suffered more extensively. At the Briggs orchard the worms have done considerable damage to the apricot crop, which had previously promised to yield abundantly. Many farmers claim the loss of several acres each of growing grain from the same cause.

THE CHEESE FACTORY BEGUN.—Hanford *Sentinel*, May 2: Last Thursday the directors of the Hanford Cheese Man'g Co. met in Hanford and did an excellent day's work. They bought an acre of nice land of J. N. Benedict, received bids and awarded the job to Mr. Ford of Hanford, who is a thorough mechanic, and on Friday he began the preliminary work of erecting the building, which is to be 30x60 feet on the ground, and 20 feet in height, two stories, on a foundation four feet high. The first floor will be divided into a workroom 20x30 feet and a cheeseroom 30x40 feet, with 5 rows of double shelving, 12 shelves each, lengthwise the building. These will hold about 1400 full-size

cheeses. There will be a storeroom, 30x40 feet, and a suite of five living-rooms 20x30 feet, partitioned off in the upper story. The land is located one-half mile directly east of Hanford.

Tuolumne.

MOVING FOR A FAIR.—Sonoma Cor. *Chronicle*, May 4: A public meeting was held here to-day for the purpose of organizing for the Twentieth Agricultural District Fair. Seventy-five signatures were obtained, and the following four were designated for appointment by the Governor as directors: Dave Oliver, Thomas Berney, James Goodwin and D. W. Berger. A committee of three, consisting of F. W. Street, E. A. Rodgers and George W. Niola, were appointed to visit Calaveras county, which with Tuolumne forms the district, for the purpose of obtaining signatures and otherwise pushing the organization. More interest was manifested to-day than in any public movement for a long time.

Ventura.

BEAN PLANTERS.—Ventura *Free Press*, May 3: J. D. Morgan has just completed the tenth of his bean-planters, for which he will receive \$80 each. This machine is likely to become very popular with the farmers, as it commends itself to all who use it or see it in operation. It is the invention of Mr. Morgan and he made the patterns for the castings and other parts at his own shop in this town.

NO SCALE.—M. E. Isham of the County Fruit Pest Commission, informs the *Free Press* that he recently examined the orchards in and about Bardale, where the incipient scale has once been found, and that he finds no signs of any there at present. He feels encouraged to think the pest is stamped out, but will make further examinations during the season and until assurance is made doubly sure.

Yolo.

A PILE OF PRUNES.—R. B. Blowers presented the Woodland *Mail* the other day with a branch from a Petit prune tree. The branch was about four feet long and bore nearly 200 prunes, which even at this early season are quite large. Mr. Blowers states that prune trees of this variety do equally well every year in Yolo county.

HOGS RUN WILD.—Woodland *Mail*: It is reported that many wild hogs infest the willow thickets near the sink of Cache creek. These hogs are, although running wild, the property of some person living in that vicinity, and he might cause hunters considerable trouble if they killed his swine. Some of the animals are vicious enough to be entitled to death in its most horrible form, but their owner might not believe this. A few days since one of these "wild hogs" was killed, his head being blown off by a charge of buckshot. One of his tusks measured seven inches in length.

ARIZONA.

GOOD CROPS.—Florence *Enterprise*, May 4: For the past two weeks the farmers of this valley have been busy cutting hay and grain. The crop of hay is something above the average, and as the acreage has been greatly extended this year, it will be both abundant and cheap. The barley being harvested is in splendid condition, and a large crop is expected. The wheat is looking fine, and will be ready for the headers in a couple of weeks. The fruit crop of the whole valley will be an unusually heavy one, the trees and vines being loaded down with it. Figs are ripening, and the season of plenty is at hand.

SEMI-TROPIC FRUITS.—All the young orange trees planted last fall in and about Florence are doing finely and making satisfactory growth. Among the semi-tropical fruits that are known to do well here is the date, which thrives exceedingly. Judge Bartleson has several fine date palms in full bearing, from which a good crop has been taken for several years.

WASHINGTON TERRITORY.

RIPE CHERRIES IN APRIL.—W. W. Union, May 4: Dr. N. G. Blalock on Thursday evening showed a reporter a handful of fully matured cherries, grown on a tree in the Walla Walla valley. Last year the first ripe cherries were picked on May 12th. Walla Walla valley has always been known as a land of immense wheat yields, early vegetables, and the fine quality of all the products of its soil. We all know that our soil is as prolific as that of California, but few know that we are as early in matured fruit as that land of the semi-tropics.

EUREKA FLAT.—Imagine, if you will, one grain-field 30 miles long by 10 miles wide, the surface undulating, billowy, with not a stream in the whole vast expanse, and but few wells of living water. Land-locked by the hills of the Touchet on one side and the Snake river hills on the other, the field spreads out like a canvas. It is not a field of grain, but a grain-field. As the train passes, there will be seen a thousand-acre patch of fall-sown grain, still an orange green, owing to the admixture of wild mustard. Perhaps next to it will be seen a stretch of brown stubble, while beyond will stretch the dark upturned earth of the summer-fallowed field. But the gem of which these things are the almost indistinguishable setting, is the dark-green fields of spring and late fall-sown grain, which in the aggregate amount to about 30,000 acres, and in a few months will yield its golden harvest of an average of from 35 to 40 bushels to the acre. It is through the center of this vast granary that the O. & W. T. has been built.

SHEEP AND WOOL.

Wool Facts and Figures—No. 5.

(Written for the Rural Press by J. R. P.)

In answer to an inquiry from a subscriber to the Rural Press, the writer will state that "noils" is the name given to various fibers and parts of fibers combed from scoured wool, such as short fibers, knots, broken fleeces and tangled fibers. They are usually used in making woolen clothing goods by carding and mixing with longer fibers. "Waste," or as usually known "ring waste," is the name given a certain kind of wool imported into the United States so as to avoid paying the heavy duty imposed on the same class of wool in good condition or ready for immediate use. It is manufactured in France and Belgium, where it is known as couronnes—crowns or rings. It is bought almost, if not entirely, by exporters for shipment to the United States. It is a highly purified scoured wool, composed of wool tops or comb wool, but when not made for export it is the tangled slubbing or wool top that, through accident, becomes disarranged in the process of spinning it into yarn. By avoiding the full extent of the duty on the wool in calling it "ring waste" the mills secure at a lower cost a highly purified class of wool to be used in the manufacture of cassimeres. In being made from wool tops, it is considered the cream of the wool, by reason of having had the short and broken fibers or bottom combed from it by machinery used for the purpose. American manufacturers treat it to a steam bath, which opens the crown or rings, when it is at once ready for the carding machines.

California, like Texas, only had the coarse-wooled inferior Mexican breed of sheep in the earlier days of its history, and even these were not held in large numbers. Oregon, on the contrary, had graded sheep which were brought across the plains by the earlier emigrants. The sheep in Oregon degenerated to a very great extent by inbreeding and neglect, so that the bulk of the wool became more or less coarse and poor, with a large sprinkling of hairs, but with renewed attention to breeding by importing fine full-blood merino rams, the grade of wool has been raised, with that from the more favored localities fetching high prices, fully as much as the fancy clips in this State fetch. The demand from 1850 to 1852 in this State became so large for sheep, principally for mutton, that it became necessary to import in increased numbers. This demand was met by New Mexico, which sent us in 1852 about 40,000 head, in 1853 135,000, in 1854 27,000, in 1855, 19,000, in 1856 200,000, and in 1857 130,000. In 1858 the trade was shut off by an Indian outbreak. The breed of sheep brought from New Mexico was improved with the happiest result by importing Spanish merino rams from Missouri, Illinois and Ohio. The grade of wool by crossing with merino was not only improved in quality, but made heavier, for the fleeces were raised from, on an average, one pound each to two pounds and over for the poorer grades, to over three pounds to the fleeces for the half-breed merinos, and to over four pounds to those above half-breeds. While the most of our growers have bred to merino rams, others again have crossed with the Cotswold, Leicester, Shropshire and Lincolns to get a longer wool and a better carcass. It is not the writer's purpose to discuss the merits of the different breeds introduced and bred in California, for there can be no doubt much depends on the soil, feed and climate, which in this State are of many kinds, varying according to locality. While not disposed to discuss their relative merits, yet experience has demonstrated that, taken as a whole, the best breed adapted to the State is those bred up to three-fourths merino, the grades above that, it is claimed, are less hardy. In California there appears to be a strong growing tendency in all directions to make crosses that will give a first-class grade of wool and at the same time a large, well-formed carcass for mutton. It is asserted that by crossing the merino with the Cotswold and Leicester, for the first generation, the mutton will equal in quality the Southdown, while the wool is superior to the Cotswold. To breed beyond the first generation in that direction has not, so far as I know, proven a success. Baechtel Bros. in this State, it is said, have recently successfully experimented in crossing the merinos with the Downs. It is said that by this cross they have secured a breed with a larger carcass and more wool than the former.

In view of the more general desire to breed for the carcass as well as for wool, some sheep-growers have begun to carry out in practice their advocacy of the theory that by feeding, merinos can be improved so as to equal the very best mutton sheep. Their theory is that merinos are poorly fed, and, when young, kept lean, which makes it difficult to fatten them when mature sheep, while the mutton stocks have been fed as well as bred to their superior capacity for taking on fat. In this direction they point to the success attending the feeding of Leicesters. It will only take a few years to thoroughly test the theory, and if successful, they will greatly increase the value of the merinos to the farmer, for in times of wool depression he can find a good market for his mutton.

In early days there was quite a rivalry be-

tween the breeders of fine bucks. The leading contestants for the topmost rounds were J. B. Hoyt, Col. W. W. Hollister, Flint & Bixby and two or three others whose names the writer cannot now recall. Although the latter bred chiefly for use in their own flocks, yet they at times sold off some of their bucks. The highest price paid for a buck was, if my memory does not fail me, \$10,000. The ram was known as "Abe Lincoln" and bred from the best imported Vermont breed of merinos. At one time there was considerable discussion regarding the relative merits of the French and Spanish merinos, each having warm friends among growers. Of necessity, more attention was given to breeding for the best grades of wools by the building of woolen factories, the first of any importance being the Mission Woolen-Mills, which was soon followed by the building

mand on this coast and also in the Central States. In order to meet the trade call, several additions have been made to the building and machinery. Outside of this, the manufacture of woolen goods of late years has not been a financial success, as witnessed in the rapid depreciation in the value of stock in the woolen-mills. At one time that of the Pioneer Woolen-Mills, which was consolidated with the Mission Woolens, sold for over \$1000 a share, but within the past three years sold below \$100 a share, and that, too, after the payment of a \$50-per-share assessment. Various reasons are assigned for the depreciation in the value of the stock, the leading being the close competition with the East for the trade of this coast since the building of the overland railroads, higher cost of labor and few manufacturers of ready-made clothing and underwear, owing to

in the sewing of the belt, and the ties are knotted with careless grace about half-way down the left side of the skirt near the front.

The over-dress has long coat-tail backs and short fronts. The waistcoat is formed of surplice portions of armure arranged upon closely-fitted fronts of lining, over which are placed outside jacket or ornamental fronts that are shaped by single bust darts. The jacket fronts roll back above the bust in large Directoire revers that are faced with velvet, and below the revers the front edges are followed by a row of Persian band. The surplice portions cross in the usual way, and their lower ends pass under a broad Directoire girdle of velvet. Persian bands overlie the exposed portions of the fronts, and the high standing collar is concealed beneath a band of the same. The remainder of the adjustment is performed by under-arm and side-back gores and a well-curved center seam. Below the waist-line of the side-back seams is allowed extra fullness, which is disposed in forward-turning plaits; and the center seam is discontinued at the top of coat-laps. A pocket-lap of velvet rests on each hip, its upper edge joining the lower edge of the jacket fronts and under-arm gores, and its curved edge falling jauntily upon the skirt. The coat sleeves are each trimmed

Fig. 1—LADIES' DIRECTOIRE COSTUME.

of the Pioneer Woolen Mills, both located in this city. The best of machinery was in use. The blankets and flannels, particularly the blankets, turned out by the factories soon gained them a wide and favored recognition. There can be no doubt but the blankets had no superior either in this country or abroad, while the flannel stood very high, which gained in reputation as the grade of wools improved in quality, and machinery was secured to take out the burs and seeds which grow so rank in many parts of the State. The first successful manufacture of cassimeres on this coast was made at the Oregon City Mills, Oregon City, Oregon. The machinery used for this purpose was of the very best and latest improved and well adapted to turn out any style or pattern desired. Owing to the limited market for the goods on this coast, the woolen company or their agents had the bulk of the cloth made up into ready-made clothing, which found good sale. The first successful manufacturing on a large scale of hosiery and other knit goods on this coast was made by the California Hosiery Co. of Oakland, California. Their goods have met with a good market and a steady increasing de-

the cheapness with which it can be done at the East.

Fashion Notes.

Ladies' Directoire Costume.

FIG. 1.—Chocolate-brown Henrietta cloth, mode-colored armure silk and darker brown velvet are here combined in the costume, with the materials and Kursheedt's Standard Persian bands for trimming. The round, four-gored skirt is entirely concealed by a flat drapery, which is arranged in deep, forward-turning side-plaits at each side of the center of the front as far back as the side-back seams; the drapery is gathered across the top for the remaining distance, descending upon the breadth in waterfall style. The center plaits are each ornamented near the foot with three horizontal strips of Kursheedt's Standard Persian band arranged about their width apart. Long sashes of armure are placed one at each side; their upper ends are plaited and included

Fig. 2 LADIES' STRAW BONNET.

across the front of the wrist with a cuff facing of velvet headed by a strip of Persian trimming, which is met by a folded band of armure that is deepest at the outside of the arm, from which it narrows gracefully to the inside seam.

The mode is a pleasing one for reception or street costumes, and other colors and textures may be handsomely associated in the same way. Embroidered flouncings, bordered goods in either cotton or woolen textures, figured poplins, fancy cashmeres, etc., are especially appropriate for a costume of this description. The sash-ties may be omitted without detracting from the good effect. Sometimes the over-dress will be of a different color from the remainder of the gown.

The *chapeau* is a Directoire shape. The brim is smoothly faced with velvet, and the crown is encircled by a band of the same; ribbon and ostrich plumage complete the tasteful garnitures.

Ladies' Fancy Straw Bonnet.

FIG. 2.—This bonnet, a capote in shape, is made of loops of very yellow braid outlined with fine gold thread. A narrow twist of light-yellow crepe is placed at each side, and just in front the crepe is arranged in a large, massed knot, in which is set a fan of gold embroidery and a bunch of deep-purple violets. At the side, quite low down, is a fancy gold pin shaped like a daisy. The ties are of yellow grosgrain with a narrow edge of gold; they are looped just beneath the chin in a formal bow. If the yellow ribbon is not becoming so close to the face, the ties may be of dark-brown or purple velvet.

Eastern Stanislaus.

EDITORS PRESS:—This 5th day of May, 1889, is a remarkable day in Stanislaus county. We have a rainstorm, an unusual thing in this part of the San Joaquin valley at this time of year. April was dry, and on several consecutive days the temperature was as high as 90°. Much grain was injured past redemption, but this rain may help the late sown. It is difficult at present to say whether or not the gain on the growing crops will equal the loss in newly mown hay. The loss in hay will be heavy, and if the rain does not soon hold up, much heavy grain will fall, as the soft straw is not strong enough to bear up the weight of the heads of wheat now filled. The wind is strong, which will make matters worse. The present is as heavy a rain as we have had this year, and is still pouring down.

This wonderful departure from former seasons will trouble the dreams of our irrigation friends. Four systems of

Canal Irrigation

Have been on foot for some time, namely, the Turlock district, the Modesto district and the Westside district, under the Wright law, and the Oakdale district, under the management of a private corporation.

Except in the Oakdale district, not much has been done, unless to pension engineers and lawyers at immense fees. As to Oakdale, the charges of the engineers are not an exception; about \$2000 has been paid for engineering 12 miles, with one tunnel and ten dug-outs, the rest being nearly level. Six hundred dollars, or 40 days, at \$15 a day, should have accomplished the entire work. But apart from this, the Oakdale canal is being pushed successfully. The Stanislaus river runs west, and the canal follows that direction for 12 miles, two miles of which at the east end, and three miles at the west end, are completed. Work is partially suspended now, but will be resumed early in the autumn, and the canal will be finished in time to use water for the spring of 1890. Land is already rising in value in consequence of this enterprise.

This canal reaches from Knight's Ferry to Oakdale, and will irrigate a large portion of the adjacent country.

Oakdale

Is a town of about 1500 inhabitants, situated at the south end of the Stockton & Visalia railroad. The distance to Stockton is 36 miles. Much freight is brought here by rail, and taken from here to the mines in the mountains by wagons. This trade and the wheat and wool trade constitute the principal business. Oakdale is bound to develop now that the canal is a certainty. The country around is level and well adapted for raising fruit. Oakdale is the second town in size in the county, Modesto alone being larger. The crops around this place have so far promised an abundant yield, though this storm may prove disastrous. You will probably know the result by telegraph before this is published. Our county depends largely on the wheat crop, and when that is a failure everybody gets the blues.

S. B. McCORMICK.

Oakdale, May 5, 1889.

A Noble Tribute.

[Private.]

March 15, 1889.

MESSRS. DEWEY & CO., S. F.:—Please stop the Rural Press from the present date—not that we do not want the paper, but to ask you to repeat the past we cannot do. As we have done our best by you, we can do no more. I think I have taken the paper 17 or 18 years. Three times I have been delinquent two years or near that. For nearly five years I have not been able to work. We have 11 children living; have lost several crops in the last ten years. The last two crops were failures. With all this, it has not been an easy matter to do even as well as we have done.

You have all your money for the paper, but you lost the use of part of it for a while. We regret to give up the Rural, even for the present, but we must have it as soon as we can send the money. Long live the Rural! All this after mature thought.

R. S. E.

[Now that it has rained, we think our friend will allow us to send the Rural a while longer. We shall forward it any way, and shall never have other than good words and kind feelings for him and his large family, the children of which we hope will grow up in honor and prosperity, and all receive at least some lasting benefit from our paper.—EDS.]

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

DISTRICT FAIR.—A dispatch from Susanville, May 6th, announces that the fair for the 11th Agricultural District this year will be held at Quincy, Sept. 23d to 26th, inclusive.

The Cassidy Drier.

We give herewith an engraving which shows the general style and method of operation of the Cassidy Drier, the invention of an experienced and well-known fruitman, J. W. Cassidy of Petaluma. Mr. Cassidy has given practical attention to fruit-driers for a number of years, and the style now being manufactured by the Petaluma Incubator Co. represents his latest experience in the way of improvements. The improvements to which he attaches most importance are the tubular heater, so constructed that there are 14 two-inch tubes which pass through the fire in the inside of the outside plates of the stove and throw a current of heated air much superior to that generated on the outside of the fire-box, and claimed to save

proper machinery to the top, where it is taken out at the upper door.

Those desiring full information concerning the drier should write to J. W. Cassidy or to the Petaluma Incubator Co. of Petaluma for their descriptive circular, which goes quite fully into details concerning the apparatus.

RABBIT REPELLENT.—The Wheatland Four Corners gives the following directions for the use of blood to prevent rabbits from gnawing trees: Procure a bucketful, or as much as is needed, of warm blood. Stir it incessantly until it cools, which will leave it free from clots, and by means of a brush or swab apply the blood to the sides of the tree. The presence of blood is very abhorrent to Bunny, consequently the tree, like the homes of the Israelites in

CASSIDY'S PETALUMA FRUIT DRIER.

from one-third to one-half of the fuel. Another improvement is the air distributor, seen in the cut, between the heater and the fruit. When in motion, the heated air is forced and equally distributed through the chamber. If the fruit placed on the trays is of a uniform thickness, same ripeness, and has the same amount of juice, it will dry evenly. Another improvement is the petroleum heater. It can be controlled as easily as a person can control a gas jet. The illustration shows how gas is manufactured from petroleum. On top of fire-box is a steam boiler. The steam from the boiler is conducted through a pipe to the door of the fire-box; there it connects with the petroleum pipe. The steam vaporizes the petroleum and forms gas which makes an intense heat, superior to any other known fuel. The heat that the boiler would contain in connection with the heater would be sufficient to keep up a strong heat through the night.

The engraving also shows the drying chamber with a portion of the shell broken away, and furnishes an explanation of its construction. The chamber is made of any desired height or diameter, to suit the operator. The fruit is admitted at the lower door and moved upward by

the Scripture, "will be passed over and saved from scourge." It is not necessary to cover the whole body of the tree, as the smell of the rabbit is very acute. A dab the size of a half-dollar will suffice.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or of some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

RUNNING TRAINS THROUGH A TREE.—The S. F. Post mentions a proposition so to change the roadbed of N. P. C. R. R. above Duncan's Mills as to run its track through a trunk of one of the large redwoods. Patrons along the road have petitioned the company to carry out the idea. It is proposed that the high stump of one of the giants be tunneled. Prof. John Knowlton and a number of the company's representatives went up the road recently and selected a tree 16 feet above the present level of the road, and 17 feet in diameter.

ENORMOUS FORTUNES.

Notwithstanding the enormous fortunes accumulated through the use of printers' ink, large sums of money are annually wasted in ineffectual and unremunerative advertising.

The merits of a really valuable commodity properly portrayed in the columns of an influential and widely-read newspaper, like the Pacific Rural Press, will speedily become generally known and appreciated, while the returns reaped by the advertiser will be like those of the wise husbandman who "planted seed in good ground, wherein it bore fruit and brought forth, some a hundred-fold, some sixty, some thirty."

The wording of an advertisement is an all-important matter.

Clearness, attractiveness, brevity and sincerity must characterize any announcement intended to catch the public eye and appeal to public confidence. An advertisement inserted in a London journal a few days ago brought instant and multitudinous replies accompanied by an almost unlimited supply of bank notes, simply because it touched the chord of nature which makes all mankind akin. Its simple pathos and self-evident truthfulness appealed to every heart.

The advertiser sought for a lost relative, and giving his name, said: "I am ill and 'friendless.' My last half-crown is expended in paying for this advertisement. Write me at"—(giving the address). As already stated, nearly every one who read the announcement hastened to relieve the necessities of the sufferer—a real sufferer in this case, though many swindles are perpetrated in the divine name of charity.

Thus it is with a really meritorious commodity or preparation; if its virtues be properly and truthfully set forth in the public press, its success is prompt and certain.

On the other hand, the public is quick and unerring to detect deception and charlatanism; and, accordingly, no amount of "puffery" will force a vile nostrum into public esteem and patronage. Untold sums have been sunk in vain efforts to advertise into popularity so-called medical preparations which did not possess the virtues or properties claimed for them.

Valuable medicines, however, like Warner's Safe Cure and Warner's Log Cabin Sarsaparilla, carry their own best commendation in their power to cure the particular diseases for which they are a specific.

They require no labored panegyric to convince the people of their power and efficacy, for they have been tried and found perfect.

Nature's remedies, by their own intrinsic merits, have conferred a lasting boon upon mankind, and they have secured an enviable reputation and unlimited sale throughout the civilized world.

Injurious Insects of the Orchard, Vineyard, Field, Garden, Conservatory, etc.,

Remedies for their Extermination.

By MATTHEW COOKE.

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 26 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price \$4, postpaid. For sale by Dewar & Co., publishers, 220 Market St., San Francisco.

Wanted.

Pure and sound OLIVE OIL in bulk. State price and quantity. SUMNER, Box 2517, San Francisco.

Sorghum and Sugar Machinery.

We are in receipt of the Catalogue of The Blymyer Iron Works Co., manufacturers of the celebrated Victor, Niles and Great Western Cane Mills, Cook Evaporators, etc. Parties in want of Sorghum or Sugar Machinery will do well to write for a copy of the Catalogue.

ALWAYS USE THE BEST.

It is the Purest.
It is the Strongest.
It is Free from Lime and Pan Scales.
It contains No Insoluble Matter.
It requires No Sifting, as the Grain is very Uniform, and every Ounce can be Used.

Five pounds of HOLMES' Extra Sifted SALT is enough for 100 pounds of Butter. The quantity of Table Salt used in a family is small. Why Risk Health and Spoiling Butter by using ordinary Salt, when the extra cost of using Holmes' Extra Sifted Salt is so small? Ask your Grocer for it.

A RARE BARGAIN!

The undersigned offers for sale, on good terms, his **CONCRETE BLOCK FACTORY** of 300 acres, situated on Squirrel Creek, 2 miles west of Grays Valley. It is well watered by springs and has excellent irrigation facilities. commodious farm buildings, orchard of 150 trees and 6 acres of vineyard. A fine herd of Holstein, Ayrshire, Jersey, and Durham (thoroughbred and grade) cattle for sale with or without the ranch. Holstein and Ayrshire premium bulls on lowest terms, including "Tehama," which, on account of kinship to the herd, can no longer be used in breeding. A good dairy route is also included in this offer.

H. B. NICHOLS, Proprietor.

FOR \$5000.

A Ranch in El Dorado county, near Placerville, contains 100 acres, nearly all fenced in with a four-strand barbed wire fence, a good house of 11 rooms, hard finished, two brick chimneys, cut stone basement with cut stone steps, a good barn and stable, chicken house, work shop and other out-houses, a good well of water, one water ditch for the land, 1000 fruit trees, all in bearing, Peach, Apple, Fig and Cherries, 1000 Grapevines; 80 acres cleared and ready for the plow, all nearly level; about 25 acres woodland, pines, etc., all of which can be cleared; three cows and two calves. The Ranch is five miles from Coloma and nine miles from Placerville. The soil is a red loam, the house stands on the county road and the stage passes it twice every day. A span of horses, a new harness and wagon, plow, harrow and other farming utensils to be given with the Ranch. The Title, U. S. Patent. For further information address, "RANCH," Box 2361, San Francisco, or care of Illustrated Publishing Co., 220 Market St., S. F.

An Unusual Incident.

Last Tuesday our office was visited by George Elisha Church, late of Dayton, Washington Territory, but now a resident of Oakland. He claims he has been under spirit control since '62, when, attempting to speak in a Methodist church at Elgin, Ill., the "spirit" rebuked two members who had quarreled at the noonday class-meeting. For three years the Press had been sent to him in Washington Territory, but he had a wife and six children and found it hard to keep the wolf from the door. He claimed that the "voice" told him that morning to get on the boat, come here and pay the bill. He is a "Bible Spiritualist" like Mrs. Eddy Glover, and contends that everything in the Bible is true but written under the same sort of influence as that which controls him. He had the misfortune to be sent to the asylum for the insane at Steilacoom, Washington Territory, by two doctors, but as three others pronounced him sane he was discharged in four days. "By their fruits ye shall know them." If more delinquent subscribers were as effectually under control as Mr. Church, it would make us appreciate the silent regulators of men. What makes this case more remarkable is the fact that the bill had been owing so long, as it ran back to 1866.

Thanks to Mr. Church; also to those who have paid up old bills through the honesty of their hearts and the good sensations and lingering satisfaction of paying an honest debt. We want to thank many more soon (under the control of spirits, honest impulse of their better natures, fear of the opinions of honest neighbors, the law, or any other good influence) for paying up long-delinquent bills.

Petaluma and Vicinity.

[Written for the Rural Press by J. C. H.]

A Rural reporter made a flying trip to Petaluma one day last week. There is quite a stir and local interest taken in the proposed railroad from Petaluma to Sebastopol and the redwoods on Russian River. Resident capitalists in this section have paid in \$10,000, it being ten per cent of amount subscribed, and one of the several surveys adopted.

The Petaluma race-track has been re-covered with coating of earth and put in first class condition at a cost of over \$1000. It is the opinion of expert horsemen that it is now equal to any, if not the best, race-track in the State. President White, Directors Crane, Page, Whitney and several leading citizens, inspected the race-track and feel well satisfied with the work and improvements made. It is anticipated that the coming district fair will be one of the best ever held.

The Petaluma Incubator Co. had a large force of skilled workmen employed in manufacturing incubators and the Cassidy fruit-drier.

W. H. Worth, proprietor of the Petaluma foundry, has blocked out 40 of Worth's patent combined toggle lever and screw wine and cider presses, as also a number of Worth's grape elevators and Worth's Improved grape-stemmers and crushers to meet the demand for this season, a large number of orders for which are already in.

The agricultural dealers report a good demand for farm machinery, and this section seems to be in a highly prosperous condition.

New Books.

YOSEMITE AND OTHER POEMS.—We have received from the authoress, Jean Bruce Washburn, a volume of verse entitled "Yosemite and other poems." The home of the authoress is at the Wawona hotel, Clarks, on the way to the far-famed valley, and, living among such grand surroundings, she seems to have become imbued with the beauty, spirit and traditions of the mountains.

THE STORY OF LAULI, A DAUGHTER OF SAMOA. We duly acknowledge the receipt of a complimentary copy of "The Story of Lauli, a Daughter of Samoa," written by herself and edited by Wm. H. Barnes. The story makes a handsome volume, "giving the life, manners and customs of the islanders, peculiarities of the race, games, amusements, incidents of many kinds, and matters of interest in connection with the Samoan people." The interest attached to these islands by reason of the events which lately transpired there, make this a timely publication, furnishing information which everybody wants to know. For sale by subscription. A. A. Willis, husband of Lauli, No. 320 Pine street, S. F., is the publisher. Winterburn & Co., S. F., the printers, have made a creditable appearing volume for public favor.

THE Mount Shasta District Society will hold a fair in Yreka, commencing Oct. 2d and continuing four days.

THE STABLE.

The P. C. T. H. B. Association.

Wilfred Page of Penn's Grove, Sonoma county, secretary of the Pacific Coast Trotting-Horse Breeders' Association, has issued the following circular:

At the meeting held April 19, 1889, the following Board of Directors was elected:

J. H. White, P. O., Lakeville, Cal., president; N. T. Smith, San Francisco, treasurer. Directors—W. S. Hobart, San Francisco; R. T. Carroll, San Francisco; L. J. Rose, Los Angeles; L. U. Shippee, Stockton; M. Salisbury, Pleasanton; H. M. Larue, Sacramento; F. L. Coombs, Napa; D. J. Murphy, San Jose; L. H. McIntosh, Chico.

As soon as the breeders, owners, etc., from other States or Territories on the Pacific Coast join the association, they will be given representation on the board. The membership fee has been fixed at \$25; the annual dues at \$5.

The Board of Directors have been authorized to hold a meeting at such time and place as they may select during the fall, and to give such stallion and colt stakes and purses as they may deem expedient.

It has also been authorized to grant any member who may donate the sum of \$300 or over, toward making up said purses or stakes, the privilege of naming one of the same, provided, that the name selected meet with the approval of the said board.

No horses or colts bred or owned on the Pacific Coast shall be eligible to stakes or purses given by the association, unless the owners thereof be members of the P. C. T. H. B. A.

Colts bred and owned outside of the limits named shall be eligible thereto without the requirement of membership on the part of their owners.

The Pacific Coast shall be interpreted to include all such States and Territories as lie in whole, or in part, west of the Rocky Mountains.

You are earnestly invited to become a member of the association, and thereby to further the interests of all trotting-horse breeders and owners, and of the trotting turf of this coast.

It is not necessary, in order to be entitled to membership, that the applicant be a breeder or owner; admirers and lovers of the trotting horse, and patrons of the trotting turf who are desirous of its encouragement, perpetuation and elevation, will be made welcome to membership in the P. C. T. H. B. A. The membership fee, \$25, is now due and should be remitted to the secretary, either by draft, payable at San Francisco, or by postoffice or Wells-Fargo money order, payable at Petaluma, Cal.

Other Floral Fairs.

A pleasant epidemic of flower festivals has prevailed these three weeks here in the Golden State. Besides the one at Los Angeles, so faithfully depicted by an eye-witness in our last issue, the San Diego ladies made a like display for five successive April nights, clearing about \$1100 for three sister charities—the Woman's Industrial Home, the Woman's Exchange and the Day Nursery. Floral fairs more or less elaborate have busied benevolent hands and delighted appreciative eyes and nostrils in San Jacinto, San Bernardino, Ontario, Pomona, Santa Ana, Sacramento, Dixon, St. Helena, Santa Rosa, Healdsburg, Ukiah, Oakland and Alameda. The ladies of the Horticultural Hall Association at San Jose are doubtless opening theirs as we go to press Wednesday evening. The S. F. Woman's Exchange has already held one here this season, and we elsewhere give a somewhat extended announcement of what the State Floral Society has in store for the coming week.

CARP AND CATFISH.—The Dixon Tribune doubts if the Fish Commissioners have benefited California. "They introduced the catfish, which have multiplied so fast and are so voracious that they have driven many other kinds of the best food fish out of the waters of the State. They also introduced carp, a species of fish that are a network of bones and as tasteless and unpalatable as sawdust, and these fish have multiplied until now the Sacramento, its tributaries and the adjacent marshes are literally alive with them."

THE HATCH-ARMSTRONG FRUIT & NUT CO. has filed articles of incorporation. Its objects are to purchase real estate, to produce, sell and export fruits, nuts, vines, trees, grain and other productions of the soil, and to produce and deal in wines and brandies. The corporation is to exist for 50 years. Capital, \$320,000, divided into 3200 shares worth \$100 each. The amount actually subscribed is five shares, one each by the following trustees: A. T. Hatch of Solano county, Herman Zadig, Frank Dalton and Frank McMullen of this city, and Elbert Armstrong of Hamilton, Ohio.

POOR SHADE TREES.—The Bakersfield Californian thinks a great mistake is made in planting such trees as the willow, cottonwood and poplar. They are cheap and grow rapidly, but there their good qualities end. They are infested by obnoxious insects which are destructive to the fruit trees and vineyards. Their roots are enormous feeders and stretch out in all possible directions to the detriment of all plant-life in their vicinity.

QUERIES AND REPLIES.

Green Whitewash.

EDITORS PRESS:—Please ask your numerous readers if they know of any receipt for making a lime-wash (whitewash) with a pale green tint. I have often seen barns and other out-buildings washed in this manner. It is much better than the common whitewash for our hot, sunny climate, because it is not so glistening and trying to the eyes.

Lime washes are wonderful preservers of wood-work, have a clean look and are much more healthy for stock than bare boards, and ought to be more generally adopted than they are. From a sanitary point of view, lime is infinitely superior to paint.—T. H. BURGOYNE, Cummings, Mendocino Co., Filberts.

EDITORS PRESS:—In a recent issue of your valuable paper I saw some inquiry regarding the planting and germination of filberts. Upon this subject I have nothing further to add. But I would strongly advise your correspondent who is about to go into nut culture to obtain the filbert known as "The Kent Cob Nut." It is a much larger nut than the ordinary English filbert and very superior in point of quality. It is in fact the very finest variety of filbert known, and in England brings from 20 to 30 per cent more per pound in the open market than any other. The usual retail price of this nut there is from 20 to 30 cents per pound, viz.: 1 rod. to 1s. 3d. —T. H. BURGOYNE, Cummings.

The variety mentioned was introduced some time ago by Leonard Cates of Napa, and Felix Gillet of Nevada City has introduced the best kinds from the continent of Europe.

Alfalfa on Upland.

EDITORS PRESS:—I would like to ask those of your subscribers who have grown alfalfa on hill or upland to please give their experience through the Press as to the profitability of the same. And does the plant need as much water as some suppose?—L. B. CADWELL, Carpinteria.

SERPENTS' FANGS.—The "sting" of snakes is neither in the tail nor the tongue. The death-dealing organs are the great poison-fangs. The fatal wound is a bite and not a sting. And among all the special modifications of snake-structure, none is more remarkable than the development of the poison-fang. In the harmless snakes there is a longish bone on each side of the upper jaw, which may be armed with a dozen teeth or more. But in the vipers this bone is shortened to a wedge, which bears only one great fang, though behind it there may be two or three reserve fangs, one of which will rapidly become attached to the bone should the poison tooth in use be broken. In all snakes the jawbones are but loosely attached to the brain case. But in the vipers this fang-bearing bone is so hinged to its neighbor's that, when the creature is not roused, the poison tooth can be laid back in the mouth and protected by a fold of skin. Should the creature, however, be enraged, and the mouth be opened widely, its poison-fangs may be separately or simultaneously erected so as to stand out at right angles to the jaw. In the less-developed venomous snakes the curved fang is grooved along its anterior margin; but in the cobras the groove has sunk so deep into the fang that it only opens by a narrow slit, while in the vipers and the ring-hals even this slit has closed and there is a complete canal running from the base of the tooth to a slit-like orifice near but not quite at the point. Into this canal at its lower end opens the duct of the poison gland, a deadly modification of a harmless salivary gland. In a fair-sized puff adder I dissected, this was about as large as a bean. About half a dram of clear, gummy poison may be collected from a fresh and vigorous cobra.—Murray's Magazine.

QUEER ORIGIN OF A FIRE.—Mr. J. T. Walker of Ignacio valley lately lost his best barn (worth, with the feed it held, about \$1000) in a singular way. It appears he had a smokeroom in the structure. A piece of meat directly above the fire with which the smoking was being done fell into it. The fire flared up and ignited the other meat hanging from the ceiling, the barn was soon in flames, and it took hard work to save the adjacent buildings.

A RARE RETURN FROM POULTRY.—The Gridley Herald tells how a citizen of that place lately bought a chicken, which his wife began to prepare for their dinner. While dressing it she found what she supposed to be a piece of glass in its craw. Her husband thought otherwise and sent the crystal to San Francisco. It proved to be a first-water diamond, and one of the leading jewelers of the Bay City purchased it for \$185.

SORGHUM EXPERIMENTS.—Chemist Wiley of the Agricultural Department left Washington the 5th inst. to select sites for experiments in growing and manufacturing sorghum. He expects to establish stations at Rio Grande, New Jersey; Kenner, La.; Cedar Falls, Iowa; and at Sterling and other points in Kansas. Last week he established a station in Maryland, on the grounds of the Maryland Agricultural College. He is sanguine of successful results.

THE GREAT CHANCE to buy work horses, draft colts and fillies, thoroughbred Angus and Holstein cattle, farm machinery, etc., afforded by F. H. Burke's auction sale on the 18th, should not be neglected. Further particulars may be learned from the advertisement on another page.

401,867.—WINDMILL—Geo. P. Thurston, S. F.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

THE CALIFORNIA CANNED GOODS ASSOCIATION has instructed its committee, appointed April 27th, to ask the Transcontinental Association to grant the California fruit-packers the following rates: 80 cents to the Missouri river and tributary points, 90 cents to Chicago and \$1 to New York. The committee has selected J. K. Armsby of Chicago to represent the fruit interests of this State at the Transcontinental Association's meeting.

CATTLE FROM COOK FARM AT AUCTION.—The executor's sale of Galloway, Polled Angus, Devon, and other cattle, advertised by Killip & Co. to take place at the Bay District track next Thursday, bids fair to attract a throng of intelligent breeders who will desire to improve such an opportunity.

A PERMANENT exposition of the products of Southern California in Los Angeles has been fully decided upon, and a building will probably be erected for the purpose.

BAD eggs used at an egg-nog party at Philadelphia caused the death of one lady and violent illness of eight other people.

Inducements to Subscribers.

SHEEP MEN, ATTENTION!

ADMINISTRATOR'S SALE

By order of Probate Court, in the matter of the Estate of JAMES ROBERTS, Deceased.

I will sell at private sale to the highest bidder, for cash, on or after May 1, 1889, at the Ranch in Irvington, or at my office in Oakland, 946 Broadway, Alameda Co., Cal., the entire flock of Thoroughbred French Merino Sheep, consisting of 280 (Two hundred and eighty) Ewes, 79 (seventy-nine) Bucks, and 180 (one hundred and eighty) Lambs. These Sheep are the get of the original flock imported by Robert Blacow of Centerville. Mr. Roberts, as foreman, having charge of the flock for several years prior to Mr. Blacow's death, after which he became the owner of the entire flock, which he has kept purely for stock purposes.

All interested in Thoroughbred Sheep should be familiar with this flock, which has become famous under the care and management of Mr. Roberts; always receiving first premiums, having been sold to Europe, South America, and all parts of the United States; individual members having repeatedly sold for from \$500 (five hundred) to \$1500 (fifteen hundred) each. Sheep Men should seize this opportunity to secure some, as they must be sold to settle up the Estate. Address, JAMES STANLEY, Administrator Estate J. Roberts, Deceased, Mission San Jose, or 946 Broadway, Room 17, Oakland, Cal.

THOROUGHBRED SPANISH MERINO SHEEP.

Have taken the First Premiums at the State Fair for the last three years.

S. H. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, May 8, 1888.

General trade in country produce was interrupted by rains, but at the close it is improving under clearer skies and a promise of fair weather. The rains have been of inestimable benefit to all growing crops, but, as usual, some injury in a few sections was done. The wheat market at the East and abroad has eased off under good crop weather and heavy offerings. The following is to-day's cablegram:

LIVERPOOL, May 8.—Wheat—Firmly held. California spot lots, 6s 9½d to 7s 1½d; off coast, 34s 6d to 34s 9d; just shipped, 34s 6d; nearly due, 34s 9d; cargoes off coast, quiet but steady; on passage, quiet; Mark Lane wheat, quiet; French country markets, steady; wheat in Paris, quiet; flour, steady.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	May.	June.	July.	Aug.	Sept.	Oct.
Thursday.....	78½d	78½d	78½d	78½d	78½d	78½d
Friday.....	78½d	78½d	78½d	78½d	78½d	78½d
Saturday.....	78½d	78½d	78½d	78½d	78½d	78½d
Sunday.....	78½d	78½d	78½d	78½d	78½d	78½d
Tuesday.....	78½d	78½d	78½d	78½d	78½d	78½d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	35-6d	35-6d	35-6d	Dearest.
Friday.....	35-6d	35-6d	35-6d	Dearest.
Saturday.....	35-6d	35-6d	35-6d	Dearest.
Sunday.....	35-6d	35-6d	35-6d	Dearest.
Tuesday.....	35-6d	35-6d	35-6d	Dearest.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

Day.	May.	June.	July.	Aug.
Thursday.....	82½	82½	82½	82½
Friday.....	82½	82½	82½	82½
Saturday.....	82½	82½	82½	82½
Sunday.....	82½	82½	82½	82½
Tuesday.....	82½	82½	82½	82½

The closing prices for wheat have been as follows, at Chicago for the past week:

Day.	May.	June.	July.	Aug.
Thursday.....	78½	78½	78½	78½
Friday.....	78½	78½	78½	78½
Saturday.....	78½	78½	78½	78½
Sunday.....	78½	78½	78½	78½
Tuesday.....	78½	78½	78½	78½

NEW YORK, May 8.—Wheat—84½c for cash, 84½c for May, 84½c for June, 85½c for July and 85½c for August.

CHICAGO, May 8.—Wheat—84c for cash, 84c for May, 84½c for June and 85½c for July.

Foreign Grain Review.

LONDON, May 6.—The *Mark Lane Express*, in its weekly review of the British grain trade, says: English wheat is steady. Foreign wheat is stronger. Russian has advanced 6d. Flour is firmer under lessened stocks at London and Liverpool. The prices of barley and oats are maintained. Corn is weaker. At to-day's market there was a slack demand for wheat. English was 6d lower. Foreign was rather weaker. Fair Californian and fine Russian were steady.

Eastern Wool Markets.

NEW YORK, May 5.—The short week developed trade enough in wool to indicate the tone of quotations. Business is quiet. Manufacturers will not purchase freely between clips, especially when holders offer no tempting inducement. Here and eastward the market sounds stronger than last week, as very full prices are named for all desirable lines, probably with deference to some support reported obtained by interior dealers locally. Sales of 10,000 lbs. scoured, 3000 X California, 59c; 15,000 fine de-laine, 35½c; half-blood, 36½c; 20,000 double X, 34½c; 15,000 fine unwashed, 21c; 5000 Territory, 21c; 9000 domestic, 12½c foreign and 143 bags ditto on private terms. Philadelphia reports a featureless market, including 66,000 lbs. California spring at 12½c. Boston's sales were 2,187,000 lbs. domestic and foreign, about one-half of the latter.

Miscellaneous.

NEW YORK, May 5.—Hides are neglected, but unchanged.

Limas are firm at 33.15. Large prunes are in good demand; small are low, as they compete with cheap Turkish. The range is 5½c to 11c.

The best grades of raisins are active at \$2.10; 3-crown layers, \$2.40. No demand whatever for common.

Hops are without large business, but maintain very full prices. Best new State, 22@23c; good to prime, 19@21c; common to fair, 15@18c; best new Pacific, 20@21c; prime, 18c; common to fair, 13@15c; all olds, 3@10c. The exports of the season to date are 54,000.

Local Markets.

	S. S.	R. S.	B. S.	'89.	'88.	Dec.

	Buyer Season.	Seller 1888.	Buyer 1889.
Thursday.....	60½	60½	60½
Friday.....	60½	60½	60½
Saturday.....	60½	60½	60½
Sunday.....	60½	60½	60½
Tuesday.....	60½	60½	60½

BAGS—The market for Calcuttas shows a stronger tone at 7½c for spot, 8 to 8½c for June, and

8½ to 8¾ for July. Some holders ask more money than the above quotations.

BARLEY—The market gained in strength under a report of damage to the crops, but heavy receipts soon broke values, closing the market weak and in buyers' favor. On Call, more trading was done in futures. The following are the reported sales made to-day:

Morning Session: Buyer 1889—1000 tons, 80½c; 800, 80½c. Buyer season—100 tons, 64½c. Seller 1889, new—100 tons, 72½c cwt. Afternoon Session: Buyer 1889—300 tons, 80½c; 100, 80½c. Buyer season—500 tons, 64½c cwt.

BUTTER—Receipts the past week were heavy, yet the market stood up well, even gaining a fraction for gilt-edged. Considerable is going into brine, more than was packed last season. The outlook is not favorable for an immediate improvement in values, owing to the close competition of Eastern creameries for trade that naturally belongs to this city.

CHEESE—Heavy receipts have caused another decline in prices, with a weak tone at the close.

EGGS—The market is stronger, owing to smaller receipts and a continued good demand. With better roads, farmers' deliveries are expected to be larger, when a shading in values is not at all unlikely to set in.

FLOUR—Trade is very dull. The market is unchanged.

WHEAT—The rains interfered with trading, and at the close lower cablegrams cause buyers to bid down. Offerings are very light, which cause exporters not to bid for their wants for fear of raising values. In futures, trading the past week was quiet, with a general bearish feeling reported. The following are the reported sales made on to-day's Call:

Morning Session: Buyer 1889—900 tons, \$1.36½; 600, \$1.36½. Buyer season—100 tons, \$1.33½; 400, \$1.33½ cwt. Afternoon Session: Buyer 1889—500 tons, \$1.36½; 600, \$1.36½; 200, \$1.36½. Buyer 1889, after August 1st—100 tons, \$1.33½; 1300, \$1.33; 1700, \$1.33½ cwt.

Market Information.

Produce Receipts.

Receipts of produce at this port the past week were as follows:

Flour, qr. sks....	59,266	Middlings, sks....	7,268
Wheat, cts....	267,621	Alfalfa, ".....	"

Cereals.

The London *Agricultural Gazette*, April 22, says: Official reports of the wheat crop in India dated Calcutta, March 22d, are to hand, and the following note appended: "Summarizing very briefly the abstracts above recorded, it may be noted that in the Punjab, northwestern Provinces and Oudh, Bengal, Rajputana, and Central India the extent and quality of the wheat harvest will be quite up to the ordinary standard, and are especially good in the northern portion of the region covered by these Provinces and States. In the Central Provinces, Bombay and Berar, there will be a decided deficit. The condition of other food crops than wheat is sufficiently favorable to lead to an anticipation that no such abnormal demand will be made upon wheat as to interfere with the export trade. A telegram from Melbourne, dated Tuesday, is to the effect that the drought in the colony of Victoria had completely broken up. It is estimated that the colony of New South Wales will require to import 750,000 qrs. of wheat. An advice from Buenos Ayres, dated March 1st, stated that the continued wet weather had prevented any wheat being brought from the west-side for export, to that date. Navigation at Stockholm opened on Monday last. The wheat crops are favorably spoken of in France, Belgium, Holland, Germany and Southern Russia, excepting in the valley of the Don. Favorable weather for spring seeding has also been common over Europe, although the season has been a late one."

The wheat market, the past week, was fairly active up to Monday, when the rains of Saturday, Sunday, and Monday caused both buyers and sellers to hesitate. The general feeling was bearish under unfavorable market reports from the East, and also from abroad, combined with the security felt that the rains would prove of inestimable advantage to all late sown grain, which constitutes the large majority of the acreage seeded to wheat. This, of necessity, refers to the acreage of the State at large and to no one particular locality, for in two counties the early sown and the late sown are about evenly divided. There can be no doubt but many fields of grain wherein the plant had grown rank have been thrown down, which, with a continuance of rain for a few days, will rot or be so injured as to preclude the possibility of cutting for either grain or hay, but the plant on thin soil, or where late sown, will, if the rain is followed by cool weather, turn out a larger yield to the acre than since 1880.

Barley held to steady prices up to Monday, when a slight advance was established. The hardening in prices was due to reports that many fields of the grain had been thrown down, which, owing to its advanced state, farmers will be unable to save. Had it not been for the rains, harvesting would have been commenced on last Monday in the more favored sections.

Heavy receipts of corn have weakened the market for that cereal, making it quite difficult to give correct quotations. The market is governed by the necessities of both buyers and sellers.

Continued heavy receipts have weakened oats, causing some sellers to shade prices so as to place consignments. Crop advices are favorable in this State and Oregon and on Puget sound.

In rye there is nothing new to report. We are drawing our supplies of buckwheat from

the East, owing to last year's crop being exhausted. A leading miller in this city reports that the flour made by him from wheat received from the Willamette valley, Oregon, was poor, and would not raise in baking, consequently Oregon wheat is in disfavor. He attributes the loss of power to raise in baking to the grain having commenced to germinate, but not to such an extent as to be detected by the naked eye.

Mr. Harkinson of Oakland returned yesterday (Tuesday) from Solano, and reports that the summer-fallow grain was down when he left, but the winter grain was O. K. He says that farmers state that if the plant in falling did not crack, it will rise with sunny weather, but where cracked it will remain down. Blum, Baldwin & Girvan of this city report to-day that their advices are to the effect that the fallen grain is rising, and no damage of any consequence is looked for, while great benefit has been done the winter or late sown by the rains.

Fruit.

Rains the past week have been of the greatest benefit to growing fruit crops. Strawberries ripening were injured, but the vines have been greatly benefited, and will in consequence give larger returns than if rain had not fallen. Matured cherries will probably be injured, but growing cherries will be benefited, particularly the varieties used for canning. The same remarks apply to apricots.

Purple apricots were received the past week, and sold at 50 cts. per pound. A shipment was also made to the East.

Oranges continue in free supply. Choice, well-selected good-keepers are readily placed, but poor-keepers and otherwise poor oranges have to be sold for the best figures obtainable. Rains two or three days the past week were against hucksters buying, and many poor oranges had to be sacrificed. In limes and lemons there is nothing of particular interest to report.

Dried fruits are without essential change. The only movement worthy of notice is prunes ranging from 75 up. Selling offers of a month ago are not only bid now but in some instances an advance of fully ½ cent a pound was bid for a carload. They are hard to get.

Raisins are quiet but firmly held, particularly for the more choice, which are in light stock.

At to-day's (Wednesday's) fruit market there was a good shipping demand, which caused the more choice, good-keeping cherries, berries and citrus fruits to strengthen. Choice Navel oranges are very strong under a scarcity.

Feedstuff.

In ground feed there is nothing of special interest to note. The consumption continues light, which is offset, to a great extent, by the lessened production.

Cutting of hay was beginning to be quite general up to Saturday, but the rains have temporarily suspended the work. Reports are current of damage to the hay already cut, which the writer's experience thinks are unduly exaggerated. Unless rains continue for a few days, followed by cloudy weather, the injury to the cut hay will be irreparable, but with clearing weather and sunshine from now on, the greatest injury will be in the color; but this can be brought out by a judicious use of salt in stacking. It is difficult to quote the market correctly, but values will depend very much on later and more reliable crop reports. At this writing both buyers and sellers appear offish.

Live-Stock.

The market for bullocks and mutton sheep does not appear to improve, owing to continued few offers. The rains the past week assure a continuance of natural pasturage which will undoubtedly keep sellers from pressing the market as much as they would with the prospect of seeking new pasturage or else feeding, at an early day. Lambs and calves are unchanged. Hogs are weak, under only a fair demand. Packers claim that prices will rule lower next winter. In horses the movements are slow for all kinds, and reliable quotations hard to give.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, grain fed, 5½@6c lb.; dressed, 8½@9c lb.; soft, 5½@6c lb.; dressed, 8½@9c lb. Stock hogs, 5½@6c lb.

BEEF—Stall fed, 6½@7c lb.; grass fed, extra 6½@7c lb.; first quality, 5½@6c lb.; second quality 4½@5c lb.; third quality, 4½@5c lb.; bulls and thin cows, 2½@3c lb.

VEAL—Small, 7½@8c lb.; large, 6½@7c lb.

MUTTON—Wethers, 5½@6c lb.; ewes, 4½@5c lb.; lambs, spring, 6½@8c lb.

Vegetables.

The receipt of seasonal vegetables was interrupted to some extent by rains the past week, but sufficient were received to keep the market fairly well supplied. The present weather could not have been ordered more advantageously for growing garden truck.

Asparagus, peas, string beans, green corn, cucumbers, and tomatoes were without essential change the past week. Prices were controlled by the daily receipts. It is claimed that with more settled weather and better roads, heavier receipts of seasonal vegetables will be in order.

Receipts of new potatoes the past week were only fair, yet prices did not recover any, probably owing to the low range of values for old. The receipts of the latter were very large, Oregon sending us heavy supplies, much larger than before known at this season of the year.

In root vegetables and cabbages there is nothing new to report.

The receipts of onions the past week were heavy, causing a weaker market.

Wool.

Receipts are heavy and assortments more complete, but it is stated that the rains have interrupted shearing. Shipments the past week via Canadian Pacific Railroad were as follows: 125,214 lbs to New York, 252,713 lbs to Boston, 89,097 lbs to Webster, Mass. To New York via Panama, 32,064 lbs.

The market shows more activity with a slight advance, in two or three instances, paid over the prices of the preceding week for the same grade of wools. Free buying is reported in the interior. Our mail advices from England report a very active and higher market. Referring to the situation, the London *Agricultural Gazette*, April

22, says: The causes for the present high prices both for English as well as Colonial wools, are no far to seek. Since the commencement of the present year trade in every direction has been carried on on a more satisfactory basis, and as usually happen when the iron and coal trades are active, similar animation characterizes the wool and woolen trade. During the past two months the woolen and worsted manufacturers in Yorkshire have undoubtedly been very busy. Full time has had to be worked in most of the factories in order to meet the orders which have poured in upon them from home and Continental buyers, and it is worthy of notice that during the period named there has been but little or no talk indulged in, nor any expression of lament of working at "unremunerative prices."

Miscellaneous.

Poultry has ruled firm throughout the week, under moderate receipts and a good demand.

Beans appear to have a steadier feeling, under lessened receipts. Crop prospects are of the best.

In seeds, there is nothing new to report.

Hops continue strong, under steadily lessening supplies to draw from.

In honey and beeswax there is nothing new to report. New crop honey was received the past week.

The British ship *Dunfellon* cleared yesterday for Liverpool, with a full cargo of California produce, among which were the following: 35,976 gals. brandy, 25,257 lbs. honey, 6437 cases canned fruits, 100 gals. wine. To Ireland, 63 gals. of wine were sent, and 6062 gallons to Switzerland. There was shipped to New York via Panama the past week 25,727 gallons of wine and 485 gals. of brandy.

From the *Commercial News* of May 8, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port.....	205,403	267,712
On the way to neighboring ports.....	33,744	132,853
In port, disengaged.....	16,296	38,165
In port, engaged for wheat.....	36,474	12,271

Totals.....291,917 451,007

To get the carrying capacity, add 60 per cent to the registered tons as given above.

From July 1st to May 7, the following are the exports from this port:

	1889.	1888.
Wheat, cts....	11,450,666	8,034,257
Flour, bbls....	668,602	678,466
Barley, cts....	1,261,534	645,134

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

EXPLANATION.—Cl. for clear; Cy., clou ty; Fr., fair; Fy., foggy; Cm., calm; — indicates too small to measure. Temperature, wind and weather at 12:00 M. (Pacific Standard time) with amount of rainfall in the preceding 24 hours. T indicates trace of rainfall. Observations taken at 5 P. M. instead of 12 M.

Branch House,
261 to 267 Front St., Portland, O.

A NEW METHOD OF PRESERVING MEAT.—Experiments have been recently conducted at the Australasian Wool Stores, Melbourne, with a novel process of meat preservation, introduced into the Colony by Col. House of the United States, where, it is stated, the success of the method has already given rise to a flourishing trade in the exportation of fresh meat from that country. The process, by which flesh of all kinds may be preserved for an almost indefinite period, is exceedingly simple, consisting merely in the steeping of the flesh in a liquid preparation patented as "Beniana," the effect of which is to render the meat entirely unsuceptible of decomposition. By this means meat has been kept in a fresh state for over nine months, exposed to the influences of the atmosphere, and yet at the termination of that time has not shown any effect of the treatment, being in taste hardly distinguishable from the butcher's article. The company were shown samples of pork that had been thus preserved for over eight months, after having been kept in the liquid for less than 60 hours. The samples were declared by all present to be perfectly fresh and devoid of any undesirable effect from their immersion in "Beniana." Although the efficacy of this preparation has been well established in the United States, the patentees have conducted a series of experiments in Victoria, with the object of testing whether the effectiveness of the process was likely to be interfered with by different climatic conditions, but the result of these trials has been perfectly satisfactory. The liquid has been submitted for analysis to the Government analyst, who has certified that it contains no deleterious ingredients likely to prejudice the fitness of the meat for human consumption.

MAKING CELLULOID.—This interesting substance, which masquerades as genuine ivory in the shape of flour-triers, paper-knives, combs, brushes, buttons, etc., as highly finished fourply linen in "dickies," collars and cuffs, and reaches its most striking form in the powerful explosive known as gun-cotton, is manufactured by the following process, according to a description in the *Inventor*: A roll of paper is slowly unwound, and at the same time saturated with a mixture of five parts of sulphuric acid and two parts of nitric acid, which falls upon the paper in a fine spray. This changes the cellulose of the paper into proxylin gun-cotton. The excess of the acid having been expelled by pressure, the paper is washed with plenty of water until all traces of acid have been removed. It is then reduced to a pulp, and passes on to the bleaching trough. Most of the water having been got rid of by means of a strainer, the pulp is mixed with from 20 to 40 per cent of its weight in camphor, and the mixture thoroughly triturated under mill-stones. The necessary coloring having been added in the form of a powder, a second mixing and grinding follows. The finely divided pulp is then spread out in thin layers on slabs, and from 20 to 25 of these layers are placed in a hydraulic press, separated from one another by some sheets of thick blotting paper, and are subjected to a pressure of 150 atmospheres until all traces of moisture have been got rid of. The matter is then heated to a temperature between 140 and 150 degrees Fah., after which it issues in the form of elastic sheets of celluloid.

PROJECTED LARGE CANAL IN SWEDEN.—A new canal is at present on the tapis in Sweden, having for its object to connect the Kattegat with the large and important Lake of Venern. The canal will connect the towns of Uddevalla and Gensersborg, and, if carried out, is sure to prove of very considerable importance for a large portion of Middle Sweden, where a number of iron-works are located. The total length of the projected canal is about 12 miles, of which some four miles are lakes. It has been proposed to raise the level of the canal by three sluices above that of the Lake Venern. This would make the canal cheaper to build, but is otherwise attended by several drawbacks, and it may be preferable to incur the additional expense by not making it any higher than the Venern. The depth of water in the Uddevalla harbor and in the Venersborgvik limits the depth of the canal to 21 feet, which would admit of vessels of about 3000 tons passing the canal. The sluices would have to be about 350 feet long and 45 feet broad. From Vermland, Daleland and upper provinces, an export of about 200,000 standards of timber is reckoned upon to pass through the new canal, which would also be the best route for about 100,000 tons of Swedish iron export, and would lower the rate of freight from several wood-pulp manufactories, etc. It is now the intention to collect the necessary funds to have the matter thoroughly sifted, financially, commercially, and from a technical point of view. It is considered necessary that the State should build and own the canal.—*Engineering*.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3.00 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

This Header, as made for this season, has been greatly improved, and we feel confident will meet with the wants of the farming community. It has the long guards and reverse section sickle, so popular in the Hodges' Single-Gear and Hodges' Case Headers.

— ALSO —

HAINES' IMPROVED SINGLE-GEAR HEADER, 10, 12 and 15 Feet, and HODGES' CASE HEADERS, 10, 12 and 14 Feet,

Manufactured by A. J. HODGES & CO., Pekin, Illinois.

Patent Bevel Finger Bar and Improved Guide Wheels and Boxes, with Self-Adjustable Reels and Large Gear, a very Great Improvement, which can only be found on the Headers sold by us.

We also have One 12-foot Hodges' Header, with ALL STEEL FRAME, made like the regular Header and used very extensively in the East. Price same as Wood Frames.

1889

Guaranteed to Bale Hay or Straw Cheaper Than any Other.
Full Weight to the Car. So Warranted or no Sale.

18x22 Variable Length, Price \$425.

DOUBLE-ACTING PERPETUAL HAY AND STRAW PRESS.

A MACHINE IMITATED BUT NOT EQUALED

In Symmetry, Simplicity, Durability, Ease of Management, Effectiveness of Power, Fast and Neat Baling. Needs but to be Seen to be Appreciated, and while the Machine is only Claimed to Bale 10 to 15 tons per day's work, yet many parties using the Victor are baling over two tons per hour.

FOR REFERENCE WE NAME YOU A FEW OF THE MANY PARTIES USING IT:

MR. N. MATHEWS, of Los Angeles, says his men have baled with a Victor as many as 37 bales per hour (good weight).
CUNNINGHAM BROTHERS, of Glendora, say they have baled 4800 pounds of hay per hour.

MR. FRANK JOHNSON, Banning, says he is baling six tons per three hours.
MR. JAMES P. BURDICK, of Santa Ana, says the Victor is the only machine baling hay successfully.

\$3 a Year, in Advance.
SINGLE COPIES, 10 Cts.

A Sonoma County Residence.

The building up of large agricultural enterprises with investment of capital in buildings and equipment in keeping with the landed interest and the value of the product is becoming quite common in California. Within the last decade there has been notable improvement in the character of our agricultural structures, both those devoted to family residence and to productive effort on a large or small scale.

founder is still active in its councils, though the main part of the work is done by younger men.

The engraving is presented merely as an illustration of the more costly class of California rural homes and thus an indication of the development of the country.

REDUCED RATE ON CANNED GOODS—The efforts of California canners and shippers to secure a reduction of freight rates on eastward-bound goods have been rewarded in a measure.

Shorter Courses in Agriculture.

It is announced that Prof. W. O. Atwater, who is in charge of the Experiment Station branch of the Department of Agriculture, is preparing a publication to be issued this year on the subject of agricultural education. He will urge the establishment of shorter courses than usually provided for in the colleges of agriculture, and that the requirements for entrance be made much less. The report will

be read at all these schools, and, because of the great practical benefits accruing, the bulletin will strongly advocate the extension of the system. Secretary Rusk is also deeply interested in the establishment of short winter courses of lectures to young men on farms, upon topics related to the successful conduct of their labors.

A THRIFTY FRUIT-GROWER.—Simeon Cook, one mile from Redlands, San Bernardino county, is demonstrating what can be done by a

RESIDENCE AND OFFICE AT FOUNTAINGROVE, NEAR SANTA ROSA, SONOMA COUNTY.

Here and there, too, in many counties, there are larger establishments which are created by the use of combined capital and experience.

The engraving on this page shows the residence and office of the establishment widely known as Fountaingrove, located near Santa Rosa, in Sonoma county. It shows well how the added beauty of large structures and gardening may consort with the natural charms of the country. The Fountaingrove enterprise was established some years ago and has achieved a good name for its product of native wine, which is being marketed through local agencies in different parts of the world. The Fountaingrove estate includes nearly 1900 acres, of which the vineyard now occupies 400, and is being extended year by year. The establishment was made about 25 years ago, and the

At the meeting of the Transcontinental Association, held in St. Louis on the 10th instant, a rate of \$1 per 100 pounds in carloads was established on canned fruits and salmon from all Pacific Coast points to all Missouri river points, St. Louis and Chicago, and will be officially announced in a few days by Chairman Leeds.

DR. C. C. PARRY, the eminent botanist, seems to belong as much to California as to Iowa, and it gave us real pleasure to see him in the Rural office again on Tuesday, and learn that he is tarrying awhile in Oakland with Prof. and Mrs. Lemmon.

THE Delaware peach and pear crop, if all reports prove true, will be so large this year as to require all the agencies of distribution to enable growers to realize any profit.

cite the fact that in connection with the State University of Minnesota an Agricultural School was opened last fall, the course of study comprising two years of 24 weeks each. Graduates of the common district schools of the State are qualified to enter, and they are taught the practical things of farm-life, in addition to the literary branches of learning. The school had been opened but a few weeks when its accommodations were all taken, while the Agricultural College proper has been struggling along for years with barely enough students to form a single class. At the Indian and colored schools at Hampton, Va., supported by the Government, an even more elementary course of agricultural instruction is pursued, and nearly 100 pupils are engaged in it. Experimental stations of the department are lo-

careful fruit-grower on a small farm. During the past season he has marketed \$3000 worth of fruit, \$1800 of which came from six acres planted to oranges. He has 20 acres under cultivation and all planted to fruit except a small patch of alfalfa. Most of his orange trees are but five years old, and largely seedlings, yet he gets a crop which sells for \$125 per acre. Mr. Cook also has some lemons, raisin grapes, apricots and nectarines. When his little farm comes into full bearing he will receive a snug income. He thinks it wiser to pay attention to the business of fruit-raising than to get wild over real estate booms.

THE Board of Supervisors of Lassen have repealed the license on sheep-grazing in that county.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

From Lake County.

EDITORS PRESS:—Lake county is having a most remarkable season. It is seldom we have such a soaking rain so late in the year. As the growth of vegetation, trees and grain here is limited only by the advancing dry season, it must be immense this year. Fruit of all sorts has set quite thick, except a very few kinds, the earliest to bloom—caused, I suppose, by the rain-drenched pollen not fertilizing the embryo which soon dropped off, yet generally there is nearly enough left.

In spite of the disadvantages of isolation, Lake county is fast coming to the front in fruit and grape production. Her rains, followed by the dry north winds, are destructive to fungus growth and insect pests.

Our hopes of a speedy outlet by rail are like the old saying about falling to the ground between two stools. Still we are on the high road to prosperity. Whenever any person has for a time enjoyed the pure, health-restoring air and drank from nature's fountain-springs, he is almost sure to return again to this Switzerland of America.

Taxation.

It would be really laughable to see what a muddle our legislators, Board of Equalization, and assessors are in, were it not for the injustice often done. "All property should be assessed." If property is defined as any particular separate thing that is bought, sold or transferred, then growing crops of grain are property, and may be sold, and are of present value for feed. What are termed improvements, as buildings and fences, have an intrinsic separate value, though it may be greater in connection with the land. Not so with young trees and vines; before coming into bearing they are not of value, except with the land. From the standpoint of justice and equality the way seems easy and plain to me.

C. P. SCRANTON.

Lower Lake, May 7, 1889.

Ranching in Amador County.

EDITORS PRESS:—It has long been customary for many Californians to designate the lowland and coast districts by the suggestive cognomen, "the Cow Counties;" but after a few days' rambling through the foothills of Amador, I think that this county too can lay claim to the same euphonious title.

To one who has lived for many years in the great valleys of this State, it is quite surprising to find so much land in these hills capable of tillage, and more astonishing still to see the rank growth of barley and other crops now rapidly maturing; and the great herds of horses, cattle and sheep, half hidden in the dense growth of wild oats and burr-clover, are all a convincing argument in favor of the climate and fertility of the soil of Amador county. That portion of the county lying below the altitude of 2500 feet is unsurpassed for the growth of all the principal fruits, but the present extremely low prices for the dried product, and the lack of shipping facilities for green fruit, has kept this great industry in the background.

The extension of the railroad from Ione or Latrobe through this section would be a great help to the horticulturists of Amador. Commencing near the town of Plymouth and running in a northeasterly direction for six or eight miles, is a tract of land about three miles in width known here as the Shenandoah valley, presumably not the one that Sheridan "cleaned out."

This magnificent body of land, containing nearly 10,000 acres, is what might be called a rolling prairie, and is only dubbed valley in contrast to the rugged hills on all sides of it. The soil is a stiff red clay, with the rock cropping out now and then, and nearly the whole of this vast tract is at the present time covered with a heavy crop of summer-fallowed barley that bids fair to yield 50 bushels per acre. This red clay soil has proved to be excellent for fruit, and should the railroad come through Plymouth, much of this valley will be planted to trees and vines. For some reason the farmers here do not sow much wheat. I suppose that barley pays better.

Land sells here from \$10 to \$30 per acre, which is, all things taken into consideration, cheap enough. I met one of your old subscribers who has about 30 acres of trees in the Shenandoah valley. His name is John Harrell. He has invented a machine for cleaning dried fruit, and it works like a charm, doing all and more than is claimed for it, and the dried fruit after going through the renovator is as bright and clean as if just taken from the evaporator.

Mr. Harrell has now on hand all of his last crop of dried peaches, the very finest I have seen, but he has held them too long and can get no offer for them.

Probably the most extensive fruit-grower in this county is Geo. Woolsey of Ione City. He carries on a general merchandise business, and is also the owner of the well-known Q ranch near that place. Mr. Woolsey is quite enthusiastic on the question of fruit-growing and

has been making a very determined war upon insect pests in his orchard. His trees show the effect of careful cultivation, and are the healthiest I have seen on this trip.

At the suggestion of Mr. Woolsey, I visited the Agricultural Experiment Station near Jackson, and was very much pleased with the outlook from the top of the station building. If Prof. Hilgard selected this site for the station, he is to be congratulated on his good judgment and true artistic taste for the beautiful and sublime natural scenery. [Prof. Hilgard made the selection, but the choice was based upon such practical considerations as the securing situation and soils which are representative of a large belt of foothill lands. The sightliness of the place, etc., are of course an advantage, but the choice was made for the practical reasons stated.—EDS. PRESS.]

To my great disappointment, the superintendent was temporarily absent, but Mr. Orville Dick, the accommodating young man in charge, kindly showed me over the farm, and I found everything in a prosperous condition, all showing the supervision of a careful and master hand. There are about 20 acres planted to the various kinds of grain, shrubs, trees and vines too numerous to mention in this article; a nice two story house with an observatory on top, a good barn, a reservoir with water piped to all parts of the grounds, and best of all, a good graded road, leading down to the main Jackson thoroughfare, so that it is an easy drive to the station, although it stands on the top of a mountain 2000 feet high.

From the summit one has a full view of the great valleys, as far west as Mt. Diablo, and at night the electric lights of Stockton and Sacramento are visible, while on a very clear day Mount Shasta's snowy peak shines like a huge mirror in the northern landscape.

Soon after leaving the station I had the good fortune to meet Mr. Hansen, the superintendent, and found him to be a very genial gentleman who impressed me as being the right man for the position.

W. W.

FORESTRY.

Meeting of the Forestry Commission.

The new State Forestry Commission, composed of State Senator Frank J. Moffitt of Oakland, Cal., Walter Moore of Los Angeles, and John D. Spreckels of San Francisco, held its first meeting last week at the board's quarters in the Flood building.

Senator Moffitt was made president of the board.

Sands W. Forman was chosen secretary, W. S. Lyons head forester and Ben Fehnmann, Ed J. Niles and Phil D. Gaffey special agents to prevent and suppress forest fires and other damage to the timber resources of the State.

It was decided that inasmuch as the Board of Foresters of Chico would care for the experimental station there, the State Board would not appropriate any money for it or the station at Santa Monica.

Chairman Moffitt stated that his colleague, Senator W. E. Dargie, would present to the State 25 acres of land in Santa Barbara county for the establishment of an experimental station. The matter was referred to Senator Moffitt to confer with Senator Dargie and report. The matter of the Livermore station was similarly referred.

Senator Moffitt moved that 40,000 oak trees, embracing the 17 varieties, be presented to Oakland for planting in that city. The motion was adopted.

The secretary of the board was instructed to confer with the Park Commissioners of San Francisco relative to the presentation by the board to the park of 50,000 ornamental trees and shrubs from the Santa Monica and Livermore stations. Several thousand trees in Merced will also be offered to the Park Commissioners of San Francisco and Oakland.

Timber Culture Entries.

WASHINGTON, May 6.—Secretary Noble today rendered an important decision in the case of James Hair of Kerwin, Kas., on appeal from the decision of the Commissioner of the General Land Office, in which he reverses the ruling of the department during the last administration relative to the amount of timber allowable on timber-culture land entries. Hair in his application makes oath that on the land in question there are two cottonwood trees and four cottonwood sprouts two inches in diameter. The section was returned by the official surveyor as timber land, under the ruling of the department that the words "devoid of timber" in the timber-culture Act necessarily mean "without timber" or "destitute of timber." The entry was therefore not allowed.

The Secretary says: "No arbitrary rule can be established for the government of every case. It should be the desire of the department to ascertain what the intent and purpose of Congress was in the passage of the Act. It stands to reason that it was not the purpose to deprive occupants of the vast prairies of the West of the benefits of the Act if there happened to be a single tree upon the section. I take it that the words 'prairie land, or land devoid of timber' within the spirit of the Act, mean land practically so. To give the Act the

construction placed upon it by the last decisions, just cited, according to their legitimate deductions and fair conclusions, would prevent the entry of any prairie land that had timber of any character upon it, standing, fallen or otherwise. This is certainly too narrow a view to take of the Act. As the testimony in this case is conflicting as to the amount of timber on Hair's claim, a further examination is ordered."

THE VETERINARIAN.

A Case of Impact.

EDITORS PRESS:—Not long since I was called to prescribe for a sick cow. Will you please inform me, as nearly as you can, as to what in your opinion is the matter?

The animal is a valuable Jersey milch cow; has been very well fed on bran and hay, redtop clover; was very fat. I found her "off her feed," refusing to eat or drink; pulse normal, 50; respiration, 14; horns, tips of ears, and the legs cold to the touch; muzzle dry; eyes bright and full; evacuations, normal; occasionally grating her teeth, and driveling from the mouth; flow of milk diminished.

I tempted her appetite with a kind of hay of which she was particularly fond. She ate a few small mouthfuls, suddenly stopped, pawed the ground, and shook her head, apparently in great distress. A few moments after she was taken with what appeared to be a slight chill, quivering and trembling in every muscle of her body, which soon passed off, and she was seemingly all right.

This was on a Thursday. She had then been sick two days; had been noticed once before having a chill. I concluded she had been overfed, and directed her feed to be withheld till the next morning; gave her a quart of raw linseed oil and slight external treatment to improve the circulation in the extremities.

Next morning (Friday) she seemed better; extremities warm; muzzle sweating, but still refusing food and water. Gave her another quart of oil, and drenched with a quart of gruel three times during the day.

Next morning (Saturday) she continually grated her teeth with a loud, harsh sound, frothing at the mouth. An examination showed a decided change; legs cold up to her body, mouth and tongue cold, ears and horns cold, muzzle cold and dry, constipated bowels, urine normal, pulse 80, respiration 20. Later in the day, fore feet and hind feet close together, and back arched, eyes sunken.

During the two days preceding, she had not been observed to chew her cud, nor had she of her own accord eaten anything; flow of milk very nearly ceased. I decided that impaction of the omasum, attended with gastritis, was the trouble, and gave the following:

Gentian, 2 oz.
Bicarb. soda, 2 oz.
Extract belladonna, 2 dr.

Three doses, two hours apart, with no apparent result. I then gave the following:

Magnesia sulphate, 10 oz.
Sulphuric acid, 20 drops.
Quinine, 30 grs.

Within an hour she had stopped grating her teeth, and the pulse had perceptibly lowered.

Next morning (Sunday) she was much better, but showed signs of exhaustion. I gave the following:

Sulphuric acid, 20 drops.
Quinine, 30 gr.

In a tumblerful of whisky every three hours, and also drenched her with gruel made of flaxseed-meal and cornmeal cooked together.

She apparently rallied under this treatment, and next morning (Monday) was still further improved; all her extremities warm, eyes full and bright, muzzle sweating, pulse 50, respiration 16, bowels normal, flow of milk increasing; ate a small bran mash, but refused hay. I made a cud and gave her. Next day she chewed her cud, but refused to eat anything, and has steadily refused to eat or drink since.

Wednesday and Thursday following, she had several what I would call paroxysms. I first noticed her looking at familiar objects as if they were strange, not wildly or staringly, but with a puzzled look. Suddenly she gave a start as if she had received a blow. Then the muscles all over her body began to twitch and play, slowly at first, but increasing in violence until it seemed as if she would shake to pieces. The paroxysm seemed to reach its climax with a powerful spasmodic jerk of all the muscles of her body at once, that almost lifted her off her feet, after which the spasm passed away exactly as it came on, leaving her looking at familiar objects with the same puzzled inquiring air that I first noticed at the beginning of the attack.

In less than three minutes from the beginning of the attack, she was walking around the yard as though nothing unusual had happened. After the spasm had passed there was no increase of pulse or respiration.

I find that firm pressure with the hand in the hollow where the windpipe and gullet enters the body causes her great pain.

I hope that I have not become tedious. I have tried to present every phase of her symptoms. Hoping I have made the cause plain to

you, I await your answer with great interest.
Grass Valley, Cal. WILLIS PEASLEE.

Comments by Dr. Buzard.

EDITORS PRESS:—From the above symptoms I think there is no doubt of the case being impaction of the omasum or third stomach, commonly known as "staggers," "vertigo," etc. Symptoms—The animal stands, and with difficulty can be moved; it is dull, and suffers from acute pain; the pulse is hard and frequent; there is often a grunt; general signs of disease are present. In the latter stages the brain becomes affected, there are muscular tremors over the surface of the body, a staring of the eyes, which are often insensible to light, a staggering gait, sometimes terminating in paralysis; often the animal will rush about; occasionally the tongue protrudes and becomes swollen. I have also seen the urine tinged with blood. There is always obstinate constipation a short time after the animal is attacked. Sometimes this disease terminates in *omastitis*, inflammation of the omasum, accompanied by the usual signs of fever.

Treatment.—When the brain is involved, it is good practice to bleed. Strong cathartics are necessary; sulphate of magnesia is useless, as it acts only on the bowels. I depend solely on linseed and croton oils, and in extreme cases I resort to gamboge. It is also necessary to give stimulants. I prefer the preparations of ammonia. We must know that we have a relaxed organ, and it is necessary to restore its tone. Enemas should be regularly given, and no food of a solid character allowed, or any that would be necessary to be remasticated, as the animal ceases to ruminate. Making a cud and giving it to a ruminant that has ceased to ruminate, for the purpose of making it chew its cud, is all bosh. Sedative medicines, unless *omastitis* has set in, must be always avoided. Counter-irritation is also of great service.

A. E. BUZARD M. R. C. V. S. L.
No. 11 Seventh St., S. F.

HORTICULTURE.

The Fruit-Growers' Convention No. 4.

The proceedings of the Fruit-Growers' Convention at National City continued with the following important essay by Hon. Russell Heath of Carpinteria, Santa Barbara county, on the growth of the

English Walnut.

Having been invited by the society several times to give my views on the English walnut, so called, and its culture, I have consented to do so with reluctance, believing that others could do it much better than myself. I must preface by saying that when I commenced the culture of the nut in 1858, I was profoundly ignorant on the subject, but believed there was a future in its cultivation that would be not only profitable to whoever engaged in it, but would add something to the development of the great resources of our new home. I have not been disappointed in my expectations. They have been more than realized. Commencing with the cultivation of many of the other fruits and nuts now profitably cultivated in California, I gradually came to the conclusion that it would be better to make a specialty of some one thing in preference to the cultivation of many. I selected the walnut as my specialty, although I have on my place many of the stone fruits. I hope it will not be considered outside of the question allotted to me if I give some of my opinions on the profit of fruit culture in California. Most persons when they commence this industry make up their minds that they must have everything on their place. This is a laudable desire. I have done it myself, but I am firmly impressed it is better to have a specialty and turn your energies to the thorough development of one or two kinds of fruit, if the desire is to make money by it. I do not desire to be understood as saying that the walnut is the best to make money out of. There is money in the cultivation of all of our fruits. What I desire to impress upon the minds of fruit-growers is that a thorough system is necessary to success.

Trees and vines cannot be planted and neglected and remain profitable. Anything that is worth doing is worth doing well. Almost all of our fruits require a different kind of treatment and handling. With too many irons in the fire some are apt to burn, and in the burning your fingers are apt to come in contact with an unpleasant heat. Now for the walnut. This fruit has various names. By some it is called the English walnut, by others the Madeira nut and Naples walnut. It takes these numerous names from the different locations where it is cultivated. It really is of Persian origin, and ought to be distinguished by that name, and that only. It is said to be true to its seed when planted, and I believe it is, although in the planting of great quantities of seed the fruit may be somewhat different; that is, the shell may be harder or softer than the nut planted, but the kernel remains the same in flavor; in that there is no difference. The soft and medium shell nuts (and we have no hard shells) have their advocates, and much may be said concerning them—some cultivators preferring one variety and some another. Upon that question I do not desire to enter, but simply say I have both varieties, and after years of

experience I have discontinued the planting of any variety but the medium shell. In Persia the tree comes in bearing at eight years from the planting of the seed; in Italy, Spain, and the Island of Madeira, in about 16 years; in France—the southern part—in 18; in England, 24; in California, 8 years, the same as Persia. So I take it the southern part of this State is nearest its original home. Some cultivators claim that trees have produced younger than eight years from the seed. That is not my experience. If it is true, and I am assured it is, then I say we beat its native home, and this adds one more laurel to California's fame in fruit culture. In the cultivation of this fruit my advice would be, get your trees from the seed or seedlings in preference to grafted or budded trees.

Not much can be gained by grafting or budding unless you desire to change the variety, as the tree comes in bearing as soon as its size could possibly make it profitable. Much has been written about the localities and soil best adapted to the planting of the walnut, some asserting that they will grow anywhere, on rocky and uninviting hillsides, on stiff clay and adobe lands; any place is good enough for the walnut. I will admit they are a hardy tree.

You can rear a pig on sour skim milk, but will it not do better on more nutritious food? The walnut should be planted for profit and best results, on deep, rich loam, with no hardpan, stiff clay, or impenetrable subsoil nearer than 12 feet. I would select locations naturally moist in preference to lands requiring irrigation. A temperature of 60 to 80 in summer-time, I regard as more favorable than hotter localities, although they thrive and are profitable in much hotter places. I have adopted for planting, 40 feet apart, and this distance will do for 100 years, with judicious side pruning. As to their age I can only say they are a hardy, long-lived tree, like the oak, and ought to produce fruit in abundance for at least 1000 years. In handling the fruit, I cure in dry-house by artificial heat, heating sufficiently to evaporate the water, and set the oil of the nut. When this is done the nuts will keep sweet for an indefinite time. I have kept them as an experiment in my storehouse, which is of concrete, for five years, and at the end of that time they were as sweet as when first cured. With my facilities I cure them in about eight hours. In preparing them for market, I have a washing apparatus, invented by Mr. Ellwood Cooper, president of this society, which I use if the nuts are discolored, as they often are, by coming in contact with leaves or shucks when there is dew or rain. Directly after washing, they are thoroughly dried and cured in the drying-house. I regret to say some purchasers desire the nuts bleached, to give them a nice bright appearance, which is done with sulphur and some other substances. It is hardly necessary to say that I disapprove of this method of preparing the fruit, as it cannot be accomplished without affecting the keeping quality as well as the taste of the fruit.

Horticultural Machinery.

Henry A. Brainard of San Jose, quarantine guardian and editor *Santa Clara Valley*, furnished the following essay:

Within the recollection of a middle-aged man we have seen a wonderful progress in agricultural machinery, particularly in harvesting appliances, counting from the time when men grasped the growing grain by handfuls and cut it with the notched edge of the crooked sickle; when it was beaten from the chaff and straw by the hickory wingel of the flail, falling in measured cadences upon the thrashing-floor, and when it was winnowed in the evening breeze, down to this day when the ponderous machines upon our California fields do the work by wholesale at a rate which you know better than I can describe.

In horticulture it is only recently that machinery has come to play an important part, but the progress is quite rapid and there are many operations connected with it now profitably performed by machinery which formerly required hand labor.

In the work of cultivation, horticulture has shared with agriculture the improvement in the machinery for breaking up and pulverizing the soil, but special implements have been invented to work close to the trees and others to prepare the surface of the ground and put it in the best condition to endure drouth, so that in this respect horticultural machinery is perhaps all that can be desired.

We can remember when trees were pruned with the ax and knife, but we now have powerful shears and sharp saws that seem nearly perfect in their operation. There may be room for improvement in tools for pruning large trees.

It is in gathering and preparing fruit for market that the more recent improvements have been made, and it is in this direction that invention may be exercised with great profit.

Gathering fruit is still mostly done by hand. The only exception is the prune, which may be gathered by machinery with considerable advantage.

A recent invention by a San Jose orchardist consists of two pieces of canvas attached to each side of a San Jose orchard truck on which are placed the fruit boxes covering the whole bed.

Driving the truck up to a tree, two men quickly spread the canvas; a smart shake brings down all the fruit that is ripe enough, and quicker than we can tell it the canvas is lifted

and the fruit rolls into the boxes, passing in its way over some slats where all the leaves and twigs are separated. With this machine two men can do the work of 20 who shake and pick by hand. Apricots and peaches must still be picked by hand, for no machinery can replace the eye, which distinguishes ripe from unripe fruit.

There is a machine which will grade these prunes into any desired sizes, rejecting entirely all fruit that is not fit for drying. Grading is advantageous in tending to make the trays dry evenly.

What is now needed is an apparatus that will, in one continuous operation, pass these graded prunes through the bath of hot lye-water, again through the clean water, and deliver them on trays.

There is room for an invention by which these trays can be placed upon the drying ground or in the evaporator with less manual labor than is now required.

The perfect fruit evaporator has not yet been invented, and there is plenty of opportunity for improvement. It is pretty evident that for driers on a large scale the heat must be distributed by means of steam pipes or radiators, so that it can be regulated exactly, without reference to the fire, only that it be hot enough to do the work.

Cherries, plums, apricots and freestone peaches may be pitted by machinery for drying. For canning, the clean out made by the knife in the hands of a skillful operator is still required, and we have seen a newly invented knife for this purpose, having a spur near the base of the blade for removing the stone, that seems the best ever offered for this purpose.

We have seen a machine that will pit 1200 cherries every minute, and if driven by power will require only one hand to tend it. By a little change the same machine can be arranged to pit 360 apricots or peaches in a minute. Another machine saws the apricot or peach in twain with two revolving saws which spring apart at the stone and remove it. Both these machines divide the fruit into equal halves, but in every possible direction in relation to the natural axis of the fruit.

We have seen another machine, yet in the experimental stage, which requires the fruit to be placed in position by hand, but the operation of cutting and removing the stone was entirely automatic. This machine will cut as regularly in relation to the axis as by hand if the fruit is symmetrical. With fruit in the proper stage of ripeness, these machines will doubtless answer the purpose intended. To one of these machines may be attached an arrangement for spreading the fruit upon the trays, but for this purpose the trays must be made to fit the machine and on purpose for it.

A better grading machine is needed for prunes after drying, for even if graded before drying they will not be exactly the same after this process. Apricots and peaches may, if desired, be graded before drying, but they always need more or less hand-sorting afterward.

Opinion seems to be against dipping fruit into hot water previous to boxing, but we are inclined to think some heating process will be necessary to destroy inside germs unless the fruit is evaporated and packed dried from the evaporator. Here, then, an invention is needed which will pass the fruit through a close, heated chamber before packing.

A machine is also needed which will automatically place the proper weight of fruit into boxes or sacks in the same manner as is done by the flour or starch-packing machines.

In the case of orchards there is no more useful piece of machinery than the spray pump. There is hardly a month in the whole year when there is not a need for such a machine. California inventors have been active, and the latest and best patterns of pumps have large air chambers and receptacles holding several gallons, and the pressure can be raised and kept at a hundred pounds or more per inch, making a spray as fine as steam. The better class are equipped with a pressure gauge and relief valves to prevent a bursting pressure on the hose or air chamber. With the great odds against which the American fruit-growers have to contend as against the European grower, who has cheap labor, cheap ocean freight and small import duty, the balance must be made with our productive soil and the perfection of machinery to do much of the work which has been done by hand.

RAISING CORN FOR FUEL.—The St. Paul (Minn.) *Pioneer Press* recommends the growing of corn for fuel, since "three acres of it will itself supply a winter's fires, but could not be sold for enough wood or coal to do it." Corn may be used in either a wood or coal stove without any change of grates, and makes a steady, hot fire, which can be regulated as readily as a coal fire. Two bushels of corn in the ear, it is estimated, will keep a comfortable fire the coldest day in winter. Regarding the squeamishness about burning an article that is used for food, the writer says: "I would sooner have an acre of corn that can be replaced in a single year than to burn an acre of timber that it takes years to replace, even on the score of sentiment." There is common sense in this. It is cheaper for people on the fertile prairies to raise their fuel, as they do their food, and save what little timber they have for other purposes. While there can be no excuse for wastefulness, there is good reason for burning corn when it is of more value for fuel than the proceeds would be if used in the purchase of wood or coal.

SHEEP AND WOOL.

Wool Facts and Figures - No. 6.

[Written for the Rural Press by J. R. F.]

The best authorities on sheep husbandry generally concede that prior to 1860 the sheep and wool statistics of the country were defective and therefore only served as a guide in showing its growth rather than thorough accuracy, such as is now obtainable. For the sake of tracing the growth in the United States, I give the following, compiled from the best obtainable authorities.

In 1810 it is stated that the number of sheep was 10,000,000 and the pounds of wool 13,000,000. In 1812 the number of sheep had increased to 11,500,000 and the wool clip to 21,000,000 pounds, with the quality of the latter much finer. In 1836 the number of sheep had risen to 17,000,000, which had increased to 19,311,374 in 1840, with the wool clip placed at 35,000,000 pounds. In 1850 the census report gave the number of sheep at 21,723,220 and the wool clip at 52,516,950 pounds. In 1860 the census returns gave the number of sheep at 22,471,275 and the wool clip at 60,511,343 pounds. These returns, inaccurate as they are claimed to have been, show a steady increase in the weights of the fleeces, which goes far in proving that the breeding must have been for wool as well as for mutton.

After the civil war, more attention was given to sheep husbandry, and as emigration from abroad set to the United States, the railroad system enlarged, drawing each year into settlement large tracts of land. Naturally, as transportation facilities increased and security against loss became more assured, the sheep industry made rapid strides. The most decided commencement of the development of the industry was in 1869, and it continued to grow up to 1884, since which time it is generally conceded that the number of sheep and number of pounds of wool shorn have steadily decreased. The railroad expansion of the country, which gave the industry its first great impetus by making land too valuable, thereby lessening the pasturage, has contributed no little in reducing the flocks.

The census returns of 1870 gave the number of sheep in the country at 28,477,951 and the wool clip at 100,102,387 pounds. In 1880 the total clip had risen to 240,000,000 pounds and the number of sheep to 40,765,900 head. Statisticians and those in the trade place the number of sheep in this country in the following years as follows: 1884, 50,626,626; 1885, 50,360,243; 1886, 48,322,331; and in 1887, 44,759,314. The wool clip is placed as follows: In 1884 at 308,000,000 pounds; in 1885, 302,000,000 pounds; in 1886, 285,000,000 pounds; and in 1887, 265,000,000 pounds.

J. R. Dodge, statistician of the Agricultural Department, Washington, gives the following estimates of the average weight of the fleeces: In 1840, barely 1.85 pounds; in 1850, 2.42; in 1860, 2.68; in 1870, 3.52; in 1880, 4.79; and in 1887, about 6 pounds. The same authority says that the population of the country has not kept pace with the growth of the wool crop. In 1860 the country produced a little over 2 pounds to each inhabitant; in 1880, a little over 4 pounds; in 1885, over 5 pounds.

The sheep industry in this State (California) as reflected through the wool clip is an interesting study, as the following compiled table shows:

Year.	Pounds.	Year.	Pounds.
1854	175,000	1871	22,187,188
1855	300,000	1872	24,255,468
1856	600,000	1873	32,155,169
1857	1,100,000	1874	39,350,781
1858	1,428,000	1875	43,532,223
1859	2,378,000	1876	50,559,970
1860	3,055,345	1877	53,110,742
1861	3,721,998	1878	49,862,091
1862	5,990,300	1879	46,903,360
1863	6,268,48	1880	46,074,154
1864	7,923,670	1881	45,076,639
1865	8,919,931	1882	49,527,119
1866	8,532,047	1883	42,848,690
1867	10,288,600	1884	37,415,330
1868	14,232,657	1885	36,561,390
1869	15,413,970	1886	38,519,100
1870	20,072,610	1887	31,564,231

In Oregon, Washington, Idaho and Montana there has within the past two decades been a steady increase, owing to better pasturage. Many flocks were taken from this State into Eastern Oregon and Eastern Washington.

Turning from the United States to foreign countries, we find that outside of the thickly settled nations where land is valuable, they have kept pace with us. The English Colonies in Africa sent to England in 1845, 3,500,000 pounds of wool; in 1850, 6,000,000; in 1855, 11,000,000; in 1859, 14,000,000; in 1870 they produced 41,000,000 pounds, which was increased to 46,000,000 by 1880. India exported to England in 1840, 2,500,000 pounds of wool; in 1850, 3,500,000; and in 1859, 14,000,000 pounds. In 1870 it is stated that the clip was 30,000,000 pounds, and in 1880 over 50,000,000. Australia, another Colony of England, had a wool clip of 1,000,000 pounds in 1830, 3,776,191 in 1835, 9,000,000 in 1840, 24,000,000 in 1845, 39,000,000 in 1850, 49,000,000 in 1855, 55,000,000 in 1860, 193,000,000 in 1870, and 392,000,000 in 1880. The number of sheep in 1880 was 51,000,000, which shows that the average weight to the fleece was eight pounds. Notwithstanding a severe drouth, destroying from

10,000,000 to 12,000,000 sheep, Australasia in 1885 exported 455,476,000 pounds of wool.

In the Argentine Republic the wool industry has shown a most remarkable growth, for in 1887 the number of sheep is said to have been 80,000,000, fully as many as there were in that year in Australasia. The following is the order in which the other countries come as wool-growers: Russia, England, France and Germany.

To give a better idea of the status of the wool industry in 1887, I take the following from an article written by me for a contemporary:

The production of wool is as follows in its raw state and after cleaning:

	Raw, lbs.	Clean, lbs.
Europe	584,000,000	400,000,000
Asia (India and Caucasus)	100,000,000	50,000,000
Africa	75,000,000	45,000,000
North America	346,000,000	168,000,000
South America (excluding Brazil)	340,000,000	120,000,000
Australia	430,000,000	220,000,000
Total	1,875,000,000	1,003,000,000

By the above table it will be seen that the loss in weight by cleaning is very large in Asia and North and South America, which necessarily shows that there is something radically wrong in the sheep husbandry in those particular sections of the globe. South America does not manufacture woolen goods, so the only consumers of wool for manufacturing purposes are the United Kingdom, the Continent and North America.

The Messrs. Schwartz, who are a recognized authority, place the production and imports of the three great consuming (manufacturing) areas as follows:

	In 1887.	Production, lbs.	Imports, lbs.	Total, lbs.
United Kingdom	134,000,000
Continent	450,000,000
North America	846,000,000
Total	930,000,000
In 1887.
United Kingdom	258,000,000
Continent	550,000,000
North America	104,000,000
Totals	942,000,000	1,872,000,000

According to population, the United Kingdom is the largest consumer of wools, using over 300 per cent more than North America, and about 50 per cent more than the Continent. Germany is the largest consumer on the Continent, owing to wools coming in free of duty. To obtain a better and more distinct impression of the situation, we give the following statistics for ten years past of the consumption and population per head:

Yrs.	Population.	Consumption, lbs.	per head, lbs.
1878	357,000,000	1,514,000,000	4.25
1879	361,000,000	1,522,000,000	4.22
1880	366,000,000	1,633,000,000	4.46
1881	370,000,000	1,627,000,000	4.40
1882	374,000,000	1,711,000,000	4.58
1883	378,000,000	1,727,000,000	4.57
1884	383,000,000	1,820,000,000	4.75
1885	387,000,000	1,830,000,000	4.73
1886	391,000,000	1,911,000,000	4.89
1887	395,000,000	1,872,000,000	4.74

As will be seen by the above, the consumption per head has not only increased, but there is an increase in the number of consumers. Judging the future by the past, it can be confidently asserted, even without wars, that within the near future the consumption of wool will be in excess of the production, when a much higher range of values will follow.

A Much-Grafted Rose-Bush.

H. L. Barker, who resides at 1814 Union street in this city, is not a professional gardener, but has a fancy for experiments in grafting. He has in his garden one rose-bush, trained upon a fence with an eastern exposure, which (the *Call* states) has reached a height of 16 feet and a spread of nearly 12. The parent stalk, a few inches above the ground, is nearly five inches in circumference. It is of the variety known as the June or Hundred Leaf rose, and grafted upon its branches are 12 other varieties, all hardy, so that at present there may be seen upon this bush 13 varieties of roses mostly in bloom, but a few yet in the bud. The parent stalk is ten years of age, and the several grafts range from one to ten years. Before this result was obtained, Mr. Barker made at least 200 grafts. The bush shows in all the wealth of beautiful colors the pale pink June rose; the delicate Solferino; the hardy John Hopper, with its bright rose-colored leaves and carmine center; the buds of salmon-colored rose, Mme. Pauline Labonte; the intense glowing crimson and very beautiful Duchess of Edinburgh; two varieties of the salmon-colored mottled rose, the Homer; the exquisite Lamarque, a white blossom spreading to lemon; a few Lady Banksias, while in the shade of green leaves are several buds of Le General Jacqueminot, that rich, crimson-scarlet, velvety rose, which is so much sought after, and here and there are branches heavy with those pure, white blossoms known as Mme. Plantier.

 Dallas Grange Picnic, Luckiamute Falls.....June 7-8
 Lane Co. Picnic, Stafford.....June 15

Some Things in Our Grange Edition.

In our Grange Edition to-day the following matters of interest are mentioned at more or less length:

State Master Hayes Before the M. C. P. G., Three Oregon Granges, A Touching Obituary, Watsonville Work, Dr. Caples' Counsel, In Memoriam, Linn County Business Council, From Oswego Grange, A Hint to Correspondents, From Tulare, A Live Grange, From Secretary J. D. Huffman, A True Appeal to Farmers, Letter-Notes.

Education by Conversation.

It is not what we eat which gives us strength, but what we digest; it is not the quantity but the quality of the books read, and the impression they make upon the memory, which imparts scholarship. Some of the brilliant men whose names are famous in our early annals had but three or four books in the parental library, and of a character which the dime-novel reader would spurn; but these were books which nourished the mind and prepared it for ripe scholarship. Many men do not read modern books, but study the newspapers thoroughly. It is surprising to see the information they have gleaned. Men whose weeks spent in school might almost be counted on their fingers can converse about art, music, the drama, science, explorations; they understand chemistry, mineralogy, geology, botany, zoology; Stanley's explorations for recent times are counterbalanced by Columbus' and Captain Cook's. They know all about our Philadelphia Centennial; they are posted upon the present French Exposition. There seems to be nothing past or present of sufficient worth to know of which they are ignorant. They learn because they are not afraid to confess ignorance. They endeavor to glean something from every conversation. Often they are better listeners than talkers, not because they cannot talk, but because they are more anxious to learn than to impart. How much could be learned in our Granges if all would try! In addition to the ordinary routine of farming, intersperse knowledge on topics generally relegated to the professions. When farmers are well posted on a generality of topics, it will be easier to get the recognition which is needed to smooth the pathway and rid it of inequalities which now make it a burden. Let some experienced person read a certain portion of the ritual at each meeting, and have all listen, especially the officer whose lecture is read. It is a shame that a Patron who has been a regular attendant for years should mispronounce a single word. Such ignorance is unpardonable, and belies our assertion that the Grange is a school. Let all Patrons try the experiment of asking questions, and if any be unanswerable, let each one try and answer it before the next meeting. It will not be long before the Grange trying this experiment will have members whose knowledge will be enviable and worthy of comparison with men who are commonly supposed to be on a higher intellectual plane than the horny-handed sons of toil.

CO-OPERATION is one of the principles of the Grange. It is to be hoped that the theory may be practiced extensively and successfully. When the farmer realizes that he can get what there is in his work—that the bulk will not go into the hands of the non-producing middlemen—he can work with greater enthusiasm and produce more than if his ardor were chilled by the thought that he is sowing for others to reap. In England co-operation has made considerable headway; in towns there are co-operative stores and factories, while rural communities have farms conducted in a similar manner. We are indebted to Bro. J. T. Cobb of Michigan for more than a dozen copies of tracts on these subjects, issued by the Central Co-operative Board of Manchester, England.

SUBSCRIBERS who are Patrons, or feel interested in the Grange should bear in mind that, upon application, they can receive the Grange edition of the Pacific Rural Press, containing two or more extra pages of Grange news, in place of the regular edition, without extra cost or the loss of any considerable amount of valuable reading or advertising matter.

Alameda and San Jose Grange Picnic.

Arrangements are now pretty well under way, we think, for one of the largest and best picnics yet held in Alameda county. Joaquin Miller, the poet, and Governor Waterman, as elsewhere noted, have accepted invitations to be present and participate in the exercises and pleasures of the occasion.

The old pioneers who have a local organization in Eden, Murray and Washington townships, all within driving distance of Alvarado, have indicated their desire to be present.

We learn from San Jose that a good interest is taken there by the Grange in the affair, and there should be a large turnout of Grangers, farmers and their citizen friends from San Jose and intermediate stations on the Narrow-Gauge railroad line. The entrance to the picnic is free.

Round-trip rates on the railroad will be 75 cents from San Francisco and intermediate stations and San Jose and intermediate stations. Alvarado is centrally located between Oakland and San Jose. This picnic will afford an excellent opportunity for all who love to spend a day in the rural districts in a pleasant, informal way with the yeomanry of the country. It is open to all well-behaved people, old and young, who are worthy and can appreciate such an occasion.

A brass and string band will be present to discourse enlivening music appropriate to the wants of the terpsichorean and patriotic participants, both old and young.

Trains will leave San Francisco at 8:15 and arrive at Alvarado at 9:45 A. M.; leave Alvarado for San Francisco at 5 P. M.; leave San Jose for Alvarado at 7:46 and arrive at 8:38 A. M.; also leave San Jose at 9:46 and arrive at Alvarado at 10:41 A. M. Returning, leave Alvarado at 3:52 and 5:55 P. M.

It is hoped that a goodly number of Patrons will also be present from Contra Costa county Granges as well as some representatives from all parts of the State, all of whom will be very heartily welcomed.

No lengthy addresses will be delivered, and but a short time will be occupied for literary exercises, including a few remarks by distinguished visitors and Grange speakers.

We hope members of each Grange will be very active between now and the 25th inst. in securing a large attendance and making the occasion a success in all respects. Tickets can be obtained of the members of Temescal and San Jose Granges and by specially calling for them at the ticket offices in San Francisco and Oakland, and also Alameda and East Oakland; also at San Jose, Santa Clara and Agnew stations and at the office of the Secretary of the State Grange.

A Pleasant Visit to Napa.

We recently paid a visit to the home of W. A. Fisher, one of the pioneers actually engaged in farming near Napa. His fine residence is situated near the race course, and embraces most excellent tillable lands. His homestead is well divided off into orchards, pastures and grain-fields. From brief observations made, we think Mr. Fisher has fortunately established himself in a diversified agriculture which makes his farming apparently safe, comfortable and progressive.

We are indebted to him for a pleasant ride through a thrifty orchard district between the central valley road between Napa and Calistoga and the western hills. Most of the orchards seem in good bearing condition for the season. From prices of fruit-bearing orchard lands, we judge that prices rate from one-half to two-thirds the cost of similar lands thus favorably located in the Santa Clara valley.

Mr. Fisher has been a great reader and has a select library, of which he has made excellent use.

The wine interest seems to be discouraged this season owing to the low price of wine, otherwise the fruit and farm crops seem to promise well. The acreage of corn in this valley has increased greatly in the past few years.

The line of small steamers running daily from San Francisco up Napa creek to Napa City is a decided advantage to producers. With improvements likely to be made and an increase of produce in the valley, much lower freight and passenger rates will, no doubt, ere long, be in vogue. There are public improvements needed which could be watched over unitedly by a large and prosperous Grange, such as the valley ought to support. It would seem to us as if a broad, well-laid out avenue and thoroughly constructed road between Napa City and Calistoga, bordered with appropriate and beautiful shade trees planted upon either side the whole distance, would prove a most profitable investment for property-holders and form a most charming feature of what is considered by many the most beautiful valley in California.

ABOUT OUR OREGON EXCURSION, we must confess to being discouraged. From two or three dozen bright and active Patrons who anticipated going, we have not been able to secure a positive promise of more than half a dozen to go. We still hope to hear favorably of others. The fact that a session of the Na-

tional Grange in California is anticipated, in addition to the State Grange, has seemed to work against the project of making a full visitation to Oregon this year. We are glad to hear good, encouraging reports of a splendid session probably at Salem, and indeed are morally certain that not a few California Patrons will have to regret their non-attendance this year.

Troubles of a Granger.

MESSRS. EDITORS:—Last Friday, and the preceding Friday, and the Friday before that, back through a long list of Fridays—in fact to the date the "kid" was born—at precisely 17 minutes after 1 o'clock in the morning, the writer of this (who is a bold, bad man) has had his slumbers disturbed unpoetically by his wife poking him in the spine with her brawny fist with her proverbial trip-hammer gentleness, with so much emphasis that it has generally occurred to him something must be wanted badly.

In response to the spine-breaking calamity the writer always says: "Mabel, dear, what is the matter? Is there a mouse or centipede in bed?"

"No, Edwin, but Bobby here swallowed a piece of garden-hose to-day and he has one of his crying fits."

That means the writer of this must jump out of bed, take Bobby, garden-hose and all, and perambulate in the malarial air, which is always prevalent at the unseasonable hour of 1 A. M., for some miles, clad in a marvelously brief costume, consisting principally of a necktie tightly drawn to choke down the swear words, and a pair of slippers to keep tacks out of his feet. When Bobby is handed the writer Sister Thistle always consigns him to his fatherly care with "God bless you, little Bobby."

Then comes the tramp with the garden-hose annihilator, up and down, and around and across that scene of misery until the crowing of the roosters reminds the writer another day is at hand, while Sister Thistle is executing some beautiful nasal operatic airs which sound to my unmusical ear like the braying of a bay mule suffering with chronic bronchitis. There may be a great deal of fun in being a papa, but I can't see it. Babies ought to be born four years old. The trouble I am having has prevented my attending Grange of late. I have grown so thin my clothes fit me abundantly everywhere. I have such a careworn look I have not attended Grange of late fearing some brothers and sisters might construe my symptoms into domestic infelicity or take me for a ghost with an appendix of legs and arms. I attended to-day in spite of my troubles, and I was most pleased to find, as of old, the hall filled with Grangers, young and old, who seemed either to take a great deal of interest in the regular Grange proceedings or each other. Brotherly and sisterly love abounds everywhere in the Sacramento Grange. It is a charming feature, too. This fraternal feeling ripens sometimes into a deeper expression of soul—in fact I am informed seven unions are to be consummated before the National Grange meets in Sacramento—all from Grange No. 12. They are going to solve the moss-grown question, "Is marriage a failure?" I think it is from experience.

Our elderly Chaplain, Bro. Davenport, who has been ill of late, has so far recovered as to officiate splendidly to-day in his capacity. Bro. Davenport is a true Granger of the purest water. His zeal and sincere fidelity to the Grange and its principles is worthy of imitation. He is one of one thousand. No Granger, past or present, has ever found his way into the inmost precincts of so many hearts as Bro. Davenport. I say for that which he has done and is doing, let us crown our gallant brother with laurel.

We are going to have a strawberry festival May 26th,* at 12 o'clock. Come, bring your wife and babies—if you have not got the latter you can have my Bobby. I have reserved 15 seats for you and party. We all look forward with great pleasure to the advent of our distinguished guests in the autumn. We are pleased indeed to know both the State and National Granges meet here. We regret though there is not still another organization of farmers that we could also entertain, for we have ample accommodation in all respects, and certainly have the keen desire to make the stay of every Granger pleasant who is desirous of paying us a visit. Come ye Grangers all.

Sacramento Grange is neither dead nor dying. When she dies a return ticket will be bought to come back on. There has been no self-consuming boom in the Grange referred to, but there has been a steady increase of membership, an increase of activity and interest easily apparent. There has been some pruning done so that now the Sacramento Grange is in a healthy condition, needing the services of no doctor, much less an undertaker. Yours fraternally,
 Union House, May 12. EDWIN THISTLE.

*May 26th is Sunday, a date not generally selected for Grange festivals, but probably "Bobby" has upset paternal families.—Eus.

EDEN GRANGE.—We learn that Eden Grange had an excellent meeting on Saturday last. The picnic and other matters of interest were discussed. Three new applications for membership were received from young petitioners, with the understanding that more applications will soon be received.

Grange Picnics.

Despite the heavy showers and cold wind, the Rev. Dr. Barrows' able address at Hook Farm, May 14th, was well attended by Yuba City Grangers. May 2d, the Sacramento county Grangers enjoyed themselves in Beach's Grove. May 25th, Alameda and Santa Clara county Patrons, and it is to be hoped some from Contra Costa also, will meet at Alvarado. May 8th, Tulare, although troubled with the elements as their brethren at Yuba City, managed to draw Patrons from other Granges to their picnic, where they maintained that reputation for hospitality which they earned at the last session of the State Grange. At Lodi, May 9th, the San Joaquin county Patrons had a grand time, marred only by the absence of the officers of the State Grange. Other picnics have been announced, but so far we have not heard from them. We want full reports of all these good times. On such occasions Patrons from different Granges meet each other and form friendships which shall be as lofty and long-lived as the trees beneath which they assemble.

Bradley and Bradley Grange.

MESSRS. EDITORS:—The stranger in passing up the Salinas valley through the town of Bradley, on the southern boundary of Monterey county, can have no adequate conception of the extent of fine agricultural land that lies on either side, tributary to this point. Beautiful, rolling, grass-covered hills, sparsely studded with oaks, stretch away from the valley to the north and south, and but few cultivated spots can be seen from the flying trains. It is necessary to drive out through the Hames valley to the south and Indian valley to the north to form an intelligible idea of what the country really is. The former is estimated to contain, of arable, fertile soil, at least 45,000 acres, of which 6000 is owned by B. Porter; the remainder is occupied by from 80 to 160 acre homesteaders who have already laid the foundation of happy and prosperous homes. The valley was so named from a man by the name of Hames, who, before its settlement, occupied the entire territory as a sheep range. No finer wheat have I seen growing anywhere this year than I saw in this valley. It is also, so far as tested, pronounced first-class for fruits of nearly every variety raised in the State. Among the first and most enterprising settlers were Messrs. J. A. Hackett, Riewerts, Betts Bros. and a few others.

The former gentleman is also a leading spirit of the town of Bradley, in the welfare of which he has always taken an active interest. A large amount of the land adjacent to the town is owned by the Sargent Bros., and used as a cattle range at present, but it is surprising to find what a crowd of people can be gathered together at Bradley on holiday occasions. On May Day about 1000 people, it is claimed, could have been seen in Bradley.

Bradley Grange.

In passing through Bradley several times during the past winter, I had little thought that a creditable Grange could be established here, but some months ago I was assured by Mr. Hackett that they had the people here, of the right kind, and that, in his opinion, the Order could be planted here successfully; so while at Jolon I decided to drive over, being almost on my route to Cambria, and ascertain what could be done. I arrived here last Saturday, and after talking with a number of the bone and sinew of the nation, I decided to hold a meeting on Monday following, the 13th inst. The best class of farmers, their wives, sons and daughters were notified of the meeting, and at the appointed time Hackett's hall was well filled with people from the surrounding country, and upon calling the meeting to order, I explained, to the best of my ability, the purposes of the Order, its accomplishments, and some of the advantages the farmers here might derive by falling into line with their fellow-laborers in the Granges throughout the land. Rev. D. G. Wright, an old-time Patron, followed in a stirring appeal to his brother farmers to not let the favorable opportunity pass of organizing a Grange at Bradley, showing that it was a matter of interest to those having the welfare of the town at heart as well as the many advantages that would accrue in other ways. The opportunity was then offered for those who wished to enroll their names, which finally resulted in securing the signatures of 28 persons—19 men and nine women. The election of officers then followed, resulting in the selection of B. Riewerts for Master; J. A. Hackett, O.; L. Bidwell, L.; J. T. Donaldson, S.; C. H. Betts, A. S.; A. J. Wise, T.; Rev. D. G. Wright, C.; Mrs. F. Betts, Sec.; G. F. Stockstill, G. K.; Mrs. M. Hackett, Ceres; Mrs. J. T. Donaldson, F.; Mrs. J. Dukes, L. A. S. Installation will be held to-night (Tuesday), when others may unite. Will hold a special meeting to-day, 10 A. M., to exemplify the unwritten work.

Bradley, May 14, 1889

THE Secretary of the State Grange is now prepared to furnish Patrons copies containing the Constitution and By-laws of the National and State Grange and proposed by-laws for subordinate Granges for 5 cents a copy or 60 cents per dozen, purchaser to pay postage or expressage.

San Antonio—A New Grange.

MESSRS. EDITORS:—Sixteen miles due west of the promising neighborhood of San Lucas lies the Jolon district, in the charming San Antonio valley. The settlement known as the Jolon comprises a population of about 1000 souls, who, though comparatively isolated, are apparently as prosperous, happy and hospitable a lot of people as has been my fortune to visit in this State. The valley is shut off from the Salinas by a low range of wooded hills on the east and bordered on the west by a more lofty and picturesque range. In this region are many fine homes adorned tastefully by such horticultural and floral attractions as their intelligent owners have just reason to be proud of. While there is much to indicate the industry and thrift of the inhabitants, they are not of the class that believe in denying themselves all the recreation which the God of Nature evidently intended they should enjoy, nor can they be justly censured for occasional slight neglect of the field, garden or orchard when it is realized how great is the temptation to his away with gun and fishing-rod 'mid the game-haunted fastnesses and trout-bearing brooks akin to the region. The country is proving well adapted to the growth of fruit trees and vines, and, as almost everywhere else throughout this southern country, many promising young orchards greet the observant eye.

Second Largest Vine in California.

At Jolon my attention was attracted to the remarkable grapevine, said to be the second largest in California. It is in front of Mr. Dutton's store, and the stock is about ten feet high, as straight and nearly as smooth as an ordinary fruit tree, and measures an average diameter of about seven inches. The branches afford an immense arbor, and the amount of fruit it produces is well-nigh incredible. The age of the vine is less than 20 years. A few miles above Jolon, on the banks of the murmuring San Antonio river, stands the grand old Mission church of the same name. My time would not permit of my visiting the scene of early historic associations, much as I desired to do so. My self-imposed mission was to institute a Grange in this neighborhood, providing a sufficient number of good and eligible men and women could be found who were desirous of enlisting in the Patrons' cause.

Starting a Grange.

The first night I entered the valley I passed at the hospitable home of M. Boolinger, one of the most substantial citizens of the country. The next day I called at Mr. N. Paulsen's residence and made known my purpose. Without solicitation this gentleman readily accompanied me to the houses of many of his neighbors, to whom he introduced me, and then generally left me to do the talking, but occasionally putting in a timely suggestion. Our meeting was called for the evening of the following day (Wednesday, May 8th), to be held at Pleasant View schoolhouse. At the appointed hour the house was filled with people. After the close of my remarks, in which I tried to explain the aim of the Order, what had been accomplished, and some of the benefits that might accrue to them from a Grange at Jolon, and also answering a great many questions, 16 persons—12 men and 4 ladies—signed the roll as charter members, and we proceeded to elect the officers. It then being apparent that the organization could not be fully completed within a reasonable hour, it was voted to adjourn until the following evening and have a public installation. This hour of meeting witnessed a still larger gathering than before. I announced that the roll was still open for the signatures of eligible persons to be added as charter members, upon which 17 added their names, and later, 3 more signed, making in all 36—18 men and 18 women. After the installation I exemplified the unwritten work. Much zeal was evinced among the members, and I was struck with the singular unanimity of feeling that seemed to permeate both meetings. The building of a suitable Grange hall was mooted by a number, and I was assured privately that a building for this special purpose would beyond doubt be erected before the lapse of the year, as the Native Sons of the Golden West propose to institute a Parlor one long and will aid in the expense of construction.

The following are the names of the officers of San Antonio Grange for the current year: J. Alonzo Forbes, M.; N. Paulsen, O.; E. D. Bushnell, L.; L. S. Fleming, Jr., S.; P. H. Paulsen, Asst. S.; Wm. Nance, T.; Rev. J. S. McGowan, Chap.; J. M. Bolten, Sec.; Wm. Renwick, G. K.; Lulu Alm, Ceres; S. S. Paulsen, P.; J. W. McGowan F.; Sarah Cook, L. A. S.

Look out for a good report from this Grange. F. B. LOGAN.

Tulare Picnic.

Yesterday was windy and rather cold, but despite the weather there was a large attendance at the Grangers' picnic. The literary exercises in the forenoon were quite interesting. They were opened by a song from the Grange choir, after which came prayer by Rev. W. D. Williams. The remainder of the program was as follows: Declaration of the purposes of the Patrons of Husbandry, by A. P. Merritt; song by the choir, address by Dr. Williams, song by the choir, and a select reading by Geo. Roth. The well-filled baskets and their contents were

spread under the oaks, where the picnickers gathered in little knots and passed a very pleasant hour. After lunch, dancing, games and other amusements occupied the afternoon. —Tulare Register, May 10th.

San Jose Grange.

It was nearly 10:50 Saturday morning when Master O. F. Alley gave the order to close the outside gate of San Jose Grange.

S. P. Sanders of the Special Committee on the Taxation of Trees and Vines reported a conference with the Executive Committee of the State Grange not yet complete, and requested further time, which was granted.

Captain Dunn read the clause of the Constitution which granted power to the State Board of Equalization, and said it seemed to give more power than he at first supposed.

Mr. Brainard said that if the present law should be declared unconstitutional it would probably be on the ground that it worked a practical exemption of property from taxation, which was not in conformity with the Constitution.

Mr. Pettitt said he thought the Constitution did not give so much power to the State Board as Captain Dunn believed it did. It probably gave supervisory power and power to equalize, but no power to declare against any law of the Legislature.

A. Chew, a former supervisor of Santa Clara county, said he did not think the State or County Board of Equalization had any right to dictate to the assessor. They had the power to equalize valuations if they thought the assessor had made them either too high or too low. He believed Santa Clara county was now paying a larger tax proportionally than any other county of the State. As he looked upon the matter, there was no power conferred to order the assessor to disregard a law. If we had an assessor who owned a large amount of trees and vines, he might more easily see this matter correctly.

D. Coates said the calling of trees and vines a growing crop seemed perfectly reasonable. The tree had no value except as it bore fruit, and was exactly on the same basis as the stalks of wheat and corn, which were of no great value except as they bore heads or ears of grain.

Mr. Feely and Mr. Wingate expressed opinions similar to those which have been heretofore reported, and were strongly of the opinion that the law should be followed so long as it stands upon the statute-books unimpaired.

R. Fisk, Master of the Grange at San Miguel, being present, was called upon and said it gave him much pleasure to meet with the Grange. He said he had remained over the day in order to meet with them. He said a Grange was organized last March at San Miguel with 16 charter members, and they were getting into good working order. They had initiated some new members and were receiving some new applications.

Mrs. Bicknell read a paper on criminal statistics which gave the startling figures that one-third of the criminals were under 20, one-half under 21 and two-thirds under 22 years of age.

These facts seemed to show that there was something wrong in parental discipline.

She called attention to an article in the *Mercury* showing the effect of mental work on otherwise idle criminals, as put in practice at the New York State Reformatory at Elmira. Illiterate criminals were educated and prepared to become good citizens.

Mrs. Sheldon read an article which she had compiled from the Consular reports as to the methods of curing prunes in France.

Mr. Feely said he had tasted prunes prepared in Santa Clara county after a process similar to the French, and they were surely the best prunes he had ever tasted. The orchardist who prepared them claimed the extra flavor was owing to his superior soil, but it was evident the secret was in the preparation.

A question arose as to the comparative merits of French and California prunes. Mr. Pettitt said he did not believe better prunes were grown than those of California.

Mr. Brainard said he had seen a letter from a New England grocer, who said that so far he had generally preferred French prunes to California prunes, but so much progress had been made the last three years in California raisins, which were now equal to any in the world, that he expected an equal improvement in prunes, and that California fruit might in the end prove the best. Mr. Brainard said this should teach our people not to rest contented that we had the best prunes in the world, but to try to make improvements in curing and packing till all should be forced to acknowledge superiority.

It was generally agreed that California fruit was superior to the French, but the curing and packing were not yet, as a general thing, up to the French standard.

A grand picnic of Santa Clara county and Alameda county Granges has been arranged for Saturday, May 25th, at Alvarado. Tickets for the round trip will be 75 cents, and there will be a good time if all the expectations are realized.—*Mercury*.

TEMESCAL GRANGE meets at 2 P. M., Saturday, May 18th. Matters relating to the picnic will be brought forward. A large attendance is particularly desired. All sojourning Patrons are invited to attend.

Bro. I. C. Steele at Gilroy.

MESSRS. EDITORS:—In obedience to the call for help to reinstate Gilroy Grange, I attended their meeting on the 11th inst. State Deputy Roache arrived before me and his cordial greeting was timely and very grateful to me, as I had never visited Gilroy Grange before and knew none of its officers. The Master was not present and the attendance was not large. There were no visiting members from any other Grange, but the members of Gilroy present were earnest, thoughtful people, anxious for instruction, who will undoubtedly revive the work if encouraged and assisted as they should be by the officers and members of the State Grange. The Worthy Overseer, Bro. Thomas, presided and showed the true spirit of a good Patron and a good officer. He lives ten miles from the hall, but says he proposes to stay with the Grange. They meet in the Masonic hall, a nice, large, commodious hall. After the regular business was disposed of, Bro. Roache rendered the unwritten work to perfection. He has a happy faculty for imparting instructions. He also spoke to them of the objects of our Order and the privileges of members, of the results already attained, and pointed out the power of united effort in the accomplishment of a worthy object. I gave them such additional information and suggestions as seemed suited to the occasion.

Four applications for membership were received and committees appointed, and it is expected that a large class will be ready for initiation in the near future.

The late rain did considerable damage to hay in this section. About one-half of the hay crop had been cut. But the benefit to other crops will be fully equal to the damage done to hay.

I staid in Watsonville over night on my way here, and was informed there that the rain did much more good than harm. Along the coast in Santa Cruz and San Mateo counties the rain did much good and very little harm, as most of the crops are late and the rain was just what was needed. The crops are generally good, but the hand of the skillful husbandman is notable in the response of Nature to his better methods.

Yours fraternally, I. C. STEELE.

Gilroy, May 12th.

Gov. Waterman and Joaquin Miller at Alvarado.

It is highly probable that the picnic of Temescal, Elen and San Jose Granges at Alvarado, May 25th, will be honored by the presence of Gov. R. W. Waterman. In a letter to Secretary Dewey, dated May 13th, he says:

My motto has ever been, "Business before pleasure," but if I can get off for a day from the prison investigation, or if they can spare me, I will try and join your party. Send me full directions how to reach the grounds. If possible, my folks will come with me.

The following letter from the Poet of the Sierras also looks promising:

My Dear Dewey:—I am going to try hard to be with you. I want to meet my friends, the people. I want also to see the stout-hearted Governor; a big man in all ways and a sterling friend of California. I want also to see you.

I can only say *certainly* if mother is strong enough we will be with you. Yours,

JOAQUIN MILLER.

Oakland, Cal., Sunday, 1889.

San Joaquin County Grange Picnic.

MESSRS. EDITORS:—Thursday, May 9th, was the day set for the San Joaquin county Grangers' picnic at Lodi. The day was all that could be desired. The grounds were in excellent condition, the heavy showers of the preceding week having laid the dust and freshened the grass. Although a somewhat busy season with the farmers, the gathering was well attended. Lodi was out in full force. Many were there from Woodbridge, Elliott and Washington Granges. Stockton and vicinity also were well represented.

Promptly, at some time between 9 and 10 o'clock, the procession formed at the hall, and headed by the band, marched to Villinger's Grove, some 200 yards distant. After the opening song by the Grange, Bro. J. D. Hoffman, president of the day, introduced Dr. James Caples of Elk Grove, whose remarks were attentively listened to. Bro. Hoffman read a letter from D. Flint regretting his inability to be present. All were sorry to learn of the illness of W. S. M., W. L. Overhiser.

The following literary program was well rendered: Recitation, by Miss Birdie Childs; humorous recitation, Miss Mary Ellis of Woodbridge Grange; recitation, Mary McIntosh, Stockton Grange; song, by a trio from Stockton Grange; recitation, by Sister Merrill, Stockton Grange; select reading, by Sister W. D. Ashley; song, by the Grange, Sister N. E. Alling; organist; recitation, Miss Jessie Woods; recitation, "How Mother Fixed It," Prof. C. B. Newton, Stockton Business College; encore, "The Tay Bridge," song, by Master Alling; song, by the Grange; selection by the band. The meeting dismissed and Patrons and friends gathered in groups of from 4 to 12 under the spreading trees and bushes to inspect the knives and forks they had brought with them. The inspection service being duly concluded, dancing was be-

gun; foot-racing and various sports filled the afternoon, all being concluded by a grand ball at Stoddard's hall in the evening. N. V. W. Stockton, May 12, 1889.

The Parting Word.

Dear Sir and Brother:—Your "written on the fly," May 8th, at hand. This is about the last I think to write before I leave. My head and hands have been full the last few days, and I am in no fit condition to answer your kind and generous letter. I cannot compose myself to do it justice. Friends are calling on us every few minutes and congratulating us, with the best of wishes. I wish I could see you and Sister Dawey and exchange the warm, fraternal grasp once more. I will correspond with your paper the best I can. Send your papers to headquarters California exhibit, Paris Exposition. Run the Grange the best you can, and when I return I will help you out the best I can. Your letter of this morning, 9th, just at hand. Thanking you for all your kindness to me and mine, I must defer until I am off on my trip. Fraternally yours, DANIEL FLINT.

Sacramento, May 9th.

[Accompanied by his faithful wife and James Hutchison, a leading nursery and seedsman of Oakland, our Worthy State Lecturer traveled toward the rising sun on the afternoon of May 9th, the date of receipt of the letter so promptly answered despite his numerous cares. Their departure was the occasion of many good-byes and expressions of good-will for a *bon voyage* and safe return. To these verbal ejaculations, we add ours in print.—EDS.]

A Forward March.

MESSRS. EDITORS:—March Grange had a meeting to-day with a very good attendance, and after talking about one-half hour, they concluded to hold on to the charter and go ahead with the Grange. They elected a set of officers for the year, and in two weeks from to-day I will go over and install them and set them to work. All of the members that were there paid up all of their back dues, as you will hear from the Secretary, in the shape of State Grange dues. I think that March Grange has taken on new life now and will be a live Grange from now on. I hope so. I shall do all that is in my power to help them on the road to success. The following are the officers: M., J. C. Porter; O., W. W. Wilber; L., Sister N. L. Porter; S., E. A. Nois; A. S., W. B. Reynolds; C., Kate Wilber; T., R. K. Stevenson; Sec., Sister S. T. Nois; G. K., B. F. Stevenson; Ceres, Sister N. A. Stevenson; P., Sister M. J. Stevenson; F., Annie Gilfratic; L. A. S., E. C. Reynolds.

You will get a further report from the Secretary, so I won't trespass on your time any further. Yours fraternally, B. F. FRISBIE, Yuba City, May 11th. Deputy Lecturer.

Resolution of Thanks.

WHEREAS, To discover an oasis in the arid desert of human selfishness lightens the hearts of all true lovers of their race far more than does the sight of the gushing fountain the weary traveler in the desert; and

Whereas, An oasis has been discovered in the persons of Worthy Past Masters Flint and Steele, who, through their goodness of heart, left their large and extensive business, their beautiful homes and loving families, and, without fee or price, came on a long and tiresome journey to benefit us; therefore be it

Resolved, That Watsonville Grange most truly and sincerely appreciates their generous and brotherly act, and, with unanimous accord, thanks them for the same. A. P. ROACHE.

Watsonville, May 4, 1889.

CHARTER MEMBERS.—The following is a list of the charter members of San Antonio Grange, No. 286, Jolon district, Monterey Co., organized May, 1889, by F. B. Logan, Deputy: N. Paulsen, L. S. Fleming, T. H. Paulsen, W. Weferling, J. M. Bolten, Wm. Renwick, J. S. McGowan, Gottlob F. Roth, E. D. Bushnell, J. Alonzo Forbes, W. A. Baker, C. R. Hill, Wm. Nauer, G. F. Smith, Joseph Walker, Henry Loeber, W. A. Nauer, R. T. Forbes, J. N. Moss McGowan, S. L. Cook, S. L. Paulsen, Lulu Alm, Dora Johnson, Wm. M. Johnson, Mrs. Wm. Nauer, Clara Smith, Regina Roth, Maggie E. Smith, Emma Weferling, Mattie Smith, Lydia Fleming, Louisa Wentlock, Mrs. Anna Paulsen, Mrs. Ida M. Walker, S. S. Hill, Miss Margaret Forbes.

A LETTER from Mrs. E. J. Stephens, Sierra valley, is full of thanksgiving on account of the recent snow, which, had it not melted as it fell, she thinks would have been four feet in depth. Before it came, everything was as dry as midsummer, little water in the streams, wells low, and bad prospects for farmers, mill-men and miners. In the mountains about six feet fell, and now all are happy. She writes that the Grange proposes to celebrate with a picnic, but, unfortunately, she forgets the important part—the date—so we cannot give it to our readers.

ACCORDING to the Toronto Grange Bulletin, Canada also is about to be afflicted with a binding twine trust. All the more need that American farmers should smite it for all time. If we do our duty there will be too little of the trust for burial by another year.

The Evolution Theory.

Some anonymous writer lately sent the following verses to Rev. M. J. Savage:

So you came from a monkey, you tell me?
No kinsman of mine then, that's flat;
But 'tis few who can grapple with history,
And trace such a birthright as that.
But, indeed, I'm not over ambitious,
And haven't the slightest desire
To take for my mother a monkey,
Or call a gorilla my sire.

It strikes me that somewhere in history
Recording creation's great plan,
We have it decided and certain,
"God in the beginning made man."

A man, not a monkey, remember,
But a being of beauty and shape;
No gorilla, or ugly baboon,
Or pitiful, chattering ape.

You may deem me both simple and foolish,
But in the beginning I see
God made man in His own upright image,
And that is sufficient for me.

Yet, philosophy, ponder the mystery,
I begin where creation began;
And there, without ape or gorilla,
"God in the beginning made man."

Mr. Savage replied in the same meter:

You are very sincere, madam, doubtless;
So have been people wiser than you;
And yet they have piously sneered at
What afterward proved to be true!

The poor, abused Bible has often
Been turned to a cudgel, whose blow
'Twas hoped would give a quietus
To all Moses chanced not to know.

Galileo's new moons were delusions;
The earth did not move, and was flat;
And every new wonder of knowledge
Was impious, false, and all that.

But, spite of the folly thought pious,
The truth, not of man, but of God,
Still breaks through all clouds, like a sunrise,
Bright alike in the star and the sod!

One line seems to you all conclusive,
"God in the beginning made man;"
But, pray, can your wisdom inform us
Just when God's beginning began?

Can you tell me why 'tis not as noble
To lead life on, up through the ape,
As out of the dust, dead and formless,
The great human wonder to shape?

Sure, the ape is God's work; so, contemptuous,
To sneer at one part of his plan
Is hardly the way best to honor
Him who, by some process, "made man!"

When I hear foolish people whose title
To decide on so mighty a matter
Is only a prejudice pious,
I fancy I still hear the "chatter"

That hints the ape theory strongly,
But only goes far to suggest
That still there are cases remaining
Where progress has met with arrest!

Madge and Her Lovers.

[Written for the Rural Press by I. H.]

Little wonder that their name was legion, for Madge was the happy possessor of all that make a woman attractive—youth and beauty, loveliness of character, and last, but scarcely least, a comfortable income of her own. Yet the years were passing by and she remained in her uncle's house "in maiden meditation, fancy free." Not one of the would-be suitors had been able to pass a certain charmed line on the other side of which she stood unapproachable; and certainly no one of them all had ever awakened in her heart an emotion warmer than friendship.

Would it always be so? Her aunt, thoroughly convinced that no woman would fulfill her destiny if she failed to become a wife and mother, mildly remonstrated at times, but to no purpose.

"Do you want to get rid of me, Aunt Ellen?" Madge would say in coaxing tones; and the answer would be a vehement denial of any such desire.

"I should like to keep you always, dear, just as you are, if I were thinking of myself alone, but a woman is happier with ties of her own, husband and children."

"Not unless she marries the right man, Aunt Ellen, and as he has not appeared, we will wait for him. I am sure we are very happy as we are."

Then Aunt Ellen would sigh. Time had been when she had hoped to see Madge the wife of her only son; but no such idea had ever entered the heads of the boy and girl brought up from childhood in close companionship. Guy had married his cousin's most intimate friend, greatly to the satisfaction of Madge her-

self, and his mother's pet scheme had come to naught. She had never mentioned it to any one, and the disappointment she had kept to herself, but she sighed over it still at intervals, as we all do over the "might have beens" of past days.

Lately there had come to the neighborhood a young man whom Aunt Ellen had watched with considerable interest, wondering if he might not prove to be her niece's fate; but as yet he had given no sign, his invalid mother seeming to absorb all his interest. The mother was a most charming woman, highly educated, and gifted with a sympathetic nature that attracted Madge at their first meeting. A warm attachment sprang up between them at once, and Madge's pony was to be seen standing at Mrs. Seymour's gate two or three afternoons in every week.

But Philip—he was a secondary consideration. Sometimes he was present; oftener he was out looking after his work, and his presence or his absence seemed to make no difference to Madge. Certainly he was a model son. All the neighborhood agreed on that point, and it was impossible that he could be the constant companion of such a mother without growing to be like her in many respects. He had traveled with her, he had read with and to her, he had shared all her interests; but he had not her impulsive nature. Quiet and reserved, it would take a stranger some time to understand him, and Madge had not yet found him out; while to him she was only a very nice girl who was always welcome because his mother enjoyed her society and was not lonely without him when she was there. Not yet was he numbered among her lovers.

A day came, however, which revealed to each of them something of the other's inner nature. It was the month of May, the picnic season of California's young people, and in a wild and beautiful glen there was to be a gathering of all the neighbors. Madge was in the kitchen deep in the mysteries of cake-making when her cousin's wife appeared.

"I have come to carry you off, Madge," she said; "so as soon as that cake is in the oven you must go and get ready."

"Indeed!" exclaimed Madge. "And pray what is to become of the cake after it is in the oven if I go and leave it?"

"Oh, mother will attend to it, I am sure; I really must have you. I have just had a letter from John, and he will be out this evening and bring Hugh Sheldon with him. I can't entertain them without your help."

Madge laughed. "That is the state of the case, is it? Well, indeed I don't know why I am bound to entertain John or Mr. Hugh Sheldon either; let them entertain themselves."

"Come now, Madge, don't be unreasonable. You know if you are there, everything will go right; but if you are not, I will be in a perpetual flurry with the cooking and the baby and everything to attend to, and no one to put a flower in the vases or to see that the tablecloth is laid straight."

"Oh," said Madge, "that is putting quite a different face on the matter. If you want me to help you, Susie, I will go with pleasure; but as for your young gentlemen, I think they can do well enough without me."

"John thinks otherwise, poor fellow," said Susie, who was his sister.

"John is a foolish boy, as I have told him to his face, and shall tell him again if he provokes me. The woman he will really love one day is probably learning her multiplication table now, if indeed she has gone so far."

But neither of them said anything of Mr. Sheldon. Truth to tell, Madge rather liked Mr. Sheldon; he had paid several visits to her cousin, and without making himself at all obtrusive had shown a marked interest in Madge herself. He was a man of about thirty-five and was already known as a very promising lawyer in a large country town. There was something in his manner, a certain touch of authoritative-ness, which rather pleased the girl accustomed to the obsequious devotion of a host of younger men. She could never care for any one who would be her willing slave. Then Mr. Sheldon's conversation was interesting and suggestive; he neither indulged in idle gossip nor senseless compliments. On the whole, Madge was pleased to know that she would meet him again, and felt that he would be an acquisition for the picnic.

Aunt Ellen readily undertook to bake the cake, and Susie carried off her ally in triumph, intending to keep her for several days. Madge was always a welcome guest in her cousin's home; she helped Susie in all her household cares, amused the baby, roused up Guy, who was too apt to bury himself in his farm duties, and brightened the house with all the little winning ways so natural to a woman care-free and light of heart. No wonder that she was wanted when visitors were expected. John Taylor, a mere boy of twenty, who was one of her open adorers, was enraptured to find her present when he arrived, and Mr. Sheldon's rather grave and unreadable face lighted up unmistakably.

The day of the picnic came, and as a matter of course Madge was invited by Mr. Sheldon to ride with him, as he had his own buggy and a fine, spirited young mare. She consented, but with the inward determination to be entirely free when the picnic grounds were reached.

Mr. Sheldon had been to country picnics before; he knew the common custom by which a gentleman escorting a young lady may monopolize her entirely without infringing upon the public sense of propriety. Did he hope so to have Madge all to himself and to enjoy showing

to others a certain right of possession? If so, he was disappointed; for Madge was everybody's friend and there were crowds of people whom she was anxious to see and speak to. Certainly she did not neglect the stranger who had come with her; she introduced him right and left; she set him to work putting up a swing for the children; she came to him now and then with a smile and a few bright words. But she seemed to be everywhere at once, the healthy human interest of her young heart overflowing to all sorts and conditions of people; now she was listening without weariness to an old woman's account of her various ailments; then discussing serious questions of poultry-raising with another, and again enjoying a game of any kind with the children, to whom she was almost an idol.

The lunch hour brought her again to Mr. Sheldon's side, and showing no chagrin, he exerted himself to entertain her. Never had he seemed so kind, so obliging, so interesting. Madge was quite delighted with him. Yet true to her nature, after a little while she excused herself.

"Mr. Sheldon," she said, "I am going to take the baby from Susie and send her here; please see that she gets her lunch comfortably," and she was gone.

The baby was cross and fretful, as babies are apt to be in a crowd, and the mother was tired and warm. "Now give him to me and I will put him to sleep," said Madge; "you know I can always conquer him."

The little fellow, glad of a change, held out his arms, and telling the mother to be quite at ease about him, Madge carried him off. She found a cool, quiet spot under the shelter of a large rock, and there she sat down and sang him to sleep. It was very pleasant to be alone for awhile, and Madge was in no hurry to get rid of her little charge; she sat still, enjoying the soft murmur of a stream near by, the waving of the leaves in the gentle breeze, all the quiet sights and sounds that soothe the heart to rest in Nature's solitudes. Presently she heard a footstep, and looking up, she saw Philip Seymour. With a smile and a warning gesture, she forbade him to speak, and seeming to understand, he passed on, but immediately returned with a buggy-robe and dextrously arranged a bed for the sleeping baby.

Madge was by this time glad to lay the child down. As she did so, patting him softly to keep him from waking, voices from the other side of the rock broke the silence.

"Ha! Sheldon," said one, and it was the voice of a saloon-keeper in the neighboring village, a man whose reputation was very low—"it seems you don't get on very fast with the heiress; she rather threw you off this morning."

"Jim," said the other slowly, "did you see the mare I drove to-day? I'd a good deal rather control a creature like that than one of your quiet kind. Wait awhile. I'll manage her yet; she's worth the trouble."

There was a coarse laugh. "Well, I wish you luck."

Madge bent her head over the sleeping baby; the hot blood rushed to her cheeks, the indignant tears to her eyes. This was the man she had begun to like! She looked up. Philip Seymour stood beside her; there was something in his face that gave her an instant sense of protection and help.

"Will you take me home?" she said, holding out her hand.

"Gladly; but first let us find your cousin."

And just then Susie made her appearance in search of her baby. She saw at once that there was something wrong, but Madge said simply: "I am going home; please tell Aunt Ellen. Mr. Seymour will take me."

"But, Madge, what will Mr. Sheldon think?"

"It does not matter what he thinks, now or at any other time," said Madge as she turned away.

Philip Seymour made no remark; he led the way to the spot where he had tied his horse, helped Madge into the buggy and drove off in silence.

Fairly out on the road he turned to her. "Let me take you to my mother," he said; and Madge gladly consented.

Six months afterward Philip Seymour and his wife were watching the sunset from the deck of an ocean steamer. They were on their bridal tour, and naturally enough were in the habit of recalling certain happy memories.

"Philip," said Madge, "do you remember the picnic last May?"

"The picnic I went to only to take you away? Yes."

"Only to take me away from all the rest of the world, Philip," she said softly. "From that day I knew you as standing alone, unlike all other men, caring for me only for myself."

"Dear little wife," he answered her, "I had a hard struggle with myself when I did not knock that fellow down and give him his deserts; but now I think we should have sent him a box of wedding cake inscribed 'With best thanks.'"

A minister was taking a walk with his best girl in Woodland the other night, and young Toadstool followed close at his heels. "Mr. Toadstool," presently said the minister, "don't you know that two is company and three a congregation?" "Oh," spitefully snickered Toadstool, "I know that. Three is generally a durned big congregation wherever you be."

The worst form of "writer's cramp" is being cramped for funds.—*Boston Courier.*

Going to School in W. T.

EDITORS PRESS:—Coming from Oakland, Cal., where the school system is so complete, and where the genial climate permits the children to attend school nearly every day of the ten months comprising the school year without serious inconvenience, I have been deeply impressed with the many hindrances in the way of the "coming man" of Washington Territory.

Owing to lack of school funds, many districts can have but the three months' school required by law in order to hold the district, \$90 being the amount allotted to the small district, the teacher's salary being \$30 a month, less than that of a day laborer, and the teacher doesn't "board round," so his living expenses are all borne by himself. The laboring man has the advantage over the teacher of his board.

Then the rains and the roads, if roads there are, possibly only a cow-trail through woods and over wide stretches of peat swamps.

I have not traveled over the different sections of the country and will attempt to give no information respecting any other district except the one in which I live.

During the dry season the children may be needed at home, boys, and girls in some instances, assisting in the planting, hoeing and harvesting, and in clearing new land, for I have not seen a man with his 160 acres cleared, or even the half of it. Of course this brings the school session in the rainy season, when the prairies are often flooded.

Girls wear gum boots and "wade in." One term a girl of fifteen living nearly two miles distant frequently "packed" her little sister on her back over half the distance, herself wading through peat and water a foot deep, and in spots even deeper; in fact in places where the cattle tramp over it, it seems as if there were no solid foundation under it, and the only hope is to scramble out of such spots as expeditiously as possible.

A rainy morning has no deterring influence on a Washington Territory boy or girl. In one respect our rains are less disagreeable than those of California. They are seldom accompanied by wind, and with gum boots and umbrella, one doesn't mind a straight down-pouring rain.

Many of the schoolhouses are of rough logs, minus blackboards, maps, charts and other necessary appliances for the best success in teaching (our schoolhouse is quite modern); but these pioneer school arrangements are gradually being superseded by a better state of things, and still better things are in store for us when we fully become a State. It may be owing to some of these difficulties attending school, together with months of hard work during the long vacation, that give the children so keen a zest for study. I have taught in Maine and California, but never in several years' experience found children so eager for study as here. Lessons are never a task, but like a delightful game in which each is eager to excel.

The opening of school is joyfully anticipated, and its close is as deeply deplored. Will not these rugged experiences and deprivations develop in our youth an independence and nobleness of character not unlike that of the sturdy pioneer of the old New England States?

Washington Territory.

J.

Why They Had No Paper.

Stranger—So you have no paper in this town?
Native—No sir. We did have one once, but it wasn't run right, and we was glad to get rid of it.

"What was the matter?"

"Wall, in the first place, the editor didn't allers treat folks right. He'd call one gal young and handsome, and slurringly refer to another gal just as pretty, leavin' it ter be inferred she wasn't pretty enough ter be called handsome, and she might be as old as Methusalem. Wall, that made trouble, an' after that, when Farmer Hayseed and Farmer Fallow both left the same sort of stuff on his table, he gave Fallow two lines more than the other."

"Yes."

"Wall, things kept gittin' wuss and wuss, until General Oldman up on the hill died, and got half a column obituary notice, all about the Mexican war and things, while my uncle Jake, just as good a man, who never left the farm, but 'tended to his duties like a Christian, an' was a pillar in the church, got only a quarter of a column. You better believe, me an' my friends felt hurt."

"I suppose so."

"Wall, we begun inquireing around about this editor, and we disikivered that while he was chargin' as fer every little two-line advertisement we put in, he was printin' a hull column about his job office fer nothin'. That raised a breeze, I tell you."

"No doubt."

"After that things came ter a head. The feller commenced stoppin' the paper on them wat didn't pay their subscriptions. Then we 'rose in our might an' druv him out o' town."—*N. Y. Weekly.*

AN experienced lady observes that a good way to pick out a husband is to see how patiently the man waits for dinner when it is behind time. Her husband remarks that a good way to pick out a wife is to see whether the woman has dinner ready in time.

YOUNG FOLKS' COLUMN.

The Discontented Roses.

A Fairy Story.

[Written for the Rural Press by M. B. D.]

"Go-ling! Go-ling!" tinkled the golden bells of fairyland, rung by a sprite who had been asleep in the heart of a tulip. The curtains of mist folded together, revealing the Queen upon the throne with all her ministers and maids of honor around her. This court was held because two fairies were discontented.

Now they appeared trudging along through the mud under their toadstool umbrellas, for it was raining and not even a sparrow would carry them in such weather. When they arrived at court, Red Rose spoke first.

"Gracious Queen," she began, "I have ever held up my stems of glowing flowers, and kept their golden hearts well brightened and perfumed. I have shaded the trembling maiden-hair, my thick leaves grew so broad and flourishing; but now I have lived in the rural garden so long that I am weary of its quiet and desire a nobler life."

The Queen replied: "You may prefer a livelier place, but there is none more noble than yours in the rural garden nook. What has made you discontented?"

Joining Red Rose, White Rose said: "One afternoon a butterfly came coaxing around my fairest blossoms, and told them they were not half so beautiful as the rich hot-house roses which are so beloved by our Queen. He explained that even the sun and dew might not fall upon them. They go to the grandest balls and parties in the world and hear the gentlest words and sweetest music that mortals ever hear. While he talked, airily fluttering about on his long wings, the blossoms drooped and scattered their petals down until most of them floated upon the spring where the children come with their pails for water. The very next time they skipped down the hill they stopped beside me.

"Oh dear!" said Bess, "those roses are all fading. What shall I do for a bouquet at the concert?"

"Don't you care a snap," said Frank; "I'll get you much finer flowers from Meador House to-morrow; so come on," and he dipped up his bucket of water, scattering spray over my petals until most of them sank. Bess filled her little pitcher, and when they left my last petals fell, and even the buds withered from jealousy. There was not a twig which did not see its own ugliness in the mirror which the spring made below."

"Were you ever discontented before?" asked the Queen.

"No, no!" they answered together; "but we did not know what a humble place we had until the butterfly told us. We were happy when Frank and Bessie praised our flowers or put them in vases for the parlor and for the dining-table, and often Bessie wore them in her hair or at her belt. We heard the kind words which the family said to one another when they thought no one was near and did not know that we were fairy flowers."

"So," the Queen remarked, "you let that summer idler, the butterfly, discourage you in your duty by a few vain words. Well, I, who know the trial you would find living in a hot-house, advise that you both go back to your bank beside the spring. But if you will not, what shall I do for you?"

"I would like to be a grand Marechal Niel rose, dear Queen; they are so fashionable and are so much admired," said Red Rose.

The Queen sighed as she granted her request.

"Now, little White Rose, it is your turn."

White Rose trembled. The dew hung heavy on her leaves, and she felt homesick for Bessie's songs and Frank's cheerful whistling. She wanted to see the spring again and the linnets that nested in the almond tree.

"I will go back to my home, dear Queen, for I love its quiet joys more than all my dreams of splendor."

She was scarcely settled upon her old bank when Bessie's father came down the hill leading Bessie by the hand.

"So your rose is fading," he remarked. "Ho! ho! it has overbloomed itself, I guess," and taking his pruning-knife, he trimmed off the branches. "Next year it will bloom out all the better for a little clipping now," and he fastened the stalk up by a trellis, loosened up the soil about the roots, and they went away with a word of regret for the red rose.

The children took good care of their favorite flower, and she was happy in her quiet home where the larks sang all day and the honey bees were her constant guests.

Red Rose changed to a young slip and was planted in a hot-house bed. Being accustomed to the dancing rain and free breeze of the hills, she found the hot air oppressive, and wearied of the dainties which were her only food. The gardener kept nipping off every bud and leaf until she was almost discouraged, for she had nothing else to do but put on buds and leaves. No tender ferns nestled at her feet, and the roses, her companions, were not modest like her old friend, but vain and scornful, holding up their rich velvet blossoms like crests of pride.

At last the gardener let one little bud swell until it burst its calyxes and unfolded its full petals into a glowing, many-leaved chalice of

fragrance that fairly trembled with its own beauty. He cut the rose from the stem one day, and, remarking that the shrub was a weak bloomer, pulled it up by the roots. A florist pierced the heart of the rose with a wire and bound it to some fern leaves. Then it was sent with a rare bouquet to a lady who stood before her mirror, dressed in rustling silks, and who wore gems that glittered like dew around her neck and in her ears. She glanced at the bouquet critically, and choosing the most beautiful rose among them all, fastened it in her glossy black hair.

One glad thrill of triumph the rose felt in her high place among those silken tresses, then the lady said to her maid: "Give me my pearl comb, Nettie; this rose is too bright. My cheeks look almost pale beside it."

Nettie tucked the rose carelessly into the bouquet and fastened the whole rich cluster upon the lady's breast. Rose was sick at heart. The cruel wire that bound her made her droop, and her place was so insecure that she trembled every moment. They went to a brilliant party where the lights and music and gay throngs of people were bewildering.

Poor Rose grew faint in the whirl of the dance, but pride kept her up until she heard a gentleman say: "Miss Miller is the loveliest lady here; see her—that fair girl who wears the red roses."

Rose looked and saw a young lady, who had a face like Bessie's. She longed to be beside the cool spring and see Bessie's lovely eyes once more, but she was too weak even to hope. She fell to the floor and lay there unheeded and forgotten.

The next day a maid swept her into the dust-pan and a grimy ashman took her off in his cart with the rubbish of the house. She shrank from such coarse things and fell to the street, where a wicked little waif found her all dusty and withered. This poor boy, who had never been taught to be good and honorable, was scarcely less grimy and rough than the old ashman. Picking up the rose with a chuckle, he rubbed her faded leaves into some poisonous tobacco weed and rolled them into a paper, where he began to burn them slowly.

"This is a nobby cigarette, Bob," said he to a companion, "high-toned rose, you know; try a whiff!" and he winked as he handed the little roll to his grimy friend.

With a last sigh for her old home and bright, good Frank and Bessie, the poor Rose perished in the poisonous smoke and turned to ashes.

The White Rose far away in the sunny hills put on her fairest blossoms every season, rivaling with their fragrance and freshness the summer-tide's most gracious offerings of lilies and bells and trailing vines, all starred with rainbow-colored cups of bloom. Bessie rewarded her constancy and goodness a thousand times by wearing the roses in her hair and on her breast, and cherishing the sweet unfolding buds even in her own little chamber where they could catch her first soft glance when she looked from her pillow in the morning. After long years she crowned the rose with pride and joy by making a bridal wreath of her fair blossoms and wearing them with her beautiful bridal veil.

A Coursing Match.

A Rural Press reporter recently witnessed a coursing match on the plains of Fresno county, near Barton's vineyard. The contestants were a fine greyhound, a shepherd dog and a Scotch terrier which were out on a hunt, accompanying a party on a pleasure ride. A large hare was started and the chase commenced. The greyhound followed the hare in a changing, circuitous route, while the shepherd dog and Scotch terrier cut crosslots. After a five-minutes' run, the greyhound caught the hare and the shepherd dog took hold with him, each pulling in opposite directions, while the smaller one looked on without entering into the contest of securing the prize. Envy and jealousy seemed to be the ruling passion with the larger dogs, and each engaged in a hard battle. While this struggle was going on, the Scotch terrier picked up the game and took his departure, leaving his comrades to fight their battle. The lucky dog had gone but a short distance when a Chinaman took possession of the hare, and "so the poor dogs had none."

An eccentric Boston character, an itinerant mender and sharpener of scissors and knives, notwithstanding the burden of 89 years, still perseveres jovially at work, indifferent alike to the advance of time and the evils commonly associated with old age. He is of a sunny disposition, enjoying a joke even at his own expense, and is given to make light of his own years and ordinary vicissitudes. The other day he met an acquaintance, who said: "Well, Mr. —, I thought Death would have captured you before this." "Sh!" came the venerable itinerant's answer; "don't speak so loud, for I think Death has forgotten all about me. And I wouldn't have you remind him for the world."

A HUMANE SOCIETY FORMED.—The Santa Clara County Society for the Prevention of Cruelty to Animals was organized at San Jose on the 29th ult. with the following officers: Pres., Jos. H. Scull; V. P., Dr. I. W. Snowden; Treas., Mrs. R. H. Schwartz; Sec., J. E. Brown; Trustees, Prof. J. Manzer, Rev. N. A. Haskell, Rev. B. F. Farquhar, Mr. Schrimpton and F. R. Shafter. District Attorney Burchard is actively interested.

GOOD HEALTH.

Poisoning the Baby Unwittingly.

It is probable that many parents kill their infant children, without meaning to do so, from ignorance of the dangerous nature of popular sedatives and soothing syrups; while many more, without knowing what they are about, form the dreadful opium habit in their babies before the latter are weaned.

In connection with this subject, Taylor's Medical Jurisprudence, 1880, says: "It is important for a medical jurist to bear in mind that infants and young persons are liable to be killed by very small doses of opium. They appear to be peculiarly susceptible to the effects of this poison. The syrup of poppies, paregoric, elixir, Godfrey's cordial, Dalby's carminative and a variety of soothing syrups owe their narcotic effects to the presence of opium. One-sixtieth part of a grain of opium has thus destroyed life in an infant. Two children, twins of six weeks, died recently from the effects of a teaspoonful of Godfrey's cordial, given to each. This dose of cordial equals three-tenths of a grain of opium. Mrs. Winslow's soothing syrup, called also 'Quietness,' a compound resembling syrup of poppies—two doses of this caused the death of a child 15 months old, with the usual symptoms of narcotic poison. An analysis of this syrup showed that an ounce of it contained one grain of morphia with other opium alkaloids. It is not surprising that it should prove fatal to infants in small doses. It has been remarked that most of the poisoning by opium proves fatal in from about 6 to 12 hours. This drug in all its forms is especially fatal to infants. They die rapidly from very small doses. I have no doubt many a parent who has noticed the prolonged stupor following a dose will realize how close to the border line he has been. Extreme caution in the use of this drug is essential, not only in the young but the aged, and with those who indulge to excess in alcoholic beverages."

H. C. Wood, in his work on materia medica, published in 1886, cites a case where a few drops of paregoric proved fatal in a child aged nine months. He particularly admonishes against the use of Dover's powder for the reason that owing to the improper admixture of the opium with other drugs entering into its composition, no reliability can be placed on a dose for uniform strength.

PHYSICAL EFFECTS OF ALCOHOL.—But if the physical results of alcohol are varied, much more diverse are its effects upon the mental and moral nature of man. Indeed, they are as multifarious as man himself. One general classification only is possible. Certain individuals (fortunately the small minority) are always pleasantly affected by stimulants. Each successive dose arouses in them increased exhilaration, and when intoxication supervenes, their sensations are delightful. Their every sense is exalted; they fancy themselves endowed with every gift—with all power and possession. As is often remarked, these are generally men of the most brilliant intellect and of the most charming moral qualities. Once led captive by alcohol, these unfortunates seldom have sufficient power of will to refrain from renewed indulgence. No moral considerations avail to restrain them, and with few exceptions, they yield wholly, finally and fatally to the tempter. For such men total abstinence is the only refuge. * * * Upon the large majority of men the effects of alcohol taken to intoxication are clearly and essentially different; although at first exhilarated, repeated indulgence brings drowsiness, dullness of apprehension, anaesthesia, vertigo, nausea, and vomiting—in short, bodily and mental symptoms which are excessively disagreeable. Of this class very few become drunkards, and those are men to whom anaesthesia becomes desirable as a temporary refuge from bodily pain and mental distress. Herein lies the sole explanation of the fact that the proportion of drunkards to moderate and habitual drinkers remains so small.—Dr. W. S. Searle in *North American Review*.

CARBOLIC ACID IN INDIGESTION.—In a recent number of the *Practitioner and News*, a correspondent says: "I have just passed through a severe attack of indigestion accompanied by colic, pyrosis, food eructations, epigastric weight, uneasiness, etc. Alkalies, muriatic acid, pepsin and pancreatic extract failed to give relief. Seeing your note in the *American Practitioner*, on the use of carbolie acid in acid eructations, etc., I took, with almost instant relief, two or three drops of the acid as soon after food as regurgitation, distention or acidity occurred. One dose was usually sufficient. On two occasions only was a second dose required. This I took half an hour after the first. I dropped the acid on a bit of fresh bread and rolled the mass into a pill. Since my own case I have given it in a similar case, with like good result. Here I added a scruple of carbolie acid to one ounce of glycerine. Dose, a teaspoonful."

CURATIVE POWER OF MAGNETIC IRON ORE.—Mr. W. H. Lake of San Bernardino recently discovered what promises to be a veritable mountain of magnetic iron ore. Soon after his discovery he, in company with two assistants, went up to the mountain to develop the ore.

Mr. Lake, who is 63 years of age, was so crippled with rheumatism that his joints were distorted. After being there four days, he made a singular discovery. The iron seemed to be permeating his system and acting like a tonic of the tincture of iron. His improvement continued, and now Mr. Lake is entirely recovered and equal to any exertion. He has recently experimented with the ore and others who have rheumatic troubles, or pains in the back or head, and it seems to be a cure as well for heart disease. The miners at Daggett now use the ore for a remedy. They tie it in a cloth and bind it on the affected part. The curative powers of magnetism have long been a subject of study and practice in certain diseases—rheumatism, in particular, has been benefited by its use in one form or another. It is possible that its use, as above, direct from nature, may be more successful than its indirect use. At all events, the miners who have been at work at this particular mine are quite sanguine in regard to the curative power of this particular deposit, and it is said that the establishment of a sanitarium on this mountain is among the early probabilities.

DOMESTIC ECONOMY.

FLANNEL CAKE.—Beat six eggs light; stir in two pounds of flour, one gill of yeast, salt, and sufficient milk to make a thick batter; make them at night for breakfast. Have your griddle hot, fry; butter and send hot to the table.

HAM AND EGGS.—Soak ham over night in milk. In the morning, fry until brown, then remove to a platter. Fry eggs by dipping gravy over them until done, instead of turning, then take up carefully and lay upon the slices of ham.

LEMON PUDDING.—Six ounces of melted butter; pour it over the same quantity of sugar; stir it well until cold. Grate the rind of a large lemon, and add to it eight eggs well beaten and the juice of two lemons; stir all together and bake with puff paste around the edges of dish.

BUNS.—Break one egg into a cup and fill with sweet milk; mix with it half a cup of yeast, half a cup of butter, one cup of sugar, enough flour to make soft dough; flavor with cinnamon and nutmeg; let rise till very light, then mold into biscuits with a few currants; let rise a second time and bake.

CHOCOLATE CAKE.—One pound of sugar, six eggs, one pound of flour, one-half pound of butter, one cup of milk, one teaspoon of baking-powder; bake in layers. For the dressing, take one-half pound chocolate, two pounds of sugar, one cup milk or cream, one-half cup butter; cook until thick and spread between the layers.

COFFEE.—To make good coffee, allow a tablespoon of finely ground coffee for each person. Add sufficient cold water to cover well, and place on the stove till it boils three minutes, then fill up with boiling water. This coffee will require no egg to settle it. Before serving at the breakfast-table, pour out a teaspoon of coffee and return to the coffee-pot.

ORANGE FLOAT.—One quart of water, the juice and pulp of two lemons, one coffee cup of sugar. When boiling hot, add four tablespoons of cornstarch. Let boil 15 minutes, stirring all the time. When cold, pour it over four or five oranges that have been sliced into a glass dish, and over the top spread the beaten whites of three eggs, sweetened and flavored with vanilla.

CINNAMON RUSKS.—One cup of mashed potatoes, one of hop yeast, and three eggs. Mix all together. When light, add half a cup of butter, one tablespoonful of ground cinnamon and flour to make a stiff dough. Let it rise, make it into small cakes and put in buttered pans. When light, grease the tops with butter, sprinkle thickly with sugar and cinnamon. Bake in quick oven.

CHOCOLATE.—A senator's wife, who is said to serve the best chocolate in Washington, gave the following receipt to Miss Elith Ingalls: Three-quarters of a cake of Baker's chocolate, one quart of cold water, one quart of sweet, rich milk, sugar to taste. Grate or scrape the chocolate and mix with the water, thoroughly and smoothly; then sweeten and allow to boil until it is quite a thick paste. Boil the milk separately and stir into the chocolate mixture, and cook a few minutes longer.

EGG SNOW.—Put into a saucepan a pint of milk, adding two dessertspoonfuls of orange water and two ounces of sugar, and let it boil. Take six eggs, separate the yolks from the whites, beat the latter to a froth or snow (hence the name), and put into the boiling milk by spoonfuls; stir the whole about with a skimmer. When done, take the eggs out and dress them on the dish for serving. Thicken the milk over the fire with the beaten yolks, and pour this over the frothed eggs; let the whole cool before serving it.

DEVILED TONGUE.—Slice a cold boiled tongue (fresh or smoked) and fry the slices quickly in nice drippings. If you have none, use butter. Chop a little onion fine and stir in before the tongue is fried. Take up the slices, arrange neatly, overlapping one another, in a hot-water dish. Strain the fat; return to the fire; stir in a teaspoonful of browned flour, half a teaspoonful of Worcestershire sauce, a tablespoonful of vinegar, a quarter of a teaspoonful of mustard, a pinch of cayenne and half a cup of boiling water. Stir and boil for one minute and pour over the tongue.

The Week.

There have been continued dashes of rain, which have done serious injury to small fruits in some sections and have increased the ill effects of previous downfalls on the hay which was off its feet, but have contributed to the strong growth of all plants still in growing condition. Thus the pasture and grain in the later-maturing regions are growing rapidly, and though rust and lice are reported in some fields, the trouble is not general yet and may not increase. By the end of this month we shall probably have something quite definite as to the grain output for 1889. It is reported from all directions that the grain lodged by the last heavy rain is picking up again, and even where down will fill well in most cases.

Available labor supplies for the coming fruit-harvest are now being diligently canvassed. The State Board of Trade is to renew its efforts to supply white labor from San Francisco, and will send an agent to confer with the local boards concerning the supplanting of the Chinese. In the same connection, it may be stated that the U. S. Supreme Court has decided, during the week, that Chinamen now abroad cannot return, as described in another column.

The supply of China labor is decreasing, and that of white help increasing by immigration. No doubt the young people will also be an important factor again this year in the work of the orchard and preserving establishments. The change from Mongol to Caucasian is coming about slowly, and will be, ere long, accomplished without hardship and with general benefit.

The Spirit of the Age.

It is one of the peculiar features of this age that there is not a vice, crime, wrong or calamity, or even error of judgment, that affects mankind, but somebody is after it, to enlighten, to cure, to kill, or to evade. "This is truly the patent age of new inventions." And not of inventions alone, but of associations, combinations of men, of women, or both, to tear down and destroy whatever is inimical to human happiness. There is not an evil but has some enemy on its track, bent on its destruction.

Try to think of one with no enemy in the field! You cannot. From the imperial autocrat on his throne down to the army worm, the campaign for its destruction is planned, organized, and marching to an assured success. In some corner, garret, cellar, or open field, some enthusiast is rallying humanity against wrong.

And against right also! Well, yes, under a mistake. The general plan is to extirpate wrong. But there are shallow brains and mad enthusiasts who mistake lambs for wolves, and in the name of justice would destroy all the machinery and wealth that make life valuable and enjoyable. But these will fail, or their eyes will be opened to a better purpose.

Man was sent into this world to make a garden and a paradise of it, worthy of God and a blessed abode for man. Year by year it is better. You may die, and most probably will, and not see the end. But if you look back upon the past you may see that it is coming. The sun of a better future already tips the horizon, and the splendid noon of its ascendance is only a matter of time.

All schemes of vice shall fail, in the end, and all schemes of virtue shall prove a success. We do not strive in vain for truth and right. It is God's plan that they shall win. Hope, and despair not! Work, and weary not! The victory is sure! Amid conflicting opinions, and conflicting arms, we have this assurance, "that ever the right comes uppermost and ever is justice done." The world moves, not to a deeper barbarism, but to a more moral and beneficent age.

Look where you will over the wide world, and you see the clouds of superstition and despotism rising and breaking to make way for light and liberty. Nations are interchanging the ideas and products of the whole earth. As your garden and your barnyard present the plants and animals of every kingdom, so your minds imbibe their ideas, their manners, and their morals.

And we take the best. Only the best and the most useful are fostered and preserved. Even the second rate will fade and die out. The greatest excellence of all the earth is throwing itself at the feet of man, to do him honor and to make him happy.

And the end? That man shall be as happy and as perfect as God has fitted him to become. In government, religion, morals, machinery, food, clothing and homes, the dross must perish, and the superexcellent be our inheritance forever.

It is written in the Constitution and history of man.

A MALFORMED REFORM MEASURE.—On the 13th inst. Gov. Hill of New York vetoed the Saxton Electoral Reform bill, on the ground that the requirements that none but officially printed ballots shall be voted and that each ticket shall contain the names of all candidates of all parties and combinations pretending to be parties, are cumbersome and unconstitutional.

It took 7000 bags of sand to stop a leak in the Fair ranch levee at Knights Landing.

Government Irrigation Work.

Interest is rife in the proposed irrigation work by the General Government. The leading topics under which present information arranges itself are two: The plans of the special Senate committee and the effort of California to adequately impress them with the results attained here by irrigation enterprises and the desirability of giving California a generous share of the work under charge of the U. S. Geological Survey. It is telegraphed from Washington that the Senate Committee expect to spend three weeks in the field, and will visit Northern Dakota, Montana, Idaho as far as the Snake-river basin, Utah, Nevada, California and Arizona, Southwestern Texas along the valley of the Rio Grande from El Paso to San Antonio, and thence by the Fort Worth, Santa Fe & Colorado railway across the Staked Plains, the Pan Handle region and part of Southeastern New Mexico, and through that Territory to Southwest Kansas, Colorado and Wyoming.

This seems rather a large extent of territory to cover in three weeks, but perhaps the committee will overrun their estimate and take a more thorough look into affairs than three weeks would allow. It would seem that it would require about that much time to cover the distance at ordinary rate of railway speed, and that a car-seat review would be all that could be made. We trust that the telegram is in error and that the committee will give three months to the work.

As to participation by the U. S. Geological Survey, the telegram says that the committee will be accompanied by the director of the Geological Survey, and by Richard J. Hinton, who prepared for the Department of Agriculture a report on irrigation in the United States, published by the United States Senate in 1887. He accompanies the special committee as an expert, having been appointed Irrigation Engineer in the U. S. Geological Survey, which will have six engineering parties in the field some time before the committee starts. The public domain west of the tenth meridian will be divided finally into about 15 hydrological districts, as the topography of the region best indicates proper storage basins.

The California State Board of Trade is undertaking to arrange facts and routes for the use of the visiting committeemen and experts. Senator Stewart of Nevada, who has pushed this project from the start, is now engaged with local preparations for the committee's visit. A determined and we trust successful effort will be made to convince the visitors, and through them the Eastern people, of the vastness of the possibilities of the arid regions west of the Rocky mountains if adequate irrigation work is done, and we hope it will succeed.

The Bench Show.

Under the auspices of the Pacific Kennel Club, embracing poultry and pigeons as well as dogs, is to open at the Mechanics' Pavilion next Wednesday. Wm. Graham, the famous expert, is on his way hither from Belfast, Ireland, to judge the canine candidates for honors, and is expected in the city Saturday.

Entries of dogs of various breeds have been coming in from all over the country in such numbers that accommodations for 750 were ordered a week ago.

The feathered classes, also, promise to be well represented, many varieties being entered and some specimens having already arrived from Mexico.

Taking all the signs together, they point to a very interesting and successful exhibition.

AGRICULTURAL DIRECTORS.—Gov. Waterman has appointed the following to be directors of District Board of Agriculture No. 6: J. C. Newton of Los Angeles county, vice self, term expired; S. Lichtenberger, Los Angeles county, vice self, term expired; E. T. Wright of Los Angeles county, vice J. W. Waters Jr. of San Bernardino, no longer within the district.

THE EDITORIAL ASSOCIATION of Southern California is to hold a meeting at Coronado, July 9th to 11th inclusive. The hotel will give special rates, and the railroads will convey all members to San Diego and return free of charge. A program will soon be issued by the Executive Committee.

The New York Bacchanalia.

The late centennial at New York has reflected some credit upon Washington by contrast, though it might have been better morally for the country if it had never been celebrated. The first scandal arose from the foolish efforts of the aristocratic 400 (many of whom would have out their ancestors if they could have been resurrected for the occasion, because they might eat with a knife and do many things which would infringe upon the code of etiquette) to control the event and select the participants. But apart from other mistakes the chief feature was the disgraceful orgies of the feast, which could hardly be paralleled by the bacchanalian carousal of the last session of our late Legislature. Foreigners who attended and witnessed drunken waiters, who saw the leading men and women of the land insulted, struggling supperless—for the waiters and mob held the fort, that is, the table—trying for hours to get their hats while fighting for places until their clothing was torn; who heard the ticket-takers admit that they sold tickets and pocketed the funds; who knew that wine was stolen from the table and sold to outsiders, will oppose any effort in their respective countries to limit monarchy or introduce Republican tendencies coated with Jeffersonian simplicity. We sincerely hope Washington will lack media of information which will cause him to disown his children.

A SANITARY STABLE.—W. H. Anderson, one of the Rural's subscribers at Riverside, is constructing for the use of four tenement-houses now in process of erection a patent ventilated stable. The several stalls for horses are built about a central pit, into which the manure is thrown. This pit is boarded up tightly, with the exception of an air-shaft extending to the top of a dome-like structure built over the pit and carried to the top of the building. Air passes through an open space under tightly closed doors into the pit, and thence to the shaft or ventilator, so that there is a constant current of air into the pit and out at the top of the dome, carrying with it and dispersing all disagreeable odors. The pit can be cleaned out at convenient times, and the stable be thus kept a fine abode for stock and not the nuisance which too many stables and barns are in our cities and towns.

GRAIN GAMBLING OUTLAWED IN ST. LOUIS.—On April 27th the Missouri Legislature passed the "Grain Option" bill, prohibiting the sale of grain, stocks or bonds when the seller does not actually have the full amount of the article sold in his possession. On the 9th instant the Governor signed the Act, and the dealers in "options" are panic-stricken. The statute is so worded that the issue cannot be dodged, and the St. Louis grain-gamblers are said to favor closing the Merchants' Exchange and opening a "Board of Trade" over in Illinois, at East St. Louis.

CONVENTION OF NURSERYMEN.—The Fourteenth Annual Meeting of the American Association of Nurserymen will begin at Chicago, Ill., June 5, 1889. Secretary C. A. Green (Rochester, N. Y.) says that railroad tickets for the round trip, from any part of the United States and Canada, may be secured by any person, whether a nurseryman or not, at a rate of one-third fare for the return trip. This will be a notable gathering of distinguished nurserymen and horticulturists, and an interesting and instructive program is offered.

The State Board of Harbor Commissioners is to do away with the present system of collecting tolls at the wharves. After September 1st all vessels will be compelled to furnish manifests of their cargoes, and the owners or consignees of the vessels will be expected to pay the tolls and to look to shippers for their reimbursement.

SEVERAL societies in France have awarded medals for a paper on the properties of butter-milk to quench thirst, and suggesting it as a help in overcoming the drink habit. It might be a profitable suggestion to remember here as well.

The Santa Barbara Horticultural Society, at its May meeting, voted to omit the Spring Exhibition this year. Their next monthly meeting is to be held at Spence's grove the first Wednesday in June.

A Handsome Pair.

The picture which we give herewith of the beautiful Shorthorn cow Wild Eyes of Browndale 7th and her royal son Waterloo Wild Eyes will please lovers of fine animals. Browndale is the fine breeding farm of H. F. Brown, Minneapolis, Minn., who is personally known to many Californians through his visits to this State. We have shown several of Mr. Brown's cattle before, so our readers are informed of the prominent place he occupies among the breeders of the Mississippi valley. He has strains of the best and most popular Shorthorn blood, and his annual sales are great events in Shorthorn circles. One of these sales, the tenth, will be held in Minneapolis May 21st. At the head of his sale catalogue for that date stands the youngster shown in the engraving. He promises to be a remarkably fine bull. His dam has eight Duke and Oxford top crosses. His sire, imported Duke of Waterloo, is an absolutely pure Bates-bred Waterloo, which, together with Wild Eyes, combines all the best Bates blood. Mr. Brown's catalogue has on its introductory page a note on the profit of farming by proxy, which will no doubt interest many of our readers. He is engaged in other pursuits, and still finds farming profitable. The following is a quotation from his pamphlet:

The Browndale Farm contains 250 acres only, on which I keep 100 head of cattle and horses. I hire all my work done, and there has not been a year since 1875 that the farm has not given me a profit, and usually from \$4000 to \$5000 per year. Any good farm of 1000 or more acres within a radius of 75 or 100 miles of Minneapolis and St. Paul, well stocked with good Shorthorn cattle, draft horses, sheep and hogs, with the same capital, energy and attention given our mercantile and manufacturing business in Minneapolis, will beat the manufacturing and mercantile business in 20 years' operation. You will ask why so many fail in large stock farms. I will answer, they have no attention, and the city proprietors get sick before the thing is fairly commenced. I know of one city farmer who sold 90 two and three years old native steers last summer for \$8 per head. That man says stock-growing is a humbug. I know another who sold 50 head of grade Shorthorn steers three years old last fall that never saw a barn, but had enough to eat, for \$100 per head. These steers weighed 2000 pounds each and brought five cents per pound, while the native brought probably about 1½ cents. I sold last spring three cows for beef, one a Shorthorn, at five cents; she brought \$75; one a grade Jersey, three cents, brought \$27; one a native, two cents, brought \$18—all sold at same time to same man, and each cow had same care and feed. Our markets now require the best quality of everything. The best horse is none too good for the man who has the money to buy. The same is true of the cow, sheep or hog. No man can afford to spend his time breeding anything else.

It would not do to conclude from Mr. Brown's experience that every one can do as well as he in the same line, for he has a wonderful amount of the "know how" in business matters and succeeds in getting very long prices at his sales. Still, no doubt, his testimony in favor of producing the best is true as a general proposition, and any one can profit by it to some degree, according to circumstances.

FROM THEOLOGY TO AGRICULTURE.—Rev. Oscar Clute, minister of the Unitarian church at Pomona, has been elected president of the Michigan Agricultural College at a salary of \$5000 per annum, and will start for Lansing about the 1st of June. Mr. Clute was a professor in the same college 20 odd years ago, before he entered the ministry. His little apicultural book, the "Blessed Bees," has been enjoyed by many who know the author only under his *nom de plume* of "John Allen."

The Advance of Woman.

While we look for many changes in the next quarter century and expect to see inventions multiply almost as rapidly in the next decade as in the past 25 years, we believe that one of the most noticeable, even eclipsing Lincoln's emancipation of Southern slaves, will be the changed condition of woman. Step by step she is advancing. Her shackles will drop without the roar of battle. Quietly she has assumed new roles and demonstrated that she could fill the position. When the college doors feebly swung open, men said: "Her constitution is too weak; she cannot bear the strain." But she did, and stood at the head of her class, winning honors in logic and higher mathematics which it was supposed would be monopolized by male students. Her indomitable perseverance at the medical school won the respect of the stony-hearted students, and she proved that the same spirit which kept her from faltering when nursing wounded soldiers on the field of battle could enable her to use the scalpel when needed to alleviate suffering in the abode

Home Improvement.

In the New England and some of the eastern Central States there are village improvement societies whose object is sufficiently set forth in their name. Under their auspices it is wonderful how the appearance of many towns has changed. This has been done without increasing the burden of taxation by teaching individuals how, with a little effort, they may make their homes attractive and enhance the value of real estate. The house where an old rag filled the broken pane of glass, the street fringed with weeds whose seeds scattered mischief with each gust of wind, and various other signs of poverty and neglect, have disappeared where these societies have obtained a good footing. Improvement is contagious. When one improvement is made others are rendered necessary, and one change not only makes another necessary on the same building, but also in adjoining homes. In California, the home of flowers, it is possible for the poorest family to have a comfortable cottage, with beds of flowers, fruitful trees, and well-trimmed cypress hedge

The Blessed Bugs.

[Written for the Rural Press by JEANNE C. CARR.]

Not many weeks ago I spent a morning with Mr. Alexander Craw in the once famous Wolf-skill orange orchard, where the bare trunks of noble trees half a century old were feebly struggling to reclothe these sad monuments of insect depredations.

Any one who visited this representative orchard during its prime will appreciate the pathetic aspect of the calamity which has annihilated many of the venerable orchards of Los Angeles—a calamity for which the enhanced value of land was not a compensation to those born and bred under their shade.

For myself, the grand avenue at Sunny Slope, and the magnificent orchards of my neighbors the Chapmans and Wilsons, had been *wailing-places* like those of the Jews about Jerusalem even before the swift destroyer had appeared in Pasadena. Here the few inhabitants to whom the charms of their rural homes were priceless even in booming-times, prayed and sprayed without ceasing, and apparently in vain.

"Mates in Misery," we clung to such feeble hopes as crossed the Pacific from desolated Australia; yet when I stood before the little tree at Wolfskill, around which a screen of bolting cloth served as a cage for the tiny flies, not as large as well-fed mosquitoes which Mr. Koebele had imported, I felt the impotence of such relief as adding insult to our injuries.

And so I wickedly lifted up my voice in the meeting of the State Horticultural Society against the "delusion," and declared my faith in spraying pumps and compounds as the only relief.

Hardly had I got the nasty-smelling mixtures concocted, when I learned that certain "lady-bugs" (not the flies), also imported by Mr. Koebele, and which had apparently been lost in the Wolfskill grove, had reappeared in such numbers and manifestly with such appetites as justified their distribution. A miracle had been wrought in the leafy hiding places of the orchard by which we of little faith are confounded.

No sooner had the Messrs. Wolfskill and Craw verified their discovery than the good news was made known. The parent insects had been industrious and their larvae were quite abundant in the trees; a few having completed their transformations, appeared as bright little

ladybugs, snapping their wings defiantly among the white masses of the scale, while the immature insects were seen rioting like so many pigs in the bodies of the cottony mother bugs! Strange contrivances are these! These tiny devourers eat eggs only, and are wiser than to fool away their time upon immature insects.

Vedolia Cardinalis is the high-sounding name given to this small savior of our groves. She is welcomed with raptures of rejoicing, of which I send a single specimen from the morning issue of the *Los Angeles Times*.

[Following is the "fæan" inclosed by Mrs. Carr.—EDS. PRESS.]

The Millennium.

When the *Icerya purchasi* lies down with the *Vedolia cardinalis*, we may fairly conclude that the millennium "have arrove." *Vedolia Cardinalis*, Eq., is among us, and *Icerya purchasi* must take a back seat. In other words, the Australian beetle has the call on the festive and ubiquitous scalebug, and the places that have been knowing the latter to an extent not at all appreciated in this bailiwick will not know him so much by a great majority after the said beetle, the party of the first part, has become thoroughly at home among us and acclimated to the glorious climate of California. No more will the woolly little snipes of the valley whitewash our orange groves with their persons and make themselves outcasts and things to be abhorred. No more will they exude smut on our oranges and cast a gloom over our agile and able orange-grower with one fell cast, for the said *Vedolia cardinalis* is here to stay, and will without doubt receive the encouragement and support that his merits as a chewer-up of *Icerya purchasi* entitles him to. We welcome the coming *Vedolia cardinalis* and speed the parting *Icerya purchasi* by a unanimous vote, and trust that the former's stay among us may prove pleasant and profitable.

THE Rio Bravo Vineyard and Raisin Co. has incorporated with \$80,000 capital stock and R. E. Houghton, C. H. Blinn, J. W. Litchfield, G. C. Sweet and H. A. Blodgett as directors.

THOROUGHbred SHORTHORNS—WILD EYES OF BROWNDALÉ 7th AND WATERLOO WILD EYES.

of peace. Although it might be supposed that the legal profession was not adapted to this sex, yet those who have followed the career of the few women who have been admitted to the bar do not consider she has shown any lack of fitness as a pleader or counselor. In journalism she shines. Nearly all the leading papers of the country recognize and employ her services. We know where a young woman acts as reporter on a morning daily and wanders at midnight in quest of news. She does as good work as any of her male associates, and no person would venture to speak her name with disrespect. One of the most noted stock-yard reporters is a woman. Her success in that department shows she can fill any position, even that most foreign to her nature, when necessary. As dealers in real estate women are becoming famous; as teachers they are getting the monopoly; men favor their election as superintendents of schools, and the experience of certain Kansas towns, notably Oskaloosa, where all the town authorities have been women, who found the town in debt, and had a surplus at the end of the year, whose good management secured their triumphant reelection, will go far toward giving women the ballot and placing them in office.

CONTRA COSTANS are invited to meet in Bennett's hall, Martinez, on Saturday, May 18th, at 1 o'clock P. M., for the purpose of organizing District Agricultural Society No. 23 under the provisions of the Act of the Legislature.

at trifling expense. The effect on the eye of every passer-by is pleasing, and, if offered for sale, it will add more to the selling price than quite an expenditure of money in other directions. One of the earliest of Eastern towns to be built on lines of beauty was Vineland, New Jersey. It was founded on a desolate waste of sand, yet as all purchasers were obliged to conform to certain specifications, every house thus built by rule, equidistant from the street, beautiful flowers in the yard, and handsome shade trees lining the avenues, the city soon became so attractive that the desert literally blossomed as the rose and people of learning, refinement and culture flocked there until the city became a synonym for beauty and order. By method much can be accomplished. Let every householder resolve that he will devote 15 minutes each week-day to the improvement of his grounds. It is so little time that it will hardly be felt, and as the improvements become noticeable the fascination of the work will be a strong temptation to devote more than the allotted time to the task. Time so spent will not be lost.

MARRIED MEN PREFERRED.—A strike took place the other day in A. M. Cox's factory at Duluth, whereupon the proprietor raised the wages of all his married employees and gave single men notice that they would not be wanted after the end of the month unless they were married by that time, in which event they would be retained at the increased salary.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

BUDS, BUGS AND BRIMSTONE.—Livermore Herald, May 9: The dormant-bud apricots set out this season have in many places been attacked by a bug, which eats the leaves, and many of the young shoots will be found to be entirely stripped of foliage. The almonds are not affected, nor are the larger apricots. A remedy has been found, however, in the shape of common ground sulphur. Dust the leaves of the young shoots, when the dew is on, and scatter the sulphur plentifully on the ground around the tree. Apricots treated in this way several weeks ago have been untouched by the bugs, and made a fine growth, while others, but a short distance away, and not sulphured, have been very nearly eaten up.

LIVERMORE LOCALS.—H. Thonesen planted about ten acres in almonds on South avenue, this spring, and the trees are making a fine start. Any one wishing to see how almonds will bear in this valley, with good care, should inspect those in front of E. C. Newell's residence, on L street. It would be difficult to find room to hang much more fruit on the trees.... Some few of our vineyards have been visited by the cut-worm. The young shoots were badly damaged in spots in some of the vineyards on the Arroyo Valle, but new ones are coming out, equally laden with fruit. This storm, we understand, seems to have discouraged the invader.

HAY.—Our hay dealers estimate the amount of hay cut in the township before this rain at 10,000 tons, and in the country tributary to Livermore at half that amount. It would weigh much more just now! Although this hay is greatly injured, it is not probable that much of it will be a total loss. Dried, stacked and salted, it will make a good stock feed.... Many of our farmers will summer-fallow the ground recently cut to hay.

LOQUATS BEARING.—Oakland Tribune, May 7: During the last few years it has been no uncommon thing to see Japanese loquats in full bearing in this city. The tree is a beautiful evergreen, and many are to be seen throughout the city ornamenting lawns and gardens. The trees do not begin to bear until they have reached quite an age, seldom less than 12 or 15 years. A bunch of this fruit, growing on a branch covered with beautiful green and glossy large leaves, was brought to this office to-day. It was from a tree in the garden of Dr. Woolsey's Hospital for Invalids on Twelfth street, between Jackson and Madison streets. The fruit has just commenced to ripen and is of excellent quality.

Butte.

THERMALITO ORANGES.—Oroville Mercury, May 10: Yesterday we visited the 40-acre orange grove of the Oroville Citrus Association at Thermalito, and were surprised and delighted to see so many of the young trees in bearing. Probably 2000 trees, mostly Washington Navels, have a fine crop of young oranges. Some of them are as full as the little oranges can stick to the branches. Supt. Murray says that they will not allow the trees to carry full crops this year and will have them carefully picked. The grove is one of the most interesting and beautiful sights in the community. The trees are growing as vigorously as possible. The association will have several carloads of oranges ready to ship by next Christmas. Mr. Murray is still planting seeds and putting young orange trees in nursery.

SILKWORMS.—Chico Enterprise, May 4: Last March Elias Finley of this city obtained from the State Board of Silk Culture a large number of eggs. These were placed in a warm room and well ventilated, and in about 60 days began hatching, and at the end of 40 days the worm began to make its cocoon. This afternoon Mr. Finley showed us thousands and thousands of these worms at work, busily spinning. A large number of cocoons have already been spun; 360 weigh a pound, and Mr. Finley thinks he will have about 100 pounds. He has already made arrangements to dispose of his cocoons in S. F. It is a treat to watch the workings of these curious creatures, and many of our people have called at Mr. Finley's to witness them.

Contra Costa.

BLACKBERRIES AT MARTINEZ.—Item, May 9: Jasper J. Jones picked the first ripe blackberries of the season in his garden yesterday. The fruit is large and delicious.

El Dorado.

HAIL AND THUNDER.—"F. F." writing from Diamond Spring, May 8th, says: Up in this part of the foothills we had been having splendid spring weather the last few days, everything looking its best, and had a good prospect of a bountiful fruit crop. Last Saturday afternoon it started to rain heavily, continuing till the following Tuesday night. Wednesday morning opened up warm and bright, lasting till noon, when distant thunder was heard in the N. N. W. It gradually drew nearer, bringing with it a heavy cloud, which burst over Diamond about 1:45, pouring down showers of hail, ranging in size from 1 to 2½ inches in circumference. The storm lasted about 10 minutes. The damage done in its track is extensive, it having stripped the vines of their new wood and entirely thinned out other fruit.

The vineyard has now a winter's appearance, having nothing left on vines but the last year's wood in places. The center of the storm seemed to be at Diamond Spring depot, extending about half a mile each way, taking a S. W. course. I have spoken to men who have been here from 30 to 40 years, and they had never seen such hailstones. I should like to hear what damage other ranchers have sustained who were visited by the storm and how far it reached.

Fresno.

NEW RAISIN VINEYARDS.—Fresno Republican, May 10: The older vineyards near town are pictures of beauty in their fresh foliage, clean avenues and perfect state of cultivation, but after passing into the grain-growing districts, 10 miles east of town, new improvements are found, of a magnitude that few people are aware of who have not visited that locality this season. The Fairview vineyard consists of 320 acres of nearly level and very rich, chocolate-colored soil, 215 acres of which was this spring planted to Muscat vines. The proprietors are E. J. Root of Fresno and Norman Parish, and one or two other gentlemen of S. F. Mr. Root has the general management, and the work of leveling, planting, etc., has been done under the supervision of L. S. Chittenden. Nearly every vine planted is growing thriftily, and the entire place, from the neatly whitewashed barn and implement-houses to the substantial, rabbit-proof fence, shows that care, industry and intelligence are exercised in its management. From Mr. Chittenden information regarding the acreage of raisin vineyard planted in that immediate vicinity was obtained as follows: By Col. Asa Ellis, 160 acres; Capt. Cogan, 130 acres; Mr. Gray, 80 acres; G. A. Smith, 50 acres; Capt. Youngberger, 40 acres; Mr. Smith, 30 acres; J. A. Forsman, 20 acres; G. A. Wilson, 60 acres; J. L. McLeland, 80 acres; Balfour, Fortune & Co., 150 acres.

WILL DO THEIR OWN PACKING.—Cor. Republican, May 10: The regular meeting of the Washington colony raisin-growers took place last Saturday night. There was a respectable attendance. The main topic under discussion was the raisin-packing question. Over \$2000 has been subscribed toward the organization of a raisin-packing establishment to be carried on exclusively by growers. They propose to pack their own raisins, adopt their own brands and manage their own business themselves. No person shall be permitted to take more stock than \$20 per acre actually planted in fruit or vines, nor less than \$100, 10 per cent of said subscription to be paid as soon as permanently organized and a treasurer elected. The subscription list is now in the hands of A. O. Bryan, at Oleander, and will be open for subscriptions for two weeks.... The subscribers of the proposed raisin-packing company wish to frame a set of by-laws that will carefully protect their interests as growers, and guard against the possibilities of outside capital getting control. They intend to pack their crops in a manner that will give satisfaction to consumers, thereby gaining the confidence of the people and a good reputation.

Humboldt.

HORSE-BREAKING IN THE BREAKERS.—Ferndale Enterprise: Herb Lewis had a lively fracas on the Centerville beach Sunday. He was riding a colt, and as the animal was somewhat obstinate, he thought the soft sand would be a good place to give it a lesson; accordingly he dismounted, and after tying the colt's head and tail together, started it, but before he knew it the animal got away from him, whirled itself into the breakers and was soon in swimming water. Herb, on the spur of the moment, mounted the horse of Jim Odell, who was with him at the time, and put into the breakers. He reached the colt in safety, out the rope which bound his head and tail together, and as luck would have it, a big swell caught him and both horses and landed them safely on the beach.

SHEEPMEN'S CONFERENCE.—Eureka Times, May 9: A meeting of sheep-owners of Humboldt county was held at the Vance hotel yesterday. Quite a number were present. R. Porter was elected chairman. July 2, 1889, 10 A. M., was selected as the date for a meeting of the sheep-owners at Eureka to consider the new law relating to the appointment of a Sheep Commissioner, etc. J. B. Casterlin, W. T. Olmstead, H. W. Clellan, R. Porter, H. M. Davoy and Ira Russ were appointed a committee to prepare rules and regulations to be submitted to said meeting and to make all necessary arrangements therefor, and to request the Board of Supervisors to defer the appointment of a sheep commissioner until after the holding of said meeting.

AN EFFETUAL INSECTICIDE.—Rohnerville Herald: At the regular monthly meeting of the Humboldt Co. Horticultural Society, May 4th, Mathew Perrott, W. B. Dobbys and J. T. Manon, the committee appointed to test the value of the soap manufactured by Jameson & Jack, Eureka, as an insect exterminator, reported as follows: On April 13th we selected two trees in the orchard of J. T. Manon which were badly affected with woolly aphis, red spider and oyster scale, the trees being in full bloom. The first sprayed was at the rate of one pound of soap to two gallons of water, the second at the rate of one pound of soap to four gallons of water. The Bean spray pump was used. We have visited the trees several times since that date and found every insect dead, and the eggs as well, which had been reached by the spray. Neither the foliage nor blossoms

were in any wise injured. Your committee is well pleased with the Jameson soap as an insect exterminator, and cheerfully recommends it to the orchardists of Humboldt county, also the Bean spray pump, believing it to be one of the best in use.

Kern.

UPLAND ALFALFA.—Bakersfield Echo, May 9: Since we mentioned D. C. Maddux's success in growing alfalfa in the hills, several other gentlemen state that in other parts of the county they have seen small patches of volunteer which demonstrate the correctness of the proposition that alfalfa does well on the higher altitudes of unirrigated lands. One gentleman said that he knew of some near the old Chester & Livermore sawmill that had grown there for some years and was thrifty and strong.

Modoc.

GRAIN AND HAY CROPS.—Independent, May 9: Mr. E. Lauer, who has traveled over a great many ranches in the vicinity of Alturas, tells us that everywhere he has been, the crops, grain especially, are looking better than he ever saw them at this season of the year. In the majority of places the meadows are also looking finely, and with the exception of a few ranches on Pine creek, there will be a fine hay crop. The grass on the range is also excellent, and the only difficulty is the scarcity of water for stock.... H. L. Spargur, who came over from Surprise valley Tuesday, says that taking the valley from Cedarville to Bidwell, he never saw the crops looking better than they do now. The grain crop especially will be immense, and the hay crop will be much better than was anticipated a few weeks ago.... Hardin Smith, who resides on the Holden ranch, near Likely, tells us that there is every prospect for a fine hay crop on his ranch this year. The grass is much further advanced than is usual at this season of the year. Mr. Smith's ranch is mostly seeded to timothy and alfalfa, and is watered by several large springs which furnish a never-failing supply of water.

Plumas.

QUINCY GETS THE FAIR.—Greenville Bulletin, May 8: Pursuant to notice given, the Board of Directors met in Susanville last Saturday for the purpose of receiving bids, adopting a speed program and premium list, electing officers, etc. The directors present were J. W. Thompson, J. D. Byers, W. P. Hall, J. McBeth, Dr. J. S. Caister, J. S. Bransford and J. Stephan. There were only two bids, one for the location at Quincy and one at Susanville, the former being \$4500 and all privileges, the latter a little over \$4000, reserving the privileges. By a unanimous vote, the tenth annual fair is to be held at Quincy (Sept. 23d to 27th inclusive). The officers elected are J. W. Thompson, Pres.; J. D. Byers, V. P.; J. H. Whitlock, Treas.; P. L. Hallstead, Sec.; R. L. Davis, Ass't Sec. The people of Susanville, we are informed, are satisfied that they were fairly defeated and only regret that they did not correctly "size up" the Quincy bid. It is certain that Quincy will spare no efforts to entertain the large crowd that is sure to be present.

San Benito.

RIPARIAN RIGHTS MENACED.—Hollister Free Lance, May 10: A big steal is under contemplation, by which nearly all the water of the San Benito river is to be used in Fresno county, south of Huron. The men at the head of the enterprise are wealthy capitalists. N. S. Smith, a deputy surveyor of Fresno county, has made all necessary surveys and located the site of the proposed dam. The scheme is to impound the waters of the San Benito river during the winter by means of a dam 200 feet in height built across a narrow but deep canyon. The dam will be constructed at a point about six miles from Erie. From the lake thus formed, water will be taken by canals and tunnels across the divide, and down White's creek to Pleasant valley, where it will be used for irrigating a tract of land controlled by the syndicate. The farmers and property-owners of Erie and vicinity are on the lookout, and as soon as active work on the dam is commenced, will proceed to place an injunction on the proceedings on the ground that it interferes with their riparian rights. Furthermore, the dam when constructed is liable during the winter to break away. It would be a constant menace to the whole of San Benito valley.

FLORAL FAIR.—Hollister Advance, May 10: One of the most successful events that have ever taken place in Hollister was the Floral Fair held at the Opera House, Friday and Saturday of last week. The fair far surpassed all previous efforts of the ladies, both in the display of flowers and artistic design of the pieces. Visitors to the hall learned that the gardens of this vicinity contain as many choice plants and flowers as the most favored clime.... After paying expenses, the treasury of the Presbyterian church was benefited to the extent of \$175.

San Bernardino.

DISTRICT NO. 28.—Ontario Record: Governor Waterman has appointed the following directors for Agricultural District No. 28, San Bernardino county: W. R. Toles, L. M. Holt and L. F. Cunningham of San Bernardino; F. M. Hoag of Redlands; Joseph Jarvis and Emil Rosenthal of Riverside; Geo. L. Joy of South Riverside, and W. E. Collins of Ontario. Good judgment has been shown in the selection of these gentlemen.

ORANGE-GROWING ON A LARGE SCALE.—Citrograph, May 4: During the four weeks

just past there has been organized the Redlands Orange Grove and Water Co., with a capital stock of \$300,000. A dividend of eight per cent per annum is guaranteed to the stockholders from the beginning, and after six or seven years the profits will be much greater. The company now has between 200 and 300 acres of the finest lands in the county. These lands are all to be set out to the choicest varieties of oranges this year, and planting is going on with the utmost possible speed. Water in abundance has been secured, the company owning 200 shares of Domestic Water stock and 300 shares of Bear Valley stock. This water is already piped on to a portion of the land and the work of laying pipe is progressing rapidly. Although this is the first public mention that has ever been made of this company, yet its merits have become known and 1400 shares out of 3000 are subscribed. The balance will not hang on the market, for the men who have the matter in hand are going at the work in a business manner.

ORANGE SHIPMENTS.—Citrograph, May 11: From an authoritative source we learn that over 1900 carloads of oranges had been packed and shipped from Los Angeles and San Bernardino counties this year. It is thought that there are about 300 carloads yet to go forward. Riverside alone has shipped nearly 700 carloads and will ship 100 or so yet.

San Mateo.

A BUG IN THE GRAIN.—Half Moon Bay Cor. Times & Gaz., May 11: A month ago we had one of the finest prospects for a large crop, but recently we find that a small black bug has attacked the wheat and oats and retarded the growth to some extent. We also find that the wheat and oats have been struck with the rust a little in certain localities.

Shasta.

COUNTY FAIR.—Redding, May 13: Directors Bush, Ross, Culverhouse, Clinesmidt, Brigman and Reid met to-day and organized Agricultural District No. 27 by electing Bush president, Culverhouse vice-president, Hartley Hodson secretary, and Fred Grotefend treasurer. They appointed Aug. 21st to 23d inclusive for the time of holding a fair.

Stanislaus.

WEST SIDE GRAIN.—Stockton Independent, May 14: County Clerk Yolland returned yesterday from a ride through the grain-fields on the west side of the San Joaquin river from Tracy to a point 14 miles south of Grayson. He says the crop prospects in that section are better now than at any time since 1872, when the yield averaged from 30 to 50 bushels to the acre. The late rain was a great benefit to the west side country, and without it the yield would have been light. On the lands west of the Pescadero grant line, from Grayson to Tracy, the grain looks fine and will probably average 15 bushels to the acre. The crops on the lands near the creeks running out of the Coast Range promise from 20 to 30 bushels. J. M. Ritchie, near Grayson, has 1600 acres of grain that stands four feet high and is headed out to yield about 30 bushels. L. A. Richards, near Grayson, has 3000 acres of average grain and 2000 acres which will produce a heavy yield. Along the foothills from Grayson to Tracy the grain is in fine condition, wheat promising from 20 to 30 bushels and barley from 30 to 40.

Tulare.

TURKEY RANCH.—Lemoore Leader: Wednesday afternoon, through the politeness of W. V. Buckner, we were enabled to visit the turkey ranch of Buckner & Kerr, eight miles southeast of this city. We found E. W. Kerr in charge, and it was truly an interesting sight. In and about the corral were over 1200 little turkeys ranging from three or four hours to as many weeks in age. Mr. Kerr informs us that he has lost almost none, and the birds are remarkably healthy and active. He has about 1200 eggs now under the hens, and will continue hatching into August. He expects under favorable conditions to hatch and raise, this season, between 2500 and 3000.

FOXTAIL IN ALFALFA.—Visalia Times, May 9: Many farmers in this vicinity have mowed down their first crop of alfalfa and are burning it, as a large quantity of foxtail grass is mixed with it. Fires in almost every direction can be seen at night, while clouds of smoke are to be seen ascending during the day.... Foxtail grass has about taken most of the alfalfa-fields in this county—so much so that the cutting of the first crop is labor thrown away. Several farmers have inaugurated the practice of harrowing their alfalfa fields just after the foxtail has commenced to thrive, and by this means have eradicated the destructive weed for the time being, and have saved the first cutting. It is the only plan so far devised for killing foxtail, and should be generally practiced by all alfalfa-growers.

THE RAIN has done more good than harm, the principal damage being to the dry feed. There is a large quantity of grain in the county that is just now in bloom, and the rain will cause it to mature. Of course some early grain has been knocked down, but some of our best judges state it as their belief that where one bushel of grain has been damaged the rain has added four bushels in another quarter.

Ventura.

EDITORS PRESS:—The recent rain will cause the farmers here to recultivate much of the land that was ready for beans. Hay is being cut and is of good quality. Those who have

planted Lima beans find them rotting on account of cold, and another crop will be put in to insure a yield. Apricot trees are not so heavily laden as last season, but fruitmen expect no loss, as the fruit promises to be of superior quality. Beemen are expecting a crop of honey if the weather is sunny through May and June. Ventura county is steadily improving. Churches and schoolhouses are being built. Wells are being sunk successfully in many places where it was thought water could not be secured. Many are putting out orchards and vineyards and improving their homes in various ways.—MAX, Ventura, May 8th.

ARIZONA.

DISCOURAGING TO CATTLE THIEVES.—Hoof and Horn, May 9: The last Legislature amended Section 973 of the Penal Code by adding thereto the following, and the law goes into effect on and after July 1st: All persons not engaged as butchers, who shall at any time kill or slaughter, or who shall cause to be killed or slaughtered, either for their own use for consumption, or for sale, shall retain or cause to be retained in their possession, the hides taken off said animal or animals with the ear-mark attached thereto, without any alteration or disfigurement of the brands or marks on said hides or ears for the period of 21 days, free to the inspection of all persons. Any person failing to keep the hides in this manner, and for the time above mentioned, or who shall refuse to any person the inspection of said hide or hides, shall be guilty of a misdemeanor, and upon conviction shall be fined in any sum not exceeding \$200.

OREGON.

MONGOLIAN PHEASANTS.—Oregonian: Dr. Lane, superintendent of the State Insane Asylum at Salem, says that Mongolian pheasants are quite numerous on the grounds of the asylum and all around the outskirts of town. He says they increase with great rapidity, and there seem to be 25 now where there was one last year. He thinks they have come to stay, for they are sly, cunning birds, very difficult to shoot. In driving out into the country around the asylum, the pheasants can be seen in nearly every field. The males flap their wings and crow like young roosters, venture boldly into barnyards and whip any ordinary dunghill cock in fair fight. If all that is told concerning these birds is true, they will afford considerable sport already, for they are shot openly, despite the law, in many places.

"SPUDS" A DRUG.—Oregonian, May 10: Many farmers have given up all idea of finding a market for their potatoes. Dealers say that at least three-fourths of the entire crop remains in the hands of the producers. Of course potatoes cannot be had for nothing in this city, but dealers are supplied and a farmer bringing in any quantity could not find a market for them at a price which would pay for the sacks and hauling. So many farmers are literally throwing potatoes away. Mr. Tyszkiewicz of Bachelor Island has dumped 350 sacks of as fine Burbanks as ever were seen into the Columbia. This sort of thing is likely to discourage farmers from planting potatoes, and next year when they have only a few the price will, perhaps, be away up. People who get rich by raising potatoes, and there are quite a number in the vicinity of this city who have done so, plant them every year, regardless of the price, and they make by it in the long run.

THE FIRST OREGON STRAWBERRIES of the season came from Fulton Park this year and were displayed in Baum & Brandes' window on Saturday, and very fine ones they were, too. Yesterday 30 pounds of fine large berries were brought in from Mount Tabor.

WASHINGTON TERRITORY.

CROP OUTLOOK.—Spokane Falls, May 8: Reports from over 25 points in Palouse Valley and the Big Bend country say there was never a better prospect for crops. There is over one-half more acreage than last year. Recent rains have done immense good. The O. R. & N. Co. has erected elevators along the line at the principal points. Formerly all the wheat was shipped in sack at heavy expense to farmers, but now will be shipped in bulk and sacked at Portland. N. P. officials say their road will probably adopt the elevator system in this Territory in the wheat sections also.

BERKSHIRE SALES.—Phil M. Springer, Springfield, Ill., sends us information of transfers of thoroughbred stock reported to the "American Berkshire Record": Jack Ripper 21179, by Tyler Beach of San Jose, Cal., to John S. Conner of Santa Clara, Cal.; Stockton Chief 21217, by Andrew Smith of Redwood City, Cal., to A. B. Sperry of Stockton, Cal.; Lynwood Prince 21219 and Lynwood Princess 21220, by Andrew Smith to Sessions & Bigelow of Los Angeles, Cal.

AGRICULTURAL DIRECTORS have been appointed by the Governor as follows: District No. 13, W. F. Ellis, Jr., of Yuba county vice James Littlejohn, resigned; District No. 20, J. T. Howard of Placer county vice Hollis Newton, who failed to qualify; District No. 27 (Shasta county), C. C. Bush, Jerry Culverhouse, A. C. Brigman, Henry Clinesmidt, H. F. Rose, T. W. H. Shanahan, C. J. Becker and E. A. Reid.

Cassidy's Petaluma Fruit-Drier.

We would call the attention of Fruit Men to the Celebrated

PETALUMA FRUIT-DRIER,

Which has THREE PATENTS, covering all the practical points—combined in one.

After twenty years' experimenting on the different modes of curing fruit, I feel confidence in coming before the public with a FRUIT-DRIER, which is as

NEAR PERFECT AS THEY CAN BE MADE.

The Points Claimed Are:

- 1st—Fruit-Raising by Mechanism.
- 2d—Air Equally Distributed Through the Fruit, which obviates burning or sweating.
- 3d—Using Petroleum or Wood for Fuel.

These Driers are built of good material, and will, with care, last for years.

Remember, one good Drier is worth more to you than several cheap, poor concerns.

Please give us a call before purchasing elsewhere.

RURAL HEALTH RETREAT

At Crystal Springs, St. Helena, Cal.

This delightful Resort offers unrivaled advantages to Tourists and all classes of Invalids, both for Winter and Summer. It is situated on the southwestern slope of Howell Mountain, 500 feet above and overlooking the noted and beautiful Napa Valley, and 24 miles from St. Helena. It is noted for its Pure Water, Dry Atmosphere, Clear and Balm Sunshine. Even Temperature, Mild Breezes, and the absence of high winds.

THE RATIONAL TREATMENT

By all known remedial agents is employed in this Institution. With these natural and acquired advantages, pleasant and desirable surroundings, thorough and judicious treatment, and wholesome diet, most invalids who avail themselves of these agreeable facilities, rapidly recover. Patients have the care of a regularly graduated Physician of experience, who is assisted by well-trained and courteous gentlemen and lady assistants.

All Invalids and Tourists will be courteously received and kindly cared for. For circulars and further particulars, address as above.

Passengers with their baggage taken to the Retreat (by Retreat team) for 50 cents.

Telephone connections with Retreat.

Fresno County.

[From Our Own Correspondent]

Fresno contains nearly 8000 square miles of territory, or about 5,000,000 acres. It stretches from the summit of the Sierra Nevada mountains on the east to the summit of the Coast Range on the west, and from Merced county on the north to Tulare county on the south, making it the third county in area in California. Of the 8000 square miles which go to make up Fresno county, about 3500 square miles are valley land, and the remainder is either foothill or mountainous. The eastern one-third of the county constitutes the watershed of Kings river and a part of the watershed of the San Joaquin river, both great mountain streams that debouch upon the plains near the center of Fresno county, and carry water enough to irrigate, easily, the whole of the San Joaquin valley proper. To the east lie the great Sierras whose tops run up into the regions of perpetual snow and act as great unfailing natural reservoirs for the storage of water in winter for use in irrigating the plains in summer.

trading point of a large scope of country—in fact, it has no worthy rival between Merced and Fresno, a distance of 55 miles, and it is nearly midway between these larger cities. The country on all sides is of exactly the same character as that about the other growing towns in this part of the State, and there are the same reasons for growth in Madera as prevail in the case of Fresno, Merced or Modesto. The soil of the valley is a rich, sandy loam, of great fertility, when sufficiently watered by Nature's showers or by artificial irrigation, and the day is not distant when thousands of acres near Madera will be reached by irrigating ditches and the productiveness of the region multiplied many times. At present, irrigation is adopted only to a limited extent. Not many miles south of Madera the railroad crosses the San Joaquin river, which stream, from its sources in the Sierra Nevadas, makes a circular detour into the great central plain of the State, changing its westerly course to one more northerly. The same course is followed by two or three tributaries between Madera and the San Joaquin. Thus the entire northern part of Fresno county would seem to be well situated for favorable irrigation, and we predict a day when many canals will afford ample facilities for the thorough watering of this section of the State.

The most notable institution in Madera is

the Yosemite hotel, a fine brick structure close to the depot. Mine Host Ripperdan runs a hotel of great credit to himself and the town in which he lives.

FRESNO.

Probably there is no city in California today which is having so great a proportional growth as Fresno. Its boom began almost as early as the greater boom in Los Angeles and Southern California. It was not characterized by the wild excitement of other real-estate crazes, but has seemed to show staying qualities not enjoyed by any other boom in the State. The appreciation of Fresno's advantages was slower in coming than appreciation in some places, but once it came it has remained a fixed factor. We confess to a great curiosity to see this young city as we rode into it during one of the beautiful days of February last. We were anxious to see what manner of city this was which was commanding the attention of the whole coast, and which was spoken of as the predestined abiding-place of thousands of our people. We felt a desire to see for ourselves the evidences of Fresno's growth, and if possible analyze the causes of that growth and prosperity. Certainly the first view was not disappointing, nor did the picture painted by our fancy been overdrawn. The streets were thronging with busy, hurrying people; new

street is rapidly improving—thus making the better business portion of the city, between the depot and the court-house, nine blocks in extent. Within this radius nearly all the best buildings are located, and nine finer blocks, representing greater wealth, it would be hard to find in a half-dozen other cities in California.

A Great Fruit Region.

Without doubt Fresno owes its late growth to the fact made known to the world that it is located in the midst of one of the most favored fruit regions in the United States. The fruit raised most successfully here is the grape, and from Fresno grapes the finest raisins in the world are made, and some of the best wine. But it is as a raisin-producer that Fresno county is chiefly celebrated. By irrigation, fruit and cereals of all kinds can be grown with success; but the conditions of soil and climate are so pre-eminently favorable to the grape that this fruit is raised to a much larger extent than any other. There are no dews here at night, so that sun-dried raisins can be cured with the greatest perfection. There are also no damp winds to mildew or discolor the growing grapes, and there are proper elements in the soil and a genial warmth in the climate to impart a greater degree of sugar to the grape than in other parts of the State. The possibilities

A BIRD'S-EYE VIEW OF FRESNO AND ADJACENT COUNTRY.

Between the points at which Kings river and the San Joaquin come out upon the plains are constructed many large irrigating canals carrying pure, fresh mountain water, which is used in irrigating the lands lying between these streams. The lands thus irrigated lie in the shape of a delta, having its northern line running a few miles to the north of Fresno City, its southeastern margin bounded by Kings river and its southern bounded by the San Joaquin slough. This delta, or irrigated district, embracing about 600 square miles, is the easiest irrigated body of land of equal area in the world. Of this area a portion has been irrigated and put in cultivation, and the whole is susceptible of being irrigated and put under a high state of cultivation.

MADERA.

Traveling southward by rail, the first town of any considerable importance in Fresno county which the traveler visits, is Madera. It is 30 miles south of Merced. Before the construction of the railroad now being extended toward the Yosemite Valley—which branches off from the Southern Pacific at Berenda, a few miles north of Madera—the latter point rivaled, if it did not surpass, Merced in equipping excursion parties for a trip to the famous valley. A fine brick hotel at Madera, called the Yosemite House, and a large stable at the same place, are reminders of the former prominent feature about the town. But Madera has continued to prosper since it was first plotted. It is the principal

the Flume and Trading Co. of that place. The factory of this company is the most extensive establishment of the kind between Stockton and Los Angeles, surpassing anything in Fresno. Lumber is brought from the mountains in a flume 65 miles long. Here at Madera it is worked up into doors, sash, blinds, fruit-boxes, etc., and is exported to other points in the State. There are 30 to 35 men employed at the factory, while 50 to 75 men do duty in the mountains in cutting and sawing the logs. W. O. Breyfogle, assisted in the factory and yard by T. A. Pulsifer, attend to the interests of the company in Madera. This is an institution which contributes greatly to the prosperity and stability of the little city in which it is located.

Trade, Population, Etc.

There is no mercantile institution of overshadowing importance in Madera, but many dealers with moderate capital share the natural trade of the tributary region. The flume company has a general store, but it does not, and does not aim to, monopolize trade. Every dealer seems to have a fair show. Thus we see a better representation of special lines than is usual in small places. There are few reasonable wants which one cannot gratify in the stores of the town. The population of Madera is about 1000. It gives promise of growing to many times that population when this country is developed to the extent it unquestionably will be in the future. There are chances for good investments in land in the vicinity of Madera, and we understand a colony is projected in this locality. While examining the country, no more comfortable stopping-place could be found than

buildings were going up on every hand; the noise of hammer and saw contributed to a business din, while completed structures, solid and handsome, reared their finished brick walls and pointed towers into the noisy air. To be sure, this business bustle and building activity was largely concentrated within a radius of eight or ten blocks, but it indicated a lesser activity which extended over a much larger area, and proved that the city was thoroughly awake and making rapid strides toward a position well in advance among California towns. The present population of the city is already 10,000. With the present moderate impetus continued for a few years, who can predict its population, say at the taking of the census in 1900?

Business Portion.

Like other towns in Central California plotted by the railroad company, there is a reservation on either side of the track, and on one side of this reservation, for a distance of three blocks, the front is well lined with business houses, stores, factories, etc. The principal street of the city extends from the depot to the Court-house square—three blocks. This street is lined with stores the entire distance, some of them being very fine structures. The new First National Bank building—an elegant brick block—and the Grand Central hotel, are on this street. Parallel with this, on the south, is another street, which is beginning to rival the thoroughfare first noticed. On this street are the Hughes hotel, the Hughes block—both solid, fine structures—the Masonic block and two equally fine brick blocks now nearly completed. On the north, another parallel

of the Fresno country were demonstrated by the success which attended the colonies established here many years ago. These colonies were deemed by some experimental at first, but they have been successful without exception. This success excited the attention of the country, and as the colonies thrived the city of Fresno grew apace, until this growth took the form of a modern boom, and the city sprang to considerable prominence at a bound.

The history of the Central California Colony epitomizes that of all the colonies of all the counties of the great valley of Central California. It was devised and established by B. Marks, formerly of the Lincoln Grammar School of San Francisco, on land belonging to Wm. S. Chapman, at that time the largest landowner in California. This was the first of the 22 similar colonies which now cover with beautiful green the once dull-brown plain. In 1875, the land occupied by this the pioneer colony of Central California, was an extended plain of dried grass having the appearance of a vast waste of desert sand. As far as the eye could see, not a tree or bush, or tall weed was there to mark a spot on the sandy plain. A very few shepherders' cabins dotted the seeming desert, but so far apart that each was concealed by distance from all the rest. The town of Fresno was only about two years old and did not then give promise of the prosperous city she has since become. About three miles south of the town 200 farms of 20 acres each were surveyed and staked off, 23 miles of avenues were laid out, 32 miles of choice trees were planted on the avenues, 14 miles of canal and 40 miles of ditch were con-

structed. All this was done within two years from the time of commencement. The avenue trees consisted of four miles of almond-trees on Almond avenue, four miles of cherry-trees on Cherry avenue, four miles of fig-trees on Fig avenue, and so on for Elm, Walnut, and other avenues. Most of the colonists were Californians. Few of them were farmers. They were mostly teachers, book-keepers, mechanics, doctors, and business men. Some of the settlers were women. All were successful.

In addition to the Central colony Mr. Marks bought of the Bank of California, planned and established what is now known as the California colony. This also was a pronounced success. Incited by the prosperity of these pioneer colonies, a number of other colonies were projected. All met with unqualified success, and now one may ride through many miles of beautiful avenues lined with choice shade trees and presenting to the delighted eye an unbroken succession of thrifty homes so near together that the aspect is that of the suburbs of a large city. Each 20-acre farm, fronting only 660 feet on the avenue, is embellished with its cottage, barn, poultry-house, milk-house, inclosures for cows and calves, orchard, vineyard, vegetable garden, flower garden, and all the usual accessories of happy rural life.

Surrounded thus by colonies growing each year more prolific, it is no wonder that Fresno is taking on the airs of a city. Thousands of dollars are disbursed annually to the fruit-raiser of the county, and this wealth stimulates trade and enhances the value of all properties.

A Progressive Town.

It is needless to enumerate with particularity the various institutions of Fresno. She has all the characteristics of wide-awake sisters in other parts of the State, except that in many instances these features are intensified by her present activity. Water works, gas, electric light, street railway, fine hotels, concentration of capital in banks, growing wholesale houses, immense retail establishments, fine public schools, modest manufactories, etc., etc., are all here. A good courthouse stands prominently in the center of a large reservation or park, which gives a pretty view to the eastern part of the city. At least 15 to 20 fine brick buildings are in course of construction at the present time. A few of these are outside of the limits mentioned in the former part of this letter, and indicate the speedy expansion of the business quarter of the city. The style of architecture adopted in many of the leading buildings is attractive in the extreme. Brick walls are relieved by trimmings of yellow sandstone or white granite, and pointed towers finish the upper stories of corner buildings. There is a commendable pride among the builders to erect handsome structures, and those now about completed are models of their kind. The Hughes hotel is one of the finest hostleries in the central part of the State. The Hughes block, on the opposite side of the street, is another monument to the persistence and success of that pioneer of Fresno, Thos. E. Hughes, who pinned his faith to the city before it was more than a hamlet, and who has been rewarded by great wealth as a return for his accurate judgment. Fresno is noted for its good spirit and hospitality. It entertained the Native Sons in royal style last year, and it is about to entertain in equally good shape the Grand Lodge of Knights of Pythias. These things indicate the character of the people, who are public-spirited and wide-awake. There is something in the air of a growing city which prompts to liberality and breadth of view, and this is as noticeable in Fresno as in any city we have visited.

SELMA.

Selma, the principal town in southern Fresno county, was laid out in 1880, and originally consisted of a town plot of 40 acres. J. E. Whitson, E. H. Tucker, M. Snyder and G. B. Otis took the initial, and after having the town surveyed petitioned the railroad company to give them a side-track and depot. They were told that the point was of so little importance as a shipping point that unless the petitioners would pay the company the estimated cost of the proposed side track, or \$700 the town of Selma would not be made a stopping-place on the railroad. The above-named gentlemen under the most discouraging circumstances raised and paid to the company the required amount, and the town of Selma was numbered among the stopping-places on the line of the Southern Pacific railroad. From this small beginning the early citizens of Selma, without money or credit, have succeeded in building up one of the most flourishing young cities in the great San Joaquin valley and one of the most prosperous communities in the State.

Resources.

Selma is situated on the line of the Southern Pacific railroad, 15 miles southeast of

Fresno and 222 miles from San Francisco. It has at present writing about 2000 inhabitants, and at no time in its history has it grown as rapidly as during the past year. The town plot now consists of the original 40 acres with some 20 additions. These tracts embrace each from five acres up to 80 acres, and are being gradually sold off into town lots and some of them improved. Selma's growth for the past three years has been phenomenal, and yet it has not been the result of an exciting boom, but has sprung from a steady, healthy development of the resources of the country and the demands of business. All realize that the great wealth of the soil of the surrounding country has as yet been practically undeveloped. The thousands of acres of fruit trees and vines put out upon the lands in the vicinity of Selma have not yet come to bearing age, properly speaking, and begun to pour their treasures into the laps of the land-owners or exert the influence they are destined to have upon the business and commerce of the country. As the surrounding country is developed and its lands put under proper cultivation, as the trees and vines come to maturity, and as people learn how to make the most out of the soil and water, business will increase at Selma, new lines of industries will launch and new enterprises will come to the front. The outlook for Selma is certainly very bright. The country surrounding her will warrant the building up of a great commercial center. At this time Selma has 10 general merchandise stores, 1 harness store, 3 stove and hardware stores, 4 drug stores, 1 grocery store, 1 gent's furnishing goods store, 1 cigar store, 1 furniture store, 1 music store, 2 millinery stores, 3 dressmaking establishments, 1 undertaking establishment, 1 photograph gallery, 1 planing-mill, 1 flour-mill, 1 nursery, 1 gas-fittings and plumbing, 2 lumber yards, 2 wood and coal yards, 1 city hall and theater, 3 hotels, 3 restaurants, 4 barber shops, 5 livery stables, 6 blacksmith shops, 3 butcher shops, 1 local paper (the Selma Irrigator), 1 mattress factory, 1 agricultural implement house, 2 public water-works systems, 1 schoolhouse, 6 churches, post telegraph and express offices, 10 real-estate offices and a bank.

Population, Etc.

The present population is over 1000, 90 per cent of which has come in the past two seasons. Over 250 pupils are enrolled in the schools, and additional school buildings will be erected soon. The churches are well attended and free from debt. The grade of the town is such that drainage is complete and the sanitary condition perfect. In a word, the people of Selma enjoy all the advantages of a fertile section, with good climate, good health, good churches, good schools and good society.

To a person with a moderate amount of capital this section offers great inducements. Here the lime and the olive, the citron and the orange beautify the face of nature, and flowering shrubs and plants in great variety bloom unprotected in the open air 12 months in the year. Here the rose is perpetually in blossom and a bouquet of choice flowers may be gathered at any time of the year.

To those accustomed to snow and ice this may seem like a fairy tale, but it is only an evidence of climate difference. If you are energetic and industrious, and desire a home at moderate cost in such a locality, the people of Selma will welcome you to their midst.

H. G. P.

The supervisors of Fresno county have granted the petition for the establishment of the Sunset Canal Irrigation District. This will seriously affect the West Side Irrigation District, as it removes over 100,000 acres from that district as planned.—*Modesto Herald*.

HONESTY AND INTELLIGENCE.

It pays to be honest, you say. Granted.

Yet how many are dishonest through ignorance, expediency, or intentionally. One can be dishonest and yet say nothing.

A clerk who lets a customer buy a damaged piece of goods, a witness who holds back the truth which would clear a prisoner, a medical practitioner who takes his patient's money when he knows he is doing him no good, are all culpably dishonest.

Speaking of the dishonesty of medical men reminds us that only the past week there has come under our personal observation a form of dishonesty which is almost too mean for narration.

It is generally known that doctors bind themselves by codes, resolutions and oaths not to use any advertised medicines. Now, there is a medicine on the market which, for the past ten years, has accomplished a marvelous amount of good in the cure of Kidney and Liver diseases, and diseases arising from the derangement of these great organs—we refer to Warner's Safe Cure. So widespread are the merits of this medicine that the majority of the doctors of this country know from actual evidence that it will cure Advanced Kidney Disease, which is but another name for Bright's Disease.

The medical profession have put themselves on record as admitting that there is no cure for this terrible malady, yet there are physicians base enough and dishonest enough to procure Warner's Safe Cure in a surreptitious manner, put the same into plain, four-ounce vials, and charge their patients \$2 per vial, when a 16-ounce bottle of the remedy, in its original package, can be bought at any drug store in the world for \$1.25.

Perhaps the doctor argues that the cure of the patient justifies his dishonesty, yet he will boldly stand up at the next county medical meeting and denounce Warner's Safe Cure as a patent medicine, and one which he cannot and will not use.

The fact is that the people are waking up to the truth that the medical profession is far from honest, and that it does not possess a monopoly of wisdom in the curing of disease; doctoring the many symptoms of kidney disease, instead of striking at the seat of disease—the kidneys themselves—allowing their patients to die rather than use a remedy known to be a specific, simply because it has been advertised, and when patients are dead from Advanced Kidney Disease, still practicing deception by giving the cause of death in their certificate as pneumonia, dropsy, heart disease, or some other accompanying effect of Bright's disease.

All this is *prima facie* evidence of incompetency, bigotry and dishonesty.

We speak but the truth when we say that Messrs. H. H. Warner & Co. have done a most philanthropic work for the past ten years in educating the people up to the knowledge they now enjoy, especially of maladies growing out of diseases of the Kidneys and Liver, and are deserving of all praise for their honesty and straightforwardness in exposing shams and dishonesty of all kinds.

"De man wot knows it all is alluz a-makin change, a-buyn' ob experience." The man who does not think that he "knows it all" about Pumps can find out a great deal about them in *Grimshaw's PUMP CATECHISM*. By mail, postpaid, \$1. Dewey & Co., 220 Market St., S. F., Cal.

MUSIC and FLOWERS

Go well together. Prepare to enjoy the genial season by learning Summer Songs, and playing restful summer lullies, found in abundance on the pages of Books published by DITSON CO.

In our new **Popular Song Collection** (\$1) are found such songs as "Happy Buds," "Hunting Four-Leaved Clover," "An Old Garden," "At My Window," and 32 others.

In our new **Choice Sacred Solos** (\$1) are found "Blessed Land," "Good Shepherd," "When the Mists," "Home so Best," and 30 other songs of great beauty.

In our new **Popular Piano Collection** (\$1) are many pieces that sound well among the trees, as "Dent de Leon," "Alpine Shepherd," "Forget-me-not," "Fairy Echo," "Chapel in the Mountains," and 20 other pleasing pieces.

In our new **Popular Dance Collection** (\$1) there are many new and sparkling Waltzes, Polkas, etc.

Spend a V in providing such books as the above, and also the genial **College Songs** (50 cts.), **College Songs for Banjo** (\$1) for Guitar, (\$1), or **War Songs** (50 cts.), or **Good Old Songs** as used to Sing (\$1), or one or more of our excellent Glee or Chorus collections. (See Catalogues.)

Dewey & Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

THE DAIRY.

Stony Creek for Cream Gathering.

EDITORS PRESS:—Being used to gathering cream beyond the Rockies, I will try to select the choicest suggestions received on a late trip down the promising valley of Stony Creek, and show how cream gathering is practical there. From the Sacramento to its home among the mountain canyons this stream runs for 60 miles; in summer, large enough to wash your buggy hubs for the width of the road where the current runs as fast as you walk; during the winter rains, an angry torrent. Now the valley broadens out into a wide strip of benchland, whose soil is shown by massive oaks. Again it narrows down to a canyon where the grade is hewn from the rocks. Every now and then you see a beautiful field of alfalfa or a family orchard where nature deserves more praise than man. To an artist, the park-like benches, the wild growth along the stream, the rocks, the hills, rising range above range until snow-crowned Sanhedrin or St. John mingles with the clouds, it shows a picture of ever-varying interest.

To the farmer the first view is unfavorable. No chance for broad fields of wheat or rich pasturage for stock, and the unimproved lands along the stream where the boulders and willows are most marked give the idea of hard work and little pay. The alfalfa-fields yielding a heavy crop every five weeks from such land show that there is something better here than appears at first, and by gathering a fourth as many tones as would be common on a field in the Atlantic States and grubbing out a little underbrush, the plow and scraper will soon show the soil and a few rods more or less of ditch bring in the water that throws up such vegetation on those alfalfa-fields. The subsoil affords such drainage that the malaria common to many irrigated sections is only known here where they are so careless as to use water from wells affected by irrigation; and, as the water finds its way back to the main channel, the more they use above, the longer it takes for that part to find its way down stream, and so people farther down find that their water holds out better late in the season. As the strip of land easy to be irrigated will hardly average more than half a mile in width, there is not the danger from scarcity of water that the present suit between land and mill owners at Smithville would indicate.

Mr. W. M. Jamison last year kept 22 cows from which he sold \$1100 worth of butter. He thinks that by soiling there would be plenty of feed for two cows the year around on the acre, and would be inclined to say three. We estimated it at one man's work to cut and haul the grass for 100 cows, besides doing his share of the milking.

A neighbor, Mr. Polley, has nearly as good a stand of alfalfa in a grove of oaks. From one of the little trees his men gathered about 15 bushels of acorns. He says these will fatten hogs faster than any other feed, but did not say how much a big tree or an acre of the grove would yield. At that point there is danger for both fruit and grain from late freezes occasioned by northwest winds blowing from the melting snows on the mountains. As you go down stream the danger grows less.

Now the bulk of this 20,000 acres of cream land is yet either unimproved, is in China gardens, or in wheat-fields and pasture. Hence low rates prevail. Individual water rights, freedom from malaria, and its yield of fruit and alfalfa are further attractions to newcomers who want to begin with chickens, pigs, cows, and fruit, and make a big farm of ten acres. At this point the poor market for farm butter and the difficulties of dairying in a warm climate arise.

The Co-operative Creamery

Can meet them. This plan has been gaining ground in the Western States and is substantially this: Farmers owning together 500 cows or more, and living not farther than 20 miles from some common point, subscribe about five dollars stock to each cow kept, form an incorporated company, build and equip a creamery, hire a buttermaker and one or two cream-gatherers, and divide proceeds from sales of butter once or twice a month in proportion to the butter value of cream furnished as shown by the test churn. When as many as 50 cows are near enough together so that their milk can be easily brought to a common point, it seems that a centrifugal separator is best, but beginners and scattered farmers can do far better than with pans by using a common cooler pail 8½ inches across by 20 inches deep in a tank of cold water. These will cost not more than \$1 per cow. [But how can you easily get sufficiently cold water for deep setting?—Ebs. Press.]

The sooner the cold water is applied and the more rapidly the temperature reduced after milking, the better will be the cream separation. Under most favorable conditions it approaches closely the yield from the separator. An abundant spring or well of cold and pure water is almost essential to a creamery, and an alfalfa field of 5 to 10 acres, so that grass and butter-milk can be supplied for pigs, is a valuable adjunct.

Good Points for Creameries.

As market and conveniences for making butter are now poor along the Sacramento river in Colusa county as well as along Stony creek, we

think creameries will be well located at Elk Creek, Orland and Colusa.

The introduction of creameries into Iowa did much toward driving out the credit and bringing in the cash system of trade, and in many places the land doubled in values within three to five years of their introduction. It turned the attention of farmers from uncertain to comparatively sure crops and more than doubled the average net income. In this way many a large land-holder was more benefited than the total cost of all the creameries in his county.

The regular gathering of fresh eggs and their shipment was almost as much a gain as the cream gathering. The element of uncertainty is not so important a factor in eggs gathered regularly and marketed promptly as where nests are found by chance among the grass and weeds, kept about the house until some one happened to be going to town, and then kept in a hot stove until the boys have time and feel like packing and shipping them. Some who are making a business of poultry and send in eggs regularly are now getting five cents per dozen in advance of rates ruling for store eggs.

First the Dairy, Then the Orchard.

With a cash market at their doors for cream and eggs, farmers could settle on a small piece of land and have an immediate income and afford to invest their savings in trees and wait their coming into bearing. It remains for us to learn how the proposed sale of villa lots in this section can succeed. With subdivision resulting from such enterprise as we have outlined, towns would be demanded and have a natural growth. Farmer, merchant and land-holder are alike interested in such booming.

FRANK S. CHAPIN.

Answers for the Arizona Inquirer.

EDITORS PRESS:—I submit the following points in reply to your Arizona correspondent whose letter was published in the Rural of April 27th:

1st. One hundred and fifty lbs. butter or 400 lbs. cheese would be a fair annual yield for common dairies. A very few would double that, and statistics for a State figuring in all cows milked, vary from 71 to 125 lbs.

2d. Good dairies, or creameries, making uniformly first-grade goods, can hope for an average of about 20 cents in open market for butter. Farmer's store butter will go at half that, and for those who have reputation for a fancy grade which they supply to private consumers, especially when principal make is in winter, there is a wide margin.

3d. To milk and care for stock in a large dairy and raise the feed, not less than four good men should be employed for the hundred cows.

4th. Ten dollars is a fair average value for a good dairy yearling. This average of \$40 gross per cow may not be a flattering outlook. No one has to be an average dairyman. Test your cows. Weed out the poor. Breed up the good. Remember it takes so much to keep a cow alive and that profit must come from what she consumes beyond that. A dairy cow will produce as she consumes and a beef cow will grow as she eats. H. B. Gweler of Dekalb, Ill., says a cow must yield 150 lbs. of butter to pay her year's keeping with him. So he draws a dead line, casts out the worst and says one cow yielding 250 lbs. pays him as well as ten yielding 160 lbs. each. CREAMERYMAN.

Eucalyptus as an Antiseptic.

The London Globe describes some experiments regarding the antiseptic properties of eucalyptus, made at Rome by Count Luigi Torrelli. The results are interesting and suggestive.

A number of tin pannikins were filled with pure spring water and various leaves, such as oak, orange, lemon and grass, immersed in them; also eucalyptus leaves and bark. Gradually, but at various intervals, the leaves and water showed signs of putrescence and had to be thrown away. The oak leaves preserve the water for some time, but the water in the pannikins with the eucalyptus leaves and bark remained perfectly palatable after the lapse of more than four months.

The Count also placed some meat in water with leaves of the eucalyptus globulus, and in another pan a piece of veal in plain water. After 74 hours it was found that where the veal had been merely soaked in water the meat had become putrid and decomposed the water. The water in the pan treated with eucalyptus leaves was colored, and had a slight smell and taste of leaves, but was quite good; and the meat was found in excellent preservation, and when cooked was eaten with much relish. The Count then wrapped some veal with a slight taint in a profusion of leaves of the eucalyptus globulus. At the end of three or four hours he cooked the veal in the ordinary way, and it was pronounced excellent and tender.

PROFIT IN POULTRY.—William G. Ford, who resides in Washington colony, says one acre of hens is more profitable than 20 acres of grapes. His Golden Gate incubator hatches 75 per cent of the eggs, and works satisfactorily without special attention. The lowest price he receives for eggs is 15 cents per dozen, and the highest 50 cents. Lowest price for fowls, \$4 per dozen, and highest, \$11. Mr. Gifford finds pigeons very profitable also, as they require very little care and bring \$2 50 per dozen.—Fresno Republican.

THE FIELD.

The Wheat-Growing Problem of the World.

The British Quarterly Review, in a recent article on the future prospects of the British farmer, said that after so many years of unremunerative prices, many are disposed to regard their struggle with foreign and colonial competitors as hopeless, and it has been asserted that even if they had not to pay any rent, they could not grow wheat with profit. In 1883 the average price of wheat in England was considered very low at \$1.31 per bushel, but the next year it fell to \$1.11 and in 1886 to 96 cents, and in 1888 to the lowest figure yet recorded, 94 cents. At such beggarly returns no wonder the unfortunate husbandmen of Great Britain have at last almost decided to throw up the sponge, and are looking after other means of making a living. From the reports of 85 wheat-growers in 11 counties it appears that the average expense of cultivation is \$42 68 per acre, and the receipts \$42 per acre, or a loss of 68 cents, presuming wheat to be worth \$1.12 per bushel; so that the loss during the past two years must have been very serious indeed.

In the Western States the expense is estimated at about \$10 or \$11 per acre, and in some parts even less, so that when the vast productive area of the United States is taken into consideration, the statement that North America produces one-fourth of all the wheat grown throughout the universe may not be so wide of the mark, although it need not be inferred that the American farmers make more than a bare living at such prices; in fact, one has only to casually glance over the newspaper to become aware that there is a vast amount of grumbling among them on account of the low prices obtained, and that the greater number of the farms are heavily mortgaged. The increase in the wheat yields of the United States will be readily seen from the following:

	Bushels.
1850.....	100,485,944
1860.....	173,104,924
1870.....	235,884,700
1880.....	445,000,000

At the present time only 15 per cent of the wheat is grown in the Eastern States, the New Englander finding it cheaper to import it than to raise it. The possibilities of the future may be faintly gauged from the fact that the present acreage in wheat is about equal to the State of Alabama, so that for many years Great Britain's breadstuff supply will be exported from this country, unless it can be purchased at a cheaper rate elsewhere. Concerning the long threatened competition from India, where labor is so cheap, it has not yet reached the proportion expected, the dirty condition of the grain affecting its sale somewhat, and its lower value by a few cents per bushel is made up by the extra freight charge over that on American grain. The first export of Indian wheat was 20 years ago, when the quantity was 559,000 bushels, which had increased in 1876 to 4,687,000 bushels, in 1881 to 13,896,167 bushels, and for the last six years the average export has been 35,530,000 bushels.

The average yield of wheat in India has been placed at 14 bushels, which, after allowing for the home consumption, means a surplus for export of 66,000,000 bushels. The relative condition of the two countries stands thus:

	United States.	India.
Population.....	80,000,000	200,000,000
Area, square miles.....	3,000,000	1,400,000
Miles of railroad.....	135,000	13,300
Wheat acreage.....	34,000,000	26,000,000
Average crop 1883-86, bushels.....	437,000,000	200,000,000
Export of wheat, 1887, bushels.....	432,000,000	39,012,000
Total exports, 1881-86, bushels.....	800,000,000	175,000,000

From this it will be noticed that the United States raises 7 bushels per head of its population, and India only 1 bushel; India has only 1 mile of railroad to 20,000 inhabitants, while this country has 1 mile to 435 people. What with the expense of irrigation, the terrible droughts that often devastate India, the crude method of conducting farming operations, etc., it may safely be asserted that in the immediate future, if indeed at any time, India will not prove a formidable factor in the European wheat markets. From the mighty and vast Empire of Russia will come the keenest rivalry in furnishing Britons with their daily bread. In 1886 Russia's foreign exports of breadstuffs were 86,150,000 bushels, which increased to 123,800,000 the next year, and in 1888 to 172,870,000 bushels, and it must be borne in mind that this industry can be almost indefinitely augmented without difficulty, while the Argentine Republic in a few years will export grain on a very extensive scale.

If the production of cereals is hopeless in Great Britain, their conversion into flour will be performed by British millers, since they have recently adopted the latest improvements in the requisite machinery, and they have the world's wheat supply offered to them. Their profits are not large, but sufficiently good to induce them to continue the business, and to employ labor. Even when the English market is glutted with American flour, the odds are on the side of the English miller. Cargoes off the coast are generally to be purchased on better terms than from the farmer or merchant, and the scorings fetch four times as much as they do here, and this disadvantage the American miller has so far failed to overcome. Not long ago a flour trust was planned in England, when several of the leading mills were inclined to join the combination.

The Deficiency in the Australian Wheat Crop.

Mr. Brett, one of the best-known and most successful of colonial journalists, who has been commissioned by the New Zealand Government to represent Maori land at the Paris Exposition, recently arrived in this city on his way to Paris. During his stay here he visited a number of our best fruit and wheat growing localities, and contrasted the same most favorably with similar localities in Australia.

To a reporter of the Call he alluded to the present drought in New South Wales as something which presaged most disastrous results, particularly to the wheat crop of that country. He says the Government statistician there estimates the shortage as not less than 6,143,000 bushels on the average of crops for the last 20 years, incurring a loss to the farmers of fully \$4,500,000.

This shortage will call for a large increase of imports over those of previous years. New Zealand can supply only a portion of this demand. In regard to the California supply, Mr. Brett said: "Your flour is popular there, but we in New Zealand have the advantage of proximity, and so long as the present rates are maintained here your shippers will be unable to land wheat in Australia for less than \$1.39."

"The moment the English market falls, however, say to 39s, and provided New Zealand wheat should be selling at above 5s, say 5s 6d, then Californian growers could successfully compete with New Zealand growers; otherwise we have not much to fear."

"But the falling off is not confined to wheat alone. Oats have decreased to the extent of 7 bushels per acre, potatoes 3.09 tons and hay .75 tons per acre. There is opportunity for exhaust in these articles also."

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING APRIL 30, 1889.

402,382.—FLY-CATCHER—Albert Arents, Alameda, Cal.

402,400.—WRENCH FOR SAW TEETH—Frederick W. Cook, S. F.

402,474.—LUBRICATOR—W. H. Cooper, San Jose, Cal.

402,408.—RAILWAY TELEGRAPH—F. J. Crouch, Oakland, Ogn.

402,462.—GRAIN SEPARATOR—M. N. Laufenburg, Stockton, Cal.

402,471.—MOTOR—Hans M. Olsen, Sacramento, Cal.

402,189.—LAWN-MOWER ATTACHMENT—H. Peterson, Berkeley, Cal.

402,194.—STRAP LOOP—A. C. Reeves, Palouse, W. T.

402,479.—VARIABLE ECCENTRIC—D. L. Remington, San Leandro, Cal.

402,279.—PHOTOGRAPHIC PAPER—F. H. Rogers, Los Angeles, Cal.

402,208.—SNATCH BLOCK—A. Uren, Seattle, W. T.

402,496.—TENSIONAL SOUND BOARD—C. S. Weber, San Jose, Cal.

16,541.—TRADE MARK—Nushagak Canning Co., S. F.

NOTE.—Copies of U. S. and Foreign Patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

THE SWEET CASSAVA, which is closely related to the castor bean, has been grown very successfully on the sandhills of Florida. Garden and Forest describes the mode of cultivation and enumerates the uses it is put to: "It may be converted, with scarcely any waste, into starch, tapioca and glucose. In the tropics, cassava flour is used extensively for making a large water or cracker, which is quite palatable, and keeps without injury for months. Florida housewives have used it for making bread, puddings, custards, fritters, jellies, etc.; also as a vegetable it is used in all ways in which Irish potatoes are used. * * * It is greatly relished by cattle, horses, hogs and poultry, and seems to be a very wholesome article of food. The great tubers, sometimes three or four feet in length, may be taken from the ground at any time of the year and used as food by man and beast." The cassava has been tried from time to time in this State; but so far as we have learned the result of such experiments, a humid tropical climate seems essential to its thriving.

THE FOWLER FRUIT AND RAISIN-PACKING Co. filed articles of incorporation at Sacramento on the 8th. Principal place of business, Fowler, Fresno county; capital stock, \$30,000. Directors—Frank Victor, A. Harris, D. W. Parkhurst, C. H. Norris, C. E. Barnett, J. Aiton, B. E. Hutchinson, W. R. Shannon and T. H. Dean.

THE Canadian Department of Agriculture reports gratifying prospects for the winter wheat crop. The vegetation is a week or two in advance of last year, and the season has been early for plowing and seeding.

A STRANGE BIRD, supposed to be the Bohemian waxwing, is making havoc in Colusa county cherry orchards.

STOCKTON COMBINED HARVESTER & AGRICULTURAL WORKS

THE MILLER LIGHTNING HAY PRESS.

AWARDED
First Premiums at
State Fairs, 1884,
1885, '86, '87 & '88.
AWARDED
Gold and Silver
Medals at Nevada
and California
State Fairs, and
won contest money
of \$50.

Requires but Four Men
and Two Animals to
do Rapid Work.

CAPACITY 30 TONS PER DAY,
PATENTED
May 25, '85. }
For Standard Size Baling Press,

Or seven and a half tons per day for each man
employed, which is more than has been or
can be accomplished by any other Press yet
manufactured. Twenty tons a day with
Tight Baling Press. Can put ten tons in a
car. Satisfaction guaranteed.

Does not require Hay Stacks
built to suit our Press.

ALSO BUILD
WOOL PRESSES
TO ORDER.

The "STAR" Double Shoe CLEANER

—FOR—
COMBINED HARVESTERS,

Awarded First Premium at State
Fair, Sacramento, Sept. 24, '87.

(PATENTED.)

The "STAR" Double Shoe CLEANER

—FOR—

STATIONARY THRESHERS

We also build to order the
"Star" Cleaner with sufficient capacity
for any threshing machine. It is mounted on trucks and can
be set by the side of any "thresher," the power being transmitted
to it by means of a counter shaft
on the thresher, or belt from the
engine. The grain is conducted to
the hopper by an elevator extending
from the grain auger of the
thresher to that of the Cleaner.

HOUSER COMBINED HARVESTER

Received First Premium, State Fair, Sacramento.

No Experiment! No Failures
NINE YEARS IN THE FIELD.

500 IN FIELD USE.

None Ever Returned.

They have a larger sale than all other Harvesters combined. Built for heavy work and
large grain fields with heavy grain. Always victorious in competitive trials.
They have reduced the cost of Harvesting to less than \$1 an acre, and save three bushels an
acre over and above Heading and Threshing. Have our Premium Extra "Star"
Double Shoe Cleaner, the only successful Harvester Cleaner made. Received First
Premium in 1888.

WOODLAND, Sept. 19, 1888.

Stockton Combined Harvester and Agricultural Works
GENTLEMEN: The 14-foot Houser I bought of you this
season fills the bill right up to the handle. I have cut
1200 acres; have threshed 628 bags of wheat in one day,
averaging 540 bags for six days. The Star Cleaner and
Improved Shoe are perfect, and last, but not least, I
turn a square corner and save all the grain.

J. R. JONES.

YUBA CITY, Sept. 13, 1888.

Stockton Combined Harvester and Agricultural Works
GENTLEMEN: I have one of your "Star" Cleaner and Im-
proved Shoes on my Houser Combined Harvester, and
can say that the cleaner is far superior to any I have
ever seen in barley, being able to return unbearded
arley and pieces of heads direct to the cylinder, some-
thing that everybody can appreciate that has run a
Harvester. The Cleaner is of sufficient capacity, I hav-
ing threshed 650 sacks a day. It is well made and very
durable. The new shoe is perfection. I consider the
Houser very strong and durable, and as light draft as
machines of lighter build of same capacity.

A. GRAFFIS.

BIGGS, Nov. 25, 1888.

Stockton Combined Harvester and Agricultural Works
GENTLEMEN: I bought one of your 16-foot Houser
Harvesters this season and cut my crop of 1200 acres
with same without any expense for extras. The Star
Cleaner and Improved Shoe are perfection. Heretofore,
when using another make of Harvester, I had to have all
my grain recleaned at an expense of \$800 or more, but
with my machine it was not necessary, as the grain was
clean enough for seed as it was taken from the spout,
and I only regret that I did not buy one two years ago,
and I would have saved over \$5000. I prefer the Im-
proved Houser to any other make of Combined Ma-
chines, and would recommend it to my friends in need of
a Combined Harvester.

W. S. RIDDLE.

YUBA CITY, Oct. 15, 1888.

Stockton Combined Harvester and Agricultural Works
GENTLEMEN: The 16-foot Houser Harvester that I
bought of you this season, with the Star Cleaner, gave
entire satisfaction, and, I think, is the best Harvester
in the market. Will recommend it to anybody or friend
that wants to buy a Harvester.

J. W. HUMPHREYS.

Also Manufacturers of "Star" and Angle Sieve Grain Cleaners, Curved Standard
Gang Plows and Plow Extras, Passenger and Freight, Motor,
Cable and Horse Cars.

OSTRANDER & SONS,

REAL ESTATE OFFICE

Garibaldi Building,

MERCED, CAL.

P. O. Box No. 7.

A RARE BARGAIN!

The undersigned offers for sale, on good terms, his CLOVERDALE DAIRY FARM of 500 acres, situated on Squirrel Creek, 2 miles west of Gracia Valley. It is well watered by springs and has excellent irrigation facilities, commodious farm buildings, orchard of 150 trees and 6 acres of vineyard. A fine herd of Holstein, Ayrshire, Jersey, and Durham (thoroughbred and grade) cattle for sale with or without the ranch. Holstein and Ayrshire premium bulls on lowest terms, including "Tehama," which, on account of kinship to the herd, can no longer be used in breeding. A good dairy route is also included in this offer.

H. B. NICHOLS, Proprietor.

FOR \$5000.

A Ranch in El Dorado county, near Placerville, contains 160 acres, nearly all fenced in with a four-strand barbed wire fence, a good house of 11 rooms, hard finished, two brick chimneys, out stone basement with cut stone steps, a good barn and stable, chicken house, work shop and other out-houses, a good well of water, one water ditch for the land, 1000 fruit trees, all in bearing, Peach, Apple, Fig and Cherries, 1000 Grapevines; 80 acres cleared and ready for the plow, all newly level; about 25 acres woodland, pines, etc., all of which can be cleared; three cows and two calves. The Ranch is five miles from Coloma and nine miles from Placerville. The soil is a red loam, the house stands on the county road and the stage passes it twice every day. A span of horses, a new harness and wagon, plow, harrow and other farming utensils to be given with the Ranch. The title, U. S. Patent. For further information address, "RANCH," Box 2361, San Francisco, or care of Illustrated Publishing Co., 220 Market St., S. F.

LAND TO RENT

On Exceedingly Liberal Terms.

The S. E. quarter of Sec. 13, T. 21, R. 23, and all of Sec. 15, T. 23, R. 24, in the artesian belt in Tulare county, will be rented at a nominal rate for winter sowing, if applied or soon. The greater part of this land is rich, level and all ready for the plow. Address L. E. Smith, Pixley, Tulare Co., Cal., or Ranch Owner, office RURAL PRESS San Francisco, Cal.

FOR SALE OR EXCHANGE.

Ranch of 200 acres on Coquille River, Coos County, Oregon; 40 acres bench land, 160 acres bottom, 80 acres under cultivation; 14 miles from Coquille City, one-half mile from steamer landing. An abundance of fine spring water on place. Price, \$4500 cash, or will exchange for California property in vicinity of San Francisco Bay. For further particulars apply to H. GOETZ, 659 Clay St., San Francisco, Cal.

The Propagation and Care of the Orange.

An essay on this subject was written by Fred C. Miles of Penryn for the Convention of Fruit-Growers in National City, from which the following is taken:

In planting I use the seed from large Tahiti oranges, as so far the stock raised from them have given the best satisfaction. The practice has been, as various works advise, "to cover the seed from one to two inches with soil or sand, or both." I have had the best success here by planting the seed in June (about the 10th), barely covering the seeds with soil and then applying a dressing of one-half inch of chaparral leaves. The latter prevents the soil from baking and keeps the seed moist, the beds not drying out so quickly as with sand. The seeds are sown broadcast in beds, and are only allowed to dry before planting so that they will not stick to the hand when sowing, and only the seed is used that will promptly sink to the bottom in a water bath. Treated as above, the plants have been up at 18 days from sowing seed.

For covers for protection from the sun, the thin lining cloth, five cents per yard, is used. I do not use the stationary cover so largely in favor in Southern California, but use a frame made like the sketch below:

Device for Shading Orange Seedlings.

The pointed stake, size preferably 1x6x22 inches, having a hole bored near its top, is driven in the center of the bed before the seed is sown. A T is made having top somewhat longer than the width of the seed-bed. [The engraving does not show the cover quite as wide as it should be.—EDS. PRESS] The leg of the T is, for our hot climate, 20 inches long and has a hole bored near the bottom. A bolt is passed through the two pieces and the cloth held to the top of T by a lath tacked on. The friction of the two pieces of boards is sufficient to keep the covers in place at any angle one may desire. The great advantage of these covers is that they can be turned so that the plants can have the benefit of the sun at any time, and on this account make stronger, sturdier trees.

Another thing that helps their growth is the daily sprinkling that the plants receive in summer. I have seen plants that were drooping in the sun revive when a very fine spray was showered over them.

In our section the transplanting to nursery rows should be in March or April, as in those months the conditions are extremely favorable for moving orange trees, and this remark can be applied to setting an orchard as well. The nursery rows, if on nilly ground, should have a grade of not less than six inches to the rod. The plants from the time they appear above the ground have to be supplied with moisture, and when in nursery rows or orchard must have plenty of water. I have experimented with using water and have found that it is best to intelligently use an abundance of it. The growth, both top and root, where I have done as above has left nothing to be desired.

Budding is begun when the trees are from 15 months old upward. Probably the best per cent of good buds is obtained by working them on two-year stocks. It is an open question whether spring or fall budding is the best. I am inclined to fall budding, but experiments now in progress will soon give more definite information.

Colusa Notes.

EDITORS PRESS:—At Elk creek I had the pleasure of meeting R. Watts, who has charge of the large orchard lately started by San Francisco capitalists just up Stony creek from its junction with Briscoe creek. They are now employing 32 men at leveling, ditching, clearing, etc. Having purchased several thousand acres, we understand they contemplate planting 1500 acres in fruit within the next few years. So far they are planting principally of raisin grapes and Bartlett pears. Success to them.

Sanhedrin Lumber Company is building a mill about 12 miles west from Elk creek, whose capacity is to be 50,000 feet per day. They now employ about 100 hands. It is their plan to ship from Fruto. The grade from Elk creek is very good. One citizen affirmed that they drew a ton to the animal over the grade.

This and the fruit enterprise, added to its regular trade, is giving Elk creek a very healthy boom. F. S. C.

"MANUPRINT" is a convenient word newly coined to designate the work of a type-writer. It is to serve both as verb and noun. A type-written manuscript is a "manuprint," and its pages are "manuprinted" by the operator.

Solano's Solicitudes.

EDITORS PRESS:—We are having lots of weather, and most of it very damp. Three inches of rain have fallen since the 1st inst. The oldest inhabitant does not remember such a rain in May, but as his memory is somewhat impaired, we may have had as much before. At any rate, lots of hay has been damaged and the prospects for more rain are good.

Everything is growing fast—mortgages included. Many young fruit trees have been blown down, and many more so twisted that it was necessary to go over the orchard and straighten them up.

In some vineyards the cut worms are doing much damage, coming out of the ground at night and going back in the morning after stripping the vine of its leaves. The lively little grapehopper is also present in large numbers. It is said that bubach, mixed with sulphur, will kill the hoppers—I do not know in what proportions, but if it takes very much of the insect powder it would be cheaper to feed the hopper on grapes.

Grain hay is selling at \$8 per ton loose in the field; volunteer and damaged hay for whatever we can get. Many commission men have been around soliciting custom for their houses, but no contracts for fruit have been made that I have heard of except for one orchard on Putah creek, where the fruit was sold for one cent per pound on the tree.

The prospects for canning do not seem to be very favorable on account of high prices for tin and sugar, to say nothing of high freights East. One thing is in favor of the fruit-raiser if he ships East. The fruit crop will be light and he will not have to rustle around very much next fall to get money to pay on his freight bills what the fruit falls short of.

Vacaville, May 12, 1889.

G.

Feigning Fits.

An impostor who works on the sympathies of strangers by counterfeiting epilepsy is exposed by the *Vacaville Reporter*. The fellow's game is to fall down in some public place in what appears to be an epileptic fit. He did this in front of the Exchange hotel at Vacaville the other day. A crowd of spectators and sympathizers soon gathered around, and much sorrow was expressed for him by those who witnessed his gyrations. He lingered in the throes of the "fit" for fully half an hour, and awakened commiseration to such a pitch that \$17 50 was subscribed and given to him.

He was recognized, however, by a man employed at the hotel, who had seen him play the same trick in Oregon half a dozen years ago, and told of him. When the fellow wants to take a tumble, he sucks a little blood out of a finger which he keeps on tap and tied up, and with soap in his mouth to make froth, he works the epileptic-fit racket to perfection. Conspicuously displayed in his vest pocket may be seen a lot of cards, with his name, a recommendation from a marble cutter at San Francisco, etc., and when he falls of course the idea of bystanders is to "see who the poor fellow is, that in the event he dies the coroner's jury will have all the facts," etc.

He is a shrewd fellow and an accomplished actor, but has a despicable way of working upon the feelings of the public, and we hope will find his occupation gone. Exchanges are requested to publish a notice of his *modus operandi*, that he may have no more fits.

Sane and Sensible.

Recurring again to the subject of farmers' profits and laborers' hire, we wish to say plainly that we can entertain no sympathy for the effort to hatch up false cries against capital and successful business. We do not belong to that class that thinks the possession of worldly goods necessarily makes a man bad, any more than the necessity of toil makes a man good. The possession of railroad stock, government bonds, broad tracts of land or bank shares is not primary evidence that a man is a thief, that he is grinding the people, purchasing votes, debauching morals and controlling legislation. The proportion of good, fair-minded men in this country is greater than a majority among the rich, as it is among the poor, and fortunately such men are not, as a rule, led by prejudice to judge the whole by a part. We believe the oppression of capital is just as reprehensible as any other kind of oppression. And in nine cases out of ten those who cry the loudest against oppressions which they cannot define, against capital which they cannot possess, against character which they cannot emulate, are the ones in whose bosoms, awaiting an opportunity, lies the spirit and ideal embodied in their charges against others. We believe the oppressions that labor has needlessly produced in this country within the past few years have been as hurtful as any produced by organized capital, and when either has been fully exposed they should meet with universal condemnation. But we cannot accept the postulate that the times are so out of joint, and public and private morals at so low an ebb, that to acquire property by successful investment in any undertaking should brand the beneficiary as an enemy to good government and the brotherhood of mankind.—*Eureka Times*.

Alkali Lands.

The *Tulare Register* lately remarked that those who have made an effort to get strongly alkaline lands seeded to alfalfa know that it is no easy matter to induce the seed to germinate before the alkali eats it up. Once sprouted, the young plants will take root and grow with rapidity, and when once well set to alfalfa, unless too awfully strong, no land produces better than alkali. We were informed the other day that over in Nevada, where they have alkali in superabundance, the custom is to sow the seed in the husk, and that the husk protects the germ from the alkali until it gets strong enough to take care of itself. This looks reasonable, and we suggest that the experiment be made on lands which contain more alkali than is desired, and when thoroughly tried we should like to know the result.

Have any readers of the Press taken note of alkali lands that were formerly overrun by stock that tramped around, where the vegetable growth was kept down by feeding sheep and horses on the land? Since the country has become settled and the stock has been kept off by fences, etc., has it been observed that, where the vegetable growth was not eaten off but allowed to remain upon the ground undisturbed, it has had any effect in neutralizing the alkali and extending the area available for vegetable growth?

In some portions of Tulare valley, formerly overrun by stock, where the stock has been kept off of late years, the vegetable growth has been remarked to increase.

Chinamen Cannot Return.

The Supreme Court of the United States has affirmed the validity of the Scott Act by confirming the judgment of the Circuit Court in the case of Chae Chang Ping. This Chinaman went to China, taking with him a certificate of prior residence, similar in form to the certificates under which Chinamen had been returning for several years. Before he came back the Scott Act was passed, depriving such certificates of validity and absolutely closing the door against all Chinamen, whether they had been prior residents or not. The Chinaman raised the point that his certificate was a contract by which the United States were bound. The Supreme Court holds that it is not and that the United States have the power to exclude Chinamen at their will, notwithstanding the reservation in their favor contained in the Acts of 1882 and 1884.

Plum Aphid.

A subscriber at Capay, Yolo county, sends us plum leaves infested with plum aphid, or leaf louse, and asks for a remedy. There are several washes which will answer well. The following rosin solution was originally recommended by Prof. C. V. Riley: 4 pounds of rosin; 3 pounds of sal soda; water to make, 36 pints. Dissolve the sal soda in a few pints of water. When thoroughly dissolved, add the rosin. Heat until dissolved, and add water finally. For aphid, use $\frac{1}{2}$ pint of solution to the gallon of water. Use at a temperature above 100° F.

This remedy has also proved an excellent one for the plum aphid, and should be applied as soon as the aphid makes its appearance.

To Prevent Field Fires.

H. J. Small, superintendent of motive-power and machinery for the S. P. Co., has addressed this timely warning to Master Mechanic McKenzie of the West Oakland Yards:

As the dry season is approaching, I wish to remind you of the importance of giving close attention to the fire preventing appliance on your engines; to keep them in the best possible condition, and that regular daily inspections be made of netting in front ends, ash-pans and stacks. Instruct your engineers to report promptly when their engines throw fire, and do not allow engines to go out on the road after such report until proper repairs are made.

COLORING LABELS AND FRUIT PLATES.—We call attention to the advertisement in this issue of the Stecher Lithographic Co. of Rochester, N. Y., which states that they are ready to furnish colored label and lithographic plates of all descriptions. We have seen much of the work of this company, and it certainly commends itself. No doubt our fruit packers will do well to come with them about color work. A handsome label is a most acceptable garnishment for a package, and a neat lithograph under the cover is a good introduction to good fruit, and, fortunately, does not help bad fruit in the long run. If you have something fine to sell, give it an appropriate dress, and so far as colors go, the Stecher Lithographic Co. knows how to use them to advantage.

RED CURRANTS, the first of the season, from S. & A. Rogers of San Leandro, found ready sale in the S. F. market early this week at \$1 per drawer.

COMMENCEMENT EXERCISES AT SNELL SEMINARY, Oakland, will take place next Thursday evening, May 23d. The graduating class numbers 13.

Santa Catalina.

The sale of this island to a syndicate of English capitalists for the sum of \$400,000 is at last authoritatively confirmed, and we are very sorry it is, for it may lead to some very serious complications.

Santa Catalina lies only 22 miles from the coast of California. It possesses at least one land-locked harbor. Besides this there are a couple of bays on the channel side that may, at comparatively little cost, be made secure against even southeasters.

Should this English syndicate propose to turn this island over to the British Government, what would we do about it? Nay, suppose this syndicate is only a figment of the imagination—that they are agents of the British Government—and that the island already belongs to the British Government, what are we going to do about it? Allow a foreign Government to own so important a strategic point only 22 miles from the richest and fairest portion of Uncle Sam's dominions? The supposition is intolerable.

What is the remedy? Fall back upon genuine American principles. Pass the law demanded by all genuine Americans, that no alien foreigner shall own a single foot of American soil. "It can't be done?" Why not? Has a nation no power to preserve its autonomy by any and every means? Out upon the pusillanimity that would hesitate a moment to pass any law that might become necessary to foster and care for the welfare of the citizens of the country! Already millions of acres of this fair and prosperous country are held by alien non-residents and it is a serious menace. If people desire land in this country let them at least declare their intention of becoming citizens.

If it is a much-desired and much-prized object to be a land-owner in this country, let the party become a citizen in word and in deed before allowing him to grasp the prize for which he is striving. Only thus can we preserve our lands for our children. Only thus can we hope to perpetuate our free American institutions. Only thus can we hope to keep forever free from the horrors of the British tenantry system. Will our legislators see the danger in time? Let every true American put on his armor and fight valiantly for his country's welfare.—*Citrograph*.

Prices for Trotters.

The combination sale of trotting stock, held by Kilip & Co. at the Bay District track on the 14th instant, drew together a fair number of buyers, despite the dirty weather, but many of the animals being young and untried, the prices generally were by no means high.

G. Valensin's chestnut horse Valensin (2:23) by Crown Point—Nettie Lambert, foaled in 1883, sold for \$2050 to John Garrity.

H. A. Mayhew bought the bay filly Gracie B. by Stamboul—Moor Maid, foaled in 1887, for \$1500.

M. A. Sparks of Galt acquired the Sterling—Dore yearling Pretender, paying \$105.

H. Wieland bought the chestnut colt King Ossory by Alcona Clay—Pansy, foaled in 1887, for \$310.

Thomas Moran bought Granda, a chestnut mare, foaled in 1887, Le Grande—Miss Smith, for \$255.

E. F. Hastings bought Frank B., a bay horse, foaled in 1886, Belmont Chief—Lady Bonner, for \$290.

Standard N, a bay horse, by Almore—Dolly Nutwood, foaled in 1886, went to A. F. Jones for \$305.

Sir Charles, a chestnut gelding, by Alonzo Hayward—Lady Allen, foaled in 1883, was sold to James J. Dustin for \$350.

About 20 horses were sold at from \$100 to \$200 each.

At the American Institute in New York, on Wednesday of last week, 39 head of Senator Stanford's trotting stock were sold at prices amounting to \$35,785, which surprised and disappointed Supt. Marvin of Palo Alto.

ESCAPE AND WARNING.—The *Riverside Press* tells how Mrs. W.—the other day found her little boy with a lot of white stuff on his face and clothes. When she asked him what he had been doing, he said he had been eating it, but it did not taste good, so he spit it out. He pointed to the bottle from which he had got the stuff, and his mother found to her horror that it was strychnine. She immediately gave the little fellow all the emetics she could think of, but it was half an hour before the result was obtained. Beyond the natural effects of the emetics and the fright, no bad results seemed to follow. But it was a narrow escape and should warn people not to leave strychnine lying around loose where children can get it.

HOW ONE CIGARETTE KILLED FIVE MEN.—The whaling bark Sea Fox of New Bedford put in to Equiminas for wood and water. An agreement was made with Antonio de Bastos Pina to pay for the supplies in powder. He came on board the vessel. The powder was hoisted on deck, and an explosion was caused by Senor Pina lighting a cigarette. The after-part of the vessel was badly damaged, five men, including the smoker, were killed and several others injured.

Breeders' Directory.

Six lines in this Directory at 50c per line per month.

HORSES AND CATTLE.

P. PETERSEN, Sites, Colusa Co., importer & breeder of registered Shorthorn Cattle. Young bulls for sale.

SHEEP MEN, ATTENTION!

ADMINISTRATOR'S SALE

By order of Probate Court, in the matter of the Estate of JAMES ROBERTS, Deceased.

I will sell at private sale to the highest bidder, for cash, on or after May 1, 1889, at the Ranch in Irvington, or at my office in Oakland, 946 Broadway, Alameda Co., Cal., the entire flock of Thoroughbred French Merino Sheep, consisting of 280 (Two hundred and eighty) Ewes, 79 (seventy-nine) Bucks, and 180 (one hundred and eighty) Lambs. These Sheep are the get of the original flock imported by Robert Blacow of Centerville. Mr. Roberts, as foreman, having charge of the flock for several years prior to Mr. Blacow's death, after which he became the owner of the entire flock, which he has kept purely for stock purposes.

All interested in Thoroughbred Sheep should be familiar with this flock, which has become famous under the care and management of Mr. Roberts; always receiving first premiums, having been sold to Europe, South America and all parts of the United States; individual members having repeatedly sold for from \$500 (five hundred) to \$1500 (fifteen hundred) each. Sheep Men should seize this opportunity to secure some, as they must be sold to settle up the Estate. Address, JAMES STANLEY, Administrator Estate J. Roberts, Deceased, Mission San Jose, or 916 Broadway, Room 17, Oakland, Cal.

THOROUGHbred SPANISH MERINO SHEEP.

Have taken the First Premiums at the State Fair for the last three years.

S. F. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, May 15, 1889.

In general produce, trading the past week was fairly active for all lines, except cereals. The weather continues favorable for growing crops, which is taken advantage of by buyers to depress values. The wheat market at the East and abroad showed a slight reaction, but at the close was weak. The following is to-day's cablegram:

LIVERPOOL, May 15.—Wheat—Quiet. California spot lots, 6s 9d@7s; off coast, 3s 6d; just shipped, 3s 9d; nearly due, 3s 9d; cargoes off coast, quiet; on passage, slow; French country markets, quiet.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	May.	June.	July.	Aug.	Sept.	Oct.
Thursday	7.01	7.00	7.01	7.01	7.00	7.00
Friday	7.01	7.01	7.01	7.01	7.00	7.00
Saturday	7.01	7.01	7.01	7.01	7.00	7.00
Sunday	7.01	7.01	7.01	7.01	7.00	7.00
Tuesday	7.01	7.01	7.01	7.01	7.00	7.00

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week.

	O. C.	P. S.	N. D.	Market.
Thursday	34.61	34.61	34.61	Firm.
Friday	34.61	34.61	34.61	Quiet.
Saturday	34.61	34.61	34.61	Firm.
Sunday	34.61	34.61	34.61	Firm.
Tuesday	34.61	34.61	34.61	Quiet.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

Day.	May.	June.	July.	Aug.
Thursday	84	84	84	84
Friday	84	84	84	84
Saturday	84	84	84	84
Sunday	84	84	84	84
Tuesday	84	84	84	84

The closing prices for wheat have been as follows, at Chicago for the past week:

Day.	May.	June.	July.	Aug.
Thursday	84	84	84	84
Friday	84	84	84	84
Saturday	84	84	84	84
Sunday	84	84	84	84
Tuesday	84	84	84	84

NEW YORK, May 15.—Wheat—84½c for June, 83½c for July, 82½c for August and 81½c for September.

CHICAGO, May 15.—Wheat—84½c for cash, 83½c for May, 82½c for June, 78½c for July and 75½c for September. Oats—23½c for May.

Foreign Grain Review.

LONDON, May 13.—The *Mark Lane Express*, in its weekly review of the British grain trade, says: Heavy imports have tended to depress English wheats. Fine flours are stiffly held. Poorer grades are weak. Foreign wheats have declined 6d, excepting fine Russian. Barleys are down 3d. Corn is depressed. Beans and peas are firm. At to-day's market English and foreign wheats are firmer. Corn is stronger at 6d advance.

Eastern Wool Markets.

NEW YORK, May 12.—All the large Eastern wool markets report a better attendance and more disposition on the buyers' part to meet current rates. The strong feeling at primary points has received considerable support, which causes a watchful interest among buyers who may soon require replenishment. Some good blocks were taken at San Antonio, Texas, at 20@22½c for Boston. The offerings thus far of Southern and Middle California are very attractive. Sales of 20 bales fine scoured California at 60c; 260 new spring, 19½@21½c; 15,000 pounds scoured, on private terms; 20,000 fine delaine, 35@36c; 10,000 double X, 34@35c; 10,000 fine unwashed, 21c; 8,000 Virginia, 21@22c; 10,000 spring Texas, 18c; 5,000 scoured, 50c; 10,000 fine medium Territory, 21c; 312,000 domestic, 80,000 foreign, 75 bales ditto, private terms. Sales at Boston, 2,500,000 pounds. There has been more inquiry from manufacturers which may result in larger business next week. There is a large supply of pulled wools here.

PHILADELPHIA, May 10.—Wool is quiet and prices are nominal and unchanged.

Crop Indications.

WASHINGTON, May 11.—The condition of winter wheat has advanced from 94 to 96, of rye from 93.9 to 96.5. The general average of winter barley is 93.9. The winter wheat of the Ohio valley, while fully maintaining its April position, has had a scant supply of moisture, and fears of future decline of condition are entertained, in case of continued deficiency of rainfall. On the Atlantic slope the recent heavy rains obviated the effects of the previous deficiency. The plant is generally green and flourishing, but has not filled well in localities inclining to dryness. High condition is reported in the South, though rust has appeared upon the wheat blades in some fields. Percentages of condition of the principal States of production are: Ohio, 90; Michigan, 92; Indiana, 95; Illinois, 93; Missouri, 98; Kansas, 98; Texas, 88; in the East, New York and Pennsylvania average 96, Maryland and Virginia 98. Chinch bugs are reported in Missouri and Kansas and in some instances elsewhere, without any indication of serious injury. Spring plowing is much further advanced than on May 1st last year.

Miscellaneous.

NEW YORK, May 12.—Hides are quiet. Stocks are increasing, but there is no evidence of further giving away in prices.

There is a fair demand for Limas at \$3.15. The market is cleaned of peeled peaches at 8@10c. Unpeeled have merely small-order attention. All of the best grades of California prunes are out of first hands.

The position of hops continues strong. Best State is held at 24c, with 23½c realized for selected export stock. At the moment the English market does not sustain the upward tendency here. Pacifics hold full last rates; 22c top; red sold at 15@17c.

The price for local buyers is unchanged. The exports for the week were 398 bales.

Local Markets.

	WHEAT.	B. S.	B. S.	B. S.	B. S.	B. S.
Thursday	136	136	136	136	136	136
Friday	136	136	136	136	136	136
Saturday	136	136	136	136	136	136
Monday	136	136	136	136	136	136
Tuesday	136	136	136	136	136	136

	BUYER SEASON.	SELLER 1889.	BUYER 1889.
Thursday	64	64	64
Friday	64	64	64
Saturday	64	64	64
Monday	64	64	64
Tuesday	64	64	64

BAGS—The market is quiet but steady with a strong undertone. The pool appears to be buying up all large parcels, even paying a slight advance on current quotations. One large holder refused 8c cash for Calcuttas. The market is quotable for small parcels at 8c for cash, 8½c for June-July delivery. Large parcels are held higher.

BARLEY—The forcing of weevily barley on the market has sent prices to lower figures. There is no doubt but all well-conditioned parcels can be readily placed at a slight advance on quotations. The consumption this year will be very heavy, while the acreage seeded was less than in 1888, but present prospects warrant the assertion that the yield will average more to the acre. Trading in futures on Call has been fairly active. The following are to-day's Call Board sales:

Morning Session: Buyer 1889—100 tons, 81c. Buyer season—400 tons, 65c. Seller 1889, new—100 tons, 73c ½ cwt. No afternoon session.

BUTTER—The market is firm at a slight advance under lessened receipts and a good demand. The establishing in the cities of more cream separators, where butter is made, curtails the local consumption for dairy butter.

CHEESE—The market is weak. The distribution is increasing at the low prices. Receipts are smaller.

EGGS—Light receipts have caused a slight advance in prices. The market closed strong.

FLOUR—The market is barely steady. Exporting is on a larger scale.

WHEAT—The market is steady but strong. The light obtainable supply of shipping grades and the large engaged tonnage in port are against export buyers. In futures trading has only been fair. The fluctuations are not attractive enough to tempt free dealings. The following are to-day's Call Board sales:

Morning Session: Buyer 1889—1600 tons, \$1.37. Buyer 1889, after Aug. 1st—400 tons, \$1.32 ½ cwt. No afternoon session.

Market Information.

Produce Receipts.

Receipts of produce at this port the past week were as follows:

Flour, qr. sks.	165,259	Middlings, sks.	6,571
Wheat, cts.	144,595	Alfalfa, "	—
Barley, "	28,303	Lucern, "	485
Rye, "	331	Broomcorn, bds.	440
Oats, "	7,093	Hops, bls.	128
Corn, "	655	Wool, "	6,653
Butter, "	1,637	Hay, tons.	1,107

Onions, "	3,367	Flaxseed, sks.	4,450
Bran, sks.	13,137	Mustard, sks.	650
Buckwheat, sks.	7		

Crop Prospects.

Crop prospects continue of the very best. The rains were followed by cool weather that in turn has been succeeded by variable clouds and rains which have put the cereal crops on the high-road to a larger outturn than since the year 1880, provided hot north winds do not set in before harvesting commences. The best judges of the situation do not look for any severe devastating north winds until well into July and August, which if proven correct, will allow ample time for garnering the grain. As published by us about two months ago, the acreage seeded to wheat this year is 3,500,000 acres, which is the largest on record. The character of the weather this spring gives a large hay crop without necessitating much cutting of fields of grain for hay. Barley must be excepted, for its low price will cause a large number of the fields to be cut for hay, which has not been the case since 1880. With a comparatively full wheat acreage being harvested the total yield with only an average outturn to the acre will be very heavy, but with a large outturn it will go over 2,000,000 tons. In 1880 the outturn averaged over 26 bushels to the acre, and in 1884 nearly 15 bushels. The outlook, at present, is fully up to that at this time in 1880, which if the same yield is realized will give us an aggregate outturn this year of 78,000,000 bushels—allowing that 500,000 acres will either not be cut or else be put into hay. With a yield to the acre equal to that of 1884 the outturn on 3,000,000 acres will be about 45,000,000 bushels. It is not at all likely, even with unfavorable weather, that the outturn will go below 45,000,000 bushels. Barley crop prospects are of the very best, but there will be a light outturn of bright grades. Considerable has been cut for hay. The oat, rye and buckwheat crops are of the most promising character. The weather is all that can be desired for the growing corn crop.

Oregon advises report that the recent rains in Eastern Oregon and Eastern Washington Territory insure a large crop outturn in both wheat and barley. In the former there was a decided increase in the acreage seeded, but how much it is impossible to obtain. The quality of the wheat and barley it is claimed will be the best ever before harvested.

Cereals.

In wheat there is nothing of particular interest to report. The demand for sample parcels is only

fair. The limited inquiry is offset by the small offerings, due to the light available supplies. There is no movement which indicates anything of a speculative nature, although the feeling is strongly impressed that operators are acting more in concert than usual to bring about low prices at the opening of the season for 1889-90. As heretofore stated, the prices at which all transactions now point indicates the opening to be at from \$1.20 to \$1.25 for No. 1 white shipping. It is asserted that at these prices farmers will realize more on a long crop than at \$1.50 to \$1.60 for No. 1 white shipping with a crop below an average. Both millers and shippers confine their transactions to immediate requirements. There is a report current that many warehousemen are compelling holders to release. This action on their part is claimed to be due to the large incoming crop, necessitating all the room that can be had. Many warehouses are making additions so as to handle more grain.

In barley the market, after a spasmodic effort at a recovery, relapsed, causing values to sink to a lower level than ever. It is claimed that considerable of the feed and also of the brewing grades is more or less weevily, and consequently is forced on the market at best obtainable prices. Stocks of barley in warehouses, like that of wheat, will have to be well cleared out so as to prepare the warehouses for the new crop. While dealings in spot or cash parcels are only fair, those in futures are increasing in volume.

Oats continue unattractive to the speculative element. The large available supply on the coast, good crop prospects and the cheapness of barley are against holders. Buyers in general do not, to any extent, anticipate their wants.

Corn is sluggish, not but there is a steady demand, but there is an entire absence of any movement calculated to inspire holders with confidence of better prices in the immediate future.

In both rye and buckwheat there is very little doing. The former is weak at the recent decline, while the latter is barely steady under offerings for shipments from the Central States.

Yesterday's (Tuesday) cablegram reports as follows: Four arrivals of wheat cargoes off coast, six sales and 11 awaiting orders. Wheat and flour on passage to United Kingdom, 1,669,000 qrs.; wheat on passage to Continent, 348,000 qrs.; corn on passage to United Kingdom, 235,000 qrs.; corn on passage to Continent, 158,000 qrs. Weekly imports to United Kingdom—Flour, 107,000 bbls.; wheat, 246,000 qrs.; corn, 156,000 qrs. Shipments of wheat from Calcutta, Bombay and Kurrachee to the United Kingdom, 12,500 qrs.; to the Continent, 50,000 qrs.

Feedstuff.

In ground feed the demand is still slow. Ground barley is reduced.

The receipts of hay continue light, causing a better feeling and slightly higher prices. Reported damage to the hay crop is largely exaggerated. There can be no doubt that in choice, fine straw hay there will be a light crop, but the crop of coarse straw will be very heavy.

Fruit.

The first currants of the season put in an appearance the past week. It is very generally claimed that the crop will be quite large and of good quality. Strawberries have come in quite freely, causing values to sink to figures admitting of canners buying. Raspberries are coming in more freely, but, as yet, prices have not shaded off much.

Cherries came in more freely the past week, causing, at times, low prices to obtain so as to work off the receipts of the poorer keepers. The shipping demand continues good, cleaning up the market every little while.

Apricots are in freer supply, but the demand is, as yet, poor.

Some green apples put in an appearance the past week. The quality not being good, the consignments had to be placed at fairly low prices.

In dried fruits, French prunes are stiff, with another slight advance obtainable. Eastern advices are confirmatory of the California French prunes having better keeping qualities than the imported, which naturally causes them to command more attention even at a slight advance on the latter. In other dried fruits the market is without essential change, although a better turn is reported.

Raisins are firmer, with choice selected being in light supply.

The action of the Transcontinental Railroad Association in reducing the overland freights to \$1 on canned fruits will, without doubt, allow much if not all the canned fruits carried over from last season to be marketed in the Central markets. The reduction in freight will unquestionably cause a better feeling with canners, yet the high cost of tin and sugar is somewhat against them.

Fruit-crop prospects continue of the best. A large number of new trees will come into bearing this year, which will offset any loss reported in the older apricot and cherry orchards.

In citrus fruits, choice, well-selected, good-keeping oranges are firm at full figures, but poor keepers are sold at the best prices obtainable. Receipts are light.

Mexican limes are strong and higher, under a temporary scarcity and none to arrive under a week.

Live-Stock.

Bullocks and mutton sheep are still offering freely. The increasing supply of fruits lessens the consumption of meats, which will be more marked with warmer weather. All kinds of stock coming in are reported to be in exceptionally good condition. The only objection that can be reasonably urged is that they are too fat, particularly the mutton sheep. Sales of the latter have been made at low figures. Lambs are still weaker. Hogs are weak, owing to packers not being able to buy. The demand is only for the block. The low price of grain will cause more hogs to be fed for market. In cows, there is nothing new to report. Good fresh milkers have some inquiry at from \$30 to \$45. Farm horses are more inquired after, but no higher bids are made so as to have the wants met. For use in railroad building, the demand is essentially unchanged, but it is generally claimed that it will not be up to former seasons. For city use the call still runs on matched teams and general utility horses. Prices vary according to color, general style, free motion and other good points.

The market for dressed cattle is quoted as follows: To obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to

the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent.

HOGS—On foot, grain fed, 5½@6c ½ lb.; dressed, 8½@9c ½ lb.; soft, 5½@5¾c ½ lb.; dressed, 8@9c ½ lb. Stock hogs, 5@6c ½ lb.

BEEF—Stall fed, 6@6½c ½ lb.; grass fed, extra 5½@6½c ½ lb.; first quality, 5½@5¾c ½ lb.; second quality 4¾@5c ½ lb.; third quality, 4¼@4½c ½ lb.; bulls and thin cows, 2@3c ½ lb.

VEAL—Small, 7@8c ½ lb.; large, 6@7c.

MUTTON—Wethers, 5@5½c ½ lb.; ewes, 4@5½c ½ lb.; lamb, spring, 6@8c ½ lb.

Hops.

Receipts the past week show a slight increase. The movements were chiefly for shipping, although some went East. The market shows a fair degree of firmness for choice, which are quite scarce. Crop advices continue of the best both in this State and Washington. In his last circular, Emmet Wells of New York says that market holds to strong prices, with a good export movement. Speaking of the crop outlook in that State, he says: During our long experience in the business we never knew or heard of a season which gives so much early promise as this of a large yield. The roots have wintered remarkably well, and open up strong and healthy. The usual cry of "hard winter on roots" and "freezing out" has not been heard. Vegetation in this State is said to be fully two weeks in advance of last spring, and the vine is already beginning to look for the poles. With a favorable growing season and no vermin, New York State will produce a fine large crop of hops to be spoiled only as usual by careless picking in September. If the Pacific Coast growers can find pickers enough to gather their crop, it will not be many years before they will be able to supply the world with hops—provided, however, that their plantations continue as free from insect pests as they always have been.

Vegetables.

Seasonable vegetables are in free receipt, causing some shading in values. The demand, both home and shipping, continues good, with a decided increase in the volume of vegetables going out on orders. It is claimed that shipments up north will be largely curtailed with truck from local gardens coming in on the market soon.

Asparagus has held fairly steady, as have peas, but beans and other garden truck have shaded off some. Eveleth & Nash received the first consignment of green corn from Vacaville on last Monday. The quality is said to have been only fair. It is said that the crop of garden truck will not only be heavy but will extend quite well into the summer.

Onions are weaker under free receipts and only a fair demand. It takes good keepers to excite the attention of buyers at full asking prices.

New potatoes continue to come in freely, causing low prices to obtain. The quality is improving. The shipments out of the State are lighter than usual, which is against the market. Old potatoes, if choice and in good condition, meet with a ready market, but poor are hard to place. The demand for old slacks off as the new improve.

Wool.

Receipts show a slight advance on the preceding week, with Oregon sending us more. Rains have unquestionably interrupted shearing in some parts of the State. Buyers, as usual, continue to skirmish to keep values down, but growers do not appear disposed to press the market. While not pressing the market, growers are so bullishly inclined as not to be reached by fair bids. The clip this year will undoubtedly be of better grade (cleaner and livelier) than shorn for several years past, and therefore should command more with the Eastern markets unchanged. At the East, buyers are reported to be engaged in keeping prices down.

Miscellaneous.

Poultry closes the week under review weak, owing to a light demand and free shipments reported to be on the way from central points East.

Honey is arriving more freely, causing a continued sagging in prices. Buyers are not operating to any great extent, waiting for fuller returns from the new crop.

Beans have come in more freely, creating a weak tone, notwithstanding a fair distributive call.

Peanuts are stiffer, under a good demand and a light supply of California.

Hides are weaker, as is tallow.

A. N. Towne calls attention through the daily press to the competition of the Canadian Pacific railroad for the traffic of the coast. Representative farmers (not those who get favors from the Southern Pacific railway) to whom the writer spoke on the subject, express themselves as not caring much which road caused low freights, and hoped that the C. P. R. Co. would continue in its purpose of keeping freights on wool, dried fruits, etc., down.

The leading overland shipments via Southern Pacific railroad in last month were as follows: 4004 cts. barley, 3723 cts. beans, 35,680 gals. brandy, 494,010 gals. wine, 34,730 lbs. honey, 720,640 lbs. canned goods, 382,530 lbs. dried fruit, 6,133,020 lbs. green citrus fruit, 271,800 lbs. hides, 182,490 lbs. hops, 89,300 lbs. raisins, 1,091,810 lbs. wool.

The steamer San Blas, for New York, which left the past week, took out 31,500 gals. wine, 1973 gals. brandy, and 42,497 lbs. wool.

In seeds the market is weak for mustard and flaxseed, under free receipts. Alfalfa is easier, with the demand light.

From the *Commercial News* of May 15, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port	213,493	290,159
On the way to neighboring ports	29,292	123,672
In port, disengaged	17,635	35,748
In port, engaged for wheat	37,376	10,361

Totals 297,796 | 459,940 |

To get the carrying capacity, add 60 per cent to the registered tons as given above.

From July 1st to May 14, the following are the exports from this port:

	1889.	1888.
Wheat, cts.	11,450,666	8,034,257
Flour, bbls.	668,602	678,466
Barley, cts.	1,261,534	645,134

BACK FILES of the PACIFIC RURAL PRESS (unbound) can be had for \$3 per volume of six months. Per year (two volumes) \$6. Inserted in Dewey's patent binder, 50 cents additional per volume.

Domestic Produce.

Table with multiple columns listing various domestic produce items such as Beans and Peas, Butter, Eggs, Flour, Grain, Hides, Hops, and various fruits and vegetables. Includes prices and quantities.

Fruits and Vegetables.

Table listing various fruits and vegetables including Apples, Apricots, Bananas, Beans, Berries, and various types of corn and grain. Includes prices and quantities.

Dried Fruits, Etc.

Table listing various dried fruits and other products such as Apples, Apricots, Bananas, Beans, Berries, and various types of corn and grain. Includes prices and quantities.

PACIFIC COAST WEATHER FOR THE WEEK.

[Furnished for publication in this paper by NELSON GOROM, Sergeant Signal Service Corps, U. S. A.]

Table showing Pacific Coast weather for the week, including dates (May 8-14) and weather conditions for various locations: Portland, Eureka, Red Bluff, Sacramento, S. Francisco, Fresno, Keeler, Los Angeles, and San Diego.

EXPLANATION.—Cl for clear; Cy, cloudy; Fr, fair; Fy, foggy; Cm, calm; — indicates too small to measure. Temperature, wind and weather at 12:00 M. (Pacific Standard time) with amount of rainfall in the preceding 24 hours. T indicates trace of rainfall. Observations taken at 5 P. M. instead of 12 M.

Table listing various agricultural products and their prices, including Pears, Plums, Prunes, Raisins, and California Honey.

California Products at Chicago.

CHICAGO, May 15.—Oranges are steady. There is a fair demand and present arrivals are small. California Riverside, \$3.30; do, undesirable sizes, \$2.50; California San Gabriel, \$2.50; California Duarte, \$2.50; California Los Angeles, \$2.50; California sweet cherries sold at \$2.50 for ten-pound boxes of Black Tartarians.

THE LAUGHING PLANT.—Palgrave, in his work on Central and Eastern Arabia, mentions a plant whose seeds produce effects analogous to those of laughing gas. The plant is a native of Arabia. A dwarf variety is found at Kasum, and another variety at Oman, which attains a height of from three to four feet, with woody stems, wide-spreading branches and light-green foliage. The flowers are produced in clusters and are yellow in color. The seed pods contain two or three black seeds of the size and shape of a French bean. Their flavor is a little like that of opium, the taste is sweet and the odor from them produces a sickening sensation and is slightly offensive. These seeds, when pulverized and taken in small doses, operate upon a person in a very peculiar manner. He begins to laugh loudly and boisterously, and then sings, dances and cuts up all kinds of fantastic capers. The effect continues about an hour and the patient is extremely comical. When the excitement ceases the exhausted individual falls into a deep sleep, which continues for an hour or more, and when he awakens he is utterly unconscious that any such demonstrations have been made by him.

The only machine that received an award on both Horse-power and Thresher and Cleaner, at the Centennial Exhibition; was awarded the two last Gold Medals given by the New York State Agricultural Society on Horse-power, and Threshing, and the only Thresher selected from the vast number built in the United States, for illustration and description in "Appleton's Cyclopedia of Applied Mechanics," recently published, thus attesting it as the standard machine of this country. Buy the best. It is the cheapest in the end. Catalogue sent free. Address, MINARD HARDER, Caldwell, Schenectady Co., N. Y.

ORANGE CULTURE IN CALIFORNIA.

Now that the interest in the culture of the orange is extending so as to embrace nearly all parts of the State, a book giving the results of experience in parts of the State where the growth of the fruit has been longest pursued will be found of wide usefulness.

Injurious Insects of the Orchard, Vineyard Field, Garden, Conservatory, etc.,

Remedies for their Extermination.

By MATTHEW COOKE.

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price \$4, postpaid. For sale by Dewey & Co., publishers, 220 Market St., San Francisco.

Facts About Feet.

The common unit of lineal measure, a foot, was derived from the length of the human foot.

In a man 5 feet 11 inches tall, the foot measured 10½ inches, and the middle toe 2½ inches. In Chinese subjects, the ordinary height being five feet, the length of the foot was nine inches and five lines.

The longest foot of measure is that of old Turin, which is equal to 20 inches of English measure.

There was a time when not only each country but each town had a foot-measure of its own, indicating different averages of the different feet in various localities.

Among a tribe of low-stature Indians whose height varied from 5 feet 1 inch to 5 feet 3 inches, the length of the feet was found to be from 9 inches 4 lines to 9 inches 6 lines.

In order to get an idea of the length of shoe sizes in inches, it may be stated that a foot measuring 10 inches, with the weight of the body resting upon it, may comfortably wear a 6 shoe.

A youth in the South Sea islands, 6 feet 7 inches in height, had a foot 12½ inches long. His lower extremities measured 38 inches in length, circumference of calf of leg 17½ inches, and his ankle 10 inches.

CARE OF CARPETS.—It is quite desirable to have something with which to sweep carpets, to prevent raising a dust and to brighten the colors. Probably the safest and best way is to take half a package of soft paper and cut or tear it into bits not over an inch square. Wet it and press out the water, then scatter over the carpet. It should not fall in large lumps, but be picked apart so that it will cover almost an entire room. When the broom is used it will roll into little balls, and, as it is swept over the carpet, will take up the dust quite thoroughly. Some housekeepers go over the carpet the second time with clean paper. Very coarse salt used dry is good. If the house has damp corners it should be used sparingly, as it has a tendency to attract moisture. Wet leaves are used by some country families. One old lady has a quantity of cuttings of calico and white goods. These she moistens and throws over the carpet. When she is done, the scraps go into a tub of water, are whirled about, and then thrown upon an old wire screen, where they dry, and are clean for the next time. Brooms should always be hung up by a ring in the top of the handle. If they are set upon the floor, especially while damp, they get out of shape, and the ends of the brush are curved out, rendering them almost useless. Do not stand them up with the brush uppermost. If they are damp, the water will soak into the body of the broom, and not only rust the wire and rot the cord with which the broom is made, but will make the broom straw smell musty and disagreeable, and finally rot them altogether. Mops and window-brushes also should be hung up by the handles.

Our Agents.

BLUE GUMS AND MOSQUITOES.—O. Talbot writes the Tulare Register: "Where I formerly lived in Mussel slough, I believe there are as many mosquitoes to the square mile as any place outside of Kern county. Our house was surrounded with blue gum trees. We always slept with our doors and windows open and were never seriously bothered, while just a few rods away the stock would be covered and almost perish with the great numbers tormenting them. If any one doubts the effect of the preventive, let him take a bough picked fresh from the blue gum and lay about his bed. I don't know about the red or other species of the gum."

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, term of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

DON'T TURN KEROSENE LAMPS LOW.—For the benefit of those over-economic people who have a way of turning down low the light of the kerosene lamp when leaving a room for a little while, it may be said that experiment demonstrates that the saving in oil by this means is hardly appreciable. With the low flame a considerable quantity of the products of incomplete combustion are making their escape into the air, and these are not only offensive to the sense of smell, but are injurious to the health.

WELLS, RICHARDSON & CO'S

1889 New Steel 8 ft. Header, 36 in. Drapers. 1889 New Steel 12 ft. Header, 40 in. Drapers.
1889 New Steel 10 ft. Header, 40 in. Drapers. 1889 New Steel 14 ft. Header, 40 in. Drapers.
WRITE FOR PRICES.

Has Double Elevator Drapers. Will Elevate Anything.

Buy the Randolph Steel Header. Champion Double-Acting Continuous Portable Baling Press.

Because it is the Best. Because it is the Easiest Draft on the Horses. Because it Saves all the Grain. Cuts close to the ground or high. Guaranteed to elevate anything that can be cut, and dispenses with the man found in all other headers assisting the draper to elevate. The successful farmer buys the best. The Randolph Factory builds more and sells more Headers than all the other factories combined. It is at the top and is going to stay there.

GRAIN NEVER TOO HEAVY FOR A RANDOLPH.

MESSRS. TRUMAN, HOOKER & CO., San Francisco, Cal.

KINGSBURGH, CAL., June 28th.

GENTLEMEN:—I sold a 12-foot RANDOLPH Header to Mr. Chas. Beasley, yesterday, and it worked very nicely. It took the place of another header of a different make, which he returned; the grain was too heavy for it; but the RANDOLPH walked through it without any trouble. Yours very truly,
W. P. BALL.

A BLOOMING RECORD.

CAPAT, CAL., July 20, 1888.

MESSRS. TRUMAN, HOOKER & CO., San Francisco, Cal.

GENTLEMEN:—The 12-foot RANDOLPH Steel Header I purchased of you in 1887, through Mr. B. Howell of Madison, has been used by me for two seasons, and I am highly pleased with it; think it the best Header I ever saw. I have cut 800 acres with it, and can recommend it to any farmer needing a good Header. I have used the Hedges-Haines, and the RANDOLPH is far superior. I cut 10 days on the hills this season, and the Header will elevate in any place. Yours very truly,
J. R. PARKER.

Agents for the McCormick Mowers, Reapers and Twine Binders. Old's Hollow Steel Axle Wagons are the Best in the World.

CHAMPION CONTINUOUS DOUBLE WORKING BALING PRESSES.

FOR HAY, STRAW, MOSS, ETC.

Champion Double-Acting Continuous Portable Baling Press.

BALE WEIGHING ATTACHMENT.

By the use of same each bale can be weighed accurately as it passes out of the press, which is very desirable when wanting the correct weight of each bale. Being attached to press, is always ready and no trouble to move it about, as is the case when using a platform scale, yet it is just as correct (warranted).

See it! Try it! and you will be sure to buy it. Everything ready to work—even a Fork wherewith to feed it.

Continuous! Making Bales Without Intermission. No stopping to tie. No doors used, to be handled 1200 to 2000 times a day.

The Best Is the Cheapest. Size, 18x22, \$450, Complete with the Best Bale Weighing Attachment.

TULARE, CAL., May 4th, 1889.

MESSRS. TRUMAN, HOOKER & CO., San Francisco, Cal.

GENTLEMEN:—In response to yours of even date, will say that all the Champion Presses we sold last year gave you satisfaction and, as far as we have been able to ascertain, their average baling capacity is 10 tons per day. Those two presses you speak of did bale 16 or 17 tons once or twice in a day, but of course this they could not do only under favorable circumstances. Yours very truly,

Our Rivers.

The excursion of Californians to attend the meeting of the Oregon State Grange naturally turns the thought northward, and as pertinent to the occasion we present views in the region which has but recently been made easily accessible by means of the new overland railway from California to the great Northern States of the Pacific Coast.

One who forms an idea of California rivers by the broad sluggish water-courses which intersect our broad valleys, running bank-full and fringed by tuiles, might conclude that our streams are quite devoid of the picturesque

IN THE UPPER SACRAMENTO VALLEY—THE SACRAMENTO RIVER AT REED'S FERRY, NEAR REDDING.

river in the broad valley is wide, quiet, indolent, good to run steam-boats on, until nearly ruined by debris, but not calculated to awaken much admiration. The river in the upper valley is quite another creature. About on the southern boundary of Shasta county the great floor of the valley terminates, and above that is the upper valley with its many arms with their inclosing hills and mountains, forming a country rich and picturesque, which extends northward many miles before the higher mountains close in and place the crown of eternal snow on Shasta's brow. It is in this upper valley that our

PITT RIVER NEAR ITS JUNCTION WITH THE SACRAMENTO, ABOUT TWENTY-FIVE MILES FROM REDDING.

beauty which fills the poet's verses and covers the artist's canvas. This conclusion would be a sad injustice to California rivers, for if one will pursue them toward their sources he will come at length to clean-banked streams flowing

through beautiful meadows and further beyond to the mountain torrents dashing along between rocky barriers through which they have cut their course. Instead of California rivers being sluggish and dreary, they are, in parts of their

courses, at least, as active and as full of picturesque life and beauty as nature can make them.

The two sketches on this page will serve to illustrate this statement. The Sacramento

scenes are to be found. The first, of the Sacramento river, shows the clean-sloping banks of the river, here and there shaded by overhanging oaks, and just behind the verdant meadows

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Letter from Holland.

EDITORS PRESS:—As an introduction to such of your readers who ask what on earth can induce any one to write a letter for the Rural from this far-off western shore of the European continent, it behooves the writer to explain that he (a good many years ago) lived near Santa Rosa, was a member of Santa Rosa Grange and a constant reader of the Pacific Rural Press.

Circumstances over which I had no control caused me to return to my native country, Holland, but my sympathies remained with the State I had learned to appreciate. Being a farmer and cattle-breeder, my position as manager of the Model farm at Winkel, North Holland, soon gave me occasion to get acquainted with nearly all the most prominent American importers of Holstein-Friesian cattle, and I assisted in buying the whole herd of prize animals for the well-known firm of Messrs. French Bros. at Cincinnati, Ohio.

As your readers probably know, the protective measures adopted by the Holstein-Friesian Herdbook Association, charging heavy registry fees on all imported animals, soon put a stop to importation from Holland, which for the last two years has ceased altogether, never to revive any more, according to my views. This, however, did not prevent me from feeling continually interested in American cattle matters generally and to keep track of many renowned animals in particular. The article on J. H. White's Holsteins, published in the Press of December 1st, made me feel specially pleased with the interesting contents of a paper whose weekly arrival I value very high.

The Annual Stock Show at Alkmaar held on the 12th inst. was as successful as ever. As there have been imported from here into the United States more Holstein-Friesian bulls of the famous Willem breed than of any other family, it may perhaps interest some of your readers to know that Mr. J. Bakker at Wieringerwaard, North Holland, the original owner and breeder of Willem No. 82, Netherland Herdbook, carried off the honors of the day, as he has done already so often before. In the class for two-year-old bulls, he got first prize with Riep II, No. 1376, N. H. B., and second prize on Apollo No. 1269. In the yearling class he gained first and third prizes with Oscar and Boulanger. Pretty good that, I think, and with a strong competition against him from all parts of the province, too.

On the first of June all English ports are to be opened for our Dutch cattle, after having been rigorously closed against us during the last 17 years, in which our stock has been landed at Deptford to be slaughtered there. This opens an extensive market for our milch cows and young breeding animals, and our breeders feel quite jubilant in consequence.

Free-trade England, however, is only partially pleased with the prospect, and under the plea of fear for contagious cattle diseases, a strong protective movement is set on foot to have the Privy Council retract its resolution, passed only about four weeks ago. Our English neighbors are very strongly in favor of free trade—if it suits their convenience.

When reading the Rural I often exclaim, "What a change!" thinking of California as it is now and when I left it in 1875, its progress during the last five years and its glorious future, and yet many things seem to remain as they are that should have been altered long ago.

Surely your Granges are mainly in a flourishing condition, yet how many (dormant) members and brother farmers, non-members, should join the work in earnest and help to spread its beneficial influence far and wide. The article on page 285 of the Press, on "The Late Legislation," gave me special reason to think so.

To an outsider it seems almost incredible indeed that such things can be published and not be followed at once by an action for libel and slander, or, if true, by official measures to wipe out such a dishonor from the history of your people. If I was to translate that article in our language, and publish it, my countrymen would either think that I had been inventing a story, or conclude that the free and enlightened American citizen in the State of California is, after all, not much better than a weak-minded and oppressed slave, contented to live under and endure a rule that is a perfect shame to his country and himself. If that is the result of a progress never before witnessed perhaps in the history of any State, you might well wish to go ahead less fast and more in ordinance with those principles of honor and integrity which are the unmistakable evidences of a people's true enlightenment.

Fourteen years ago the mining-debris question was in full sway, and, according to the Press of the 23d ult., miners in Shasta county still destroy the grade of nature's waterways, thereby actually damaging the best part of several farms. I wonder if in your towns and streets any man is allowed to carry on his business when, in so doing, his neighbors or the public are put to any inconvenience, but many a miner seems to think it only fair if he is allowed to do so undisturbed for any length of time. It shows, however, that to make a law is one thing and to enforce it is another, especially where the coolest disregard of

other people's weal or woe is a simple matter of course.

Another article, on quite another subject, made me ask how the real practical American of the present day can be so impractical in a simple thing of daily occurrence. I mean where, in a former issue of the Press, an over-worked housewife complains of her manifold and endless duties. Now every physician will tell one that fresh-baked warm bread is an unwholesome and indigestible because unripe article of diet, but as a rule, and no matter how early the farm hands go to their work, the woman must have hot bread ready for breakfast. How much easier for her and how much better for the health of her children and all concerned would it be if light wheaten bread, made the day before, was considered good enough for anybody. The American nation would soon lose its reputation of being more dyspeptic and swallowing more patent medicines than any other nation in the world.

WILLEKES McDONALD.

Callantsvog, Holland.

Cloverdale Precinct, San Bernardino County.

EDITORS PRESS:—Wednesday afternoon, 5th instant, we were treated to a genuine thunderstorm, accompanied by hail, which did some damage to hay in the field. The damage was slight in our neighborhood, as our land is high and porous, so that the rain did not keep the surface wet long enough to cause the hay to mold. Haying is almost over, and heading will begin in a few days. There will be a large amount of barley thrashed this year, as the hay crop was not very profitable last year; but I fear the same will be said of the grain, as many who made hay exclusively last season will make none this.

The grasshoppers are damaging the late barley, and unless something is done soon they will become quite a plague in the future.

A few weeks since, in company with several of our neighbors, and some friends from Los Angeles and Carpinteria (your correspondent L. B. Cadwell among them), we made a trip to the Hot Sulphur springs, about 12 miles east of here and northwest of San Jacinto, and spent the day in bathing, feasting and having a good time generally. There is a small bath-house, with tub and shower-bath free. There is hot and cold water, fresh or sulphur as you like it. We found there a family from Ohio who claim that the water is doing them much good. I have heard others claim that they had been greatly relieved in rheumatic complaints by bathing in this water. I am told there are several such springs between here and San Jacinto. Our friends expressed themselves as much pleased with the country generally, and with our claims on the high lands particularly.

South of us, 12 miles away, but in plain sight, is Perris. Between here and there are extensive grain-fields with an occasional orchard beginning to show up. A little west of south and about seven miles away is Alessandro, surrounded by a good country that is still awaiting the magic touch of the plow to be converted into an earthly paradise. They are sinking for water there now, and at last reports were down nearly 100 feet with water within 28 feet of the surface in a seven-inch pipe. Once let them get the water to flow, and the fortune of the owners is made.

Potatoes are getting ready for digging. Peas and lettuce are getting old. Beans are forming, and corn is in tassel. Bees, with us, are not doing much yet.

L. S. LYMAN.

Alessandro, May 14, 1889.

THE IRRIGATOR.

Irrigation Cheaper than Rain.

The following paper was read before the State Fruit-Growers' Convention at National City, April 17, 1889, by L. M. Holt of San Bernardino:

Water is essential to plant life, and whenever too much water or too little water is used the highest state of development is not reached. One plant differs from another in the amount of water necessary to the best possible growth and development, but each variety of plant life must have the amount of moisture best suited to its peculiar needs in order to make the best possible growth—no more, no less.

There are two methods of applying water for the benefit of trees, vines and growing crops. One is natural and the other is artificial.

In all departments of domestic economy nature furnishes the raw material and man utilizes it.

Lightning is the active development of electricity by nature. As such it is of little value to man. But this same element, controlled, has revolutionized and is revolutionizing the world.

Over a great portion of the earth's surface the application of rainfall to the promotion of plant life is so irregular that the artificial application of water has been reduced to a system and a science. In fact in no part of the world is the rainfall so distributed that the best results from agricultural and horticultural pursuits are obtained except by means of irrigation.

In the great Northwestern States the lack of a proper amount of rain, or a little too much rain at the proper time, annually reduces the yield of grain and other crops. And while there are occasional tracts of land on which in a given season the maximum yield of grain may be obtained, yet such maximum yield is the exception to the general rule.

In Florida the annual rainfall exceeds 50 inches, or an average of an inch per week—over four inches per month. In San Bernardino the average rainfall for January, the wettest month of the year, has been only three inches. Thus we find that the average wettest month in San Bernardino is only about two-thirds the average monthly rainfall of Florida throughout the entire year.

It would seem that if California could have its winter rainfall extended throughout the entire season, irrigation here would not be a necessity, and yet the ablest horticulturists of Florida are discussing the proposition of establishing irrigation works in that State, where a half more water falls during each month in summer and winter than falls here in the wettest month of winter, and they assign as a reason that because they cannot have their rainfall at just such periods as they need it, the crops are injured and the best results cannot be obtained.

Whether it pays to irrigate depends, of course, upon circumstances.

If it were practical to irrigate the crops in Iowa and Illinois, it would not, as a rule, pay to do so.

A wheat-field, for instance, in Iowa will yield 15 bushels of wheat per acre in a good season, and this is reduced to 10 or 12 bushels in a poor year or increased to 20 bushels under favorable circumstances. The wheat sells at \$1 a bushel when times are good. The difference between a poor crop and a fair crop is only, say, five bushels or \$5, from which the extra expense of harvesting, thrashing and marketing must be deducted. If the irrigation of a field of wheat would increase the yield from 10 to 15 bushels per acre, it would not pay to so apply the water, for the expense would be more than the increase of crop. The same rule would apply to nearly all other crops in that section of country, except it be to small fruits and vegetables.

In this State we have certain crops which cannot be irrigated because the expense is greater than the increased income. We sow our small grains in fall and winter and trust to Providence for bountiful rains and a bountiful harvest, or content ourselves the best we can with a light rainfall and a light harvest. In some sections of the Upper San Joaquin valley, where the conditions of soil and water and its application are favorable, it has been found to pay to irrigate winter wheat and produce a crop that would yield from 40 to 60 bushels per acre; but even in those sections wheat culture is being superseded by fruit culture because the financial results of fruit culture are more satisfactory.

The first impulse of a man when he arrives in Southern California from a rainy section of country is to exclaim: "What a country this would be if it only rained here in summer!" After he has been here a few years his exclamation is: "How fortunate it is that it does not rain here in the summer season!"

There are two reasons why this last proposition is true. The first is one of health and the other is one of wealth.

With summer rains Southern California would have all the bad points of a Florida summer climate with its malaria, yellow fever and troublesome insects which find a genial home in a moist climate.

With summer rains here it would be impossible for us to produce the superior oranges for which the interior valleys of this Southern country are now noted.

This may seem like a strange statement; but the fact stares us squarely in the face that the markets of New York City, Chicago, Boston and other Eastern cities declare unanimously that no section of the world sends to those markets as good an orange as the Riverside Washington Navel, as produced in the interior valleys of Southern California.

That superior orange is not the result of superior soil but of superior climate, of which the rainless, dry summer is the principal factor.

Is irrigation a burden? Let us see. The grain crops of the Western States are, as a rule, decreased in amount 20 per cent by irregular rainfall from what they would be if the rains came in quantity and time to do the most good. This is a safe estimate. Apply the same rule to our orchards, and what is the result? On our ordinary peach and apricot orchards that yield, say only \$100 an acre, a loss of 20 per cent means \$20 an acre. This is saved by irrigation at a cost of half the amount, or less, while in the orange orchard, which yields from \$500 an acre upward, a loss of 20 per cent means a loss of from \$125 per acre upward, and this is saved by irrigation.

We all know what effect a drouth has on a fruit orchard. Visit the orange orchard of the careless owner who skipped an irrigation last summer in August, and you will find a small crop of small oranges that sell for a small price, which is in entire keeping with the small amount of judgment exercised in caring for the orchard. This skipping an irrigation is on a par with the non-irrigated sections when it forgot to rain for two months, and the result is the same also.

It is impossible to complete this subject in a single paper, but at the risk of too great length

I desire to call attention briefly to increased water supply, both artificial and natural.

A few years ago the most enthusiastic boomer of Southern California could not hope that one-half or one-quarter of the arable land of this section would ever be brought under cultivation because of the lack of water. To-day I feel safe in predicting that the time is not far distant when practically every foot of arable land in Southern California will be brought under successful cultivation—water for irrigation having been found where irrigation was necessary.

The water supply during the past few years has been materially increased and in many places more than doubled by artificial means, and this development is going on to-day at a rapid rate.

First—The natural flow is being saved by the construction of conduits—pipes and cement canals—which save all the water in the streams and put it where it will do the most good.

Second—The natural flow of our streams is being increased by running tunnels under the bed of the streams to take the underflow which otherwise is lost.

Third—Artesian wells are being sunk in large numbers and large irrigation systems are being formed and an abundance of water is being obtained from this one source alone which is adding millions to our wealth and thousands to our population.

Fourth—Storage reservoirs are being successfully built. There are at present three large reservoirs completed and filled with water. The first attempt was the Bear Valley reservoir in San Bernardino county. It is a grand success, and no one can look into the future far enough to see the vast acreage that reservoir will eventually irrigate. The Cuyamaca reservoir and the Sweetwater reservoir in San Diego county were next completed, both of which are more than meeting the expectations of their promoters. The Hemet Lake reservoir near San Jacinto and the San Luis Rey reservoir are both in process of construction and others will follow. This shows the artificial increase of irrigating water.

While man is at work helping himself, nature is also at work to prove the truth of the old adage that "God helps those who help themselves." And while man is at work increasing the water-supply by artificial means, nature is at work sending us an increased rainfall, and this increased annual rainfall is the result of man's work.

It is a well known fact that in the State of Nebraska the rainfall has very materially increased during the past 30 years, and that to-day good crops can be raised where before nothing could be raised at all. The Government records show this marked increase of rainfall since the settlement of that country. This increase is traced to two causes. One is the establishment of railroads which have an effect upon the electrical conditions, and the other is the planting of trees and breaking up the surface of the ground, and thus gradually replacing the barren plains with green verdure.

The same rules apply to Southern California, and let us see what the result is. San Bernardino has a record of the rainfall for the past 19 years. A study of the table shows the average rainfall for the several months during that period of 19 years to be as follows:

Months.	Inches.
July.....	.03
August.....	.07
September.....	.05
October.....	.43
November.....	1.68
December.....	2.59
January.....	3.36
February.....	3.10
March.....	2.49
April.....	1.64
May.....	.46
June.....	.68

The first of February appears to be about the middle of the rainy season, as 8.61 inches fell before that time and 7.83 inches after.

Let us divide this period of 19 years into two sections of nine years each, leaving out of count the present unfinished season, and then make a comparison of rainfall during the first section with that of the other.

During the first nine years of the nineteen-year period, the rainfall averaged 15.20 inches each year, and during the next period of nine years the average annual rainfall was 17.44 inches—an increase of 2.24 inches. This increase is not very much and yet it is an increase of nearly 15 per cent and enough to frequently turn failure into success.

This increased rainfall becomes more valuable when we show that it is to be found in the spring of the year, when most needed. During the first nine years we find the average rainfall in March 1.07 inches, while in the second nine years it is 3.50 inches, while the rainfall for April increases from .67 of an inch to 2.64 inches, and in May the increase has been from .23 of an inch to .68 of an inch.

This period of comparison is not long enough to give conclusive results, still the records point very strongly to the theory that as the country settles up the rainfall increases and comes at periods when it is most acceptable and does the most good.

It is well enough to note also in this connection that the rainfall of October has not increased, while that of November has been somewhat less. The principal increase of rainfall appears to have been during the months of March, April and May.

If man continues to develop water by means of tunnels and artesian wells and to store

the surplus water from the winter rains in vast reservoirs, to be used in irrigating the plains during the dry season, and if nature becoming enthusiastic over the successful works of man sends down additional rainfall at a time when it does the most good, surely the time is not far distant when every arable acre of Southern California will be teeming with life and activity; every ten-acre tract will contain a beautiful home and a contented, independent family; each neighborhood will build and patronize its public school; each settlement will contain its church building with its spire pointing heavenward; each valley will contain its village and business houses; each county will have its commercial center and Southern California will have a larger population to the square mile than any other agricultural section of the globe; and then the people will verily believe that irrigation is cheaper than rain.

HORTICULTURE.

The Filbert.

EDITORS PRESS:—Since you have introduced the subject of filberts, I would ask what profit is in them. For my part I have not found but a call for the exercise of patience in them. If I were to write my feelings I would say, root them out; they are but a delusion and a snare.

Seven years ago I planted the Red Aveline, the Witch Aveline, the Sicily nut. I planted about 200 in rich black loam and cultivated them thoroughly every year; making a perfect mulch of the top of the soil. The net result of all my toil and waiting has been two Sicily nuts.

My trees grow well enough, but they just won't bear. Who can make a better showing? Let him show it and if possible give the reason.

The native hazel thrives and bears all around these hazels of mine. My advice to any person contemplating the putting down of hazels is, don't.

A neighbor who saw me planting my hazels called me a "crank," at which I waxed exceedingly wroth; my neighbor was right, though; at least circumstances point strongly that way.

JOHN A. STUART.

Santa Cruz.

The filbert is usually condemned in California for non-bearing, and yet Mr. Gillet of Nevada City seems to do well with it and finds some varieties very fruitful. We should like to know the experience of all who have tried the nuts.—EDS. PRESS.

Fruit Nomenclature in California.

At the National City Convention the following report was received from Prof. George Hermann of Napa:

As you have seen fit to appoint me chairman of the Committee on Nomenclature, an office for which, although I see the necessity and advantages of our fruits being properly named, I am but little qualified, as I have but a short experience in this State, I am willing to do what I can toward attaining an object of which we all must see the utility and benefits. Therefore, a few remarks on the subject may not be out of place.

While we often boast, and no doubt justly, of being the greatest fruit-growing State in the Union, it may also be said of us with equal justice that less attention is paid to fruits here to have them correctly named than in any other State. I need only refer, as proof of this assertion, to our exhibition, where more than half of our handiwork fruits either appear without name or label, or under entirely wrong ones. I have often heard strangers, visitors to the State from abroad, remark: "You Californians raise splendid fruit. How is it that you do not seem to care whether they have a name or not?" If you look at the market report of our papers you generally see but two kinds of pears mentioned, "Bartlett" and "Pears," and so it runs through all our fruits. Many of our fruit-growers do not seem to care what they sell, and the dealers still less at the hucksters' stands. And yet it is of the greatest importance for every one to know what he is growing and selling. If every package came correctly labeled and stamped, the dealer would know better what he could ask for the grades, and the grower could know better what to expect for them. Besides, the buying and consuming public would buy oftener, and be willing to pay a better price for a fruit they know and like if they could always obtain it true to name. And it is certainly to the interest of every fruit grower to know which variety of fruit sells best and is most profitable to him in his particular section.

But if there is confusion and uncertainty about old and well-tried varieties, this is still more the case about the many valuable seedlings California has produced. We find them under about as many names as the sections in which they have been grown have seen fit to give them. The origin of these natives, as they are of our soil and climate, and therefore more likely to be adapted to it and valuable, should be carefully traced up and preserved. It is always customary that the originator has the right to name them, and he should have the preference in doing so. The system followed in Downing's work, our great authority in fruit-

growing, is that the original name of a variety be given first, then the synonyms under which it may be known in different sections, and to this is attached a full description of its origin, growth of the tree, whether upright or straggling in its growth, color of the wood, shape of the leaf, shape and color of the fruit, texture of its flesh, time of ripening, keeping qualities, etc.

As to the special duties of our committee, I take them to be the collection of all the information we can obtain in regard to varieties, their origin, the name by which they should be generally known, and to give such plain descriptions of their growth, their fruit, time of ripening, etc., as will enable every grower to identify them; and to report to you from time to time what we have been able to learn. But we can do very little unless we are assisted by our fruit-growers. They must make it their business as well to help us in every respect, by sending specimens by mail or express securely packed, when they are ripe enough, but not too ripe, together with leaves and young shoots, and all the information they can give as to bearing and quality, origin, chief use, etc. If this is done we can hope to aid them by publishing full reports in your annual transactions. Without such active co-operation on their part we can do little or nothing. Let each one communicate with that member of the committee who is closest to him, and I hope we may be able to gather such a fund of information as will enable us to bring some light and order into the present condition of our nomenclature, which has made us so often the laughing-stock of our Eastern, more careful brethren. It should be our ambition not only to grow the finest fruit, but also to add in all the knowledge which can be brought to bear on the subject. It is your cause, fruitmen of the State. See that you further it by giving us all the aid you can.

The Olive in California.

At the Fruit-Growers' Convention in National City, the following essay was read by President Ellwood Cooper of Santa Barbara:

This subject was very fully discussed at the Chico Convention, but so far as the varieties were concerned the conclusions were rather unsatisfactory. The numerous discouraging reports upon the Picholine have disheartened those who have planted this variety, and left thousands of the young trees in the nurseries unsalable. The demand for the Mission cannot be supplied. New varieties are being imported both for oil and for pickles. New planters cannot be too careful about the selection. The Mission is the only variety that has been tested in California, through a number of consecutive years, for the quality and quantity that can be produced from a given number of pounds of ripe fruit. For pickling, the demand is almost wholly for the Spanish Queen, the preference given on account of its size and beauty. It is my opinion that the pickles made from the Mission olive, once properly put upon the market, will, when their superior quality is known, supplant the Spanish Queen. The Mission, being an oil olive, is richer, more delicate in flavor, and as a matter of diet, far superior; consequently the growers of the Spanish Queen may find, after many years of waiting, that they have made a mistake. Oil-making will become general throughout the State. The pickler of the Mission will find ready sale for his surplus, and such berries that are not suitable for pickling; while the Spanish Queen cannot be used for oil-making. It is not an oil olive. The Mission olive, if carefully handled, will retain in the pickle all the oil. It is rich in life-giving substance. It is a freestone, leaves the seed readily and has more pulp than a Spanish Queen of twice the size.

There are several different theories on the number of trees to plant on an acre. In the essay of Charles Dondero, read at the Chico Convention, 40 feet were given as the proper distance, and the distance advocated by the Italians, and therefore worthy of the greatest respect, being the experience of generations. We were recommended to plant vines, vegetables or something else between the rows. A great deal of our land is not suitable for either, therefore it is not more profitable to plant olives, or, in other words, to plant 20 feet each way, and in 12 to 15 years, when the orchards become crowded, remove every other diagonal row? This would leave an orchard with the trees nearly 28 feet distant and 54 to the acre; at 25 to 50 years remove every other straight row and we would have an orchard of 27 trees to the acre and distant from each other 40 feet. This plan of thinning out would answer for many other varieties of trees, where planted too thickly. The value of the wood will more than pay for the expenses of thinning out.

Discussion.

The importance the olive has in California horticulture was demonstrated by the lively debate which followed the essay. The dealers who adulterate olive oil with cotton-seed oil were bitterly denounced. Russell Heath, who was at the exposition in New Orleans four years ago and tested the oil exhibits there, gave as his opinion that pure olive oil in this country is scarce except that manufactured in California. Sec. Lelong stated that he had procured what was labeled "Pure Olive Oil," and had found it containing from 60 to 90 per cent cotton-seed oil. He had prepared a bill and presented it to the State Legislature, but it was killed by the lobby sent to Sacramento by the

San Francisco merchants for that purpose. E. W. Holmes of Riverside said that the olive oil manufactured in his city compared advantageously with foreign importations. Several olive-growers in the audience in search of information on the kind of olives best suited for the soil in their orchards were instructed by the Chair, who referred them to the Horticultural Reports since 1885, which contained concise information on that point. Mr. Lelong exhibited his collection of olives and gave explanations. He said that the so-called Picholine is not the real Picholine, which latter is very much larger than its California namesake. J. M. Asher, N. W. Motheral of Hanford, Frank Cunningham of Oceanside, C. M. Alef of Fall Brook and J. T. Bogue of Marysville also took part in the olive discussion.

EDGAR'S TREATMENT FOR CURL LEAF.—As the curl leaf has nearly destroyed the peach crop this season, and all that it can do has already been done, it is useless to prescribe remedies for the result. But as it is liable to occur any other year, I thought I would give a little experience I have had this spring, in arresting its destruction of leaf and fruit. Some years ago a correspondent of the Pacific Rural Press from Ione, Amador county, said that digging the earth away from the tree and uncovering the roots of the tree at the first sign of curl, would arrest its progress. I tried it this spring and can say it has been a partial success with me. The leaves did not curl in the tops of the trees and then I have got a part of a peach crop, and that, too, on the most tender tree we have (the Morris White), so as the "curl leaf" does not only curtail the crop of fruit, but also injures the tree, I am gainer in two points, that is, I have kept my trees growing and saved a partial crop of fruit. There are some I did not experiment on and the leaves curled clear to the top. And here let me say that the Morris peach did not curl and has the crop for this year. Orchardists that contemplate planting the peach in the future please make a note of that, these points are worth considering.—J. R. Springer, in Woodland Democrat.

POULTRY YARD.

Farm Experience in Poultry-Raising.

EDITORS PRESS:—The time was when poultry occupied a place on the ranch only by the sufferance of the farmer, or that it might add to the comfort of his table, but with no idea of any profit. Even now, though poultry-raising has become a business of itself, and fowls are counted among the sources of income on some ranches, other farmers seem to fail to take in the idea that they can add materially to the farm purse. I have been reminded of an old gentleman from Missouri going to reside with a son in Los Angeles whose home was surrounded by an orange grove and all the wonders of flower and fruit of that semi-tropical land. A guest spoke to him of a California winter of bud and bloom as compared to an inhospitable one in Missouri. The old farmer with his opinion of his home land in no whit changed, replied: "I tell you, now, those big log fires of Missouri are mighty nice."

So I have shown a plain margin of profit for our fowls over and above all expenses, and then had a farmer say: "Well, I cannot see any money in chickens." Living on a ranch where grain is raised, and the chickens naturally finding more or less food about the stacks for some weeks in the fall, and also being fed milk from the dairy, it is difficult to arrive at an exact knowledge of profits, but at a time when grasshoppers put an end to grain-raising on our ranch for some years, and we were obliged to buy grain for our chickens, I tried to find the exact amount of money to be made from them.

Having about 30 hens, we raised nearly 300 chickens for market; these, together with the eggs sold, brought \$150. The expense of the grain which was fed the chickens for one year, and the cornmeal fed to young chicks, did not exceed \$60, or \$2 to each of the 30 fowls, and the ten chickens which we averaged raising to every hen. Of course the chickens were fed scraps from the house and milk from the dairy, which was not taken into account; but to counterbalance this no account was made of the eggs used for the table and for cooking purposes. So I consider the best net profits we have arrived at were \$3 to each hen.

Such good results might not have been attained were it not that, living within reach of mining towns, we are provided with an exceptionally good market. Such success in poultry-raising was only attained at the end of much labor. But our successes in life are not usually the result of inactivity.

Some housewives succeed in putting off both children and chickens with so small an amount of care as to be quite beyond the understanding of more painstaking people. If there is one point more important than any other to insure the raising of healthy young chicks, it is certainly cleanliness. The unkempt state of many chicken-houses, and the habit of putting the food for fowls upon the ground, are no doubt fruitful sources of disease among poultry.

Another thing to receive attention in successful chicken-raising is that only young fowls be kept. I do not wish to retain hens in the poultry-yard after they have reached a year

and a half in age—the number of eggs laid after that age materially decreasing and the molting season lasting longer. Chickens seem to enjoy a variety of food, though some farmers, entirely regardless of that fact, keep their fowls entirely upon dry wheat. Good results may be met with by feeding boiled barley to hens a portion of the time. In cold climates it seems well to boil the grain, whether wheat or barley, during the winter months, so that it may be fed warm and thus assist nature to keep up the animal heat. In winter, when there is a scarcity of green food, it is a good plan to chop cabbage for fowls. I also boil and chop up all attainable meat for them, heart, lungs, liver, etc., that are to be had at butchering seasons. An easier way would be to put the raw meat out and let the chickens help themselves, but I have so often seen this done, when the fowls, hungry for meat, would pull and drag it around in the dirt until one's sense of cleanliness would find that method objectionable. By chopping the meat and serving it in clean pans or troughs, each hen has her share, and the trouble is repaid by the increased number of eggs laid.

The gravies or water in which meat has been boiled, when mixed with wheat bran, forms an appetizing dish for fowls.

I find nothing better than cornmeal for young chickens, though it does not seem to be usually looked upon with great favor. The large amount of carbon in corn renders it healthful for early chickens in a cold climate; soaked bread, oatmeal and cracked wheat give them a variety of food.

People who make poultry-raising their exclusive business may have better methods than busy farmers, but we have not for a long time averaged having half a dozen young chickens die from disease in one year.

There are obstacles in the way of successful chicken-raising which it seems almost impossible to overcome. They are vermin and varmints. I have not had the experience of a farmer's wife who said that after using ashes in her chicken-house she had no more trouble with the former. My experience would be that the little insect, so destructive to a healthy condition of poultry, fairly flourishes in ashes, while plentiful use of lime and sulphur, careful attention to cleanliness, and the frequent making of fresh nests, are scarcely sufficient to keep them in subjection. Among the best things for ridding a chicken-house of vermin seems to be cedar or sagebrush hung upon the perches and upon nails and put in the nests.

Some farmers and farmers' wives seem to think the selling of eggs much more profitable than raising chickens for market, but with the prices paid in the past for fowls, experience shows that more can be made by raising chickens if one can spare the time they require. In this section we can realize 30 cents for eggs by occasionally taking advantage of the higher prices offered in some of the mining towns, although they sell at 20 cents in the spring, and have one or two seasons been down to 15 or 18 cents. They are, about the holidays, up to 50 cents per dozen. The early pullets which have received good care will usually lay well by that time. We are not often obliged to take less than \$5 a dozen for chickens when they are old enough to market, while in some of the remote mining towns some years ago they brought \$10 per dozen, though the prices may have materially decreased since then.

One will occasionally hear a farmer say with some self-complacency that no eggs are ever sold from his ranch; as if this fact manifested an unusual degree of generosity. It is possible that on these ranches where no eggs are sold, the home may not be well supplied with all those things which to some one else would be the necessities of life. A lady whose husband is a successful farmer uses the proceeds of the eggs as her spending-money. One season I happened to know that in this way she bought an extension table for her dining-room, and a tasteful set of bedroom furniture. Another farmer's wife bought herself an 80-dollar sewing machine as the result of one season's chicken raising. One woman told me that the proceeds of her poultry, particularly ducks, paid for their provisions—their family was large, a good many children and farmhands.

As to the kind of fowls, there is no doubt many good varieties, each having their friends; for chicken-raising, a cross of Black Spanish and Brahma are among the most satisfactory. For the housewife who adds poultry-raising to a multitude of home cares, a convenient chicken-house should be a necessity. In raising poultry for market, the chicken-house should have two apartments, so that hens while setting may not be disturbed.

Phumas Co., Cal.

FOOD FOR SHIPWRECKED SEAMEN.—At the French Academy of Sciences the Prince of Monaco read an interesting paper, showing that shipwrecked seamen who have to take to the boats without provisions on the high seas can obtain food from the ocean itself by trailing a dragnet made of any light stuff along the surface during the night. The net will in the morning be found to contain small shellfish available for food. In the sea to the west of the Azores the vegetable matter on the surface teems with animal life and fish which are capable of affording substantial nutriment.

NATURAL COLOGNE WATER.—A spring of natural cologne, whose liquid has been analyzed but has the odor of patchouly, is a new wonder said to have been discovered in Algiers.

Some Things in Our Grange Edition.

In our Grange Edition to-day the following matters of interest are mentioned at more or less length:

From Temescal Grange, A Hopeful Outlook for Cambria Grange, A China Wedding, Oregon State Grange, Letters from Howell Prairie, Washougal, Mayville, Surprise and Multnomah Pomona Granges, Women in the Grange, Reception Committee, Gilliam County Council, State Grange Meeting, Political Farmers, Salem Grange, Washougal Notes, Marion County Pomona Grange.

Children's Day.

A prominent clergyman once said that if he could have charge of the education of the children of the country he could have the whole nation inside his church fold. This is mainly true. Making allowance for that obstinacy which characterizes human beings, the great body adheres to the teaching given in early years. The Grange appreciates this, and has provided for the membership of children at an age considerably less than that required for entrance into other places. In some jurisdictions we have also what are called juvenile Granges, which are presided over by a Matron and have children too young to enter the regular subordinate Grange, a training-school as it were. We cannot afford to neglect the children. The adults are too firmly established in their ideas to change them suddenly, but the children can be so trained that we can be sure of succeeding generations. There has been an agitation for years in favor of making extra efforts to fasten firmly the allegiance of the young. A particular day, to be known as Children's Day, has been suggested. On that occasion efforts were to be made by the Grange Lecturers to draw up a program that should make all the young children happy and ambitious for the time to arrive when they can stand before the Grange altar and take the obligation of a Patron. Worthy Master Brigham has designated Saturday, June 15th, as Children's Day. It is to be hoped all the California Granges will keep the day. If it be the regular day of meeting, have the children's part earlier or later; if it be not the regular day, then celebrate it in addition. When all the children are in the Grange and those too young anxious to get in, we shall have taken gigantic strides toward solving the question, How shall we keep our children on the farm?

Merced's Anniversary.

MESSRS. EDITORS:—The Merced Grange celebrated the sixteenth anniversary of that Order, the 4th day of May, with a feast, the program being literary and musical, and on this occasion our little Grangers caused a good deal of merriment with their recitations, which were truly enjoyed by all.

MRS. E. S. ELLIOTT, Sec.

Merced, May 15.

Patrons' Insurance Company.

A party of gentlemen composed of T. Deming, A. Krull, D. Reese, G. W. Hack, J. H. Hamilton, C. Hull, Joseph Simms, L. R. Davis and Judge McKune met at Grangers' hall yesterday to talk over the formation of a business enterprise. It is to be called the Patrons' Mutual Fire Insurance Company, contemplating only country risks.

The organization was not completed at this meeting, but it is expected that it will be ready to enter the business world ere long.—*Sacramento Record-Union*.

BENNETT VALLEY GRANGE is having quite a boom. At the regular meeting held Saturday, May 4, 1889, there were three applications for membership. The officers rehearsed the new ritualistic work, and the Grange made further arrangements for the picnic to be held on the 25th inst.—*Santa Rosa Republican*.

WELCOME.—Sister S. L. Hayes regrets that so few Californians are coming to Salem to attend the State Grange, but she assures us that those who do come will be heartily welcomed.

Grangers' Picnic at Hock Farm.

The Grangers' picnic came off amid lowering skies and chilling winds, and yet so eager was the public to attend the festivities that by 2 o'clock nearly if not quite the usual assemblage found themselves at the historical grounds of Hock farm, the early home of California's most renowned pioneer, General John A. Sutter. The weather had been somewhat threatening for a day or two, but no rain had fallen that would have marred the pleasure found at a picnic; so, although the weather grew more threatening, it became too late to postpone. During the noon hour several showers, calculated to dampen the ardor of the picnickers, fell, but the throng took the joke good-naturedly, and the dancing-platform and the dense foliage of the great fig trees and the various buildings about the place gave very good shelter against the rain. Toward evening the clouds broke up and the sun shone through, rendering the drive home most pleasant, and the close of the day was the most enjoyable of all. The exercises began shortly before 11, and about the same time on the dancing-platform as on the speakers' stand. J. B. Wilkie, Master of Yuba City Grange, not having returned from his business visit to the North and East, Past Master C. E. Williams was selected as president of the day, who called the assemblage to order and bade them welcome in an eloquent and timely address. He then introduced the orator, Dr. C. D. Barrows of the First Congregational Church in San Francisco, who delivered one of the most eloquent and learned addresses it has been our privilege to hear. The doctor is a pleasant speaker and has the rare faculty of holding his audience spellbound. His addresses are frequently interspersed with witticisms that polish his efforts and please his audience. We regret exceedingly our inability to report a synopsis of his remarks; we attempted, but gave it up in despair. The doctor must be heard to be appreciated. Every sentence was a valuable lesson to those of all ages, his advice to the youths of both sexes being particularly appropriate, and they will do well to heed it. The speaker was frequently applauded, and his closing peroration was followed by prolonged cheering and clapping of hands; as the lunch recess was then announced, the doctor received the personal congratulations of a great number of those present. The afternoon literary exercises had to be dispensed with on account of the rain. Notwithstanding the inclement weather, many were present from Marysville and Yuba county, and Live Oak, Pennington, West Butte, Meridian and Sutter City in this county; and the Grangers' sixteenth annual picnic was voted a grand success.—*Sutter Farmer*.

The Check Swindle.

It is sometimes safer to take money than a check. If a purchaser claims that he cannot get a check cashed, it is better to wait and lose a day or two than to be too eager to get the amount due. As this trick, which we find in the *Indiana Farmer*, can be played in California, we reproduce it:

This is the way one farmer allowed himself to be victimized, according to a special from Vincennes, dated April 30th: Three young men stated that their mother sent them to buy a farm, in order to get them out of the city. They agreed with Claiborn Polk, an old and wealthy farmer of Gibson county, to buy his farm at \$75 an acre. Their mother in Chicago sent them by mistake a check for \$2300 more than the contract price. Polk paid the difference and took the check for his farm. The sharpers never came back for the deed. They were tracked to Mt. Vernon, Ind., and lost.

Assessing Trees and Vines.

The last Legislature passed an Act defining the term "growing crops" to include vines, nut-bearing, fruit and ornamental trees. The assessor of Santa Clara county has been disregarding this law in accordance with a circular issued by the State Board of Equalization, and San Jose Grange is now trying to induce him to follow out the law as passed.

The matter having been brought to the notice of Bro. J. V. Webster of Creston, he has written an opinion on the subject, which we publish this week. There are many points in Bro. Webster's article which will interest farmers generally and may, perhaps, aid in the discussion of the subject in the Grange.

Bro. W. C. Blackwood of Haywards expresses his opinion of the controversy as follows:

"I think little can be said on the course of the Santa Clara county assessor, except to denounce him as a violator of law. The State Board of Equalization is not empowered to dictate to county assessors. At most they can only advise. And they are not empowered by law to even do that. Neither they nor county

assessors can judicially decide as to the constitutionality of any law directing their duties. That is the province of the courts. Officers under a law are in duty bound to observe its injunctions till the same has been repealed or judicially set aside. I have not seen the law, but it probably contains no penal clause for a violation of its provisions. Consequently, it leaves taxpayers no remedy but to appeal to the courts for redress."

The matter was discussed at Temescal Grange at a late meeting by Judge Gibson and others, who entertained similar views to Bros. Webster and Blackwood.

Now this matter is of vital importance to farmers generally and every Grange should express its views thereon. Where or in what manner have the farmers of the State a better method of bringing their opinions on such matters before the public than through resolutions by the Grange? It being the only organized body of farmers, its action should be taken as representing the tillers of the soil.

Agricultural Statistics.

At the last session of the National Grange Bro. Leonard Rhone of Pennsylvania offered the following resolution, which was adopted:

Resolved, That the Commissioner of Agriculture be requested to inquire, through the consular system of Government or otherwise, what foreign nations are now importing agricultural products and ascertain what possibilities there would be to establish trade relations for the disposal of our surplus agricultural products; also to inquire what agricultural products are now imported that our country and climate would be capable of producing, and lay the same before Congress and publish for the information of farmers.

In pursuance of this resolution the statistician of the Agricultural Department has compiled the statistics called for, which are published in the May report of the Department.

As to wheat, it says: "Europe is practically the only market America can have for this cereal, and she imports only 144,000,000 bushels a year, raising 1,200,000,000 bushels herself, more than half the world's crops and twice that of all America. Of the European deficiency the United States supplies 95,000,000 bushels."

"In oats and barley there is very small international trade, Europe importing only 19,000,000 bushels of oats, and the United States exporting 2,500,000 bushels. Of barley this country imports 7,500,000 bushels."

"Rye is the great bread grain of Europe, which imports not less than 1,500,000 bushels, and the United States exports less than 3,000,000 bushels."

"The receipts of European countries requiring maize do not make a sum half as large as the products of Illinois, Iowa or Missouri. Great Britain takes nearly three fourths of the total, or 62,000,000 bushels. This country exports 68,000,000 bushels."

"Of potatoes, Europe grows more than she needs, while the United States supplies her deficiency from Canada and Germany."

"Only Great Britain, Belgium and Portugal, of all the European nations, do not produce enough butter to make up the deficiency of 25,000,000 pounds. The United States exports 24,000,000."

"It requires 140,000,000 pounds of cheese to supply the European deficiency, of which 118,000,000 are furnished by the United States."

"Europe gets from South America, Asia, Africa and Australia two or three times as much wool as she imports from the United States. The net deficiency of Europe is 780,000,000 pounds. The United States produces four-fifths of the wool manufactured here. The aim of the wool-growers of this country is to supply home manufacturers; if possible, never to export raw wool. The United States imports net 69,000,000 pounds of wool every year."

In conclusion the statistician says: "About one-tenth of our agricultural products are exported, yet articles shipped abroad are few. They are cotton, tobacco, meats, breadstuffs, butter and cheese. All other articles together are about three per cent of exports."

In response to the inquiry as to what products are now imported that our country and climate are capable of producing, sugar, flax and hemp are suggested, and bagging of cotton, wool and hemp; and it is stated that there is an importation of fruits to the value of \$20,000,000, half of which at least should be produced in this country.

LONG AND SHORT HAUL.—The San Bernardino Board of Trade has filed a complaint with the Interstate Commerce Commission against the Atchison, Topeka & Santa Fe Railroad Company and others, alleging violation of the long and short clause of the Interstate Commerce law, by charging lower rates to Los Angeles, a longer distance, than to San Bernardino, a shorter distance from points on the Missouri river and from St. Louis, Chicago, Cincinnati, Detroit and New York.

BRO. GEO. T. ELLIOTT of Hollister Grange writes that he will attend the Alameda and Santa Clara County Grange Picnic at Alvarado May 25th. We are pleased to learn this, and hope others from abroad will join with the Patrons of the bay counties in a general good time.

A GRANGE is never too young to build a hall. San Antonio, two weeks old, is seriously moving in this direction, and satisfactory results are anticipated.

The Grange Picnic at Alvarado.

The Committee of Arrangements of the Alameda and Santa Clara County Grange Picnic have issued the following announcement to the public:

The Alameda and Santa Clara County Grangers' and Pioneers' Picnic will be held at Alvarado, Saturday, May 25th. R. W. Waterman, Governor of California, and Mr. Joaquin Miller will participate in the cordial hospitalities and brief literary exercises of the occasion. Several representative Grangers and other able speakers are expected to make short and interesting remarks.

Major E. A. Sherman, secretary of the Alameda County Pioneers, will address briefly the Pioneers of Washington, Eden and Murray townships on this occasion.

Music and dancing. A brass band will discourse popular and patriotic airs and furnish suitable music for open-air dancing to the heart's content of "young" and "old."

Patrons of Husbandry, pioneers and farmers, and their families and friends everywhere, are invited to attend. All worthy citizens of town, city and country will be welcome without further invitation. The grove (Mr. Granger's) is close by the depot.

Owing to the short notice given, those feeling interested are requested to call attention to this announcement that others may duly appreciate a quietly social and happy day in the country.

Round-trip rates on the railroad will be 75 cents from San Francisco and intermediate stations and San Jose and intermediate stations; children half price. Alvarado is centrally located between Oakland and San Jose. Trains on the South Pacific Coast R. R. (narrow-gauge system of the S. P. Co.) will leave S. F. at 8:15; leave Alvarado for S. F. at 5 P. M.; leave San Jose for Alvarado at 7:46 and 9:46. Returning, leave Alvarado at 3:52 and 5:55 P. M. Tickets can be obtained of members of the Granges and by specially calling for them at the E. R. ticket offices.

Arrangement Committees—Temescal (Oakland) Grange, W. Renwick, S. H. Dewey and A. T. Dewey; Eden (Hayward) Grange, F. J. Anway, W. C. Blackwood and J. M. McDermed; San Jose Grange, H. A. Brainerd, H. Pomeroy, M. Wingate.

Sacramento Grange Strawberry Festival.

MESSRS. EDITORS:—The correct date of Sacramento Grange's strawberry festival is Saturday, May 25, 1889. If you want to hull strawberries, get there at 11 o'clock; if you only care to convey them to your declamatory aperture, 12 o'clock will do. Our usually accurate secretary, Sister Alice L. Greenlaw, made a slip of pen in locating Granger hall in your last issue—a short distance amounting to only six blocks—for it is situated at 10th and K in place of 16th and K, and from last accounts proposes to stay there. The writer was deaf, dumb, blind and idiotic in announcing a wrong date for the above entertainment. It came about, as you observed, too close application to Bobby. When I wrote you I remember I was trying to settle in my mind whether Bobby could wear papa's pants in 1898, hence my villainous error. Too much Bobby will reduce me to a mild solution of crank, I am afraid. I am glad Bobby is not twins.

Every Granger who sees this is expected to be on hand at the entertainment mentioned. There will be dialogues, recitations, and, I am told, an original feature, which will here be nameless, but something which bids fair to dazzle and mystify the audience will be presented. Fraternally, EDWIN THISTLE.

Union House, May 19th.

[We want "Thistle" for a regular correspondent; yes, double-regular contributor.—Eds.]

San Jose Grange.

Between 30 and 40 Grangers gathered at their hall on Saturday morning.

The Committee on Taxation made a progress report through S. P. Sanders, who had been in correspondence with the Executive Committee of the State Grange.

The matter of Grange picnic was reported complete. It is to occur at Alvarado on Saturday, May 25th, and trains will leave narrow-gauge depot at San Jose at 9:46, calling at Santa Clara and Agnews for those who join it there. The tickets for round trip will be 75 cents. Letters from Governor Waterman and Joaquin Miller were read promising their presence. The Governor's family will come and the poet of the Sierras will escort his venerable mother. Everybody will take a basket lunch and have a good time. The families and friends are invited.

Master O. F. Alley, being himself on the literary program, called Hiram Pomeroy to the chair and read an article descriptive of "Harmony Grange," an ideal body and the type of Grange perfection. Mrs. Hiram Pomeroy read a beautiful selection, "Coming Home," so effectively as to call forth a full measure of applause. Mrs. Fisk of San Miguel, a former member of San Jose Grange, was present, and spoke briefly of her delight in meeting with the Grange.—*Mercury*, May 19th.

THE annual strawberry festival of Sacramento Grange takes place to-day at their hall, corner Tenth and K streets, Sacramento. A general invitation to all Patrons has been extended.

Law vs. Anarchy.

MESSRS. EDITORS:—I have received a letter from Bro. S. P. Sanders of San Jose Grange, which demands more than a passing notice. On or about the 1st of May the brother mentioned, with four other members of said Grange, "were appointed a committee to interview the County Assessor with reference to his manner of assessing property—particularly of fruit trees and vines—which he is doing, the same as in previous years, notwithstanding the law as amended by the last Legislature, classing vines and fruit trees as growing crops." Two weeks since the committee made a partial report, but "was continued and instructed to pursue the subject further, and try to devise some way to compel the assessor to obey the law." The brother desires to know whether or not the Executive Committee of California State Grange has the power and authority "to conduct this matter to an issue which will settle the conflict."

That some action should be taken in the premises is manifest. It has been a subject of much discussion ever since the adoption of the new Constitution, whether or not the words "growing crops," as used in Article XIII, Section 1 of said instrument, should be construed to include vines and fruit trees. In order to finally settle this controversy, the Legislature, at its last session, declared that vines and fruit trees should be deemed and treated by assessors as growing crops; or in other words, exempt from taxation.

In the face of this law the State Board of Equalization has ordered the several county assessors to disregard its provisions. The excuse given by said board for issuing this order to the assessors is the discovery of a Supreme Court decision, in which they claim their position is sustained. It is not necessary here to discuss the spirit and bearing of said decision. It is sufficient to know that the decision 'referred to antedates the enactment of the Legislature, wherein it is declared that fruit trees and vines shall not be subject to assessment. The Legislature which passed this Act contained many eminent lawyers, who are presumed to have known what they were doing. There was a legal doubt as to the exact meaning of the term "growing crops" as expressed in the Constitution. In order to remove that doubt, the Legislature passed the Act referred to, consequently whatever court opinions may have been previously expressed on the subject are irrelevant and void. But presuming that the Supreme Court would, upon presentation, reaffirm the opinion previously given, is that any reason why the State Board of Equalization should assume to nullify the law? It is a non-judicial body, and if it be conceded that it has authority to adjudge or disregard one law, upon the same hypothesis it has authority to disregard or set aside each and every law that may stand in the way of its supreme will.

If one unjudicial body has authority to adjudge a law unconstitutional, certainly, every other unjudicial body has the same right. And if every unjudicial body has this right, every individual in the State is equally potent to set aside each and every law that stands in the way of his own sweet will. This proposition admitted, civil law and order is at an end. The socialist's haven is reached without an effort and chaos comes.

If, instead of the farmer, the law had been passed in the interest of the merchant, banker, or railroad corporation, from the antecedents of the august board, we have every reason to believe that the enactment referred to would have been considered good law, and spared the humiliation of being pitted against a defunct court decision. When the farmer will passively submit, from year to year, and from decade to decade, in allowing his personal property to be assessed in forty odd subdivisions, while the tradesman and merchant prince are allowed to group their immense holdings under one single heading, what better can be expected of an unjudicial body, puffed up with its own importance, assuming to set aside a recent legislative enactment, simply because it favors the fruit-growers of the State? Manifestly the State Board of Equalization has willfully disregarded the law in this matter, and should be brought up with a round turn. There are two methods of proceeding, one to bring an action to impeach the members of the board for a willful violation of the law, and deprive them of their office; and to contest the assessments, made in accordance with their illegal instructions, afterward. If not on this, there are other grounds on which the whole assessment of the State can be overturned and nullified.

Section 3630 of the Political Code declares that "the Board of Supervisors must furnish the Assessor with blank forms of the statements provided for in the preceding section." The statements provided for in the preceding section (3629) which the "blank forms" above referred to must contain, are to be made out in detail, "setting forth specifically all the real and personal property owned by such person, or in his possession, or under his control at 12 M. on the first Monday in March."

Now these "blank forms" provided for in Sections 3629 and 3630 have seldom, if ever, been prepared by, or approved of, by the several county Boards of Supervisors, as the law directs, but in defiance of law have been prepared by the several county Assessors at the insti-

gation of the State Board of Equalization. Consequently illegal. Hence it follows that if the assessment blanks are illegally prepared the assessment made thereon is also illegal, especially when said "blank forms" give the farmer's personal property in detail, and lump the trader and merchant prince's diversified stock. The Constitution declares "that all property in this State, not exempt under the laws of the United States, shall be taxed in proportion to its value to be ascertained as provided by law."

Taking into consideration the utter disregard of the late legislative enactment, coupled with the violation of the Constitution and Sections 3629 and 3630 of the Political Code in preparing the assessment blanks and levying the assessments, the farmers of the State, if they have any regard for the dignity of their calling or consideration for their own welfare, will stand together in self-defense.

The next session of California State Grange will convene at Sacramento fully two months before the State and county taxes become delinquent, and while in session some plan should be devised and adopted that will unite the farmers of the State in opposition to the enforcement of a dictum order and irregularities certainly in contravention of the laws of the State.

Creston, May 20, 1889. J. V. WEBSTER.

Alkali—Its Causes and Remedies.

[Synopsis of an address delivered before the Tulare Grange, by WILLIAM F. STEWART, April 20, 1889.]

The salts commonly known as "alkali," the unwelcome presence of which is so plainly noticeable in many portions of the San Joaquin valley, and which close scrutiny may detect in any part of it, are found blooming out of the rock in the Coast Range mountains, and to a less extent in the southern Sierra Nevadas. In the low lands adjacent to the Coast Range, particularly in the southern portion of this valley, these salts are found below the surface in layers, sometimes several inches in thickness, showing that the nearer one approaches the source of supply, the greater is the amount to be met with, and showing also that there cannot be a radical cure, as rock is constantly decaying and disintegrating, thereby liberating the salts it contains. Salts are not constituent elements of the soil, although the soil and water table may be highly charged with them; yet pure, sweet water is found at a greater depth.

Cause of Alkali Rising.

The action of the sun (or the effect of its warmth) and capillary attraction cause the moisture in the soil to rise to the surface. It in turn seizes on the minute alkaline particles and brings them to the surface, and here, owing to the evaporation of the moisture, they are deposited, sometimes forming an ash-like coating very hurtful to vegetation. Here these salts are left until the rains of another winter wash them back into the soil, where they remain until returning warmth brings them again to the surface. Alkali spots are not necessarily caused by a superabundance of salts in those particular places, but are due to the fact that there is a greater amount of clay in the substrata there than in adjoining land. They therefore hold more water and of course bring more alkali to the top. The presence of black alkali is caused by the carbonate of soda (soda) destroying the humus, or vegetable matters, in the soil. The antidote is gypsum, which should be scattered upon the land before rain or before irrigating. Water is indispensable in bringing these properties together in a soluble condition. An application of gypsum will avail little without the use of water. When the presence of sulphate of sodium (Glauber's salts) is the cause of injury to crops, the antidote to be applied is lime, which should be administered in the same manner as gypsum.

Remedies.

The principal remedies, strictly speaking, are those just mentioned. But alkali may be washed from the soil by irrigation if the water be properly applied. By the cultivation of "root crops," such as beets or carrots, the amount may be gradually diminished. Alfalfa, too, is a good plant to grow in alkaline lands by reason of its deeply penetrating roots. Other crops, whose roots spread through the surface and where the quantity of salts deposited in the manner already described is greatest, will not thrive in strongly alkaline lands. Thorough cultivation is a matter of the greatest importance, for compact ground aids evaporation and thereby brings more alkali to the surface, whereas ground in good tilth retards evaporation. This may be clearly illustrated by placing a wet sponge on a dry brick. The brick will take up all of the water in a short time, but a dry sponge on a wet brick will not absorb the moisture. In washing out alkali there should first be provided a means of drainage. If the water-table (water-level) be low enough and the substrata sufficiently pervious or open, it may be drained into. But ultimately the water will rise so as to injure vines and trees and will finally drown them. The only sure means is to provide a good under-drainage, for to attempt to wash out the alkali without having suitable drainage will increase the evil; the salts must be carried away.

Irrigation.

Water from many sources is not suitable for irrigation. A few facts culled from reports of Prof. Hilgard, from which many of the matters I have mentioned have been collated, will prove interesting. Wells at the Point of Timber in Contra Costa county contain 10 grains of

soda per gallon. To use such for irrigation would be to destroy the soil. Tulare-lake water holds from 27 to 35 grains of soda per gallon and is therefore unfit for use. Kings river and other rivers north are almost pure, while Kern river holds $1\frac{1}{2}$ grains per gallon. Some artesian wells bored near Tulare lake hold 16 to 19 grains of soda per gallon, and to apply such water to the land would only add more alkali to the soil. Water carrying a few grains per gallon may be used, provided it can be drained off. In India, where irrigation is practiced on a large scale, the canals are located on the level ground to make irrigation easy. Farmers use it freely, and the result is that alkali is coming to the surface in large quantity and is destroying the land. Engineers, unaware of the presence of injurious salts in the soil, did not provide for a correlative system of drainage. The Government of India appointed a commission to investigate the subject, and their verdict is that the only remedy is drainage. The alkali has become so bad in some places that the advisability of keeping water out of the canals is being considered, thus forcing the people to irrigate from wells as in former times. Five years ago the same Government sent an agent to California to learn our methods of treating alkali. After investigation he stated that the same conditions exist here, and expressed the hope that the residents of the Tulare valley, the worst afflicted part of California, would profit by the bitter experience of India.

Irrigation Districts—Phosphates.

We can see the need, in forming an irrigation district, of laying out the canals in such a way that there should be a correlative system of drainage provided for at the same time to carry off the alkali and to prevent the water from rising so high as to drown trees and vines. Without drainage wheat-growing on the irrigated lands of Tulare county will in time have to be abandoned.

In conclusion, a word about phosphates. The phosphates are those elements in the soil that furnish the principal plant food for the wheat and other cereals. The nitrates too are useful. The soil of Tulare county is very rich in phosphates—in fact they are in almost inexhaustible quantity, and farmers would grow wheat for any length of time without renewing the land but for the terrible alkali which keeps the plant food closely locked up.

The War Against Trusts.

The following from the *Lecturer*, issued by National Lecturer Mortimer Whitehead, shows the necessity for prompt action:

Not since the days of 1873 and 1874, when the Grange was having its greatest boom, has the spirit of anti-monopoly so generally prevailed among the farmers in all sections of our country as at the present time.

Usually the Grange is most active and prosperous in the winter season, but this year we are to have an active "summer campaign."

The "cotton-bagging trust," and the "binder-twine trust" have crowded matters too far and the millions of growers of the great staple crops of our country will not submit to pay an extra price on these articles that will add many millions of dollars to the incomes of those in the "trusts."

The National Grange spoke out plainly at its annual meeting in Topeka, Kan., last November:

"Resolved by this National Grange, That we do condemn the said 'trusts' as being unjust, and dangerous to the rights and liberties of the American people and the freedom of American institutions."

"Millions for cotton bagging—not one cent for jute." That, announces the Atlanta Constitution, is to be the farmers' shibboleth in Georgia for the coming campaign.

County, District, and Subordinate Granges all over the country are giving special attention to the "bagging" and "binder-twine trusts;" meetings of "alliances," farmers' protective associations and other organizations are being held and uniting their strength with the Grange. The Secretary of the Missouri State Grange, A. S. Smith, writes:

"I sincerely hope that this latest iniquity of organized capital to take advantage of a great necessity of our wheat-growers may be met with such a repulse by organized agriculture as to render it impossible for the future. The farmer is not the only one who suffers by the combination; the manufacturers of binders must suffer as well, because the sales of hundreds of binders have been spoiled already by it."

J. M. Thompson, Master of the Illinois State Grange, says:

"I am receiving numerous letters, some from other States, all full of encouragement, grit and sand, that would out like emery, and if they are to be relied on, the combine in twine will be terribly out this year, unless they come down soon. Patrons and farmers, stand up to and by the several organizations on this important question. It will be worth more than it costs us."

"Enlist for the war and see this matter clear through. The whole Northwest is standing firm. The East is looking on and waiting to see if the West is true. The East will not break first. All eyes are on the great cereal State of Illinois. We are right, reasonable and just in our demands. Stand fast!"

Here is a sample of the action of thousands

of subordinate Granges. Let thousands more do the same and then stand fast:

WHEREAS, It is extensively reported and believed that there has been a twine trust formed, and binding twine advanced to an unreasonable price; therefore

Resolved, By the members of Hudson Grange, No. 82, Bates county, Mo., 1st, that we will not purchase twine to use in the coming harvest, paying more than a reasonable price; 2d, that we will not purchase twine-binders so long as twine is sold at unreasonable prices.

Every Grange in the United States should hold a "cotton-bagging" or "binder-twine" meeting as soon as possible. Agree to use no twine at the "trust" prices, nor to buy a self-binder this year. Live up to your agreement. Then let each member pledge himself to see at least five farmers who are not Patrons and get them to agree to do the same. Remember if the "trusts" are broken it will be farmers alone who will do it, and if the "trusts" succeed, it will be alone the fault of the farmers. Don't forget our forefathers—how they threw the tea into Boston harbor rather than be unjustly taxed. If they could deprive themselves of tea on principle, that we should be free, let us bind our wheat in the old way, with straw, or use cotton bagging for only one year, and all will be well.

Patrons and farmers should remember the importance of all standing firm. If only one-half are true, the "trusts" will sell one-half the usual quantities of bagging and twine, and at the extra price will make as much or more profit as if they sold the full amount at the old prices. Think of this and stand fast.

Indiana's Legislature takes a hand in war on "trusts," the Senate by a large majority passing a bill characterizing them as conspiracies. This is undoubtedly as good law as that making labor-union boycotters liable for conspiracy.

The movement among the farmers against the binding-twine trust is assuming formidable proportions, and unless the manipulators of the trust get away from their extortionate rates, thousands of farmers will attack their grain without binding it. Let the farmers stick together and next season they will be able to buy twine at what it is really worth.—*Prairie Farmer*.

The only remaining play on the part of farmers is to boycott the trust, and this they seem inclined to do. Minneapolis twine-dealers are in the same fix as the farmers. A young man dressed as a frontier farmer came in here and bought up all the old twine in the hands of the dealers. It was discovered too late that he was the agent of the trust, but the twine had been sold. The local dealers are now kicking, while the twine—500,000 balls of it—is packed away. If the farmers get no twine it is likely to have a bad effect upon the wheat crop, as that cereal cannot be harvested in a good condition without the use of twine.—*Letter from Minneapolis*.

The twine trust without the farmer will be like bricks without straw. The farmers in this State have decided to bind their grain with withes of straw rather than pay the price of a bushel of oats for a pound of twine.—*Chicago Inter-Ocean*.

"Farmers in the past have managed to take care of their grain, and they can do it again, and it is hoped that every farmer in Iowa will join those who have resolved that they will not be bled by this infamous attempt to impose upon the farmers of this State. The farmers can burst up this infamous game if they will only stand true to each other. Let the farming community teach this twine trust a lesson, by refusing to buy or use their twine, and the infamous trust will discover that there is a power above the plotting of those who wish to prey upon the legitimate wants of the people."—*Des Moines, Iowa, Advocate*.

Farmers, beware of a so-called agricultural paper published in New York City in the interests of the bagging and twine "trust." Don't be deceived by their pleading about short supply of raw material, etc., etc. "Stand firm, and stand fast." In the words of Gen. Ethan Allen, "We must all hang together, or we will all hang separately."

The greatest friend the "trusts" have to help them in robbing the farmer is the "trust" that farmers have among themselves, and that is their "trust-to-luck." It will never bring down the price of bagging or binder twine, never bring that true "protection to American industry" for which farmers in the Grange are working to-day more and better than ever before.

BRO. J. T. COBB called at this office Monday, the 20th inst., to say a last good-by before departing for his home in Michigan. He states that it will be impossible for him to visit Oregon, though it would be a pleasure to meet the Patrons of the North. California Patrons have fully appreciated the brother's visit, and we hope he may visit us again at some future time.

THE officers and directors of the Grangers' bank visited Chico and Nord, Butte county, last Saturday, to inspect the real estate belonging to the bank at these localities. Pleasure was combined with business, and an enjoyable and profitable trip was had.

LODI GRANGE is prosperous. But a short time since a class of ten was initiated, and on the 15th inst. another class of the same number was instructed in the degrees. Bro. Huffman feels elated at this condition of affairs.

The Nation's Dead.

Four hundred thousand men,
The brave, the good, the true,
In tangled wood, in mountain glen,
On battle-plain, in prison pen,
Lie dead for me and you.
Four hundred thousand of the brave
Have handed our ransomed soil their grave
For me and you,
Good friends, for me and you.

In many a fevered swamp,
By many a black bayou,
In many a cold and frozen camp
The weary sentinel ceased his tramp
And died for me and you.
From Western plain to ocean tide
Are stretched the graves of those who died
For me and you,
Good friends, for me and you.

On many a bloody plain
Their ready swords they drew,
And poured their life-blood like the rain,
A home, a heritage, to gain—
To gain, for me and you.
Our brothers mustered by our side,
They marched and fought and bravely died
For me and you,
Good friends, for me and you.

Up many a fortress wall
They charged, those boys in blue,
Mid surging smoke and volley's ball;
The bravest were the first to fall—
To fall for me and you.
The noble men, the nation's pride,
Four hundred thousand must have died
For me and you,
Good friends, for me and you.

Within that prison-hold
Their martyr-spirit grew
To stature like the giant of old,
While amid agonies untold
They starved for me and you.
The good, the patient and the tried,
Four hundred thousand men have died
For me and you,
Good friends, for me and you.

A debt we ne'er can pay
To them is justly due,
And to the nation's latest day,
Our children's children still shall say,
"They died for me and you."
Four hundred thousand of the brave
Made this, our ransomed soil, their grave,
For me and you,
Good friends, for me and you.

—Round Table.

Maud's Lesson.

[Written for the Rural Press by MARY BLOSSOM DAVIS.]

"And I suppose, of course, he'll come up here Memorial Day, because he said he'd like to spend his holiday with me. He did last year, and such a lovely time we had," and Maud's face grew serious as she recalled Memorial Day a year ago.

She and Lettie were walking slowly back and forth through a little lane between the barnyard and the shadowy old orchard. They were talking, as girls talk, very low and confidentially, their arms locked about each other's waists and their faces very close together, but lest the "hired man" in the barnyard should overhear their conversation, despite the steady streams of milk that poured noisily into the empty pails. On one side several little bright-eyed calves blew their warm fragrant breath between the fence-bars and called softly for their mothers, while on the other the low gnarled branches of the orchard, all whitely set with fragrant blossoms, nodded and whispered in the twilight breeze, and showed fair petals tipped with the fire of the sunset shining brightly through the thick of the orchard. All about them was the low drowsy hum of retiring bees and home-bound birds, making music with their rapid wings, and the first shrill songs of the crickets in the tall dewy orchard grass. It was just the time for secrets, this soft, dreamy closing of the day, when everything grew more mysterious and more beautiful in the dying light, when the rustling and swaying of the long fresh grass seemed made by the unseen footsteps of enchantresses coming with some olden spell to restore those lost arcadian days which once made earth an Eden.

Maud gave her friend an affectionate little hug as a sense of all this beauty and fragrance stole over her, and she went on still more boldly with her confidences.

"He didn't like the idea to lose me for a whole month, he said. If I must go to the country, why not wait until he had his summer vacation and perhaps his friends might organize a camping tour, he urged. I fear he is a little jealous, Lettie—as if I'd see any one up here in the country to fall in love with!" and Maud shrugged her trim shoulders and gave a sly glance toward the "hired man" just stroking the sleek coat of a fractions cow, as if in scorn of such a rude, unpolished farmer.

She did not notice that the deep blush on Lettie's cheek was not a reflection from the crimson west or that her friend's blue eyes seemed rather startled after this slighting comment of the honest, manly fellow who would have sacrificed a whole day's labor if he could thereby have given this pretty, haughty stranger, who was Lettie's friend, a little pleasure during her visit.

But Maud was busy with her own thoughts and went on quite heedlessly: "He asked me for a full description of you—color of hair, eyes, etc.—to judge if you were the proper kind of a companion for me, I think, the absurd fellow! and wanted to know all about the farm—if you have many visitors or lived at all stylishly, and of course I told him just how plain and quiet everything is here, and assured him, you may be certain, that all eligible young men, fit even to flirt with, were totally wanting in these parts. But you should see Alfred, Lettie! He is as handsome as a dream, with such fascinating manners, too. He has dark eyes—my ideal eyes exactly—and dark hair, cut close to a fine-shaped head, complexion clear and white, and a handsome brown mustache. And then, oh dear, how brilliant he is! He graduates next year from the medical college, a full-fledged doctor, and then, of course, he'll be ready to begin life in earnest," and Maud gave a little sigh, in contemplation of that hopeful future time.

"I am so glad you are happy," Lettie ventured to say at last. "I hope that you will always be, Maud. But you may be sure of it if you have found a faithful heart; that is better than all else, you know."

Lettie paused a moment. She had said rather a bold thing to her friend Maud, who prized so highly all worldly advantages and vanities. And yet Lettie knew that this enthusiastic, proud friend of hers had a warm and generous heart. Her lot had been cast among those who look most to worldly achievements as man's greatest good, and forget, in so doing, the nobler promptings of the heart. And hence Maud had learned to regard with scorn those of lower station than herself, particularly if they failed from lack of refinement or accomplishments.

Her friendship with Lettie was the result of a pleasant companionship at school, whither Lettie had gone for the advantage of a few months' study of higher learning than was offered at her own home. There she and Maud had met, and the latter, moved by her kinder feelings to forget the line that divided them socially, had received the young girl from the farmhouse as cordially as those who lived in the handsome residences that lined the stylish thoroughfares of her own city home. Notwithstanding numerous thoughtless references to "country people," and droll imitations of their mistakes—which Lettie sometimes remembered with a pang in her own fond little heart, had countless times been committed by "dear old father" at home, Maud was very kind to Lettie, giving her numerous suggestions in regard to dress and other things that were very helpful. Maud had found a bright companion in Lettie. Her clothes, though not so elegant as Maud's, had a grace and air of tastefulness not to be borrowed; and her ambition and independent spirit, blended as it was with an affectionate, womanly disposition, won for her the esteem and love of her schoolmates in spite of the numerous little efforts at the outset to subdue her and make her feel that her position was beneath those of more abundant worldly fortune.

After Lettie left school she and Maud had kept their friendship warm by frequent letters and one or two visits from Maud. And they had always kept their secrets for personal meetings, promising then to reveal the very choicest happenings of their lives.

And so now Maud was relating very proudly, and with a most happy heart, what had befallen her since Memorial Day a year ago. She did not quite like Lettie's comment about a faithful heart—at least it seemed rather out of place to her when she had just been describing how magnificent was the lover who had won her.

"It's quite likely," she returned, "that one who is as noble, both physically and mentally, as Alfred, will have a heart that is all right, my dear."

"But then you know, Maud," said Lettie, "the heart is the principal thing, after all. He would better lack everything else than that!"

Maud made no answer, but burst into a little silvery peal of laughter, at length stopping short to look through the fence into the barnyard where James, the "hired man," was chasing a nimble calf back and forth, and round and round, in a vain effort to catch the rebellious little animal.

"Doesn't he make a pretty clown?" observed Maud, still convulsed with laughter. "Those awkward stumbles would grace a ballroom beyond description. There, the calf is caught at last! But it doesn't add anything to the movements of the man to be pulled about in that way. Really, this is too ridiculous for anything to see a grown man making such a picture of himself."

She failed to observe that Lettie did not laugh, nor that she soon afterward said she must go back to the house and get the pans ready for the milk-straining and attend to the preparation of dinner a little.

But Maud was not in a mood to be left alone in the parlor where Lettie requested her to wait until the work was finished, but followed her friend into the cool, sweet dairy, where Lettie was getting the pans ready to receive the warm new milk.

"My dear," she said at last, after asking numerous questions about the process of butter-making, "this is not your proper place. You have no society here, no friends who can really be companions to you, no proper occupation. Your father and mother certainly may like to remain on a farm like this and can find here work suited to their taste, since their aspirations of course must be very different from yours. But you, Lettie, you are so young with all of life before you; it is too bad to waste your opportunities by living here."

"Oh, no, Maud; don't say that," replied Lettie, as she set the pans out on the long table in the dairy. "I have been away and have had opportunities, but I always felt more contented here at home on the farm, where everything is homelike and peaceful. I think perhaps some farmer's daughters make the best farmer's wives. Some one has to marry a farmer," added Lettie, with a twinkling light in her soft blue eyes as she glanced toward her companion.

"The idea!" replied Maud sarcastically. "Your tastes need cultivation very much."

But further discussion of this important matter was interrupted by a quick, firm footstep just outside the dairy and the cheery voice of the hired man calling jocosely, "Here I come, Lettie. Are you ready?"

"All ready," answered Lettie, opening the door to admit James with his foaming pails of rich new milk. Maud noticed how gracefully Lettie stood holding the strainer while the milk poured into the shining pans, how her cheek glowed with a warm, rosy light, and how lovely and sweet seemed the expression of her face. "Lettie really is too pretty to waste her life on a farm," thought Maud as she looked. "But then she certainly looks much prettier here at home doing her work among these rural scenes in those soft, flight, careless dresses, than she ever did at school."

"How many pans are you going to skim in the morning, Lettie?" asked James when the straining was over.

"All those," answered Lettie, pointing to a row of shelves extending along the room.

"All right. I'll be around to empty the pans. What time?"

"Before sunrise."

"Ah! I see," he exclaimed, rather surprised, but giving a quick glance toward Maud. "I've picked all the strawberries for to-morrow. They are in the cellar where they will keep cool and fresh. So you won't have to do that."

"Thank you," said Lettie, blushing brighter than ever, while James hurried away and disappeared in the twilight of the garden.

That evening when the two girls were alone in their room, sitting on the low white-covered bed, Lettie told Maud a wonderful secret.

"I know you will be shocked, Maud," said Lettie. "But the plain, unvarnished truth is this—I am going to marry James, our hired man, whom you laughed at when he struggled with the calves in the barnyard, and who was in the dairy this evening."

"Lettie!" cried Maud in dismay.

"It is true," answered Lettie bravely. "He is a noble fellow at heart, if he is a farmer. Papa thinks everything of James, and couldn't possibly do without him. But perhaps he may have to some time," she added, thinking of the future. "He is one of a large family, so his work is not needed at home, but he is very industrious and ambitious if he does hire out."

We will not record the conversation that followed, in which Maud tried to show Lettie her grave mistake in being content with a rural life, and in giving up the advantages the world could offer to one so pretty and bright as she. But it was in vain, though Lettie's usually peaceful slumber was rather disturbed that night in consequence of Maud's position. Not that Lettie for a moment listened to Maud's persuasions. But with shame she remembered how she had dreaded to confide her secret to Maud, after what had taken place when they walked in the twilight by the barnyard where James milked. She had never once dreamed that Maud would view James in the light which she did. There had even been a flutter of happy expectation in her heart before Maud arrived, when she thought of the pleasant confidence she had to give. And yet it was not strange, either, that Maud should ill appreciate the manly qualities that James possessed. To her, he most likely seemed as rough and hardy as his exterior life. But what had she done? She could hardly forgive herself for forgetting the unfaltering respect due to such a true and generous character as James, even in the face of Maud's unconcealed scorn. She knew how manly he was and Maud did not.

But now that she had bravely confessed, and stood up heroically in defense of him, against Maud's disparagements, she felt that some little reparation had been done in extenuation of her cowardice, and, so comforted, she fell asleep.

The next morning Maud awoke early, but Lettie was up before her. The air was so invigorating, the sky so blue and tender and dewy, and the birds so rapturously sweet-voiced and happy, that she could not take her accustomed sleep, so she hurriedly dressed and wandered out into the garden just as the sun was breaking over the crimson-draped horizon.

Then she remembered Lettie's skimming, so she walked around through the cool, fresh perfumes from the opening flowers toward the dairy-room.

A blooming, dewy mass of honeysuckle covered the cool, quiet little place, while a huge

tank placed upon the roof, filled constantly by the ever-turning windmill, sent rainbow sprays and dripping streams down upon a wild, sweet tangle of flowers and grasses all around it. The door of the dairy-room was open, and a suggestive clatter from within proved to Maud that the skimming had commenced.

Then as she drew nearer what a picture rose before her eyes! There in the shadowy coolness of the dairy, lovely and graceful in a thin light dress, her sunny hair falling into playful little curls on her forehead, her cheeks glowing and her fair plump arms bare to the elbow, stood Lettie skimming milk. Beside her, strong and manly, and yes, almost handsome despite his tan and sunburn, lingered James, watching her with earnest eyes and anxiously waiting for the finished pan.

As she came toward them Maud could hear their conversation, so merry and pleasant and free, not at all as it had been the evening before, when, as she now knew, her presence had cast a restraint upon them.

"Here, you may have that," said Lettie, playfully, looking up with a smile, as she held out a thick lump of cream on the end of a long wooden spoon.

"How am I to get it?" asked James, making fruitless efforts to obtain possession of the cream. "Why didn't you say I had to take the skimmer in my mouth? I might succeed then."

Maud turned back, loth to disturb the pleasant scene, and with the thought also that after all this might be the best place for a girl like Lettie to live.

During the days that followed, Maud's new idea was confirmed. Lettie seemed so indispensable at the farmhouse. There was nothing that she did not do as deftly as it could be done. She was a Juno—fair, bright and womanly—one who lost none of her grace and beauty in the midst of her household arts. Day-break always found her busily at work, rosy-cheeked and sunny-tempered, and by the time breakfast was ready there were dozens of things finished and over for the day, not to mention the light, delicious biscuits that appeared as if by magic on the table.

And besides, James improved wonderfully on acquaintance. Maud was heartily ashamed of what she had said about him before her visit was over, although she considered him altogether too much of a rustic to suit her own "refined tastes." But then he was untriflingly kind to her. He was always planning and sacrificing his own comfort to obtain for her and Lettie a little enjoyment. He called it a great pleasure after a hard day's work to drive them into town for some amusement, though she knew that just at that particular time his work was very tiring, and he would have much preferred to sit at home and hear them sing or play for him. He chased the horses by the hour that he might give the girls a ride, and brought home every evening some strange or rare wild flower for Maud to see.

Maud talked a great deal of Alfred, though she very considerably refrained from comparing him to James, lest Lettie might feel hurt, and when, at last, Memorial Day arrived, she was in a perfect rapture of excitement anticipating his coming. Now Lettie could see how fine and grand was the man of her choice.

Lettie was very busy in the morning, for that afternoon James expected to drive them all to a picnic in the neighborhood, so she could not see how anxiously Maud awaited the expected arrival.

At last James, who had driven into town to meet the expected stranger, came back, but Alfred was not with him. Maud hurried out for fear some mistake had been made, when James handed her a letter which he remarked would perhaps explain the failure. Ah! well indeed Maud knew the familiar writing, so she went into the house and opened the letter.

"Friend Maud," it began, very unlike the usual address, "I write you to explain my inability to visit your friends in the country. The last two days have been very busy and exciting ones to me. I have received news that my uncle has recently died, leaving me his heir, and I am called East immediately to settle up the affairs of the estate, which is very large and valuable. I start to-day, so are you receive this I shall be gone. But accept my farewell, given with all kindly feeling. You have been a very charming friend to me, and it is with regret that our foolish little boy and girl flirtation is ended, for of course my departure will preclude any idea of the continuance of any further hopes concerning each other. I may write to you again in a week or two, for there may be some little affairs yet that need attention which I am too busy to think of now. Believe me ever your friend, Alfred."

The letter was crushed in Maud's dainty hand as she rushed to Lettie in the kitchen. "O my dearest," she cried, throwing her arms about Lettie, despairingly, not ashamed to bring her grief to that kind little motherly heart, "help me to understand this. What does it mean?" and the tears fell fast down on Maud's delicate cheeks.

Lettie took the letter and read it calmly. "It means, dear Maud, she said, 'that he in whom you trusted, he whom you thought possessed all that is good and manly, was not worthy of such regard. Never think of him again; put from your life entirely such a dangerous influence and all disturbing thoughts. The future will bring you a reward, my dear.'

She led the sorrowing girl into their own peaceful little room, and there in the dim,

cool quiet, Lettie talked long and earnestly with Maud.

"This is Memorial Day," she said. "It commemorates the manly valor of thousands of brave Americans, who left family and home and gave their lives for the sake of principle. Does not this prove that there are many noble hearts worthy of our love and esteem? We have not any to spare for those who are faithless and cruel."

When at last Maud and Lettie emerged from that grave morning conference, Maud's calm face drew all suspicion from her tear-swollen eyes.

And Memorial Day was not a wretched one, after all, though passed very differently from what they had expected. They did not go to the picnic, but James drove the girls for many miles out through the lovely quiet woods where they spent the long afternoon very pleasantly under the leafy shadows, amid the flowers and ferns and rocks. Maud was very thoughtful, but her abstraction was not without good results. She possessed a firm will and a proud spirit. Her dream had faded, but she was wiser, stronger, more generous, more womanly.

During the few remaining days of her visit, she and Lettie had many serious talks. Maud penitently acknowledged her errors, and Lettie promised to help her subdue her old haughty spirit, though she privately thought that Maud would not need any assistance, judging from her determined assertions.

When Maud departed for home, and Lettie was bidding her farewell at the depot, there was a little whispered conversation which James did not hear.

"Now Lettie dear," said Maud, with something of her old archness and merry humor, "you know I am going home with the prospect of being an old maid. Don't forget to hunt for me that fine young farmer, just like James, and then I shall escape my awful fate."

"All right, Maud," said Lettie, more seriously. "But you must remember farmers do not have a monopoly of all the good hearts. They are scattered around through the world, but be sure that you find one. If you take care of that, all else will be well."

"You may depend upon it that I shall, my dearest friend. You have taught me the best lesson of my life," said Maud as the engine thundered in and James came forward with her valise to see her safely on the train.

May.

[Written for the Rural Press by M. E. T.]

May! most beautiful month of May!
Bright with sunshine or dipping in showers;
With flying feet you pass away,
But your gifts outnumber by far your hours.

In the gliding years that are passed and gone,
You've scattered your treasures with lavish hands;
To-day we've reckoned them one by one,
And our baby among them sweetly stands.

Wealth of roses and golden hours,
Tuneful birds and prophetic bloom,
You cannot excel this gem of ours,
O month of beauty and sweet perfume!

Watonsville, Cal.

Chaff.

The hot biscuit is the grub that makes the butter fly.

A FINANCIER.—"Has Muller borrowed anything from you?" "He tried; he said he wanted \$200 for a year, and that he could get it from Schulze, but Schulze wanted six per cent, while he was not willing to pay more than four per cent. So I gave him \$4 and said: 'Here's the missing two per cent, go and borrow the money from Schulze.'"

A WAGGISH cabinet-maker, who repaired chairs as an accommodation, advertised thus: "All kinds of chairs, and bills contracted therefor, receipted with pleasure." His wit and wisdom turned him in a deal of cash trade. —Nantucket Inquirer.

A STORY is told concerning a certain play, the plot of which was very obscure. One night of its run—it had a run of one week—a man with a puzzled look in his face walked out of the house, fairly driven to drink by attempting to unravel the story. Leaving the theater, he met the manager. He stopped him. "Say," he asked, "in the name of pity will you tell me what it is all about?" The manager smiled sadly and then in a confidential whisper said: "I'll tell you, but don't quote me. The truth is this infernal Interstate Commerce law comes pretty hard on us, and we had to leave the plot behind at the last town we played."—N. Y. World.

YOUNG LADY (to editor): "I see, Mr. Shears, that you have published my article." Mr. Shears: "Yes, we used it; but we had to cut it down a good deal. We had the boy who runs the adjective-killer at work on it pretty nearly all day."—Harper's Bazar.

At a recent Oxford local examination in Northampton, the following question was asked and answer given: "Who wrote the 'Complete Angler'?" Izaak Walton; and therefore he was called the Judicious Hooker." This is fact, not fiction.—Pall Mall Gazette.

"BIBULOUS!" said a Kentuckian, being questioned about the habits of people in his State. "Bibulous! Why I don't reckon you could find a dozen Bibles in the whole State." —Washington Post.

25.—ACROSTIC.

The initials of what these animals can do, taken in their order, will make the name of a fish.

26.—TRANSMUTATION.

In these latter days of science and art,
The magician's skill takes no leading part,
Still many a juggler we yet may find
Can puzzle the brain and startle the mind.
In a trial of skill, not long ago,
Between one who came from a land of snow,
And a wizard brown from Arabia's sand,
The latter held forth in his open hand
A bulbous plant which gay flowerets bore,
Simply a lovely plant and nothing more.
But a second look, to our great surprise,
Revealed on its front, with glittering eyes,
A serpent's head, whose angry, rising crest
And darting tongue struck terror to the breast.
With nimble fingers the magician tore
Off the serpent's head and threw it on the floor,
When of reptile form we could find no trace,
But a radiant rainbow filled all the place.
Then the Northern wizard essayed his art
By pulling his head and body apart,
When an ancient Persian appeared to view,
Of whose tragic end the Bible tells true;
But a moment he stayed, then of head bereft,
Quickly disappeared; still a man was left,
Whose head, too, came off, and fell to the ground;
Yet underneath another man was found
Who still may live. Here the trial ended,
The prize was won for which they contended.

M. C. WOODFORD.

27.—A BUSINESS TRANSACTION.

A drover bought a lot of cattle for \$175, paid \$20 down and agreed to take them away by a certain time or to pay \$1 per day for their keeping after that date. He came on the appointed day, but said he could not conveniently take the cattle then, and if the farmer thought he could sell them to some one else for more than \$175 he might do so and keep half the profit. The farmer agreed, and at the end of twenty days succeeded in selling them for \$210. How much should he pay the drover?

J. W. HARKNESS.

28.—A NUMERICAL ENIGMA.

In 1 to 6 the tale appears
Of saints who lived in by-gone years;
9, 7, 8, 6, the place will show
Where cattle come and milkmaids go;
While 1 to 9 describes such lore
As romance wrought in days of yore.

The Wise Hen.

[Written for the Rural Press by MINNIE W. EDWARDS.]

"Crau-k, crau-k, crau-k," said a little brown hen as she walked away from the flower-bed, where she had employed herself in scratching up some newly-planted verbenas. "I must hunt another place to lay in, and it really is becoming quite a difficult matter, for I've searched this garden over, but that miserable Long-legs generally finds my nest wherever I may hide it, and lay out of this place I never will, though they do 'shoo' me out every day!"

"At any rate, I manage to lead them a dance, and once I did surprise them by bringing out a brood of the finest chicks that ever broke shell; but that's past and gone, so it's no longer any use brooding over it. I've laid in the potato-bag, in the clothes-pin's box, in an old hat I found in the storehouse, on the top shelf, and the egg rolled off and broke before those big stupid ones could find it, and in the branches of that big oak, but somehow they always find me out, and I declare it's too provoking, and I don't know what I shall do!" and the little hen wound up with a meditative "crau-k, crau-k."

Sir Game at this moment happened along, his brilliant plumage shining, his cold sharp eyes glistening and his whole bearing as proud as became one of his royal race, and perceiving the little hen was in some trouble, very condescendingly offered his assistance.

"Ah! pray allow me to assist you, Madam Brown. I am quite confident of my ability to do so," and upon the little hen's explanation of her troubles, exclaimed: "Can't find a nest! how absurd! Really it is quite surprising how helpless you hens can be! What would become of you were it not for our superior wisdom in guiding you? Why, I can find you a nest in no time," and forthwith he strode majestically off, meekly followed by the partially subdued hen.

After promenading around awhile, he called her to show what he considered a fine spot, "so retired."

"Yes, I thought so, too," said Henny Penny, "but Long Legs discovered that nest after I'd laid in it for two days."

"Oh, you've been there before, have you? Why didn't you say so?" growled Sir Game, while the hen mumbled something about not knowing, and when she saw him guiding her to another old nest, hastened to say she'd been there, too, to which remark his majesty deigned no reply, but walked quickly by, as though he'd no idea of going there; and before she had time to check him, up he flew in the veritable tree in whose wide branches she'd laid eggs till they rolled over the edge.

"Please, sir, I've been there, too," meekly said she.

"Well, madam, can you tell me where you have not been? You deserve to be boiled! If you wish me to find you a nest, why are you always interfering? Just like an old hen!"

"Well, really, sir, there is no pleasing you, anyhow," replied the little brown hen, who was becoming very tired, consequently cross, and didn't like to be called old, either. "And you need trouble yourself no longer; I am fully able to take care of myself."

"Madam, when I undertake to do a thing I never rest till I accomplish it," replied Sir Knight, and his dignity sustained him as he flew from his perch.

"Ah! here we have it," said he, a few moments later. "Behind this board is just the spot. I'll go in and arrange matters for you." But he came out again, rather crestfallen, as the board only hid from view a lot of old iron scraps, and he had to acknowledge it thoroughly unsuitable, while Madam B. suppressed her feminine nature, and didn't say, "I told you so."

"Now," said Sir Game, "here is the nest for you."

"Do you think I'm a bantam, sir," indignantly from Mrs. Brown, "that I can squeeze myself into that little box? Well, I never! I'm quite insulted!"

"Well, really," began the game; but soon he spied the ash-tin, and, springing into that, commenced scratching energetically in his endeavor to fix a nest, but the dust flew into the little hen's eyes, (and you know no well-regulated hen likes that) while she became so vexed that Sir Game quickly came down and took her scolding quite meekly, for a wonder.

Next he led her to a barrel, which, upon investigation, proved to be full of sticks and stones, then into the corn-crib where she sharply informed him she'd laid before, and after a few more utterly unsuitable and ridiculous places, his whole appearance underwent a change, and a more crestfallen bird you could not find, though there was still an assumption of grandeur as he said in a severe tone to Madam Hen, "It really is most peculiar how little you hens appreciate the trouble I take in your behalf, and after all my labor and subservience to your feminine whims, your ingratitude is unbearable," and with a great effort, bristling up his feathers, he stalked off, the wise little hen telling him, at the top of her lungs, that of all conceited creatures he was certainly the worst, but that was all one could expect, and after all his boasting there was nothing accomplished, and "dear me," continued she, "here it is almost feeding-time, and my day's work unfinished; it's always the way

when these masculines step in with their 'superior wisdom.' Why, here is just the place, this lovely little box, under this vine. Strange, I never noticed it before, and such a sweet doorway, too; surely Long Legs won't discover me this time," and in she went contented; and after awhile, out she came with a "cackle, cackle, cackle," and in fact she cackled so much that you might have thought she'd laid forty eggs, with a separate rejoicing for each one, and no sooner had she turned the corner, well satisfied with herself and her sagacity, than Mr. Long Legs appeared with his basket, and going to the new box-nest he'd placed there that day, took out the wise little hen's egg, and he was contented, too, while Sir Game crowed louder than ever, well satisfied as usual with himself.

DOMESTIC ECONOMY

Rhoda Toast.

EDITORS PRESS:—I have introduced into the family of my friends where I am visiting "Rhoda Toast," and it has become so much in favor on the breakfast-table that Dr. D. has asked me to send it to you for "Domestic Economy."—MRS. C. F. M., Pomona.

Rhoda Toast.—Slice any good bread same as for table. Have your griddle hot; butter as for pancakes; dip each slice of the bread in cold water; lay on griddle; brown nicely each side; spread with butter; serve hot.

WHITE CAKE.—One cup of sugar, three eggs, half-cup butter, one cup milk, two teaspoonfuls of baking powder, flour to form a batter.

MUFFINS.—Take bread sponge and thin out with warm water; use three eggs to a quart of batter; set to rise, put into muffin rings and bake.

FRIED PUMPKIN.—Slice the pumpkin and boil until tender; remove from the fire and mash with a fork; add two eggs, and fry in butter until brown.

HEAD CHEESE.—Boil the pig's head until the bones drop off; chop fine, add six rolled crackers, salt, pepper and spices to taste; pack in a stone jar and serve cold.

CREAM CAKE.—Four cups of sifted flour, two teaspoonfuls of baking powder, three cups of white sugar, one cup of butter, one cup of sweet cream and five eggs; flavor with lemon.

CRANBERRY SAUCE.—Allow a quart of water to a quart of cranberries. Place on the stove and stew until the berries will mash with a spoon. Stir until all are crushed; add sugar, a pound for a quart, and more if it is desired to have it jelly.

TAPIoca JELLY.—One-half pint of tapioca, one quart of water, the juice and grated rind of a lemon. Soak the tapioca over night in water; sweeten and boil it for an hour in a farina kettle. When nearly done, stir in the lemon and pour it into molds. Serve with cream sweetened.

OMELETTE SQUFFLE.—Five eggs, a quarter of a pound of butter, four tablespoonfuls of sugar, one of flour. Mix well, add last the stiff froth of the whites of the eggs. Melt a piece of butter in a saucepan, pour in the mixture, and stir with a broad knife until done. Sprinkle with lemon juice and sugar, or serve with preserves.

APPLE CUSTARD.—Another way to prepare apples for dessert is to core, pare and grate them. For a quart of grated apples stir in a quarter of a pound of melted butter and half a pound of sugar. Beat the yolks and whites of eight eggs separately; stir in the whites the last thing, and bake like custard in a deep dish lined with puff paste.

PARKER-HOUSE ROLLS.—One teaspoonful salt, one quart sifted flour, half pint new milk, two tablespoonfuls butter, two tablespoonfuls white sugar, three tablespoonfuls good yeast. Let the milk come to a boil; when cool, stir in the flour with a spoon, it will just take up the milk; put in sugar, yeast and butter and set to rise. When light, make into a loaf with as little flour as possible; let rise about an hour; then roll out as thick as for cookies and cut with a cookie cutter; put a little butter in the middle and fold together; put five or six across the tin.

SPICED BEEF.—Take from four to six pounds of beef, wash and cut off any part of the skin which is not sweet and clean, pick off all fine fragments of bone, and cut meat into several pieces; cover with boiling water, skim carefully as it boils, and then simmer until the meat falls to pieces and the liquor is reduced to half a pint. Remove the meat, season the liquor highly with salt, pepper, sage and thyme; add it to the meat, and mix with a fork till the meat is all broken. Pack in a brick-loaf pan, and when cold cut in slices.

CHOCOLATE PIE.—One cup of milk, three eggs, two-thirds of a cup of granulated sugar; two heaping tablespoonfuls of grated chocolate, a pinch of salt, and vanilla extract enough to flavor. Mix the chocolate in two tablespoonfuls of milk. Stir in the cup of milk, and scald. Beat one whole egg and the yolks of two with the cup of sugar. Pour the hot milk on to the egg and sugar, stirring while pouring it on. Bake in a deep pie-plate, with one crust. When done, beat the whites of the two eggs used in the pie to a stiff froth. Add two tablespoonfuls of pulverized sugar; spread over the top of the pie and return to oven until slightly browned.

The Week.

Settled weather seems to have been ushered in by the earthquake of Sunday morning. The shake is reported by the experts to have been the most notable since the memorable one of 1868, and their measuring machines indicate that the displacement was such that if the movement had not been so gradual there would have been in all probability much injury done. It is fortunate, then, that in earthquakes, as in other affairs, California is not so fast as formerly.

Growing crops of all kinds have progressed favorably, and a good output on the whole from field, orchard and vineyard is promised. Business is dropping into its midsummer quiet. The school commencement has set in, and for a month to come there will be activity in the tailoring and dressmaking industries, the air will be full of eloquence and music and another tale of graduates will be out in the world.

On Thursday of next week the ceremonies of Decoration Day will be observed in town and country. In San Francisco there will be a full parade of National and State troops and Veter-

ans' organizations, and fitting exercises in Metropolitan hall and at the cemeteries. The occasion should commend itself to all patriotic hearts.

The Scale-Eaters.

In our last issue Mrs. Carr gave a very interesting account of her conversion to belief in the imported Australian scale-eaters because of the deeds of the new ladybird, *Vedolia cardinalis*, to which allusion was made in our columns some weeks ago. Reports from Los Angeles county, where the chief part of the ladybirds are now domiciled, are abundant, and, as might be expected, some controversy is being engendered as to whether insecticides should be laid aside and trust be placed in the natural foe of the icerya. It is a proper subject for debate, in order that as much light as possible may be brought to bear upon the issue. But after all the choice must be made by the individual according to the conditions prevailing in his case. In view of the discussions concerning the efficacy of the scale-destroyer, the rapidity of its multiplication, etc., we are very glad to have from Mr. D. W. Coquillett a carefully prepared statement of the introduction and progress of the insect up to this time, as follows:

The first consignment of these ladybugs was received November 30th and numbered 28 living specimens of larvae, pupae and beetles; the second consignment reached me December 29th and contained 45 specimens in their different stages, and the third consignment of 56 specimens was received January 24th, making in all 129 ladybugs, which were placed under one of the tents at Mr. Wolfskill's. From the very start these ladybugs made themselves perfectly at home, and the havoc they made among the iceryas was surprising. By the latter part of April they had increased to such an extent that it was deemed advisable to send out colonies to different localities in the State, and up to date over 4000 specimens have been sent to various parties who have applied for them, while there are fully 2000 specimens still remaining on the trees at Mr. Wolfskill's. These 6000 individuals are the progeny of the original 129 insects referred to above, which will give some idea of the rapidity with which these insects breed. Several of the orange trees at Mr. Wolfskill's have been almost entirely cleared of the iceryas by these ladybugs, and on the other trees their numbers are becoming rapidly lessened through the persistent attacks of their merciless foe.

Besides the 129 ladybugs referred to above, I also received two later consignments. One of these arrived February 21st, and consisted of 35 specimens, which were colonized on an orange tree belonging to Colonel J. R. Dobbins, in the San Gabriel valley. A much larger consignment, containing about 350 ladybugs in their different stages, was received March 20th; some of these were also colonized at Colonel Dobbins, while the remainder were placed on orange trees belonging to A. Scott Chapman, in the San Gabriel valley. Altogether, about 514 of these ladybugs have been received from Australia.

We have received several applications for these insects, which we have forwarded to Mr. Koebel of Alameda. It seems that at present the demand for these insects exceeds the supply, but if they continue to multiply as above, there will soon be enough to reach all icerya colonies in the State.

It seems to be a good year for predaceous insects. Our Calaveras correspondent, Mr. Schaeffle, recently sent us a quince twig infested with an aspidiotus, and on examination we found that a large number of the scales had been destroyed, not by internal parasite but by the attack of an outside feeder. The parasitized scale has a neat round hole through which the parasite emerges when its larval course is run. The invaded scale has its dome irregularly torn open or eaten into. Any one can discern this difference in the case of the hard-shell scales by the use of the microscope.

The old favorite, the red-spotted black ladybird (*Chilocorus bivulvatus*) is continuing his work commendably. On a mountain-ash tree on the University grounds, which has been for several years inhabited by a colony of *aspidiotus nerii*, the *chilocorus* began about three years ago and has continued until now the scale is scarce and the *chilocorus* larvae are collected in bunches. This insect is probably a native, and there are many more native scale-destroyers which are now getting in their work.

The outlook is favorable for the balance of nature being restored in our favor, and yet we are not prepared to advise any one to fold his hands and wait. If any one should so conclude after looking the field all over, he must do it on his own responsibility, and have all the glory or all the blame for himself.

Fruit for the East.

The summer campaign in California fruit for Eastern consumers is opening briskly. The California Fruit Union has gone into summer quarters in Sacramento, and a rival organization to be known as the Golden Gate Fruit Association has also equipped itself for active work. The prospect is that there will be much more fruit sent East this summer than ever before, and so long as it is well distributed it will prove a grand thing for California growers' interests.

The Golden Gate Fruit Association appears to be created on the basis of a combination of interests of the Earl Fruit Company with those growers and shippers who were displeased with the management of the Fruit Union last year and manifested that displeasure at the annual meeting in January last. A dispatch from Sacramento, where the meeting for organization was held on Monday of this week, gives the following sketch of the methods to be pursued by the new organization:

The object of the association is to market the fruit of its members in the East at the lowest possible cost. Shippers may name the point to which fruit shall be shipped, and also the consignee. The only restriction is that when the fruit is sold by auction it shall be by auctioneers named by the association. Any grower or shipper may become a member by subscribing to the agreement and paying \$5. The association has no capital stock, and the small shipper has the same advantage as the largest. The commission charges will amount to but five per cent, instead of ten, as in the California Fruit Union. Transactions will be had direct with auctioneers, and no agents will be employed at Chicago, New York or Boston, contrary to the practice of the Fruit Union. When more than the ten carloads required to make up a special train are offered in one day, the surplus will be dispatched by passenger train, and the cost of freight by each train averaged, so that the expense will be the same per carload to all shippers.

This seems a free-for-all sort of a plan, and should work off a good deal of fruit. There need not necessarily be any conflict between the Union and the Golden Gate Association, providing the fruit is squarely auctioned on both sides. There may be a disposition to rule or ruin in Chicago, but we do not suppose California shippers will care to have much of that kind of fun with their property, and if an agent or auctioneer should attempt to crush his rival's business, let later shipments go to the opposition. The arrangements of the new association open a way for escape from any game, should any be attempted. In this case competition may be the safety in the trade, providing there is a disposition to make things too lively to suit the producers or purchasing shippers.

At Chicago there will naturally be an active rivalry and a strife for the trade. Porter Brothers, who have the local agency, will sell through their own auction-house. Messrs. Lewis & Adams and the Golden Gate Association will sell through R. M. Montgomery & Co., whose disaffection with Porter Brothers was quite freely commented upon last January. On the whole, much life may be looked for in this year's trade.

The Bench Show

At the Mechanics' Pavilion is reported, as we go to press Wednesday afternoon, to have opened very auspiciously. The collection of dogs is pronounced the finest ever seen in California, ranging from Great Danes and St. Bernards down to toy terriers. The hounds and "bird-dogs" are especially mentioned, and the display of poultry and pigeons is also very creditable. We hope to see them for ourselves before these words reach Rural readers.

SMART FOR ITS SIZE.—The town of Quitman, Brooks county, Ga., has an estimated population of 1650; yet it is reported that there were shipped thence last year 1000 carloads of watermelons, 50,000 crates of pears, and many thousand crates of strawberries, peaches, and early vegetables.

AUSTRALIAN TREES FOR THE PARK.—The State Board of Forestry has lately presented the Commissioners of the Golden Gate Park with some thousands of rare and valuable Australian trees. Many of the species are remarkable for beauty as well as utility.

THE SALINAS CREAMERY INCORPORATES.—Articles of incorporation of the Salinas City Creamery and Cold Storage Co. were filed at Sacramento, May 21st.

Our Rivers.

(Continued from page 497.)

which are now radiant with the beauty of myriad wild flowers and redolent of their perfume. The landscape is as pretty and varied as the most *blase* tourist could insist upon.

The lower engraving shows another phase of our river scenery, where the stream has rocks and not meadow loams to contend with. Here, too, there is certainly no prophecy of the dull stream of the lowlands of which these waters will ere long form a part, but a restless, swift current pouring down from mountain sources, seeking quick exit from its chilly dawn to its midday murmurs in the vales below.

We trust these views will not only be of interest to our friends who will go northward through such scenes as these, but will remind many others that the season is at hand when tasks should be laid aside and the summer vacation amid unwonted scenes should be enjoyed. Follow almost any stream toward its source, and you will find picturesque beauty to admire. If time and money allow, take a large stream and follow it into the heart of the Sierra; if not, then hitch up your team and follow the shorter runs to the canyons of the Coast Range; if not even this, pack a lunch-basket and start on foot along the creek that crosses your farm into the little hills of its birth. In all of these you will find scenes similar in kind but different in degree; in all you will gain diversion and rest and recreation, of which this generation has far too little.

The State Flower Show.

The exhibition by the State Floral Society in Irving hall, San Francisco, last week, was a notable success. The arrangements for the display were elaborate and complete. The decorative features were well looked to, the music was excellent, and the impression made upon visitors was as good as could be desired.

As was promised in the announcements, the flowers were shown singly, and so far as possible, were plainly labeled. The cut-flower stands were made to slope gently toward the aisles, the bottles were buried out of sight, and one saw only the bud or bloom resting upon a bed of moss, and its characteristics could thus be studied to advantage.

The display was very creditable to exhibitors. Not only were very large collections shown, but the specimens were for the most part well grown, and in some cases notably so. It was gratifying to see what careful study was made of the plants and flowers. The display was a study to most who attended, and the free use of pencils and notebooks showed that people were gaining information which they appreciated. The exhibitors were obliging and attentive, and added much to the attainment of the purposes of the exhibition by their answers to inquiries and comments upon the material exhibited.

On the whole, the affair was excellent, and will have a good effect both upon the public and the society. The patronage was hardly what it should have been, but the record made in the initial effort will, no doubt, win wider patronage for the next display. We are unable at this time to specify the exhibits, or to name the premiums awarded. Such a statement we will endeavor to prepare for next week's Rural.

QUARANTINE GUARDIANS.—The president of the State Board of Horticulture, Ellwood Cooper, has appointed the following quarantine guardians: S. N. Stanahan, Geo. Beals and John Rodda, for Nevada county; E. G. Carr, S. P. Hall, W. C. Porcino, W. W. Phelps, for the district of Riverside; C. H. Lathrop, for the district of Livonia, San Bernardino county; Joseph Hall, Wilbur S. Allen, W. H. Robinson, for San Joaquin county.

CALIFORNIA CHERRIES AT CHICAGO.—Richard M. Montgomery & Co. sold at auction in Chicago, May 13th, for account of Delafield, McGovern & Co. and the Earl Fruit Co., 53 boxes Black Tartarian cherries for 23½ and 32½ cents per pound. The cherries were in fair condition. This was the first auction sale for the season.

The Los Angeles City Council has this week passed an ordinance for the immediate building of an outfall sewer to the ocean at a cost of over \$1,000,000.

A Thriving Mountain Town.

Many readers of the Rural will be pleased to see the photo-facsimile which we give herewith of the town of Sonora—from a recent photograph. Sonora is one of the old towns of California and her former residents are in all parts of the State pursuing various vocations. All these and their children and children's children will be glad to look at the picture and hear again the stories of the early days. But though Sonora has sent out hosts of people to aid in the development of other parts of the State, the town has continued on a prosperous course and keeps herself abreast of the general progress of the State. The visitor at the present day will find fine residences, large stores, hotels, schools and churches, and a wide-awake and progressive population ever ready to welcome him

Mt. Dana, 13,227 feet high, with Castle peak, a little further north, and nearly as high. A remarkable feature in the topography and geology of this county is the basaltic mesa, known as Table mountain, which, running near and parallel with its northwestern boundary, extends for a distance of nearly 30 miles. This formation consists of a lava flow, which, having filled the channel of an ancient river, stands now, through the degradation of the adjacent country, an isolated mass, its top nearly level and its sides nearly perpendicular, the former more than 2000 feet above the bed of the Stanislaus which breaks through it.

Flowing through this county in a westerly direction is the Tuolumne river with its three forks, also the three forks of the Stanislaus, all large streams, the main Stanislaus and its north fork forming in part the boundary between this

WOOL-COTTON.—A vegetable product that can scarcely be distinguished from wool, it is said, has been found in Arkansas. A gentleman named B. F. O'Kelly, who arrived in this city from Jefferson county, Ark., has recently presented to the Board of Trade of Fresno a sample of what he terms "wool-cotton," grown in the State and county named above. The Fresno *Expositor* recently said that the seed was obtained from the Patent Office at Washington, and during the past two years planters have been experimenting very successfully with it. It has the appearance of wool, and the fiber would be taken for wool by those not acquainted with its origin. When woven, the texture bears every resemblance of wool cloth and wears a gloss that even exceeds woolen goods. Mr. O'Kelly is largely interested as a planter in Arkansas, and although his wool-

Commission steamer Albatross. Twelve well-known San Diegans have been recruited for the voyage, which will take place in a steam-schooner. Several Gloucester fishermen will accompany the party, which will be further equipped with one of the Albatross charts. Black and blue cod are reported on the banks in vast quantities.

FELLING TREES BY ELECTRICITY.—Hitherto machines for felling trees, says the *London Times*, have been driven by steam-power, but this is sometimes inconvenient, and electric-power has recently been adopted in the Galician forests. Usually in such machines the trunk is sawn, but in this case it is drilled. When the wood is of a soft nature, the drill has a sweeping motion, and cuts into the trunk by means of cutting edges on its sides. The drill is actu-

SONORA, THE COUNTY SEAT OF TUOLUMNE COUNTY.

and afford every opportunity to gain all the knowledge desired of the country's resources, which are great. In the Rural of April 20th, one of our correspondents gave an interesting account of the horticultural interests of Tuolumne county. Though the mining industry is still predominant, the development of the fruit and other agricultural industries will advance rapidly as soon as adequate outlet for the products can be had.

Tuolumne county is bounded on the northwest by Calaveras; on the northeast by Alpine and Mono; on the south by Mariposa, and on the southwest by Stanislaus. The following paragraph concerning the county is taken from the last report of the State Mineralogist:

Like most of the counties lying along the main gold belt, Tuolumne covers a portion of the foothills and the westerly slope of the Sierra Nevada, giving to the whole county a rugged surface, and to the eastern portion of it a considerable altitude. In the Sierra Nevada, on the confines of this and Mono county, stands

and Calaveras county. As these several rivers have many confluent, some of them considerable streams, this becomes a well-watered county. About the sources of the Tuolumne river are many small lakes, some very deep, and all remarkable for the purity of their water. As Tuolumne is well supplied with water, so is it also abundantly timbered, the more elevated portions of it being covered with pine, fir, spruce and cedar, and the lowest portions with scrub pine and oak. While gold mining continues to be in the county the leading industry, farming, viticulture, fruit-growing, lumbering and stock-raising are here important and growing pursuits, many of the inhabitants dividing their time between these vocations and mining.

AMERICA publishes more papers than all the rest of the world combined. Last year its 17,107 periodicals printed the enormous number of 2,959,566,500 copies—enough to supply every soul on earth with two newspapers.

cotton is an experiment at present, he is firmly of the opinion that the fabric made from it will be a great favorite upon the market, and the demand constantly increase. The specimens of the crude wool-cotton can be seen at the Board of Trade rooms by applying to Secretary Smith. Some of the experimental cotton-growers of Fresno county examined it yesterday, and pronounced it a phenomenon in cotton growth.

BULL-DOGS AS FIRE PREVENTIVES.—It is reported that the Standard Oil Co. has placed an order in Philadelphia for 200 bull-dogs, which will be used to guard the company's tanks in the Ohio field against tramps. Numerous fires have been caused by sparks from the pipes of tramps, and it is thought that the bull-dogs will keep them away.

CODFISH ON THE COAST OF SAN DIEGO.—It is said that D. Schuyler of San Diego City has about organized a party to explore the codfish-banks reported off that coast by the Fish

ated by an electric motor mounted on a carriage, which is brought up close to the tree and shackled to it. The motor is capable of turning around its vertical axis, and the drill is geared to it in such a manner that it can turn through an arc of a circle and make a sweeping cut into the trunk. The first cut made, the drill is advanced a few inches, and another section of wood removed in the same way until the trunk is half severed. It is then clamped to keep the cut from closing, and the operation continued until it would be unsafe to go on. The remainder is finished by a hand-saw or an ax. The current is conveyed to the motor by insulated leads brought through the forest from a generator placed in some convenient site.

A PALM-LOG CABIN.—The San Diego *Sun* says that Ex-Gov. Eli Murray, who has a ranch in the "free zone" ten miles below the line, is going to build himself a house there of the logs of the fan palm that grows to a height of from 30 to 40 feet in the canyons.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

A GREAT ROUND UP.—Livermore Herald, May 16: The principal cattle-owners in the Livermore stock district began on the 6th of this month a grand round up, which is yet in full progress, and will scarcely be ended before next week. Twenty men and 40 horses are engaged in the work, and in order to evade the necessity of feeding an army of camp-followers (some 70 in number at the last round up two years ago) the preparations were made with the greatest secrecy. The cattlemen present or represented were Hubbard, Maxey, Hayes, Roga, Green, Bronson and Clark, each with their vaqueros, and a saddle train for blankets and provisions. The work was begun at Mt. Hamilton, carried eastward to the San Joaquin plains, and as far to the south as San Antonio valley. The worst canyons, including even the almost impenetrable Hospital, were explored, and hundreds of head of cattle gathered up. Many were brought in which their owners had not seen for two years.

Butte.

CHICO CHERRIES.—Enterprise, May 20: Fifteen thousand two hundred and ninety-three pounds of cherries were shipped by the Rancho Chico Fruit Co. from the 8th to the 15th—one week. Last Friday there were 329 boxes shipped, and on Saturday 427 boxes.

Colusa.

PEARS IN INDIAN VALLEY.—Colusa Sun: Mr. Hencke of Indian valley has a few small Bartlett pear trees, and says he has sold a remarkable amount of fruit to the tree. He has been so successful that he will next year plant ten acres or more, and his neighbor, Mr. C. Boardman, will plant as much. Indian valley lies low and is subject to frost, but it seems to be no detriment to the pear. Neither is it to apples. We are finding out slowly just what kind of fruit is adapted to each section of the country. Each little section has its peculiarity, and these peculiarities ought to be studied.

Contra Costa.

SILKWORMS.—Antioch Ledger, May 18: Mrs. Abbott Sellers has a fine lot of silkworms this season. Most of them have already accomplished the object of their being, and only a few still require to be carefully watched and fed. It is exceedingly interesting to watch the rapid development of the spinners from the tiny seedlike egg just informed with life to the moment when the fullfed embryo weaves its silken shroud. Miss Mia Nason last season secured two or three moths and preserved the eggs of one, and has now 428 silkworms almost full grown. Several other ladies are raising silkworms in town.

AGRICULTURAL ASSOCIATION.—Martinez Item, May 18: The meeting of citizens of this county, held at Bennett's hall this afternoon, for the purpose of organizing District Agricultural Association, No. 23, with its place of business at Concord, was a small one. Hon. Henry Hook was selected chairman and made a brief speech. For secretary, G. P. Loucks put in nomination S. Farjeon, who was unanimously elected. The adoption of the articles of incorporation was moved and carried. The election of directors was the next order of business, and the following were submitted by the chairman: R. G. Dean of Brentwood, J. H. Tennent of San Pablo, H. Raap of Martinez, G. Durham of Concord, G. P. Loucks of Pacheco, Farmer Sanford of Walnut Creek, D. M. Sherburne of Danville, and R. C. Terry of Clayton. They were unanimously elected. Several brief addresses were made in course of the meeting.

MORE CHICKENS.—Gazette: E. Moeler, who purchased the property on the hill owned by Prof. Langer, has established a poultry yard for raising all fine breeds of chickens. He has several incubators and brooders of improved pattern, and at his place can be seen many fine fowls. Martinez has now two first-class poultry yards.

Fresno.

TAKE CARE OF YOUR POISON!—The Sanger Herald says: A pet horse belonging to Dr. M. C. Hoag's family died last week from eating wheat which had been poisoned for squirrels. The doctor discovered the animal at the feast, it having got at the wheat while roaming loose about the barn. Believing that it would die from the effects of the poison, he drove the horse out of the barn, and when but a short distance away it keeled over. Another valuable horse which Dr. Hoag had recently purchased also died from the same cause.

FIELD FIRE.—Expositor, May 15: A very disastrous fire occurred yesterday morning, a large tract of wheat being destroyed, probably from the sparks of a locomotive. There are 400 acres in the tract, which is about four miles north of Fresno. The grain belongs to Messrs. Woodward, Vogle & Hall. At noon to-day Mr. Hall had not ascertained how many acres were swept over by the flames. He stated that should it all be destroyed the loss would amount to \$4500 or \$4800; no insurance. The grain was planted early in summer-fallow, and it would seem hardly possible that it would be dry enough to burn at this time; nevertheless the owners fear it is a total loss.

Humboldt.

AGRICULTURAL ASSOCIATION.—Rohnerville Herald: The annual meeting of the Directors

of the Ninth District Agricultural Association was held at McNeill's hall, Rohnerville, on the 11th inst. G. C. Barber was re-elected president, Geo. Underwood secretary, and L. Feigenbaum treasurer. A speed program for the coming fair, which will hold for five days, was partially arranged. Important improvements will be made at the pavilion grounds, including a new grand stand.

Kern.

GROWING GOBBLEERS.—Bakersfield Echo, May 16: Clark & Spright have a turkey ranch out in the weedpatch. For the last three months they have had 186 turkeys there and have fed them no grain whatever. The birds have done well on alfalfa, grasshoppers and a weed known as "turkey mulla." They have 900 eggs now hatching and expect to set 1000 more. They propose to put a stop to the importation of holiday turkeys from Kansas so far as they can.

Lassen.

ALFALFA.—Susanville Advocate, May 16: Otto Ranker, a young man who is excessive in his praises of alfalfa, informs us that he has this year secured a good "stand," by irrigating only in the spring, when others are not using the water. He got the idea from an article in the Advocate some time ago, relating the experience of lower country ranchers in winter and spring irrigating, and resolved to try the method, with the result that his alfalfa has a good start.

Los Angeles.

VOLUNTEER SCALE DESTROYERS.—Telegrams from Pasadena state that thousands of red ladybugs, not the Australian species, have come voluntarily into that vicinity within the last few days, eating up the dreaded cottony cushion scale on the citrus trees. The progress of their work will be watched with great interest by orange-growers.

GRAIN ABLAZE.—Los Angeles, May 15: Passengers arriving by this evening's train from Santa Monica state that when they passed The Palms, six miles this side of Santa Monica, a furious fire was raging in the wheat-fields of the Machado ranch. It broke out in a 2000-acre tract, and though all the men in the vicinity were gathered to fight the flames, they could not be checked, and the entire tract was probably burned over, entailing a loss of many thousand dollars.

Merced.

EDITORS PRESS.—Some of the Merced county farmers have been Rip Van Winkles. For 25 years they did not plant a tree nor a shrub—were going to leave when they made a good stake and "go home," as they called it. Now they have decided that Merced county is "home," and they have begun to plant and make homes of their cow and sheep pastures.... The rain from the 9th to the 12th of this month was grand and there will be good crops all over the county.—Mrs E. S. E., Merced, May 18th.

RYE.—Express: Merced county will this season produce the largest and best crop of rye in the San Joaquin valley. For miles and miles on the sand north and west of Merced there are to be seen great fields of this grain waving in the breeze. The land on which it is raised only has to be seeded every four years, and it is therefore said to be a paying crop. The grain is now ripe.

Modoc.

FROM NATURAL RESERVOIRS.—Alturas Independent, May 16: A few weeks ago we mentioned that G. E. Williams and Wm. Cantrall were preparing to tap Clear lake, and that Messrs. Flournoy and Duke had tapped Blue lake to get more water for irrigating purposes. Mr. Williams was in town last Friday and informed us that both schemes were a success, and the farmers up that way are highly elated. Where the creek flows from Clear lake there is a ledge of solid rock extending across the entire channel of the creek, which, by the way, is a narrow defile in the mountains, rocky bluffs rising on either side. They went to work and cut out about a foot of this ledge or riffle, thus deepening the channel of the creek one foot. The result was that a large volume of water came down into the South fork, and all the farmers, who prior to that time had little or no water, found that they had plenty. The water in the lake was lowered about a foot, when the storms came on, and the outlet was closed to allow the lake to refill. Mr. Williams says they intend to reduce the riffle to the extent of three feet, or to draw so much water from the lake as occasion requires. He further says that this fall he and Mr. Cantrall will put a dam across the outlet of the lake, so as to raise the lake eight feet during the time that water is not needed, and that by this means there will not again be a scarcity of water in South fork. Mr. W. says the whole thing, putting in dam and all, will not cost to exceed \$150.

Sacramento.

RECLAMATION ON GRAND ISLAND.—Record-Union, May 15: The farmers along Old river, on Grand island, have already commenced levee-building, and the work seems to be such as to warrant the reclamation to be of a permanent character. It is certain that it will be such on Old river, and if the work on Steamboat slough is of the like solid nature, it will make Grand island the garden spot of California, and land will jump up in value to hundreds of dollars per acre. Two dredgers are working on the slough side. The breaks are closed.... The Phelps ranch, opposite Walnut Grove, which was sold by the Public Administrator recently to Howard Kercheval, is being cleared of wood, the levee is being overhauled and strengthened

and the place will all be planted with fruit trees.

"A BRAND-NEW BUG."—Record-Union, May 16: Fred A. Ebel, the well-known florist, says he has discovered an insect pest in this city which he thinks is an entirely new species. In front of the residence of A. A. Van Voorhies, at 14th and H streets, one of the corkelm trees on the edge of the walk is infected with a white scale. It is about as large as the black scale, looks something like the cottony cushion scale, but is quite distinct from either in structure and habits. Mr. Ebel, who is thoroughly acquainted with all kinds of insect pests, says this is a "brand-new bug." It covers the under side of all the upper limbs of the tree mentioned, and is found on many of the lower branches.... May 17: Pest Inspector Flynn announces that the scalebug reported by F. Ebel as a new-comer is in reality one of the pioneer variety, and rejoices in the name of *Aspidiotus rapae*.

San Bernardino.

AGRICULTURAL ASSOCIATION.—Ontario Record, May 15: The newly-appointed Board of Directors of the 28th Agricultural District (San Bernardino Co.) met on Thursday and organized by electing L. M. Holt, Pres.; J. C. Scott, Sec.; and the Farmers' Exchange bank, treasurer. It was ordered that the first annual fair of the association be held during the month of March, 1890; that the fairs held by this association shall include exhibitions of horses, cattle and other stock, agricultural, viticultural, horticultural, mechanical, manufacturing, mineral and domestic products of the district, with a view to the improvement of all the industries of the county. A committee of nine was appointed to receive proposals for a site for a pavilion and report the same, together with a plan for raising funds to build the same. Four members of the committee were to be appointed from the board, and five members from residents of the county. Following is the committee: Col. W. R. Tolles, I. N. Hoag, R. F. Cunningham, W. E. Collins, Judge J. L. Campbell, H. L. Drew, Fred T. Perris, M. B. Garner and Smith Haile. A committee of nine was also appointed to select a site for an agricultural park for stock exhibits, and to report a plan for raising funds to secure and improve the same. This committee was to consist of four members of the board and five other residents of the county. The committee stands as follows: E. Rosenthal, Geo. L. Joy, R. F. Cunningham, Dr. J. Jarvis, J. A. Cole, J. W. Waters Jr., Richard Gird, J. G. Bart and P. K. Klinefelter.

ORANGE SHIPMENTS.—Citrograph, May 18: On Saturday night last the Southern Pacific shipped out 46 carloads of oranges to different points, which brings the shipments to that date from Southern California to over 2000 carloads, and there are fully 200 more to go forward before the crop will have all been taken care of. Orange-growing is a business in this end of the State.

THE REDLANDS ORANGE GROVE AND WATER CO. perfected its organization this week by electing F. P. Morrison, Pres.; S. J. Hayes, V. P.; A. E. Sterling, Sec. and general manager; and the First National Bank, treasurer.

San Diego.

HAY SHIPPED NORTH.—San Diego Sun, May 14: One hundred tons of hay from Tom Daly's place in El Cajon valley are being loaded into the schooner Robert Searles for ballast. It is consigned to Chas. Hanson & Co. of S. F. for delivery at Tacoma, where the firm operates a lumber-mill. Hay is laid down at S. F. for \$10 a ton, but the San Diego county product will cost that firm but slightly over \$3 a ton.

BEES VETO CULTIVATION.—A. Titus of the Tia Juana valley was going over his fig orchard with an Acme cultivator the other day, and drove the team against a huge swarm of bees that had settled on the limb of a tree. The bees at once swarmed all over the team and stung them in many places, notwithstanding which the animals remained quiet and obedient to the rein. He drove out hurriedly and succeeded in brushing the bees off and getting the horses in the stable. Mr. Titus was not stung himself. In the afternoon he hitched up again to finish the work, and almost the first round ran into another swarm, causing him to retire precipitately from the orchard.

SUGAR BEETS.—Great interest is manifested among the Tia Juana farmers in the proposed sugarie of the Spreckels Brothers. Wallace Dickinson is taking pains to distribute samples of sugar-beet seeds for trial, and several farmers are already supplied.

ENGLISH BROAD BEANS.—Yesterday Gen. Eli Murray exhibited at his office a number of fine beans of the English Broad variety, grown upon his ranch in the Valley of the Palms. The pods are five or six inches long, three-fourths of an inch broad and contain a large, flat bean very much like the American butter bean. Gen. Murray says there is scarcely any limit to the number of beans that can be raised in that section.

EL CAJON STATISTICS.—Cor. Union, May 13: Deputy Assessor J. Rea has just completed the assessment of property in El Cajon valley, and the list is as follows: Lemon trees, 631; orange, 12,268; olive, 11,452; apple, 4139; pear, 8604; peach, 13,297; quince, 205; fig, 3753; plum and prune, 6106; cherry, 135; apricot, 6089; nectarine, 761, making a grand total of 68,440 trees, not including English walnuts, loquats, guavas and other varieties that have

been quite extensively planted. Mr. Rea reports the present season's hay and grain crop at 2449 acres, and the acreage in vineyards at 3056. Of course, not all these trees and vines are in bearing, but they will be in two or three years. There will then be plenty of fruit to justify the establishment of an extensive cannery in the valley, taking the item of peaches alone. And let me say that the El Cajon peach is not surpassed in size and quality by any grown.

San Luis Obispo.

FOR ARTESIAN WATER.—S. L. O. Tribune, May 17: E. H. Crawford is boring a deep well on his ranch near Steele's station, in the confident hope of getting artesian water. He has already bored 200 feet and has 180 feet of water in the well. As there are no other similar wells in that vicinity, the venture is in the nature of an experiment; but he is quite sure of getting a good strong flow at a depth of 300 feet. Mr. Crawford is prepared, however, to go down 900 feet if necessary. Should the venture prove successful, Messrs. Maxwell, Roselip, Steele and others will follow his example.

Santa Barbara.

TREES AND VINES.—The Santa Maria Times of May 11th prints a list, prepared by Chas. Froude, of those who have set out fruit trees in that valley during the past two seasons, with the number of trees planted by each person or firm. This list, which does not include family orchards, but only those put out for profit, foots up over 92,000 trees, citrus and deciduous, besides more than 68,000 vines.

Santa Clara.

CHERRIES GOING EASTWARD.—San Jose Mercury, May 20: Under the caption, "Cherries by the Carload," the Union of yesterday says: "The first carload of fruit to be sent East from Sacramento this season was yesterday shipped by the California Fruit Union to Chicago. It was a shipment of cherries and consisted of 2000 boxes." The shipment was made by J. Z. Anderson of this city through the California Fruit Union, and one-half the shipment was procured from orchards in the immediate vicinity of San Jose, and the remainder from San Leandro. Not a single box of the 2000 was grown in Sacramento county. If the weather continues favorable Mr. Anderson will this week ship four carloads (8000 boxes) of cherries to Eastern points. Mr. Anderson says the cherry crop of this county is in fine condition, very little damage having been done by the rains, as the fruit at that time was not far enough advanced to be easily injured.

Santa Cruz.

ROSE FAIR.—Watsonville Pajaronian, May 9: The Rose Fair, given by the ladies of All Saints' Episcopal church in this place, opened on Thursday evening last, closing Saturday night in a halo of splendor. The vast auditorium of Ford's Opera-house was one sea of budding, blooming, variegated and fragrant flowers. The floral goddess sat a queen indeed in tropical robes of regal beauty and sweetness. But to undertake to itemize or individualize would occupy space far beyond our limits.

HANDLING THE BEETS.—We have heard of one beet-grower near Watsonville who has contracted for the thinning, cultivation and digging of his beet crop at \$1.50 per ton, and who is to pay 50 cents per ton for hauling. He has contracted at very favorable figures.

GRAIN LICE.—Prior to the storm the aphid arena, or grain louse, had made its appearance in nearly every field of late-sown barley in Pajaro valley. The louse was doing considerable damage, and but for the rain would have nearly ruined the barley crop.

Sierra.

SAINFROID.—Gazette & Stockman, May 16: G. E. Woods, the Sierra valley farmer, sowed a pound of espersette last year on a piece of foothill land of a rotten granite formation, dry as a powder-horn, with splendid success. It is now eight inches high and very rank. Mr. Woods is of opinion that it will thrive in the poorest of dry land.

Stanislaus.

PROPOSED CANAL.—Modesto, May 16: P. Y. Baker, engineer of the Modesto irrigation district, submitted a report of the survey to the Board of Directors this afternoon, under the provisions of the amended Wright Irrigation Law. The district comprises 80,000 acres, and its estimated cost is \$241,000. The point of diversion is at Thompson's ferry, on the Tuolumne river. The canal will be 50 feet wide on the bottom and 5½ feet deep, carrying 430 inches of water per second. The estimate is considered reasonable, and Baker offers to construct the canal for the above figures. The canal will be 34 miles long.

POISONING SQUIRRELS.—Modesto Herald, May 16: Kill the squirrels! Thousands of young ones, called out by these warm spring days, are producing sad havoc with our grain fields. A half-grown squirrel eats nearly double the amount that an old one does, and a hill of them in a few weeks' time will cut down every stalk within a circle 50 yards across. Young squirrels will eat the first thing they come to when they come out of their holes in the morning, and poisoned wheat scattered liberally around will kill every one. Besides, they prefer the taste of dry grain to the green. Four years ago the writer experimented on his brother's farm west of Turlock with the "Dead Shot Squirrel Poison." It was during May, and young squirrels were very numerous and exceedingly destructive. With a horse we went

over a half-section one forenoon, going only to the knolls where the squirrels had been at work, and scattered the poisoned wheat plentifully. Toward evening we went back over the field and found nearly 200 dead squirrels. Most of these were young ones. We found as high as 15 dead on a single hill. Every kernel of grain had been eaten, although the growing grain "was in the dough," which is said to be the state when squirrels like it the best. Farmers will find it much easier to poison squirrels now than at any other time of the year, and no work that they may do will benefit them as much as that of a few days employed in putting out poisoned wheat.

Ventura.

CITRUS SUCCESSES.—Hueneme *Herald*, May 16: N. W. Blanchard of Santa Paula made us a call the other day. He states that his orange and lemon orchards are doing better than ever before. His shipments of oranges for the season will foot up over 20 carloads, and he estimates that during the present year he will sell 3000 boxes of lemons. Mr. Blanchard spent many years in bringing his orchards into bearing, and it is gratifying to know that his labors promise to be so well rewarded.

Yolo.

SUGAR BEETS.—The Woodland *Democrat* states that samples of beets grown from seed furnished by Claus Spreckels to C. F. Reed, and planted by the latter near Knight's Landing on the ranch which he subsequently sold to Senator Fair, exceeded in sugar all other samples from the different parts of the State, the sugar tests being an average of 17½ per cent sugar for the whole lot of 20 tests, and the highest test being 22 per cent. Senator Fair has had 10 or 12 separate patches planted on his farm, and about a dozen different farmers in a radius of five or six miles from the Landing have been supplied with seed which they have planted. Should the further tests confirm the previous ones, a sugar plant will be immediately erected at the Landing.

STRAWBERRIES AND GRAPES ON CACHE CREEK.—*Democrat*: We visited the strawberry-fields of Jerome Baker, and found 16 or 18 Japanese under the supervision of Mr. Martin busy as bees among the delicious berries. The extent of the field is about ten acres, and the men are picking from 1000 to 1500 pounds per day. The late rain has had no perceptible effect on the berries, and will doubtless make the second crop a splendid success. Messrs. Baker & Martin are getting rid of all varieties except the Triumph, which is a splendid red berry, sweet and solid, fit for transportation. . . . Mr. Dickinson, who has a 20-acre farm on the Pearl tract, showed us Muscatel vines from the cuttings of last year that had as many as a dozen bunches of grapes to the vine. In fact, there will be enough raisins on the vines for this, the second year, to well pay for the care of the place.

WELL WORTH SAVING.—Woodland *Mail*, May 18: Some weeks ago a fine blooded colt, the property of a rancher living near Woodland, ran against a barbed-wire fence and so injured its right fore shoulder that its life was despaired of. Going to Veterinary Surgeon DeFries, the rancher presented him with the colt with the understanding that he either cure it or ease its last days as much as possible. The surgeon accepted the animal, placed it under treatment, and to-day exhibits a colt worth \$300, and as sound as a hickory nut.

SHEEP DROWNED.—Some five miles below Knight's Landing, Wednesday, a band of 50 sheep belonging to a rancher stampeded and rushed into the river. Thirty-four valuable animals were lost and floated down stream.

Yuba.

MARYSVILLE MISCELLANY.—*Appeal*, May 17: Large quantities of the spring clip of wool have commenced to arrive. The price paid is about 20 cents. . . . The regular monthly meeting of the Sutter Horticultural Society was held yesterday afternoon, and the subject of "Summer Spraying" was discussed by the 15 or 20 members present. All were of the opinion that summer spraying of the orchards is advantageous, and that whale-oil soap and sulphide of soda is the best wash. . . . Upon invitation of Judge Garber, an *Appeal* reporter took a ride for several miles on the Feather river road last Sunday, and with him examined into the condition of the crops. Along the road on either side is considerable summer-fallow, and none of it seems to have been affected by the recent storm. Judge Garber has 113 acres south of the Rogers farm, which he thinks was positively benefited by the rain. All of the winter-sown is looking remarkably well. . . . Marysville oranges, which have been packed for nearly five months, were sold on the streets yesterday by two young men at 10 cents per dozen. The fruit was in a remarkably good state of preservation. . . . "All the talk about the hay crop in the foothills being ruined," said F. R. Lofton, yesterday, "is hosh. It's looking fine, and was benefited by the rain." This, of course, relates to the uncut crop.

NEVADA.

DROUTH AND CROPS.—*Silver State*, May 15: P. N. Marker, Water Commissioner for the Humboldt river and its tributaries, and ex-County Commissioner Thies of Lovelocks say that not enough rain has fallen this spring to lay the dust, and hundreds of acres of grain sown early in the year has not sprouted. The ground is perfectly dry, and as there is no

water to irrigate it and none falls from the clouds, the grain lies in the parched earth as sound as when it was sown months ago. Some farmers have planted potatoes down near the lake and in the bed of the river, with a prospect of raising good crops, as the ground is moist and likely to continue so. Some others are putting in pumps and windmills, with the hope of getting water enough to irrigate small vegetable patches to supply their families. The alfalfa looks fairly well, and the prospects for at least one crop are good. Generally three crops are produced in a season, the average product of a season ranging from three to five tons per acre. This year, however, farmers do not expect to harvest more than one crop, and that will not be up to the average.

OREGON.

CONDENSING MILK.—Portland *Oregonian*, May 17: C. L. Baker & Son, the "Oregon Condensed Milk Co.," have begun the manufacture of preserved and cream milk at the Stott farm, near Troutdale. They have nearly 800 acres of land and a factory with the necessary machinery, which employs eight men and uses the milk of 135 cows daily, about 1500 quarts, which is condensed into 500 quarts. Pure unskimmed milk, condensed at a low temperature by the evaporation of 80 of the 87 parts of water it contains and the removal of all impurities and animal flavors, yields an article having the appearance of cream, and hence it is called "cream milk."

NEW WOOL ARRIVING.—Wool of this season's clip is beginning to come in, and the market prospects are somewhat better. Captain George Pope & Co. have leased Columbia dock No. 2, which is 500x350 feet, and fitted it up as a wool-packing house, with two new presses and other machinery of the latest pattern, and have already there 50,000 pounds of this season's clip, from Grant and Gilliam counties and from the Kikikat. The wool from some sections this year is of superior quality, but from other sections it is very sandy and dirty. They have already received extensive orders, which seems to indicate that there will be a good demand for wool.

FRUIT FOR DISPLAY.—The Oregon Immigration Board have lately received ten cases of choice dried fruit, for which they are indebted to the thoughtfulness and generosity of the Board of Trade of Eugene City. The cases are covered with glass, and the apples, prunes, plums, etc., show to advantage.

THE FLOUR TRADE.—"Since the Idaho was put on the route to the Sound and British Columbia," said a dealer in flour yesterday, "Portland is regaining her flour trade in that country." "How did you lose it?" asked a reporter. "Well, the Northern Pacific raised the rates from Portland to Seattle to shut out Portland millers and let in mills along their lines, but they succeeded in letting in California flour, which could be brought from California cheaper than we could ship it under the rates charged. Then the O. R. & N. Co. put on the Idaho and the N. P. had to put the rates back to the old figure, and now we are working to get the trade back. The California flour is good, but not so good as that made from Willamette valley wheat, which is whiter and better, and we are going to have the trade, sure."

FLOCKS AND HERDS.—Lakeview *Cor. Reno Gazette*, May 10: It is estimated that there are at present nearly 250,000 sheep in Lake county, against 220,000 at this time last year. It is anticipated that 50,000 head of transient sheep will also summer in Lake county—principally from the Sacramento valley. The sheep that are here at this early season are those that have been wintered on the great desert that lies in the northern part of Lake and southern part of Grant counties. Horses, sheep and cattle are wintered in great numbers on this vast desert, at slight expense and usually with little loss. It is necessary for herders to be constantly in attendance of the sheep, but other stock are allowed to roam. Sheep have now all been removed from the desert and rodeos are gathering up the other stock. Owing to the last winter having been an open one, all stock in this vicinity, both on the desert and other ranges, have come forth this spring in unusually good condition. . . . The sheepmen report an unusually prolific season among the ewes, some parties claiming their lamb yield to be as high as 110 per cent. But few lambs have been lost by the present storm, and, unless it should continue with great fury, no serious losses are expected.

ELECTRICITY AS A RAILROAD BRAKE.—The method of stopping the electric cars on the English road where the series system is used is not done by the ordinary brake, but by momentarily short-circuiting the motor and immediately reversing the current through the field magnets.

SAWMILL BURNED.—The sawmill of the Caspar Lumber Co. at Caspar, Mendocino county, was totally destroyed by fire on the night of May 17th. The fire is supposed to have originated in the engine-room by the explosion of a coal-oil lamp.

PROF. A. VAN DER NAILLEN, who was badly hurt in the elevator accident in the Bancroft building last September, has brought suit against H. H. Bancroft and the other directors of the Bancroft Publishing Co. for \$25,000 damages.

Arrival of the Survivors from Samoa.

On Monday a steamer unused to our waters entered the harbor and proceeded directly to Mare Island. She was the Rockton, a steamer especially chartered in Sydney to bring home the survivors of the sad marine casualty in the harbor of Apia, where a tropical storm wrecked

ed fatal to so many. The scene was impressive, and its spirit will no doubt be reflected in the thanksgiving through the country for the safety of the rescued.

The incidents we have described will give new interest to scenes representing the disaster at Samoa which we give on this page. The views are by the Dewey Engraving Co.'s photoplate system from photographs. The upper view is of a portion of the harbor of Apia, showing a

hull of the Adler is seen, and in the background the shore of the harbor.

The third picture shows the German corvette Adler as she was left high and dry on her beam ends on the beach. While she fared better than her consort, the Eber, she is nevertheless represented as a total wreck. Her casualties were 20 men killed and drowned.

These figures give, of course, but a faint idea of the events, but the pictures showing the

GREATENING ORCHARDS.—As a sign of the rapid growth of the fruit interest in California an exchange notes the fact that W. R. Strong & Co. of Sacramento sold between 600,000 and 700,000 deciduous fruit trees, and about 125,000 orange trees last season. Of the latter, 60,000 went to Oroville and 35,000 were sold in Los Angeles, San Diego, and San Bernardino counties, the balance being distributed through Central and Northern California. If this one firm

THE SAMOAN DISASTER.

Fig. 1—Wreckage on the beach and partial view of Apia.

Fig. 2—View showing how of the Eber in the foreground and bottom of the Adler in the distance, with stern of the Trenton on the right.

Fig. 3—Front view of the Adler after the storm.

the war ships of the American and German Governments, drowned many officers and seamen and cast others upon the shore, where they occupied temporary shelter until the steamer arrived to bring them to this country. The approach of the survivors was not announced, but as soon as the coming of the Rockton was made known, her greeting from the wharves and from ships in the harbor was loud and cordial. As the steamer approached the wharf at Mare Island the band on board struck up Home, Sweet Home, and the men on the Government ships and in the navy-yard hastened to shout out their welcome to their comrades who had survived the perils of the deep which had prov-

part of the town on one side and the debris and wreckage left by the hurricane on the beach on the other.

The central view shows the remnant of the battered bow of the Eber, all that held together of a once noble vessel. The wreck of this ship was so sudden and complete that out of a crew of 78 officers and men, only five were enabled to save themselves. To the right is the stern of the Trenton, the flag-ship of Admiral Kimberly and the American squadron. After heroic attempts to save her she was driven aground by the fury of the hurricane. In her loss of life she was extremely fortunate, only one man being reported lost. In the middle distance the

wrecks and displacements will enable the reader to appreciate the vast forces of nature engaged better than columns of description.

HE SMOKED UP HAY AND WAGON.—A few days since an El Cajon farmer started for San Diego with a load of hay. He was enjoying a good smoke, when suddenly he scented fire. Turning round, he found the hay all ablaze, it having caught from a spark out of his pipe. The entire load and the wagon were burned.

A NEW FLOUR-MILL that will turn out 100 barrels of flour a day has recently been built at Eagle Rock, Utah, by Mr. Farr.

has sent out over three-quarters of a million trees in a single season, the aggregate distributed from all the nurseries must be something enormous. Strong & Co. have now 100,000 orange trees growing in Florida, 46,000 of which are already engaged for the coming season.

OBJECTS TO ELECTRICITY.—William Kemmler, who has been sentenced to die by electricity, for killing a woman, is in mortal fear of "death by battery," as he calls it. He says he would rather be hanged 40,000 times than suffer the electric death. The execution will take place at the Auburn State Prison soon after June 10th.

SHEEP AND WOOL.

Wool Facts and Figures—No. 7.

(Written for the Rural Press by J. R. F.)

The history of the development of woollen manufacture in the United States is of great interest to all, but for a newspaper article only a brief outline can be given.

Virtually the manufacture of woollen goods in this country began with the erection of fulling-mills in Massachusetts in 1648 by a society of Yorkshire people, who brought from England their looms and implements of trade. This claim of being the first to manufacture woollen goods can rightly be maintained, for the history of that period states that the "woolen webs of the hand looms of the private families were carried to the fulling-mills to undergo a process which gave them greater body and thickness, adapted them to a better finish, and besides increased their durability." This naturally led to each community throughout the colonies having a fulling-mill, while every family had its loom and every woman was a weaver. Aside from this, there were weavers who traveled with their looms from family to family to ply their trade at a stipulated price. The fulling-mills of the present day are, by connection, a part of the woollen manufactories, with probably the remote and isolated localities of the South and Central States excepted.

The first record of the building of a woollen factory in this country was in 1788, when Jeremiah Wadsworth and others erected one at Hartford, Conn. In this mill there was only one loom. The capacity of the factory was 5000 yards of cassimeres or broadcloth per annum. So important was this move looked upon by Americans that special mention was made of a visit to the factory by General Washington, who afterward wore a suit of clothes made from the broadcloth manufactured there when he made his inaugural address to Congress. Special mention was also made of the factory and its important bearing on the industries of this country, in an address to Congress by Alexander Hamilton in 1791. In this address he urged the importance of improving the breed of sheep. In 1789 another woollen-mill of about the same capacity was erected at Stockbridge, which was followed in 1790 by the erection at Watertown of another factory, having the same capacity. This gave in the latter year three woollen-mills in operation in this country, having a combined capacity of 15,000 yards of broadcloth a year.

The first incorporated woollen company organized in the United States was formed at Byfield, Mass., in the year 1794. The company built a factory and used the latest improved machinery that could be imported from Europe. They also employed skilled laborers brought over from England under charge of Arthur Schofield. In this factory, it is recorded, was made in 1804 the first fine broadcloth manufactured from merino wool. The success met with by the Byfield company led to the forming of another company in 1809 at Pittsfield, Mass., for the purpose of manufacturing fine cloth. So far as any record can be found, there were only five woollen-mills in the United States in the year 1810 that manufactured fine cloth, but there were nine others running upon coarser cloth averaging about 10,000 yards a year each. Aside from the above there were ten small factories. The statistics of that period report that the product of cloth in 1810 by the factories aggregated 200,000 yards, having a market value of from \$1 to \$10 a yard. It is also stated that in the same year there was manufactured in the private families woollen cloth to the extent of 9,500,000 yards, so that the factories cut a small figure in the total number of yards turned out. The value of the 9,700,000 yards was placed at the time at \$25,608,788. Each State had its woollen factory, the principal or largest being located as follows: Byfield, Mass.; New Ipswich, N. H.; Warwick and Portsmouth, R. I.; Derby and Hartford, Conn.; Watertown and Poughkeepsie, N. Y.; Philadelphia, Pa.; Wilmington, Del.; and Baltimore, Elkton and Frederick, Md.

In 1812 steam as a motor was first introduced into the woollens. The first application was at Providence and Middletown. The first power loom was used in 1825, when it was used by the Pontoosac Manufacturing Co. for making broadcloth, also superior all wool, cotton-warp, drab and fancy cloths. It is stated that the first large factory in the United States was erected by L. Pomeroy, who used hand-loom only. Great impetus was given to the industry by the war of 1812, owing to the large demand for military and naval cloths, blankets and negro cloths. This increased call for woollen goods was met by the erection of many more factories, whose growth was of a mushroom nature, for after peace in 1815 the superior goods, of English manufacture, were imported, for at that early day our manufacturers had neither the skill, labor, machinery nor fine wools to successfully compete against England. Heavy importation of foreign woollen goods sent prices to such low figures as to compel many of the home factories to suspend operations. The foreign imports in one year aggregated a value of nearly \$155,000,000. The depression in the industry in this country is better illustrated by the following comparison of values of woollen goods manufactured in the United States: In 1810, \$25,608,788; in 1820, \$4,418,060; in 1830, \$14,525,166; and in

1840, \$20,696,690. Urgent appeals were made to Congress for greater protection, which resulted in several changes in the tariff. In 1816 an ad valorem duty of 25 per cent was levied on all imported goods, which was to run for a period of three years, after which time it should be reduced to 20 per cent. In 1824 Congress again raised the duty on woollen goods, making the tariff 25 per cent ad valorem on all imported goods costing 33½ cents or less a yard, and 33½ per cent ad valorem on all going above 33½ cents a yard; but unfortunately for manufacturers, Congress at the same time levied a duty on raw wool of 30 per cent ad valorem on wools costing 10 cents and over a pound and 15 per cent ad valorem on all wools costing less than 10 cents a pound. England, in order to offset the changed duty, in 1825 reduced her import duty on foreign wools so as to enable her manufacturers to turn out woollen goods cheaper, by which they would be able to furnish woollen goods to America notwithstanding the higher tariff laws, which they did most successfully. In 1828 Congress increased the duties on woollen goods to 45 per cent ad valorem on all goods costing \$4 and under a yard and 50 per cent ad valorem on all costing over \$4 a yard; but at the same time the duty on raw wool was increased to fully 100 per cent ad valorem on all wools costing 8 cents or over a pound. This law, owing to the high duty on the raw material, gave only temporary relief. In 1832, Congress, to meet the demand of manufacturers for cheaper coarser wools so as to compete against foreign woollen goods, allowed all wools costing 8 cents or under a pound to be imported free of duty, but kept the duty on all going above 8 cents a pound at 4 cents a pound and 40 per cent ad valorem—the same as it was made in 1828. In 1846 the tariff was again changed, by which all raw wool costing 20 cents or less a pound should be admitted free of duty, and only 30 per cent ad valorem should be imposed on all wools costing over 20 cents a pound. The tariff on woollen goods was also reduced to 30 per cent ad valorem. This law gave more general satisfaction and caused quite an expansion in the manufacture of woollen goods. This rate of duty was kept in force until 1861, when the exigencies of the civil war caused a higher duty to be levied.

Before extending this article further for this issue it may be appropriate to refer to the improvements in the manufacture of woollen goods, and this cannot be better done than by giving the following from the business experience of the late Thomas R. Hazard, one of the earliest woollen manufacturers of the country: In 1816 and later I used to employ scores of women to spin at their homes at 4 cents a skein, by which they earned 12 cents a day at most. Inferior cotton shirting sold then at 50 cents a yard, thus requiring four days' work of the woman to pay for one yard of cloth, she boarding herself. The wool was carded into rolls at Peacedale and transported to and from on the backs of horses. Some time ago I stood in the manufactory in the same village and took note of a stripling who tended two highly-improved jennies, from which he was turning off daily as much yarn as six or seven hundred formerly spun on wheels in the same time. In the meantime the introduction of labor-saving machinery and perfected skill had so reduced the cost of goods that a superior article of cotton cloth was then sold in the village stores for 15 cents a yard, for what formerly cost 50 cents a yard. So that had this boy spinner been paid the same price per skein that was formerly paid to a woman for an equal amount of work, he would have received as much as could formerly have been earned by about two thousand hand-spinners in the same time.

COLONIAL DAYS.—In the pioneer days of New Hampshire, articles of ornamentation were almost unknown, and most articles of use were rare. In 1768 there were in the town of Sanbornton, N. H., but three horses, three great-coats, and two men each owned a pair of boots. It is said that the first person who had shoes upon his horse gave great offense to a neighbor, who was about to go on a journey, by refusing to lend his horse-shoes to be used on the occasion.

A MAN-EATING SHARK, nine feet long and weighing about 500 pounds, was caught in a fisherman's net in San Diego bay on Tuesday of last week.

ORANGE CULTURE IN CALIFORNIA.

Now that the interest in the culture of the orange is extending so as to embrace nearly all parts of the State, a book giving the results of experience in parts of the State where the growth of the fruit has been longest pursued will be found of wide usefulness.

"Orange Culture in California" was written by Thos. A. Garey of Los Angeles, after many years of practical experience and observation in the growth of the fruit. It is a well-printed hand-book of 196 pages, and treats of nursery practice, planting of orange orchards, cultivation and irrigation, pruning, estimates of cost of plantations, best varieties, etc.

The book is sent post-paid at the reduced price of 75 cents per copy, in cloth binding. Address Dewey & Co., Publishers "Pacific Rural Press," 220 Market St., S. F.

Cheap Money for Farmers!

Reasons for Subscribing for the Rural.

Hon. Abbot Kinney, one of the foremost agriculturists of Southern California and ex-chairman of the State Forestry Commission, writes as follows:

Before closing, permit me to congratulate you on the continued high merit of the Rural. It is a paper that every farmer should take.

First, to keep informed as to the transportation of crops and their market.

Second, to keep up with the general movement and progress of agriculture.

Third, as a guide, educator and friend in the family; and

Fourth, as a literary link, helping the farming class to the sympathy, harmony and union so necessary to the welfare of this still great but unorganized part of our population.

Yours very truly, ABBOT KINNEY, Lamanda Park, Los Angeles Co., Cal.

IT COST TOO MUCH.

The Sad Experience which Befell One of the Astors.

In the early days of the direct tea trade with China, importers were anxious to secure the earliest cargoes of a new crop.

The fastest clipper ships were engaged in the trade. Great haste in loading them was followed by a hot race to reach New York first.

The first cargo brought the best price and large profits. The successful captain was always rewarded, so every known aid to navigation was adopted.

The young captain of one of Mr. Astor's clippers bought, on one of his trips, a new chronometer, and with its aid made a quick passage, and arrived first. He put the price of it into the expense account of the trip, but Mr. Astor threw it out, insisting that such an item of expense for new-fangled notions could not be allowed.

The captain thereupon resigned and took service with a rival line.

The next year he reached port long in advance of any competitor, to the great delight and profit of his employers, and the chagrin of Mr. Astor.

Not long after they chanced to meet, and Mr. Astor inquired:

"By the way, captain, how much did that chronometer cost you?"

"Six hundred dollars," then, with a quizzical glance, he asked:

"And how much has it cost you, Mr. Astor?"

"Sixty thousand dollars."

Men are often unfortunate in the rejection of what they call new-fangled notions.

There are sick men who refuse, even when their physicians tell them they cannot help them, to take Warner's Safe Cure, because it is a "new-fangled" proprietary medicine. The result is they lose—life and health.

Thousands of other men have been restored to health by it, as the testimonials furnished to the public show. These testimonials cannot be doubted. The proprietors have a standing offer of \$5000 to any one who will show that any testimonial published by them is not, so far as they know, entirely true.

Dr. Andrew Wilson, Fellow of the Royal Society, of Edinburgh, the editor of "Health," London, Eng., says, in his magazine, in answer to an inquiry, "Warner's Safe Cure is of a perfectly safe character and perfectly reliable."

The refusal of a manufacturing firm to pay for the patent of a new invention by one of their workmen, cost them their entire business. A new firm took out the patent and were soon enabled to make goods enough cheaper to drive the old firm out of business; and many a physician is daily finding his patients, long-time chronic invalids, unaccountably restored to health by the use of the new kidney specific. New-fangled notions are sometimes very valuable, and it costs too much to foolishly reject them.

LONDON PURPLE

Can SAVE YOUR CROPS from Potato Bugs, Canker Worms, and most insects.

"LONDON PURPLE"
Will SAVE YOUR MONEY. It is one-half the price, and does three times the work of the usual poisons.

"LONDON PURPLE"
Is SAFE TO USE—its color shows where it has been applied. Be sure to get

"LONDON PURPLE"
and not spurious imitations. Send for circular and opinions—free.

The New York Herald says: "London Purple" is preferable to White Arsenic or Paris Green, as it is not so liable to burn the leaves, and its color enables one to distinguish readily between poisoned and non-poisoned trees."

HEMINGWAY'S LONDON PURPLE CO. LTD.
90 Water St., NEW YORK. 60 Mark Lane, LONDON.

Injurious Insects of the Orchard, Vineyard Field, Garden, Conservatory, etc.,

Remedies for their Extermination.

By MATTHEW COOKE.

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price \$4, postpaid. For sale by Dewey & Co., publishers, 220 Market St., San Francisco.

Cassidy's Petaluma Fruit-Drier.

We would call the attention of Fruit Men to the Celebrated

PETALUMA FRUIT-DRIER,

Which has THREE PATENTS, covering all the practical points—combined in one.

After twenty years' experimenting on the different modes of curing fruit, I feel confidence in coming before the public with a FRUIT-DRIER, which is as

NEAR PERFECT AS THEY CAN BE MADE.

The Points Claimed Are:

- 1st—Fruit-Raising by Mechanism.
- 2d—Air Equally Distributed Through the Fruit, which obviates burning or sweating.
- 3d—Using Petroleum or Wood for Fuel.

These Driers are built of good material, and will, with care, last for years.

Remember, one good Drier is worth more to you than several cheap, poor concerns.

Please give us a call before purchasing elsewhere.

A RARE BARGAIN!

The undersigned offers for sale, on good terms, his CLOVERDALE DAIRY FARM of 500 acres, situated on Squirrel Creek, 2 miles west of Grays Valley. It is well watered by springs and has excellent irrigation facilities. commodious farm buildings, orchard of 150 trees and 6 acres of vineyard. A fine herd of Holstein, Ayrshire, Jersey, and Durham (thoroughbred and grade) cattle for sale with or without the ranch. Holstein and Ayrshire premium bulls on lowest terms, including "Tehama," which, on account of kinship to the herd, can no longer be used in breeding. A good dairy route is also included in this offer.

H. B. NICHOLS, Proprietor.

FOR \$5000.

A Ranch in El Dorado county, near Placerville, contains 160 acres, nearly all fenced in with a four-strand barbed wire fence, a good house of 11 rooms, hard finished, two brick chimneys, cut stone basement with cut stone steps, a good barn and stable, chicken house, work shop and other out-houses, a good well of water, one water ditch for the land, 1000 fruit trees, all in bearing, Peach, Apple, Fig and Cherries, 1000 Grapevines; 80 acres cleared and ready for the plow, all nearly level; about 25 acres woodland, pines, etc., all of which can be cleared; three cows and two calves. The Ranch is five miles from Coloma and nine miles from Placerville. The soil is a red loam, the house stands on the county road and the stage passes it twice every day. A span of horses, a new harness and wagon, plow, harrow and other farming utensils to be given with the Ranch. The Title, U. S. Patent. For further information address, "RANCH," Box 2361, San Francisco, or care of Illustrated Publishing Co., 220 Market St., S. F.

San Jose's Floral Fair.

In lieu of a special report, by our own correspondent, of the fair held at San Jose week before last, we lay before our readers a few condensed extracts from the *Mercury* of the 9th and 10th instant:

The Floral Fair which opened at the Horticultural hall last evening was an exhibition of flowers in name only. Not that there was any lack of flowers, for there were many and all were beautiful; but because these flowers were used only as decorations to the booths and bowers and were subordinate to the draperies of lace and tulle that formed the chief feature of the scene. Santa Clara valley, and the gardens of San Jose in particular, are so rich in blossoms of every variety that an exhibition of flowers, to do anything like justice to our floral wealth, would require the whole space of the Horticultural hall. The exhibition makes no attempt to reveal the fullness of the glory of our gardens and hillsides. There are many exotic flowers which flourish in this valley more luxuriantly than in their native lands that are not seen at all in the fair, though they are to be found in a walk along almost any street of the city. The wild flowers of the land are not exhibited at all, and only a few sprays of the pepper tree are chosen from out the mass of ornamental shrubs and trees that adorn our groves and forests. It is evident that the ladies have sought to make a beautiful fair and have used flowers as adornments only. The general effect of the hall is one of unsurpassed loveliness, and will win for the managers, Mrs. I. Newhall, Mrs. Geo. Tarleton, Mrs. S. T. Ingalls and Mrs. D. W. Burchard, the highest praise for artistic excellence of its design.

In entering the hall, the stage is the first thing which attracts the eye, and when all has been seen it is to the stage that the eye returns again with ever-increasing delight. The whole wide sweep of the proscenium is banked from the floor up with calla lilies. No lesser flowers mar the regal splendor of the parterre, which contains a thousand lilies, rising on stately stalks from out the tropical luxuriance of their dark-green leaves. The decoration was designed and executed by Mrs. G. Tarleton and Mrs. James E. West. The lilies, 956 in number, were contributed by Miss Ziegler, who resides with W. A. Z. Edwards, and they were all grown in one garden.

On the left-hand side of the hall, the booths are arranged to represent the hues of the rainbow. They are eight in number; white, which represents the union of all the colors, red, orange, yellow, green, blue, indigo and violet.

The table of "named roses" arranged with reference to harmony in color, size and effect by Wm. Beauchamp in charge, contains about 60 roses, some rare and very valuable. One vase containing the President rose, a very large double light pink and red, called forth many expressions of admiration. This was perhaps due more to the magnitude of the roses than to their superiority over the others displayed; for the Giant of Battles, Perle des Jardins, and above all the Triomphe de France, a beautiful dark pink rose of almost indescribable hues, were equally beautiful. Another table of roses, under the management of Mrs. S. T. Ingalls, contained many beautiful roses not found in the Beauchamp collection.

Near the icecream booth is a stand of flowers containing an exhibit made by James A. Clayton. If the fair had been a genuine floral exhibition this would have merited an extended notice by the variety displayed and the extraordinary size and color of the roses. The flowers are grouped artistically and simply on a large stand which they completely cover, and they form the best exhibit in the hall of what San Jose can show in the way of flowers.

There is an exhibition of marigolds that is more lustrous than a yellow sunset. The other flowers, pansies, pinks, heliotropes, violets and honeysuckle, are lost in the exuberant profusion of roses and lilies and marigolds, but when they are sought out they display a beauty not less fine and charming than their larger and more richly blooming rivals.

The exhibition of green plants is not conspicuously large, but what there is of it is excellent.

AMERICAN SOUTHDOWN ASSOCIATION.—The eighth annual meeting of the American South-down Association will be held in the Leland hotel, Springfield, Ill., on Wednesday, May 29, 1889, at 7:30 P. M. The membership being widely scattered throughout the United States and Canadas, some may perhaps find it inconvenient to attend. Communications from those unable to be present, pertaining to the work of the association and the interests of sheep-breeders generally, if addressed to the secretary in time, will be duly considered during the meeting. It will be much better, however, for all who can possibly do so, to be present.—S. E. PRATHER, Secretary, Springfield, Ill.

WM. HAM. HALL ON THE GOVERNMENT SURVEY.—The *Record-Union* of last Saturday, noticing the appointment of Wm. Ham. Hall as one of the engineers to prosecute the surveys for the Government plan of storing water in the mountains for the irrigation of arid sections of the country, remarks: "Much of the data required for the work on the western slope of the Sierra Nevada Mr. Hall has already secured, and his experience as State Engineer of California for ten years makes his services especially valuable to the Government."

Celery for Gopher-Bait.

Our old acquaintance, C. R. Paine of Craf-ton, has had remarkable success in clearing his orchard of gophers. Having observed them eating with great relish the celery growing in his garden, he made an experiment in his orange-groves, and writes to the *Citrograph* about it as follows:

"I added to the celery, cut in inch lengths, a little powdered strychnine mingled with an equal amount of sugar, because strychnine is so bitter that one is apt to give too much. I found seven places within and around the borders of the two groves where the gophers had raised a mound to mark their subterranean abodes. With a garden trowel I sunk a shaft to the main or branch runways, and put the attractive morsel where its delightful odor would quickly reach their olfactory organs. I had previously fed them raisins, potatoes, etc., which they sometimes found and ate, but the celery drew as a magnet draws the iron, and a mere fragment of it soon appeases their hunger forever. To test how small an amount would do, I fed an inch piece of celery so prepared to a live, healthy gopher which I had domiciled in a five-gallon tin can, and the sixteenth part of an inch sufficed to make his gnawing hunger cease, and so the inch would provide a large balance to attract his friends and neighbors. In every case, on a second visit, I would find no more gophers to feed, and I would have to seek new grounds when I wished to supply my rodent flock with this variety of food."

Galloway and Polled Angus.

The Interstate Galloway Company of Kansas City have 50 head of Galloway and 10 head of Polled Angus cattle at Sacramento. This herd consists of 20 bulls, the balance being cows and young stock. These cattle are from imported stock and are a fine and well-selected herd. There were about 20 head on the Fair grounds during the Capital Turf Association meeting last week, and were much admired by cattlemen. They are in charge of Mr. E. W. Crutcher, formerly president of the Live-Stock Association of Nevada, and Mr. Walter C. Weedon, formerly secretary of the Polled Angus Association of the United States. This herd is offered for sale as a herd or by the single animal at very liberal prices.

SIGNED TO HIS COST.—Manuel Rose is an illiterate farmer living in Alameda county. Some time ago one Fleming, who owed him \$60, called upon him with a paper, which he requested him to sign. Under the impression that the paper had something to do with the debt, he was induced to make his mark there-to, and several weeks later found he had signed with Fleming a note for \$389 for agricultural implements, payable to Truman, Hooker & Co. Fleming had failed meanwhile, and the payment of the note devolved upon Rose. He refused to meet the obligation, and suit was brought to recover. Justice Murasky held that Rose's illiteracy was no excuse—that if he did not know the character of the paper he was signing, it was his business to inquire, and gave judgment for the plaintiff for \$299.

ROYALTY RANCHING.—According to the *London Star*, the Prince of Wales lives the life of a regular country gentleman at Sandringham, eating the huge breakfasts of the Norfolk farmer, going in extensively for home comforts, looking after his farms and stock, and taking a keen interest in sport. It is also stated that during the past quarter-century, Queen Victoria has captured 447 agricultural prizes with stock from her Windsor farms. She takes great interest in cattle shows and is a good judge of Shorthorns and Jerseys. At Windsor, on Aber-geldie farm and at Osborne she has herds of cattle worthy a royal owner. The park at Osborne is now stocked with a picturesque herd of West Highland cattle.

SELMA.—A friend writes to correct the reference to Selma made in his article on Fresno county by our correspondent, H. G. P. The population of the town is computed to be 2000 instead of half that number, and, singularly enough, in mentioning the newspapers the *Enterprise*, a wide-awake local journal edited by C. W. Nicklin, was omitted. We are pleased to correct the statement in this respect.

THE STORY METHOD of counting ballots was followed at the Stockton city election last Tuesday and worked admirably. About 2300 votes were cast. The returns of 11 of the 12 precincts of the city were all footed up within 2½ hours, and the result in the whole city was known at 8:30—3½ hours after the polls closed.

TICKS ON LIVE-STOCK.—A correspondent of the *S. L. O. Tribune* recommends coal oil as a sure cure for ticks; but it must be put on sparingly or it will burn too much. The best way would be to saturate a cotton cloth and rub it on where the ticks are the thickest, and they will all soon disappear.

PROMPT AND RELIABLE.—From the manner Knupp & Anderson, searchers of records at Visalia, Tulare county, recently executed an order from this office, we can give them credit as above. They are also well-known real estate, loan, and insurance agents at the Government seat of their large and improving county, the firm business having been established in 1877.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

From the official report of U. S. Patents in DEWEY & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING MAY 7, 1889.

- 402,727.—HAIR CUTTER—J. W. Eisenhuth, S. F., Alameda, Cal.
- 402,816.—SASH FASTENER—Chas. H. Foster, 402,918.—FIRE-ARMS—L. W. Gay, Wardner, I. T.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Pacific Grove by Rail.

It is officially announced that the Southern Pacific Co., Coast Division, will extend the railroad from Monterey to Pacific Grove and Carmel bay some time this season. This will be welcome news to thousands of families who make these resorts their summer residences. Already the march of improvement has been taken up, and cottages by the sea have been erected, and some elegant mansions projected to be built this summer. It is expected there will soon be an addition to Pacific Grove laid out in subdivisions and lots to meet the demand. This favored section in climate and surroundings seems to be accorded by common consent the rendezvous and sanitarium of the Pacific Coast. The Del Monte Express will be run on schedule time of one hour and ten minutes to San Jose, and three hours and ten minutes from San Francisco to Monterey. This "flyer," in connection with the attractions at Hotel Del Monte and Pacific Grove Retreat, will make this one of the popular attractions of the season for excursion and pleasure-seekers. The literary program at Pacific Grove will be more varied and extensive than at any time since it was opened, and preparations are on foot that promise a series of events during the season.

From a neat folder issued, we make the following extract:

Program of the series of summer meetings, 1889, to be held at Pacific Grove, under the auspices of the Pacific Grove Retreat Association. Rev. F. F. Jewell, Pres.; Rev. T. H. Sinex, Sec. W. C. T. U. School of Methods, June 20th-24th; State Teachers' Association, June 25th-28th; State Sunday-School Convention, June 28th-July 1st; Chautauqua Assembly, July 1st-15th; Summer Encampment, July 16th-19th; Y. M. C. A. Day, July 18th; Mid-summer Reunion, July 22d-26th; California Conference M. E. Church, Sept. 11th-16th.

Late Improvements in the Art of Taking Pictures.

The improvements in photography have enabled it to be applied to many uses for which it was formerly not available. The flash-light has made it possible to photograph tunnels and rooms where the sunlight does not penetrate. Manufacturers are using photographic views of their machinery much more than in former years. Exploring and surveying parties are fitted with photographic apparatus. All of the recently fitted men-of-war have amateur outfits on board, and the departments at Washington employ the camera for many purposes. Insurance men have taken advantage of instantaneous photography to obtain views of fires, explosions and accidents as a means of advancing their business. In fact, there is scarcely a line of business in which photography is not now used in some manner. The outlook for the future is that still further improvements will be made in the methods and the apparatus, and that the utility of photography will be greatly increased.—Richard A. Anthony in *Chicago Inter-Ocean*.

For most complete outfits, newest discoveries and all apparatus for photography in all its branches, see Partridge, 529 Commercial street.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

BEEF TRUST.—At a meeting of the representatives of the American Meat Co. and the American Cattle Trust held in New York on the 18th, a contract for a term of years was signed by the controlling powers of the two organizations by which the meat company will handle the entire product of the cattle trust. Senator Dorey said that the two organizations had not been consolidated, adding: "We have effected a traffic agreement, which practically makes the American Meat Co. the agent of the American Cattle trust."

The Cook Cattle Sale.

At the auction of fine cattle from the estate of the late Seth Cook, which was held by Kil-lip & Co. at the Bay District track on Thursday, the 16th instant, 62 head were sold at prices amounting to over \$5000.

SHEEP MEN, ATTENTION!

ADMINISTRATOR'S SALE
By order of Probate Court, in the matter of the Estate of JAMES ROBERTS, Deceased.
I will sell at private sale to the highest bidder, for cash, on or after May 1, 1889, at the Ranch in Irvington, or at my office in Oakland, 946 Broadway, Alameda Co., Cal., the entire flock of Thoroughbred French Merino Sheep, consisting of 230 (Two hundred and eighty) Ewes, 79 (seventy-nine) Bucks, and 180 (one hundred and eighty) Lambs. These sheep are the get of the original flock imported by Robert Blacow of Centerville. Mr. Roberts, as foreman, having charge of the flock for several years prior to Mr. Blacow's death, after which he became the owner of the entire flock, which he has kept purely for stock purposes.
All interested in Thoroughbred Sheep should be familiar with this flock, which has become famous under the care and management of Mr. Roberts; always receiving first premiums, having been sold to Europe, South America and all parts of the United States; individual members having repeatedly sold for from \$500 (five hundred) to \$1500 (fifteen hundred) each. Sheep Men should seize this opportunity to secure some, as they must be sold to settle up the Estate. Address, JAMES STANLEY, Administrator Estate J. Roberts, Deceased, Mission San Jose, or 946 Broadway, Room 17, Oak and, Cal.

S. H. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, May 22, 1889.

Continued fine growing weather has naturally had a depressing influence, so far as values are concerned, on the general produce market. The lower prices, outside of cereals and feedstuff, have invited more business. The cereal market is still under the various unfavorable influences that have been heretofore noted. Foreign cablegrams received to-day are as follows:

LIVERPOOL, May 22.—Wheat—Very dull. California spot lots, 6s 6½d to 6s 9½d; off coast, 33s 6d @ 33s 9d; just shipped, 33s 9d; nearly due, 33s 9d; cargoes off coast, very dull; on passage, very few bids in market; Mark Lane wheat, weaker; French country markets, mostly turn cheaper; weather in England, brilliant.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	May.	June.	July.	Aug.	Sept.	Oct.
Thursday.....	6 11/16	6 11/16	6 11/16	6 11/16	6 11/16	6 11/16
Friday.....	6 11/16	6 11/16	6 11/16	6 11/16	6 11/16	6 11/16
Saturday.....	6 11/16	6 11/16	6 11/16	6 11/16	6 11/16	6 11/16
Sunday.....	6 11/16	6 11/16	6 11/16	6 11/16	6 11/16	6 11/16
Tuesday.....	6 11/16	6 11/16	6 11/16	6 11/16	6 11/16	6 11/16

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	34-61	34-61	34-61	Quiet.
Friday.....	34-61	34-61	34-61	Dull.
Saturday.....	34-61	34-61	34-61	Dull.
Sunday.....	34-61	34-61	34-61	Slow.
Tuesday.....	34-61	34-61	34-61	Inactive.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

	May.	June.	July.	Aug.
Thursday.....	82 1/2	82 1/2	82 1/2	82 1/2
Friday.....	82 1/2	82 1/2	82 1/2	82 1/2
Saturday.....	82 1/2	82 1/2	82 1/2	82 1/2
Sunday.....	82 1/2	82 1/2	82 1/2	82 1/2
Tuesday.....	82 1/2	82 1/2	82 1/2	82 1/2

The closing prices for wheat have been as follows, at Chicago for the past week:

	May.	June.	July.	Aug.
Thursday.....	82	80 1/2	79 1/2	74 1/2
Friday.....	82	80 1/2	79 1/2	74 1/2
Saturday.....	82	80 1/2	79 1/2	74 1/2
Sunday.....	82	80 1/2	79 1/2	74 1/2
Tuesday.....	82	80 1/2	79 1/2	74 1/2

NEW YORK, May 22.—Wheat—81½¢ for cash, 80½¢ for June, 81½¢ for July, 81½¢ for August and 81½¢ for September.

CHICAGO, May 22.—Wheat—81½¢ for May, 80½¢ for June, 76½¢ for July, 73½¢ for August and 73½¢ for September.

Foreign Grain Review.

LONDON, May 20.—The *Mark Lane Express*, in its review of the British grain trade for the past week, says: English wheat is dull and flour is 6d lower. Foreign wheat declined 6d. Values of oats are sustained; corn is weak. At to-day's market there was a further fall of 6d in English wheat. Foreign was also weaker. California, which sold at 35s last Monday, sold to-day at 33s 9d. Red American declined 6d. Flour dropped 6d. Corn was stronger.

Eastern Wool Markets.

Late mail advices from Boston report as follows: The market for wool is still in a quiet condition, but the statistical position is strong. All foreign markets are higher comparatively than this, while the new clip in this country, which is just being got ready for market, is also held very high. There is nothing in the situation that would indicate cheap wool, but at the same time buyers here do not seem inclined to operate, and dealers who have wool to sell do not find it an easy matter to dispose of it. The only weak point noticeable is the good situation, and there is no doubt but this is a very unsatisfactory condition. The light orders for heavy goods, owing to the mild winter, are being felt now, and it looks as though considerable machinery would have to be stopped this month.

Philadelphia mail advices report as follows: All desirable lots of wool are firmly held, and the advices received from the South and Southwest indicate increasing strength in values in the new clip districts. In Texas 20c has been paid for clips that sold last year for 16c. Kentucky wools are already well sold up, and in St. Louis the market is strong, with business in round lots reported at 25½¢ on cars. Reports from other sections show equally high prices paid for new wools, but thus far the purchases have been chiefly for interior mills. Eastern dealers are reluctant to meet the views of growers, as present prices, with freight and other expenses added, bring cost fully up to the level of this market, and in some cases a little beyond that level. It is a little early yet, however, for any general buying, and the developments of the next few weeks will be watched from this market with keen interest.

Miscellaneous.

NEW YORK, May 18.—Some handsome cherries are here. They have a small fancy retail outlet. The trading in hops is light. Owners of fancy shipping styles have refused the last top offer, but for selling purposes the market is no better than last week. Good under grades are fairly taken by brewers. Exports of the week 36 bales.

There is better demand for dry hides. Holders yielded early in the week. The market closes rather stronger; best 16c; California and Central American, 15c; others range from 10½¢ to 14½¢.

Canned peaches, \$1.80; apricots, \$1.60, for much of the large shipments on the way.

Local Markets.

—New. BAGS—The market is recovering from the effects of the death of a large holder, for at this writing it is quoted steady, with a strong tone. Spot, 7½¢; June-July, 8½¢.

BARLEY—The market for sample parcels is in a demoralized condition, which is reflected to a considerable extent by the dealings on Call in futures. To-day's sales on Call are reported as follows:

Morning Session: Buyer season—100 tons, 57½¢; 100, 58¢. Buyer 1889—100 tons, 75½¢; 100, 75½¢; 100, 75½¢; 400, 75½¢; 100, 76¢; 200, 76½¢; 400, 76½¢; 100, 76½¢. Afternoon Session: Buyer 1889—100 tons, 70½¢; 100, 70½¢; 300, 70½¢; 500, 70½¢; 100, 77¢. Buyer season—100 tons, 58½¢; 100, 58½¢.

BUTTER—The market after advancing about 2c a pound, under a good packing demand and light receipts, closes barely steady at quotations under heavy receipts.

CHEESE—It has been a long time since the market was as low as it now is. A sale of a round parcel of choice new was made the past week at 5½¢ a pound. Although we quote higher, it is safe to say that our quotations can only be reached in a jobbing way.

EGGS—The market is not quite so strong, owing to receipts increasing and demand not so free.

FLOUR—The market is very weak and in buyers' favor. Although not quotable lower, yet concessions are obtainable.

WHEAT—Never within the recollection of the writer has the market been so low and weak as it is at present, in the face of small supplies and a large engaged tonnage in port. This condition is due to the good crop prospects on this coast and a declining market abroad. To-day's private cables report the Liverpool market "weak, low and declining, with the weather favorable to growing crops." In futures, trading is light on Call, with prices still shading. The following are to-day's Call Board sales:

Morning Session: Buyer 1889—100 tons, \$1.30½; Buyer 1889, after August 1st—200 tons, \$1.29½; 200, \$1.29½; 100, \$1.29½. Seller 1889, new—300 tons, \$1.23½. Afternoon Session: Buyer 1889—200 tons, \$1.32; 100, \$1.32½. Buyer 1889, after August 1st—100 tons, \$1.29½. Seller 1889, new—400 tons, \$1.24. Buyer season—100 tons, \$1.29.

[COMMUNICATED.]

Market Information.

Produce Receipts.

Receipts of produce at this port the week ending May 21st, were as follows:

Flour, qr. sks.....	64,321	Middlings, sks.....	5,718
Wheat, cts.....	242,013	Alfalfa, ".....	—
Barley, ".....	20,016	Chicory, ".....	100

Cheese, cts.....	1,452	Wine, gals.....	159,866
do bxs.....	—	Brandy, ".....	4,030
Eggs, doz.....	118,120	Raisins, bxs.....	1,339
Beans, cts.....	8,202	Honey, cs.....	41
Potatoes, sks.....	17,640	Walnuts, sks.....	—
Onions, ".....	3,116	Flaxseed, sks.....	2,869
Brn. sks.....	26,343	Mustard, sks.....	2,143
Buckwheat, sks.....	—	—	—

From the *Commercial News* of May 22, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port.....	202,281	292,975
On the way to neighboring ports.....	30,671	127,425
In port, disengaged.....	26,725	43,353
In port, engaged for wheat.....	47,050	9,989

Totals.....306,727 473,748
To get the carrying capacity, add 60 per cent to the registered tons as given above.

From July 1st to May 21, the following are the exports from this port:

	1889.	1888.
Wheat, cts.....	11,888,918	8,132,206
Flour, bbls.....	740,511	700,617
Barley, cts.....	1,261,534	645,134

Cereals.

Crop prospects continue good. So far as known, the hot weather on last Sunday did no perceptible damage, but, on the contrary, it was beneficial in several sections. The grain is well on the way, and it is not at all improbable that new wheat will come in this year at an earlier date than we have any record of.

The wheat market has sagged to lower figures in sympathy with the demoralized market abroad. The large prospective outturn on this coast has a bearing influence, which is more pronounced in the absence of any speculative movement either at home or abroad. The bulls have, at all times in recent years, been badly worried if not financially killed; consequently there is an entire absence of any combination to advance prices, yet there is a possibility that a bull move may be inaugurated after the new season opens. For sample parcels there is not much demand, while there is very little offering. Foreign cables report a demoralized market. In futures in our market, trading is slow, with the bulk of sales reported to be cross orders, made either for the purpose of keeping the market down or else to keep outsiders from thinking that all business has forsaken the Board.

Barley has held to low figures throughout the week, under free offerings of weevily, which have been rejected and thrown on the market. The warehousemen appear anxious to clear their warehouses of all grain having weevil so as to fumigate the buildings before the new crop comes in. Receipts the past week were only fair, but light as they were, they aided to bring values still lower.

Harvesting will be commenced in several localities the coming week, and will be quite general by the forepart of June. The impression prevails that the grain will be quite plump, but off-color. At the present low prices, only those who will be compelled to sell will dispose of their new crop.

Oats are weak, under very heavy receipts and a good selling pressure. Receipts were very heavy, coming chiefly, if not entirely, from up North. Crop advices are of a uniformly good character. The consumption at the low prices is said to be good. Surprise oats still command \$1.15@1.22½, owing to light supplies.

Corn is essentially unchanged. Buyers, as usual on a dull and heavy market, confine their buying as much as possible. Receipts were only fair.

In rye and buckwheat, there is nothing new to report.

Feedstuff.

The receipts of bran were exceptionally large the past week. The demand both for export and home shows signs of increasing. Ground barley is lower, which causes more to go into consumption.

Choice to extra choice hay, with fine straw, is wanted, and for which good prices are obtainable. Coarse-strawed hay and also bleached hay are in buyers' favor. Receipts are light, while the demand is good.

Fruit.

Advices from Oregon report that the cherry crop will be light, while that of pears will be a full average, as will peaches. In this State we are in receipt of advices which are confirmatory of a light yield of cherries, pears and apricots. The wind the forepart of this month blew down large quantities of pears. Some trees were stripped almost entirely of the fruit. The yield of peaches will be a full average. Advices from the vineyards report the outlook for a good crop of the very best.

Peaches came in the past week. They were green, hard and unsalable. Canners bought apricots the past week at 35 cts. Royal apricots are coming in, but as yet they sell high. The first received fetched 20c a pound. Strawberries have a wide range, varying according to quality. Canners are still buying. Currants and gooseberries are coming in more freely, causing a lower range of values to obtain. Royal Ann cherries are coming in and selling at \$1. The market for all kinds is lower under heavy receipts. Canners are buying.

Choice, well-selected, good-keeping, smooth-skinned oranges are wanted. Rough, thick-skinned are slow of sale, as are poor keepers.

Mexican limes are weaker under free consignments. The demand is good.

Honolulu is sending us watermelons. They sold at an average of \$1.50 apiece.

Tomorrow, Thursday, the Southern Pacific Railroad reduces the rate of freight on dried prunes to Central and Eastern State points. The rates on other fruits are unchanged. This is, to say the least, a very singular move, particularly when it is understood that the reduced freight only applies to dried prunes in sacks, and not in boxes. This it appears must have been worked by the agents or branch houses in this city of firms in Chicago and other Eastern cities. Why the railroad did not reduce the rates on other dried fruits it is hard to say, unless the Chicago houses feared that by lower rates the California fruit would come in closer competition with their dried-fruit products. A carload of dried prunes, 90c and upward, in boxes, was sold the past week at 4½¢ a pound, and a carload of same grade in sacks was sold at 5c a pound. The demand for all kinds of dried fruits continues good for the season. Oregon is still sending us dried apples.

Raisins continue to meet with a good inquiry at full figures for the more choice. The supply to draw from is very light.

From January 1st to May 1st, 1889, there was shipped from here via Canadian Pacific Railroad to distributive points in the Central and Eastern States, about 180 tons of dried prunes.

It may not be out of place to state that the recent reduction in the overland rate for canned fruits was only secured by a most determined fight made by the representatives who went from here. Chicago, St. Louis and Eastern houses in general were either opposed to the reduction or else were indifferent spectators. It is stated that the Southern Pacific Railroad alone fought against the reduction. The rate on sugar to distributive points west is 65c per 100 lbs, and on canned goods \$1 per 100 lbs. From Atlantic points to the Missouri river [1600 miles] the freight is 50c per 100 pounds with differential rates according to distance from shipping point as low as 10c, or, in other words, the freight ranges from 10c to 50c per 100 lbs, according to distance carried, whereas from here to the Missouri river and all intermediate points the freight is \$1 per 100 lbs; so that the Eastern packers are favored. With higher labor on this coast, higher prices for tin, etc., our fruit-packers and growers have a hard enough time without our home railroad fighting them.

Live-Stock.

The market for bullocks and mutton sheep continues in buyers' favor. The warm weather is against retail butchers carrying much in their stalls. The quality of the meat continues good. For calves and lambs the market is unchanged. Hogs are still weak, with packers not operating. It is claimed that the low price of grain will cause a very general fattening of hogs for this market. Milch cows are unchanged, as are horses. There appears to be a better inquiry for driving horses, matched teams and general utility horses.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, grain fed, 5½¢@6¢ lb.; dressed, 8½¢@9¢ lb.; soft, 5½¢@5½¢ lb.; dressed, 8¢@9¢ lb. Stock hogs, 5¢@6¢ lb.

BEEF—Stall fed, 6¢@6½¢ lb.; grass fed, extra 5½¢@6¢ lb.; first quality, 5½¢@5½¢ lb.; second quality 4½¢@5¢ lb.; third quality, 4¢@4½¢ lb.; bulls and thin cows, 2¢@3¢ lb.

VEAL—Small, 7¢@8¢ lb.; large, 6¢@7¢. MUTTON—Wethers, 5¢@5½¢ lb.; ewes, 4½¢@5½¢ lb.; lamb, spring, 6¢@8¢ lb.

Vegetables.

Onions have fluctuated some. The better keepers were wanted for shipping.

New potatoes have held fairly steady, notwithstanding free receipts. There was a good call for

the more-matured, good keepers. Old potatoes are slow of sale, and as quotations are more or less nominal, they are withdrawn.

The hot weather on last Sunday caused the asparagus received on Monday to be poor, necessitating concessions. Since then the quality has been good.

String beans and peas fluctuate from day to day, being governed by the wants of buyers more than by anything else. The quality continues good.

The first tomatoes of the season from Vacaville were received on Monday. They were placed at \$2.50 a box. The crop this year, it is said, will be large.

The green corn received continues poor, with a wide range in prices reported.

Summer squash and cucumbers are falling.

Wool.

Receipts are only fair from points in this State, but from Oregon they are increasing. The market is not as buoyant as was expected by many it would be if the present political party got into power at Washington. Considering the improved grade of the wool over last year, the prices now paid are not as high as at this time in 1888. The shutting down of the Pioneer woolen-mills in this city will lessen the consumption of raw wool very materially. Buyers are trying very hard to keep prices down, but holders of choice clips do not appear disposed, as yet, to accept the low bids. Many sales are made P. T., which gives color to the report that buyers pay an advance over bids.

Miscellaneous.

Under free receipts and a lessened demand, poultry is weak at lower prices.

Beans are weak, notwithstanding the light receipts. Crop prospects continue of the most favorable character.

Honey and beeswax are still in buyers' favor. The receipts of new are not of sufficient moment to justify quoting.

Mustard seed, flaxseed, alfalfa and grass seed are slow.

Among the shipments from Jan. 1, 1889, to May 1, 1889, from this port via the Canadian Pacific railroad are the following: One hundred and forty-four tons barley, 11 tons hops, 25 tons beans, 180 tons dried prunes, 955 tons wool, 7154 gals. wine, 2929 gals. brandy.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations. WEDNESDAY, May 22, 1889.

Rattlesnakes.

One of the younger scholars of the Russ school, in San Diego, named Sadie Marigold, recently distinguished herself by killing a rattlesnake, which she very nearly stepped on, in the school-yard. The reptile was already coiled and ready to strike when the child discovered it. Her presence of mind in putting an end to its poisonous existence in all probability saved some of the numerous children at play in the yard at the time from being bitten. One of the boys of the same school killed one of the same species only a few days previously.

Another "rattler" was killed about the same time by a laborer on the Cajon Valley ranch. He had opened a gopher-hole which happened to be occupied by the snake. Unknown to himself he cut the reptile in two with the point of his shovel. Finding a rook in his way, the man reached his hand into the excavation and was bitten just below the knuckles by the forward half of the reptile. Immediate doses of whisky were taken, and though the hand and arm swelled to twice their natural size, the remedy was efficacious.

Appropos to the above, it is stated that a fine pointer on Hennagin's ranch, near Woodland, stirred up a large rattlesnake about two weeks since. He attacked and killed it after a savage fight. As soon as the snake was dead, the dog ran to a shallow mud-hole, buried himself for several hours and came out all right. Perhaps the instinct of the dog may be a good "pointer" to man. It is possible that a mud bath may be better than whisky in such cases, but then the latter is more convenient and tasteful—to some.

THE CUBAN FIRE-FLY.—A most interesting experiment has recently been made in taking a photograph by the light of the Cuban fire-fly. The species of this insect belonging to the United States are well known, but its light-producing powers are very feeble compared with those of its relatives, the lantern-flies or cucuyos of Cuba, Brazil and Mexico. It is said that persons traveling by night in the tropical forest are accustomed to place these fire beetles on their boats to light the way, and that Cuban ladies mount the cucuyos as gems for their hair and clothing. A living specimen of these tropical insects was recently presented to the Bridgeport Scientific Society. It is about an inch and a half long and bears upon each side of its body oval spots resembling eyes. In the dark these spots emit a greenish light resembling that of tiny electric lamps in full glow. If the cucuyo is placed on a watch dial its light will enable one to tell the time of night, and it also clearly illuminates a small printed page. Its radiance seems to be in a measure under the control of the will, for, when a gas jet is rapidly turned on and off, the insect, whether from rivalry or some other motive, is sure to do his best. After various trials of the insect's power, the experiment of photographing by its light was successfully carried out. A copy of a family portrait was made, the insect being held within an inch of the original and in such a way that the rays fell perpendicularly on the negative. The time of exposure to bug light was about 30 seconds.—*Scientific American*.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

Persons receiving this paper marked are requested to examine its contents, term of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

THE GOAT.—Col. Daniel of Talbotton, Ga., says that goats are spunky animals. He says that his father had a flock of goats, and that the goats while grazing came to a pond of clear water. They went to the pond to drink, and when they lowered their heads they saw their shadows in the water. They began to butt at the goats in the water, and failing to drive them away they continued to butt until the entire flock was drowned.

A NEW DEPARTURE IN LEGISLATION.—A recently enacted law in the State of Maine provides that "whoever by intimidation or force, alone or in combination with others, prevents a person, journeyman, or apprentice from continuing or entering into the employment of a person, firm, or corporation, shall be punished by imprisonment not more than two years, or by a fine not to exceed \$500."

Rheumatism

"Having been troubled with rheumatism at the knee and foot for five years, I was almost unable to get around, and was very often confined to my bed for weeks at a time. I used only one bottle of Paine's Celery Compound, and was perfectly cured. I can now jump around, and feel as lively as a boy." FRANK CAROLI, Eureka, Nevada.

Paine's Celery Compound

has performed other cures as marvellous as this—copies of letters sent to my address. Pleasant to take, does not disturb but aids digestion, and entirely vegetable, a child can use it. It cures even those whom doctors call incurable. What's the use of suffering with rheumatism? \$1.00. Six for \$5.00. Druggists.

WELLS, RICHARDSON & Co., Burlington, Vt.

ALWAYS USE THE BEST.

It is the Purest.
It is the Strongest.
It is Free from Lime and Pan Scales.
It contains No Insoluble Matter.
It requires No Sifting, as the Grain is very Uniform, and every Ounce can be Used.
Five pounds of HOLMES' Extra Sifted SALT is enough for 100 pounds of Butter. The quantity of Table Salt used in a family is small. Why Risk Health and Spoiling Butter by using ordinary Salt, when the extra cost of using Holmes' Extra Sifted Salt is so small? Ask your Grocer for it.

SINGLE COPIES, 10 CTS.

A Kern County Residence.

From the Shasta county scenes portrayed on our first page last week, we turn now to a view in Kern county. Shasta county and Kern county are at opposite ends of the great interior valley of California and are about 300 miles apart. Our engraving represents a scene on the

irregularly shaped area of four miles in its greatest width and eight miles in its greatest length. The spot shown in the engraving is about eight miles southwest of Bakersfield.

CALIFORNIA RAISINS ABROAD.—A cable dispatch from London says: Col. Forsyth, one of

THE GOVERNMENT AND THE BIG TREES.—The Commissioner of the General Land Office in Washington has received a letter from the Register of the Land Office at Visalia saying that certain tracts containing the big trees which the Government had withdrawn from settlement in order to make a reservation had been pre-empted by certain parties claiming

WOOL SALE AT UKIAH.—Charles Thorn, Jr., general freight agent of the S. F. & N. P. R. Co., has been conferring by letter with the wool-growers of Lake, Mendocino, and Humboldt counties, and learns from a majority of his correspondents that their wools will be in Ukiah at dates ranging from June 1st to 10th. He accordingly invites producers and buyers to

COTTAGE AND LAWN ON BELLEVUE RANCH IN KERN COUNTY, CALIFORNIA.

Bellevue ranch, the cottage and its environment of locust trees intermingled with palms and other growths. The grounds are well maintained, and with their shade trees and greensward on which are the chairs, writing table, etc., give the beholder some idea of the delights of open-air life in California. The Bellevue cottage is one of our larger rural residences, as the ground floor is about 50x100 feet, and it has also an annex cottage of considerable dimensions, a conservatory, etc., besides the office and various other ranch buildings—shops of all kinds, warehouses, barns, stables, etc., as required in the conduct of a splendid property of 13,500 acres, covering an

the leading raisin-producers of the United States, who has just returned from an inspection trip to the raisin-growing districts of the Continent, says American raisins, in addition to supplying the American market, are destined soon to take a large share of the London business. He says the phylloxera is constantly diminishing the crops of Spain in an increasing degree, and even if they should now get a remedy, which is not probable, it will be five years before the Malaga district can recover its former position. A heavy consignment of California raisins has been disposed of in London this season, being the first shipment of the kind on record.

settlement previous to the Government's order of reservation. The Register stated that he had refused to receive the filings. It is quite probable that Congress will be asked to make a public park of certain sections of the redwood tracts so as to preserve the trees as curiosities.

A RUSSIAN INVESTIGATOR.—Baron Ranner recently visited California and Colorado to gain information concerning our agricultural methods and machinery for the use of the Russians on arid lands recently acquired by the Czar in Asia. The baron passed some time at the University Experiment Station in pursuit of his inquiry.

meet in Ukiah on the 15th of June, and it is expected that all having wool to sell will have it there at that time without further notice.

MUIR, NOT MORRIS WHITE.—J. R. Springer writes in correction of the quotation which we made last week from the Woodland Democrat, that the Muir and not the Morris White is the peach which has the crop this year. The Muir, he says, takes no back seat in the way of heavy and regular bearing.

OLEO PROHIBITION.—Gov. Buckley of Conn., last week, vetoed the bill prohibiting the manufacture and sale of oleomargarine. The House passed the bill over his veto.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

From Sea to Sea.

EDITORS PRESS:—One "longing, lingering look behind," and then, as we swept round a curve, the friendly faces and waving hands disappeared from view. A little while, and the green slopes of our dear old Berkeley hills had vanished, and we leaned back and tried to feel becomingly pensive, in which attempt I, at least, failed signally. Who could be sad, anyway, with a continent unfolding before them and the fever of travel in one's veins?

On we sped, the train swaying and careering along like some wild creature just let loose from bondage; on through the freshness and verdure of a California April, until night closed in upon us.

A little later, and then (ah, romance!) the picturesque process of "going to roost," as somebody called it! Unlucky I was doomed to an upper berth, and finally tumbled into it, a promiscuous heap. But the idea of going to sleep, ridiculous! Safely ensconced behind my curtains, I thoroughly enjoyed my neighbors' misdirected efforts at climbing, and the prolonged ohs! which announced another head or elbow cracked.

Calm at last brooded over the scene. The man who would insist upon talking was silenced; the children were tired of play; the porter rested from his labors, and only the snort and gallop of the train were audible. Whizzing along through the blackness, I gave loose rein to my imagination, and at last fell asleep and dreamed of home.

Next morning, the white lights flashing through the car windows woke me, and I lay and watched the snow as it showed for a moment through the crevices of the sheds.

Next in order was the getting up (or rather down), the gradual evolution from first boot-tip to the grand final jump, as the butterfly (?) emerged from its chrysalis. I watched this till I was tired, and then did it myself.

All that day and the next we were choked and parched with the dust from arid, sandy plains, the monotony only varied by stops at little, treeless, so-called towns. On these occasions there was a dash made for the door, and generally a brisk promenade in front of the depot, while some giddy members of the party surreptitiously snatched pieces of ice from the trucks as they passed.

Utah was abominable. No scenery except some bare ranges of mountains and a few ugly red houses with two front doors just alike—supposed to belong to a man with two wives!

"Sherman!" shouted the conductor, and off we hurried to get a memento of the summit of the Rocky mountains. The air was very much rarefied here, and one's breathing much quicker than ordinary. Both the ascent and descent to and from the summit are so gradual that one does not realize in the least the height attained.

Cheyenne is a thrifty looking place, and possesses a very handsome stone depot building. Only a few minutes' stop, however, and away we go southward toward Denver.

Here, six hours' breathing-space being allotted, we "do up" the city in most approved style, with two immense omnibuses, four white horses apiece, etc. It is in truth a beautiful place, with fine public buildings, graceful churches, clean streets, electric street-car lamps, and above all, such solid, well-to-do looking houses. To one accustomed to wooden dwellings it was refreshing to drive through streets, streets of red brick houses, some of them with trimmings of black, while others were plainer.

The trees are a great attraction also. They were beautiful, just budding, and in summer-time must be lovely. There was a law formerly, compelling all land-owners to set out trees in front of their lots. Whether it is still in force, I know not, but at any rate, the city is abundantly supplied with foliage. From the top of the Nob hill of Denver we caught glimpses of Pike's peak far away in the distance, suggesting memories of H. H. and her writings.

But I must not forget the magnificent Denver High School building. Occupying the whole of a large block, with four massive entrances, brick and stone seem to have vied with one another in giving it every possible attraction.

Upon the streets of the city there was no such showiness of dress as characterizes a San Francisco thoroughfare, neither did one see the number of pretty faces so common in California. Yes, really, Denver is first-rate considering it isn't in California.

"All aboard" at last, and off again over the rolling prairies of Colorado and Kansas. At Kansas City we crossed the broad expanse of the Missouri, and had a fine view up and down the river. Missouri itself is a charming country; the woods were fairly ablaze with the vivid spring verdure.

I would describe the crossing of the Father of Waters, but unfortunately was asleep and unconscious of it all.

Northeastly, across grain growing Illinois, and lo! Chicago surrounds us, while matchless Lake Michigan lies blue and reposeful.

We've come a good way—
I'm tired, aren't you?
Let's stay here till May,
And centennial's through!

SADIE M. HARDY.
Rockville, Conn., May 8, 1889.

Northern Counties of California.

EDITORS PRESS:—The seven northern counties of the State of California are comprised and included in that area situated between the parallels of 40° and 42° north latitude and 120° and 124° 30' west longitude. Del Norte, Siskiyou and Modoc, the northern tier, form the northern boundary of the State, while Humboldt, Trinity, Shasta and Lassen adjoin on the south. For facts concerning the topographical features of this broken and mountainous region, the writer is indebted to J. W. Powell, Director of the United States Geological Survey for the California Shasta Sheet of his official map made by members of his staff in 1883 and 1885.

In no other portion of California can be so well seen the stupendous effects and powerful influences of the pent-up force of dynamic agencies that have been generated in Nature's laboratory as in this region.

This whole section has been tossed, torn and dislocated by irresistible and invisible forces. The strike or trend of the stratified rocks, as well as their central core, has been changed from west of north to north 20 east as if swung on a pivot. The main axis of the mountain range with its central granitic core has not only been metamorphosed by chemical action, but as stated, changed its position and been thrown into confusion with no order or system.

From Mt. Shasta, which evidently was the focus of the disturbance, subordinate ranges and spurs of ranges radiate in every direction, with isolated peaks and buttes of greater or lesser proportions indiscriminately thrown up like bubbles of gas in a seething caldron. Old river channels were obliterated and new rivers formed. The eccentric course of the river now known as the Klamath, in its efforts to find an outlet to the sea, was due to this cause. Its tortuous and snake-like windings is a fair illustration of this chaotic confusion, this cabalysm of events.

The long-pent-up powerful gases that produced these effects finally found an outlet in Mt. Shasta and her subordinate volcanic vents which belched forth torrents of molten rocks, lava, scoria, etc., not only building for themselves isolated mountains of no mean proportions formed of eruptive matter, but covering the surrounding country to great depths, filling beds of extensive lakes and basin-shaped depressions forming plateaus or table-lands of immense extent. The overflowing molten current passing onward in a southerly direction followed the course of and filled the channels and troughs of the then existing system of Pliocene rivers and hermetically sealed their auriferous contents for the use of unborn nations, overflowing their banks and surrounding ridges, covering verdant plains teeming with the vegetation of the tropical clime, and destroying all animal life in the morasses, lagunas and rivers that had not been dried up or evaporated by the advancing flood of the fiery molten stream.

Abundant evidence that this was the case is seen in the numerous remains of the mammoth, mastodon, the horse and other species which are found in the gravelly beds of these Pliocene channels and the surrounding bogs and morasses of this region. It is also possible that Pliocene man may have existed during this Tertiary or early Quaternary period and lived in these ancient streams.

This period was followed by oscillations of the earth's crust. Alternate elevations and depressions occurred, producing great changes in the physical geography of our continent—as well as climatic changes—from a tropical clime to the temperate, followed by the glacial period, when an icy sheet covered the whole Western Continent, of which there is abundant evidence in glacial marks that have scored and furrowed the surface of the rocky formation. Previous to this period, however, the Sierra Nevada range of mountains had assumed shape, form and proportions with its granite core, flanked by the metamorphic slates that form our present metalliferous domain.

At a still later period the coast range of mountains raised its head above the ocean (anterior, however, to the volcanic changes) with its sandstones, shales and slates of the cretaceous and tertiary formation forming the easterly bank and shore line of an arm of an inland sea that extended at least as far north between the two ranges as Shasta Basin, and possibly into Oregon, the recipient of the waters of a river equal if not superior in size to the Columbia, possibly the Columbia itself. That this theory is tenable is evidenced by both the flora and fauna of this region, and by the remains of a system of ancient rivers that flowed from the north southerly through Washington Territory, Oregon and California. This system spanned a width of nearly 40 miles, situated on the high peaks and table-lands of these northern regions at elevations of from 4000 to 6000 feet. In places it is lava-capped; at others their trough or channel with inclosed gravel are exposed where cut by bisecting modern streams that course at right angles with the Pliocene system.

J. H. CROSSMAN.

THE LATEST USE OF PHOTOGRAPHY is to make a cannon-ball take a picture of its own wabblings. An arrangement something like a camera is placed in the forward end of the projectile, and when it is fired directly at the sun, the light traces lines upon the sensitive plate, from the direction of which it can be told whether the projectile has kept in one position or has wavered to and fro during its flight. The scheme is largely theoretical as yet.

HORTICULTURE.

Unprincipled Fruit Packing.

An essay entitled "Unprincipled Packing," by Leonard Coates, of Napa, was read by Assistant Secretary Rice at the National City Convention, as follows:

Mr. President and members of the Convention: The object of this article is to call attention to the vital principle which lies at the bottom of marketing successfully our fruit products. This principle, in a word, is honesty, with which should be closely allied good judgment.

It is not my purpose to deal with the strictly moral side of the question, other than to endeavor to show that at least in this business "Honesty is the best policy." Nor can I assert, by implication or otherwise, that those who hold contrary views are necessarily dishonest, though they must be classed among those who make grave errors of judgment.

These remarks are also made upon the assumption which few can question, that every fruit grower is apt to think his own fruit, and his own methods of putting it upon the market, are as good, and generally better, than that of every other grower.

My experience in buying sample boxes of various kinds of dried fruits of the very finest brands obtainable, is evidence enough to convince me that we are building up a reputation of unreliability.

It is useless in this paper to mention names and localities. Suffice it to say that in my allusions I refer to leading and well-known growers and dealers. I would, however, add that it is the duty of such bodies as the California Fruit Union and the California Dried-Fruit Association to publish cases of persistent fraud, giving the full name, and the stockholders should demand some such action as a protective measure to themselves.

The "hand-to-mouth" policy of the aborigine or of the natural-born "bummer" is a failure, whether applied to the Digger Indian or the fruit-grower of California. We ostensibly sell our fruits in order to sell them again, and extend our business; in reality we sell them where they cannot be sold again, and every year we depend on a new batch of hungry customers as our market.

Fruit labeled "extra evaporated" is almost invariably, to speak the truth, "medium sun-dried," and the manager of the Dried Fruit Association will tell you that it never sells more than one season as indicated by the false label.

Pray, what becomes of the "medium" and "second" and "third" class grades of dried fruits? I have not seen a box which was not labeled "choice" or "extra."

Why is the term "evaporated" applied to nearly all sun-dried fruits, when the public has been taught to believe that "evaporated" means machine-dried, and buys it as such?

The packer will tell you that his sun-dried fruit is better than machine-dried, and that he is committing no crime upon the public in marking it "evaporated." Certainly machine-dried fruits are very different, and it is a fraud upon both the public and those who dry by artificial heat to steal the name and apply it to sun-dried fruits. Machine-dried fruit must be better, because it is cleaner, and too much sulphur is not so likely to be used, little, if any, being necessary. It costs much more, and can only be produced in comparatively small quantities; at any rate as long as it has to compete with "evaporated" fruit dried in the sun.

What do I find on opening boxes of these "extra evaporated" fruits? In the center of the box, third and fourth grade fruit, rubbish, straw, dirt, pits and worms, in varying proportions. Would I, as an average consumer, buy a second box of this fruit, think you? Would any one?

Again, fruit dried in the sun is apt to get wormy, and in order to counteract this it is the custom to scald it before packing, to kill the eggs. This scalding process has been very generally resorted to in the great zeal evinced to prevent the public having to take meat with their fruit; and some even forget to heat the water, but turn the hose upon the fruit as it lays in piles upon the ground, packing it before it is dry, to increase the weight, some being so soaked that the water oozes out of the boxes afterward. This has been seen by a member of a prominent San Francisco firm, who related it to me in the presence of a gentleman well known, and probably present at this convention. He also asserted, and he was in a position to know, that many tons of fruit thus "scalded" (?) were rotting in boxes in Chicago to-day.

On the same general grounds taken in this paper I would condemn the indiscriminate use of sulphur, and would go further, and say its use should be discontinued altogether. It is only a question of educating the public, which now buys light-colored fruit because it thinks it, only, is clean. Let it be known that the lighter the fruit the more it is charged with sulphur and the less fruity flavor is possessed, and it will not long be in demand. This could easily be done by labeling the fruit properly, somewhat after A. L. Bancroft's plan, calling attention to its properties, directions for using, etc., and with the assistance of the press.

An instance of a pack of fruit thus treated, and a neat label being printed and pasted on every box, has come within my own experience, the results being flattering in the extreme, and a gentleman, Rev. A. T. Perkins of Alameda, at a recent State Horticultural Society meet-

ing, gave his own similar experience, where his fruit sold much higher, and complimentary letters were being constantly received regarding it.

Among my collection of "extra" samples are "Silver prunes," most beautiful to look at, but wet and sticky with some foreign "dip," and the taste most vile, causing all who eat them to be sick. A strong sulphur flavor is left on the tongue, and the rich, fruity flavor is entirely gone. This crop is sold at 17½ cents per pound, but who will ever buy a second box?

Rather every purchaser will feel it his duty to warn his friends against purchasing such unwholesome food, and be victims to such a contemptible fraud.

The principle at the bottom of this sulphur business is rotten, and the practice is a fraud on the public. No man wants his family to be dosed sulphur every year unless under medical advice. And who would willingly take lye into his stomach or prescribe it for his wife and children?

Do the fine grades of imported prunes ever show any signs of having had their skins "out" with lye?

Theoretically, the prune is dipped in lye to "cut" the skin that it may dry quicker, and then be immediately rinsed in cold, clean water to wash off every particle of lye. And what a lie this is, every one who has been there well knows; the cold rinsing water is often nearly as much impregnated with lye as the solution itself, for it is rarely changed.

And so, in "our hurry to be rich" we are not "innocent," and it remains for those who are alike actuated by a belief in the old saying, "honesty is the best policy," and a higher sense of true principle to use their influence in the fruit associations, and also toward more stringent legislation on the general subject of food adulterations.

[Mr. Coates takes rather an advanced position in some respects, for example, to abandon the use of sulphur at present would be to sacrifice a good part of the market value of the fruit. His appeals for care and cleanliness and honesty should be heeded.—EDS. PRESS.]

The Loquat.

Concerning this little-known fruit, J. H. Kellom read the following interesting paper at the Fruit-growers' Convention at National City:

The loquat is commonly known by the misnomer, "Japan plum." The Kelsey Japan plum differs from the loquat, and the true Japanese plums are entirely different. At a late meeting of the Florida Nurserymen's Association it was voted that the Eriobotrya Japonica be known as the loquat, and the Kelsey Japan plum simply as the Kelsey plum.

The loquat was introduced into London from Japan about 100 years ago. It came directly from Japan to California. It is a beautiful evergreen, growing to the height of 25 and 30 feet. The leaves are large, eight or 12 inches in length, undulated, thick and shiny, and dropping freely at certain seasons of the year. The blossoms are produced in umbels or spikes at the end of the branches; are small, white and unobtrusive. The fruit ripens from the 1st of March to the 1st of May, and but for the birds would remain sound on the tree until the 4th of July. The fruit is yellow, plum-like, elongated in shape, from one and a quarter to two inches long, and containing from one to three stones or pits. It has a peculiar pleasant, acid taste, combining the flavor of the tamarind and pineapple.

So agreeable and mild is the acid taste, the eater only wishes the seeds were less in number and size.

We are told by ex-Commissioner Colman that the loquat is extensively cultivated in Lower Louisiana. The fruit is marketed in strawberry baskets, and brings fancy prices. For the years 1886 and 1887 the crop was light, owing to late and severe frosts. Orchards of loquats may be seen in Florida. One near Jacksonville was said, a few years ago, to have brought in more cash per acre than any other piece of land used for agricultural purposes in the State.

This tree is grown from seeds, which germinate slowly but readily, if planted while fresh. "It is also grown from layers and cuttings, and can be grafted and budded on the quince and hawthorns, which are closely related trees."

The loquat is not known as an orchard tree in California, and the single purpose of this brief paper is to call the attention of Southern California, and of all the "Northern Citrus Belts," to the value of loquats planted in orchards. I am told it is perfectly hardy in the coast region, from Marin county southward, but, blooming in the coldest season, it is not apt to set fruit excepting in comparatively frost-free localities.

James Shinn of Niles, Alameda county, has a number of trees of about 15 years old which produce from 25 to 30 pounds each every year, and the fruit finds a ready sale. But the great value of the fruit consists, not in eating the fruit from the tree, but in converting it into jelly. So far as my investigation and reading have proceeded, I find no mention of the conversion of the loquat into jelly. We have plenty of fruits that will make plenty of jelly; but in my estimation there is no jelly that combines all the points that go to please the taste, comparable to the loquat jelly.

I have but two trees, standing on opposite

sides of the walk passing from the front door to the street. They are 10 years old, 12 feet high, and would have been 15 feet or more but for cutting back, white with blossoms in January, and yellow with fruit from March on. Strangers invariably notice their beautiful foliage and early blossoms, and ask what the fruit is good for.

Hitherto, my reply has been, to feed mocking-birds and linnets, and, after them, ourselves, with the first fruit of the season.

The earliest pear and peach are composed mostly of water, and are eaten and relished just because they are early. But the loquat, two months before the earliest peach or pear, contains a juice more delicious than that found in other fruits.

For two years past my cook has placed on the table loquat sauce and pies with about one-half apple. But at my suggestion, a few weeks since, she tried to jelly the fruit, and those who sampled it exclaimed, "Eureka!" Guava, the queen of jellies, must abdicate in favor of her majesty, the loquat.

If our opinion of the merits of this jelly be confirmed by the experiments of others, may we not have, in time, a new industry, stimulating the planting of loquat orchards, thus giving employment to many and enjoyment to thousands.

Ashes for Curl Leaf.

EDITORS PRESS:—At A. W. Dunton's, Upper Lake, we saw an experiment that may be worthy of notice, now that this malady is creating such wide-spread disaster. Mr. D. had read in the State Horticultural report directions for battling the borer. As his eyes were poor, he did not try to cut the borers from the trees, and as he had no slacked lime he put a quart or two of ashes around each tree. Now his trees are showing hopeful signs of recovery, and he announced that the insect at the root was the cause, and ashes the cure, of the curl leaf. Every orchardist knows that the borer has enough to answer for without this new crime; but still, the ashes may have had something to do with the improvement in the trees. Who has more light on this subject? It looks as if peaches would be very scarce in Lake county this year. Plums and prunes promise well.

F. S. CHAPIN.

THE STABLE.

Montana Bronchos in New York.

The *Stock-Growers' Journal* says that Oliver H. Wallop, the breeder of fine horses of Ashland, Montana, passed part of the winter in New York. As an experiment, he had with him 18 bronchos from Custer county. Mr. Wallop says that never again will he take bronchos to market unless they are thoroughly broken for all purposes. He relates an amusing experience with the wild steeds of the plains. He feels fully compensated for his trouble by the immense fun which he saw.

When he unloaded the quadrupeds in Jersey City, he necked two of the wild ones, they bolted into an alley; a smart Aleck tried to stop the brutes, but one of the animals landed a hoof on the abdominal protuberance of the citizen, and that individual, luckily not killed, crawled off holding his enteric walls and still "glad he was living."

Failing to find any one who could stick on their backs, Mr. Wallop essayed to show how it was done. He rode into Central Park. The animal was so active and erratic in his movements that an Irish policeman ordered Mr. W. to quit the place, as the creature was trampling grass and crushing the shrubbery. The rider could not move him and the policeman was invited, for fun, by Mr. Wallop, to lead the horse out of the park. As soon as the blue coat touched the bridle, the Montana broncho arose and struck out at the peeler, who was mounted. With the cry of "He's a devil," the policeman lit out, adding: "Be dad if ye come in here again, I'll be after arresting ye."

The animals were clipped, and having been blanketed they looked fine; and they were wanted by the master of a riding-school. Samples were taken to the tanbark circus of the school. The galleries were filled with curious people to see the heroes of the Montana horse herds, the untamed bronchos. They saw them. The electric light lit the scene. The band played. The riding-master brought to the front one of his most daring and accomplished riders, who walked confidently up to the broncho, which had been equipped with an English pig skin. "Moind him now!" said another Hibernian gentleman at Wallop's elbow. "Moind him now, till he gits onto him. He's a devil! Ye can see it in his eyes." This remark referred to the broncho and not to the would be rider. The band and the electric light and the cheers of the ladies and gentlemen enthused the Montana horse to do his best. He did his best. First jump the crack rider straddled the horse behind the ears; the second buck dropped him hard back into the saddle, the dainty spur struck the flank, and the man shot straight over the horse's ears and turned gracefully and quickly in the air, yelling "Mein Gott! Mein Gott!" for he was a Teuton, and lit on his back. One old gentleman was in the alcove, in the gallery, 30 feet above the tanbark. Every time the broncho bucked the old gentleman jumped back, having an opinion that

the horse could and would jump into that alcove.

Barnum sent up to buy one of the horses, but after his agent saw the spirited activity of the creature he concluded that the animal was too much for Phineas T.

Mr. Wallop is of the opinion that to successfully sell our bronchos they must be well broken out in Montana, else they will only be bought for bear meat at the Zoo, in New York, and in the latter event Mr. Wallop cautions the owners of the grizzly bears to kill the bronchos before they are fed to Bruin, otherwise he will bet odds on the broncho busting up the bear.

Horseshoeing.

The New York *Sun* has been publishing some interesting articles regarding the method of shoeing horses that are being trained as trotters. In the last issue it has an interview with Robert Bonner, respecting Simpson's method of using tips instead of a regulation shoe. As the use of tips has become quite common in this section, it may interest some of our horsemen to know what are Mr. Bonner's objections.

The first objection to the tips is that with them the foot is not properly balanced, but this is not the main difficulty. Mr. Bonner contends that the tips destroy natural movement, and, eventually, natural formation. He thinks it must produce malformation of the foot and ankle to have a device attached to the hoof which will depress the heel more than nature provides for. He insists that the horse's power of action is as much impaired by that method of shoeing as would be the human hand if one's duties required him to be constantly pushing against some object with his hands, and instead of placing his palm flat upon the object, he constantly kept that part of the palm next to the wrist free from contact. Such use would certainly weaken the power of the hand and wrist, and something of the same nature takes place according to Mr. Bonner when tips are used in place of regulation shoes. But while speaking of horseshoeing, we wish to cite an authority more experienced than perhaps a majority of horse-trainers.

Major Geo. B. Rodney, U. S. A., commanding Battery F, 4th Artillery, recently published a paper on this subject in the *Journal of the Military Service Institution* in which he takes the ground that shoes are entirely unnecessary, even for artillery service. He commences with the statement that many think it strange that any horse should wear out three or four pair of legs, but says it is not to be wondered at when we reflect that special artisans are employed to deform and misshape the foot by paring and shoeing. He proceeds to give some interesting experience that he had with horses used in his command. He finally became a convert to non-shoeing and adopted a regular plan for hardening the horse's hoof while giving the frog a chance to develop and perform its natural functions. His horses were used for parade over the cobble-stone pavement of Chicago in 1887, when they trotted five miles with bare feet, and he was surprised to find that they not only did not shrink from such usage, but sustained no injury thereby. This made such an impression on him that he covered the ground along his picket line to the depth of eight or ten inches with broken rock and compelled the horses to stand on this for four or five hours each day. At first the hoofs cracked and broke off, but the new growth was so tough and hard that it could scarcely be worked with a rasp, and not at all with a knife. Major Rodney says this growth was better than any iron shoes, standing harder usage with less injury to the foot. The conclusion is that shoeing renders the foot tender and is contrary to natural design. Our cavalrymen on the plains also claim that horses are better without shoes, even for long campaigning.—*Eureka Times*

POULTRY YARD.

Liver Diseases in Fowls.

EDITORS PRESS:—In the Press of April 27th is an interesting article by T. B. Geffroy on "Poultry Diseases," in which he alludes to lameness in fowls as a symptom of disease of the liver. Having several times verified by dissection that the above statement is correct, I have waited for some time for some of our poultry experts to give more light upon the subject tending to a remedy for the disease. My last dissection was made May 11th on a fine bronze turkey about two years old. For the past six months we had noticed diminished activity on the part of the bird—he long since ceased to strut and gobble. About four weeks ago we first noticed that he limped occasionally with his right leg, which gradually grew upon him, though he would be better at times. He has also sought a low place to perch instead of occupying a tree, as formerly. All of our fowls have free range, running water from a spring and generally favorable conditions for health. We keep only a limited number for our own use—from 40 to 60 chickens and turkeys, and lose not less than one-half dozen every year from disease of the liver, always accompanied with lameness.

May 11th I killed the turkey alluded to above. A careful examination of all the organs showed them to be apparently healthy, except the liver. This organ was much enlarged (weighed one pound), of a dark-green color and thickly studded with tubercular bodies, white

and round, from the size of a mustard seed to one-half inch in diameter. Cutting one of these bodies, the outer portion is much like cholesteroline, or the substance found in cheesy pneumonia. The center is harder and grates as the knife passes through. The appearance under a glass of low power was fatty and granular. The parenchyma of the liver seemed to be a homogeneous mass entirely incapable of glandular function. However, my means of examination were insufficient to determine the more minute pathological condition of the organ which might lead to the discovery of the cause of the disease and its remedy.

I would suggest that some of our poultry breeders in easy communication with S. F. send a morbid specimen to some expert pathologist and microscopist in the city. I would recommend that the specimen be taken from a fowl not very far advanced with the disease. For when about to die, the liver is almost a fluid mass, held, as it were, in a sack by the delicate serous coat. The specimen might be sent to Prof. Arnold A. D'Ancona of the Toland Medical College, or Prof. Jos. H. Wythe of Cooper Medical College, or any expert who could give light on the subject.

The question naturally arises, is the disease contagious?

This I cannot answer, but would advise that fowls so affected be at once killed and burned, not thrown out for other fowls or swine to feed upon. I send the above to your valuable paper, hoping to stir up an investigation which will lead to practical results.

O. S. PHELPS, M. D.
Blocksburg, Humboldt Co., Cal., May 17, '89.

THE DAIRY.

A Novel Consideration.

EDITORS PRESS:—There is admitted to be a loss by some one somewhere in the cattle business, but by whom and at what point along the line from calfhood to the day the fat steer goes to the shambles, who can tell?

How it may be in other localities I know not, but here in Central Illinois it seems that so long as the people raise babies the cattle-grower will buy feeding steers for less money than he could raise them. When a new child comes into the family, a fresh milch cow is one of the first prescriptions ordered by the village physician.

The children must have milk. In the cities this can be had, such as it is, from the milk-wagon or supply stores, but in the towns and villages the family cow is indispensable. The cost of keeping the calf until it can be taken by the farmer is counted as nothing—is placed rather to family expense account. When it is offered for sale at weaning-time, the question of cost to date has nothing to do with the price. It goes to the buyer at whatever he is ready to give. He perhaps is a farmer who cares to buy a few only to place with a few of his own raising to glean about the barn and feed lots, thus saving what otherwise might be lost. But unless he has a large farm and plenty of pasture, he soon finds himself overstocked with a lot of half-fattened young cattle, so he in turn is ready to sell at figures to be fixed by the next buyer. He either ships to Chicago or sells to the farmer near home who has the broad acres and the money.

This last purchaser is the cattle-feeder proper. As a rule, he buys in the fall the best 2½ or 3-year-old steers to be found among neighboring farmers or at the stockyards, usually paying about 3 cents per pound or an average of \$33 per head. He winters them on grass and corn and sells within ten months at an advance of \$30 to \$36 per head. Even then the feeder is not always sure of having made a reasonable profit on the purchase-money, the land and the time invested.

Surely if there has been little or no profit to the last handler, how could there be any to those who bring the feeding steers to the age when they are to be made ready for market? One thing is very certain: The cattle-feeder does not raise his own feeding stock. He waits and buys only when the animals are right for the last turn.

PHIL THRIFFTON.
Springfield, Ill.
[This is a novel consideration. It cuts no figure out here, for we haven't babies enough to the square mile in our cattle-producing regions to keep one cow busy—and then we don't have to buy cows for all the babies; they have other visible means of support. One thing we can assure our Eastern friends, and that is if the cattle interest and the babies can't both thrive together the cattle interest will have to go to the wall. Our reading has taught us that since the birth of Cain the baby has been the boss of the world and the *bos bovis* stands no chance beside him.—EDS. PRESS.]

Keeping One Cow.

EDITORS PRESS:—Will some reader of the Rural who keeps one or more cows give a rancher some hints on the keeping and milking of one cow; also quantity of feed and when to give it. How much milk ought an average cow to give per day?

El Dorado, Cal.

THE FIELD.

Better Cultivation of Field Crops.

T. S. Van Dyke, after a visit to the back country of San Diego county, wrote to the *Union* as follows:

One of the best signs of the future is the vast improvement in the quality of the plowing. It is but a short time since all grain was scratched in with a harrow or cultivator. Even the gang plow ran little deeper. Such work gave good results in most years, because in good years almost any planting will do in California. But it was not such work as prosperity can depend upon. While it will often do for grain, it begets a slovenly habit which is carried over to everything else, and tells too heavily in the long run. Now the single plow or sulky plow is doing the work and running several inches deeper than ever before. Hundreds of fields show plowing that would be very good in any part of the United States, and the results can be but one way.

There is every reason to believe that the rest of the county is in the same condition as the portion over which we traveled. If so, the area in trees and vines will be nearly double what it was a year ago, and there will be about 2,000,000 bushels of grain raised. A considerable area of grain will of course be out for hay, which is always a profitable crop. But as most farmers have already six or eight months' supply left from last year, the proportion out for hay will not be very great. There has now been abundance of rain to insure a good crop. More is quite certain to fall, but with the usual cool weather of spring, upon which the California crop mainly depends, there is already enough.

A considerable area is evidently being prepared for corn. Here is a chance, if people would only utilize it, to surprise all strangers, over and over again. A good crop of corn—not a big crop, but a good, paying crop—has been raised without irrigation upon high uplands, dozens of feet from water below, and upon which not a drop of rain has fallen since planting of the seed. Nothing paralyzes a tenderfoot like such a corn-field; and at Fallbrook, and one or two other places, such corn has sold more farming property than all else put together.

The trick is a very simple one, though many make a wretched failure of it. It is done by good plowing, proper planting and thorough cultivation after planting. The old style has been to plant either in furrows like peas, or in hills about 20 inches apart, crooked both ways. In either case it was never touched with plow or cultivator after planting, and could not be cultivated even if one were disposed to treat it properly. This style was imitated from the Mexicans, who, however, always irrigated, and made water-works instead of the plow. The first Americans imitated them in all but the important feature of irrigation. The Mexican rarely or never planted corn where he could not irrigate. The American cared little where he planted it so long as he could do all work beyond that of planting. I have even heard people say they preferred the upland to bottom land for corn, because they didn't have to cultivate it. That is, the weeds did not bother them there, and the killing of weeds was the only object of cultivation that they could imagine.

But a few years ago there came some men from Kansas and other sections of the West, who planted corn exactly as it is planted in Kansas—in hills about four feet apart and straight both ways. The Kansas farmer cultivates steadily after planting, until the corn becomes too high to drive through without injuring it. As soon as he finishes the field one way he starts into it the other way, and then back again the first way. In the Western States this is done primarily to kill the weeds which would otherwise smother the crop. But its effect in retaining moisture is quite as important, and in seasons of short rainfall it makes the difference between a middling crop and no crop at all.

The same course pursued here has repeatedly given crops of from 30 to 60 bushels of corn to the acre upon almost any kind of high upland. Much of this has been successfully done on the mesa back of Encinitas, Del Mar, and other places along the coast as well as in the mountains. Potatoes, beans, and all other crops planted on hills, may be raised the same way, not of course to the extent they could be with irrigation or on wet land, but still to an extent that will well repay a man doing his own work. It requires only good work, good judgment as to time of planting, and then results are sure. Where a man does his own work, 15 bushels of corn to the acre will pay, counting in the fodder, which here is always good. A large amount will be planted this year, and if the improvement in its cultivation keeps pace with the improvement in plowing everywhere else, the corn crop will be a large item.

COWS FOR DRAFT.—A team of four cows appeared in Bellevue, Idaho, not long ago, having been driven from Nebraska, a distance of 1000 miles. They had acted as motive-power for a prairie schooner, and had also furnished milk and butter for the farmer and his family en route. They were in good condition, with the exception of their feet, which needed shoes badly. It may not be generally known that cows will stand that kind of work about as well as oxen, and in proportion to their weight will haul a greater load.

Some Things in Our Grange Edition.

In our Grange Edition to-day the following matters of interest are mentioned at more or less length:

Grange Prospects in Mendocino County, A Grange Paper, China Wedding, Sacramento Grange Harvest east, The "Patrons' Budget," A Non-Voter's Thoughts, The Master of Arroyo Grande Grange, Has Come to Organize a Grange, Oregon State Grange—Address of Worthy Master Hayes, Marion County Pomona, Salem Grange.

Children's Day Important.

Do not think too little of Children's Grange Day, which comes on Saturday, June 15th. It is important to give the young folks their Grange day of delight.

While the young, if properly encouraged in the Grange to take an interest and part in ordinary Grange meetings, are more to be benefited by experience, education and social acquaintanceship than many older heads, they are not so fully entertained with the general proceedings, some of which, even to grown people, are considered "rather dry." So give the children a good day once a year for themselves.

The National Grange, with due consideration and wisdom, has announced that the children shall have a day all their own. If it be too late to make proper arrangements for the day announced, take some later date.

Say they meet at ten o'clock, and outdoors if convenient. Otherwise hold an open meeting in the hall. Get the young folks to take active part (with a little assistance from the older ones) in decorating the room and preparing a program.

Make it an occasion to bring in outside farm-people, as well as their children, and let them learn of some new and pleasant features in farm-life.

We merely suggest something like the following for an

Order of Exercises:

1. Music by the Grange.
2. Address of Welcome by the Lecturer, Master or other brother or sister to the children.
3. Response by some young brother or sister.
4. Song by the young folks.
5. A recitation by some young Patron or invited guest.
6. Reading of a humorous poem or essay.
7. Solo or duet by some good singer.
8. Reading and answering questions written by the children and dropped in a box passed around.
9. Ask the children what they think of the Grange. How many will join it now? How many when old enough? Ask parents who are eligible to join. Ask how many have children old enough to join who are not yet members.
10. Appointment of committee to arrange for next Children's Day.
11. A march or dance by all hands around, the children in the front, with appropriate music.

We refer this hastily suggested program to some of our apt readers to make amendments and complete the list in our next.

Patrons, do not close the next session of your Grange without taking up this subject and if possible arranging for a splendid time for the boys and girls of your Grange and neighborhood. Get them into the Grange. It is important to you and to your Grange, and even more beneficial to them.

A STRAW BINDER WANTED.—The State Grange of Illinois, through its Executive Committee, offers \$10,000 to any one who will invent a machine or device to attach to reapers, that will bind wheat and oats with straw. The device may work and twist its straw direct from the reaper, or it may be a separate machine that will twist the straw and wind on large spools, that may be re-reeled on smaller spools by the farmer and set in place on the reaper when wanted. The money will be paid as soon as the device is proved to be a success. Should more than one person claim the \$10,000 on his invention, the committee reserves the right to choose the one that to them seems the most practicable. The patent is to be issued for the use and benefit of the Illinois State Grange, and legally transferred by the patentee. This offer holds good until July 8, 1889.

WATSONVILLE GRANGE will confer the third and fourth degrees on a large class June 15th, and have a Harvest Feast June 22. All Patrons are most cordially invited to attend on these occasions.

BENNETT VALLEY GRANGE.—The party at Grange hall, May 17th, was a success socially and financially. It is rumored that Bennett Valley Grange will have a very large class to initiate into the mysteries of the Order in the near future.—*Sonoma Democrat*.

The Patrons of Husbandry and Pioneers at Alvarado.

The picnic given by the Grangers of Alameda and Santa Clara counties, in conjunction with the Pioneers of Washington, Murray and Eden townships at Alvarado, Saturday, attracted a large attendance and proved a most satisfactory event in every respect. Quite a large delegation attended from Oakland, and the San Jose train brought a number from Santa Clara county. Many came in from the surrounding parts in private conveyances, and there were over 200 vehicles about the park. It was estimated that during the day there were over 1000 people present.

The grove in which the picnic was held is convenient to the station and was generously placed at the disposal of the Pioneers and Patrons of Husbandry by Mr. Granger, the proprietor. Tables were ranged about among the trees for the convenience of the visitors, most of whom came provided with well-filled lunch-baskets.

The literary exercises of the day were rather impromptu. During the forenoon the committees of Temescal (Oakland), Eden (Haywards) and San Jose Granges met and selected the following officers of the day: President, A. T. Dewey of Oakland; Vice-presidents, O. F. Alley, Master of San Jose Grange; Judge W. C. Blackwood, Master of Eden Grange; Rev. S. Goodenough, Chaplain of the State Grange and Master of Temescal Grange; Secretaries, Bro. Henry A. Brainard and Sisters A. Sharia and Nellie C. Babcock, Secretaries respectively of San Jose, Eden and Temescal Granges.

Music by the boys' band of the Reed-street school, San Jose, attracted the crowd to the speakers' stand about 11 o'clock in the forenoon, when the President, A. T. Dewey, announced the officers of the day and the order of exercises. After a selection by the band, Rev. S. Goodenough of Oakland offered an invocation. The President of the day, Mr. Dewey, then made some brief remarks in which he congratulated the Grange upon the progress that it was making. They had come together to meet socially, and he hoped that the day would be one pleasant and memorable. Mr. Dewey then introduced F. B. Granger, Sr., who in a few words welcomed the visitors. In a few complimentary remarks the President then presented Joaquin Miller, who he said had brought his mother with him to enjoy the day and would make some remarks and recite a poem. After remarks in a humorous vein, the poet recited his own lines, as follows:

The Fortunate Isles.

You sail and you seek for the Fortunate Isles,
The old Greek Isles of the yellow bird's song,
Then steer straight on through the watery miles,
Straight on, straight on, you cannot go wrong.
Nay, not to the left, nay, not to the right,
But on, straight on, and the isles are in sight.
The old Greek Isles where the yellow birds sing
And life lies girt in a golden ring.

These Fortunate Isles, they are not so far,
They lie within reach of the lowliest door;
You can hear them sing by the twilight star,
You can see them gleam by the moon's white shore.

Nay, never look back. These lonely gravestones,
They were living steps, they were steps into thrones.
All glory for souls that have gone before
And have set white feet on the fortunate shore.

And dear the names of the Fortunate Isles,
With labor and love and a large content,
Lo! these are the isles of the watery miles
That God let down from the firmament,
Lo! duty and love and a true man's trust,
Your forehead to God though your feet in the dust;
Lo! patience and love and a sweet babe's smiles,
And these, O friends! are the Fortunate Isles.

Major E. A. Sherman was then introduced as one of the pioneers and delivered an oration. At the conclusion of Major Sherman's address the President announced that it had been hoped Governor Waterman would be present, but he had been called to San Bernardino and was unable to attend. An intermission was then taken, during which the company gathered about the tables or in family groups for the discussion of the refreshments. Joaquin Miller sat at the table with Judge Gibson, Dr. L. P. Hess, J. R. Capell, A. T. Dewey, Rev. S. Goodenough and a number of ladies. He was in one of his happiest moods, and seasoned the feast with jest and repartee.

Afternoon Exercises.

After ample justice had been done to the abundant provisions the crowd again gathered about the stand, where some brief and impromptu speeches were made by Judge W. C. Blackwood, W. T. Gibbs, president of the Alameda County Pioneer Association; C. J. Cressy, Judge E. M. Gibson and Mrs. L. J. Watkins. Joaquin Miller again entertained the audience with a brief speech and by reciting "William Brown from Oregon" a poem written by himself which was published in Rural Press of May 19, 1888. O. F. Alley, Master of San Jose Grange; D. W. C. Gaskill, a pioneer, and Orrin Dennis, Past Master of Eden Grange, also spoke, and C. J. Cressy enlivened the proceedings with interjected remarks and witty allusions. The remainder of the day was devoted to dancing in the pavilion by the young people and sociability by the older persons. At five o'clock the train conveyed the Oakland delegation home.—*Oakland Enquirer*.

The Oregon State Grange.

The annual session of the Oregon State Grange convened at the State House in the city of Salem last Tuesday, to remain in session three days—Tuesday, Wednesday and Thursday. Governor Penoyer delivers the address of welcome, responded to by Mrs. I. L. Hilleary of Turner Grange. On behalf of Salem Grange, Judge R. P. Boise welcomes the Grange, with a response by W. A. Sample of Heppner. The California delegation is welcomed by Sister H. E. Hayes. We go to press too early in the week to receive an account of this meeting, but hope to give a report of its work in our next issue.

A Visit to Hollister Grange.

MESSRS. EDITORS:—Pursuant to agreement with Hollister Grange, I boarded the Del Monte flyer, and in less than no time arrived at Gilroy, where I nerved myself for a two-and-a-half-hour wait, but succeeded in breaking all former waiting records, as the train was nearly an hour late.

Arriving at Hollister, I was met by the genial Master of the Grange, Bro. G. S. Nash, who, with a convenient carriage and a fine Norman, whirled me away to his beautiful mansion, where a fraternal greeting from Sister Nash and an excellent dinner again convinced me how good it was to be a Patron. We soon reached the Grange, where Sister Rachiff presided at the piano and an excellent choir singing familiar songs was most inviting.

The work in this Grange was well rendered, and a class was instructed in first and second degrees in a manner which would make most old Granges look to their laurels. The interest and energy exhibited by officers and members will surely fill this Grange with a hundred of the progressive farmers of this beautiful valley in a short time. Among those present were three of the wide-awake officers of Gilroy Grange, who came on a tour of inspection, and who doubtless were amply rewarded for their long ride.

After Grange I was taken in charge by Bro. and Sister Gustav Brown. I reached their well-kept home among the sheltering foothills about six o'clock, and was shown over their large ranch until sundown. Improvement is here the order on every side, and with a large and healthy family, this brother and sister should be happy. Spent a very enjoyable evening discussing the U. W. and Sister Brown's jokes. Was again taken possession of by Bro. and Sister Nash, who placed me under lasting obligations for their hospitality. After inviting all to attend Watsonville Grange on the 15th of June, when the third and fourth degrees will be conferred on a large class, or on the 22d, at the Harvest Feast and entertainment, I bade them all, good-by and God-speed in our glorious cause.

A DEPUTY AT HOLLISTER.

A Non-Voter's Thoughts.

(Written for the Rural Press by Mrs. J. M. K.)

Notwithstanding the discussion of partisan politics was wisely, no doubt, forbidden in the Grange, the discussion of principles of political economy and legislation affecting the farmer's interests has been a powerful means of education. The Granger no longer looks upon his party as infallible and the other fellows as the sum of all wickedness. All these years of close acquaintance and fellowship should certainly have created such confidence in each other as will permit freer discussion than was at first possible.

I believe the political education of the Grange will be far more rapid in the future than in the past. Let every true Granger stand firmly for principle, and frown upon the sentiment that to vote upon the winning side is to be aimed at or gloried in.

We are told we "must vote together." Certainly, if half full on one side and half on the other, we have no force in elections—but who is to tell us where to pull? While each looks at candidates and measure through the lens of the old party papers, is it not likely we will continue to pull against one another?

It is all very well to mend up our old tools as long as they can be made to do the work; but there comes a day when that is no longer possible and we must have new. While truth and justice are eternal, parties in the very nature of things are not immortal.

To my mind all things indicate a speedy recasting of parties. There is a loud call for one that shall stand for right as against wrong. While the farmer plowed and reaped, while the workman toiled in the marts of the world, while the preacher labored for the next world, and woman was relegated to domestic seclusion, greed and avarice seized upon every vantage ground of power. But let us not paralyze our energies by a pessimistic view. Only the fatalist sits down in indolence, saying, "It is the will of Allah."

The army, eager and ready to work for righteousness, only waits to be organized and intelligently directed to rout the foe.

(Now, Mr. Editor, I so dislike hinting and beating about the bush, please indulge me in a few plain words.)

Mr. Carr, in his article May 11th, tells us he is ready to join or form a new party, "unless the present political parties of this country

grant us a part at least of what belongs to us." Now, I believe the day is past when by either petition or demand much can be gained through them. Still, a party called farmers' and workmen's does not meet my view of the broad foundation we need. We ask no special favors or privileges, only such just and equal legislation as will be for the good of the whole people; only such laws as honest, right-minded people of all classes and occupations should be willing to work for. The foundation of this grand new party, which is to enter upon the new century and shape it for more equal justice and prosperity than the world has yet seen, is even now being laid by earnest, self-sacrificing men, who well know that for years to come they are leading a forlorn hope; but trusting in the justice of their cause, they work for its advancement in the ranks of this or that little reform party. I expect to see at no distant day the leaders of some of the most prominent of these parties discussing issues of the day and formulating a platform which their respective adherents can indorse. From what I have learned, I believe this is no very difficult task.

What, then, should the Grange do to-day? Get up on the fence and take your bearings. If you find your old party, by the natural law of inertia, has ceased to move, look about for one traveling in the direction you wish to go; then join it, and work with all your might—be one of those enthusiasts who, as we are told in a late Press editorial, "In some corner, garret, cellar or open field are rallying humanity against wrong."

The S. P. C. Loses Land.

In the United States District Court at Los Angeles, May 27th, a highly important decision was rendered by Judge E. M. Ross in the suit brought by the Government against the Southern Pacific Company to annul patents issued to that company for land situated in Los Angeles county.

The particular case decided involves about 2300 acres of land, but the ruling of the court affects the title to 800,000 acres lying between Tehachapi and the Colorado river.

All the lands involved in the suit are situated within the 20 mile or primary limits of the grant to the Southern Pacific, and part of said lands were in 1871, when the grant to the Southern Pacific attached, within the claimed limits of the Rancho San Jose, and were excluded by the final patent and survey. The Government contended that the lands in dispute were included in confirmed Mexican grants, or in the Atlantic and Pacific grant, which are both prior.

In overruling the defendant's demurrer, Judge Ross held:

First—That the lands which were within the claimed limits of the Rancho San Jose were *sub judice* when the railroad grant attached, and were excluded from the operations, and that the patents therefor were issued illegally and should be vacated.

Second—That all the lands embraced in the suit having been on the general line of the grant to the A. & P. R. R., under the Act of Congress of July 27, 1886, were excluded from the grant of March 3, 1871, to the S. P. C., and that the patents issued to the latter company were issued illegally, and should be vacated.

In speaking of the decision U. S. Attorney Denis said: "The railroad company has already sold a good portion of the land to innocent purchasers, but by the law under which the suit was commenced these will be protected in their rights. They will be enabled, if the Supreme Court affirms this decision, to patent the lands they have bought from the railroad company direct from the Government, and the Government will, in turn, bring suit against the railroad company for the purchase-price of the land."

It is understood that the S. P. Co. will take an appeal to the U. S. Supreme Court.

EDEN GRANGE deserves much credit for their attention in securing the grounds for the picnic at Alvarado last Saturday. The members arranged the grounds in proper order and in various ways assisted in making the affair a success. San Jose Grange turned out in good numbers, doing their part of the work well. All the Granges were especially benefited by the securing of so good a band on very acceptable terms.

UNITED STATES POSTMASTER GENERAL JOHN WANAMAKER has ordered that all postmasters who are saloon-keepers, holding office under him, shall be removed, and he has issued an order that no postoffice shall be allowed to remain in a place where liquors are sold, nor in any room opening into such place.

BRO. A. T. DEWEY, accompanied by Sister Dewey, left for Salem, Oregon, last Sunday evening to attend the session of the Oregon State Grange. We wish them a pleasant journey and safe return.

SUBSCRIBERS who are Patrons, or feel interested in the Grange should bear in mind that, upon application, they can receive the Grange edition of the Pacific Rural Press, containing two or more extra pages of Grange news, in place of the regular edition, without extra cost or the loss of any considerable amount of valuable reading or advertising matter.

STOCKTON GRANGE will meet on the first and third Saturdays during the months of June, July and August.

Bro. Flint at the East.

MESSRS. EDITORS:—May 9th, a party of four of us left Sacramento, journeying across the continent, to finally bring up at the Paris Exposition and see something of the Old World. Our sleeper went from Oakland to Council Bluffs without change, which is much more agreeable than formerly, when we had to change at Ogden. Ours was a buffet car, with facilities for making coffee, tea, and getting up some warm dishes, which served to make our dry lunch palatable.

We did not get off to get a meal until we arrived at Chicago. We had a regular picnic at each meal, as four of us gathered around the small table with contents of two large baskets spread out—sometimes two and three stories high. I think we consumed about one-third more than we would if we had sat at two different tables. We indulged in so much chatting and gossiping of times gone by, and planning in anticipation of the trip before us, that we hardly knew when we were through with our meals except by timing ourselves.

The country around Truckee was mostly covered with snow, and we did not see much more, except high peaks, until we arrived at Sherman. From there on, for a long distance, the ground was covered with snow, about six inches deep, and the cattle and horses were pawing the snow from the grass or nibbling at the stray spears of grass that stuck up through the snow.

I could not help remarking the almost endless barb-wire fences through Wyoming, Nebraska, Iowa, Illinois, Indiana and part of Michigan, and even quite a percentage of Canada. I said to myself that the inventor of barb-wire fence was entitled to a pension from the Government for the saving of the tremendous consumption of lumber for fences. It would seem that the lumber for fencing in the United States is beyond the power of computation, and that the ratio of consumption is much greater than the growth; and, from that manner of reasoning, it would be but a few years before our valleys and hills would be treeless. I believe the wire-fence man has come to stay; and now, when I want a little lumber to build a woodshed or chicken-house, I shall not have any scruples in ordering it.

Iowa showed off her black, rolling prairie ground, as the farmers were turning it over for corn; while Illinois corn was just coming up so you could see the rows.

We arrived in four days and 22 hours from Sacramento, in Lansing, Mich., where we found Mayton Buck with his carriage and white courser ready to receive us and take us to his father's house, D. W. Buck, ex-Mayor of Lansing. We left our co-partners—James Hutchison and wife—at Chicago, to visit friends and places and to meet us at New York on the 24th. Our stay in Lansing could be of only two days, so we had to visit very fast and improve every moment. The time flew so fast with our friends that it seems more like a dream than a reality.

While in the midst of the pleasures and congratulations of our friends, we could not forget those that were silent. We visited the beautiful City Cemetery, where lie the remains of Mrs. F.'s mother and two sisters. Marble and granite slabs, with affectionate and appropriate inscriptions, mark the places where lie the bodies of two beings that were as dear to me as my own sisters, and a mother-in-law that watched over me in my sickness with that tender solicitude which only a mother could bestow on a favorite son. As a token of affection to the departed, the fragrant lilac was plucked from the shrub growing in the yard—where they had seen it, each returning spring, in its full perfection, and deposited on their respective graves. Before stepping into our carriage, we took a long, sad look at the sacred spot where memory calls back and affection lingers. If the spirits of the departed are permitted to be present, I believe they were there, and I saw them as I did years gone by, when I communed with them in their physical bodies.

We took sleeper, via Port Huron and Suspension Bridge, to Buffalo, where we had to wait five hours, which time we put in looking at the large city, its parks, cemetery and fairgrounds. They have a mile track, regulation style, with quarter-turns. The Agricultural building is inclosed in the grounds, which is the city limits. The stalls, pens and coops are well arranged, and everything seems to be arranged with an eye to beauty and convenience. The main building is very large and nearly square—not so high as some—and ornamented with gables, towers and columns. Buffalo has grown wonderfully in the last few years; has fine business blocks, well-paved streets, ornamental and inviting residences.

We arrived here Saturday night via Albany, Springfield and Greenfield, completely tired of resting in easy-riding and well-appointed cars. Royalston is a true type of a New England village, on Miller's river, nestled between the hills, where every 20 rods the water can be used again for power. Rock maple trees give shade on either side of the streets through the village, and their green, clean leaves can be seen mingled with the white birch, oak, and elm, covering the hills as far as their undulations permit the eye to extend. The whole landscape presents a carpet of green and everything seems at its best. The sky is a little overcast to-day, and warm May showers are falling, which must

give great promise to the tiller of the soil as he looks out on the green hills and sees in anticipation the well-filled barns, granaries, and cellars, which means well-filled wallets, sound sleep, contentment and happiness.

The loom and the spinning jenny are rattling in my ears. They give employment to young men and women, who are forming industrial habits which will shape their future destiny. A double-track road passes through the village, which distributes their manufactures through the West, and brings in return their more cheaply grown grain, flour and meats, with an occasional balance of shekels.

To help freshen my memory of boyhood days we went out into the pastures and gathered pippins, checkerberries, wintergreen, and flowers. I saw the high and low bush blueberry, full of blossoms, which gave great promise of a coming crop. How I longed to drop a few of them into a bowl of New England milk, seasoned with a slice of brown bread.

I have seen and recognized most of the trees and timber that I knew in my youth, except the black birch, the bark of which I used to chew as the modern school-girl does her gum. I shall probably never forget how the white birch looked as it so frequently hung over the mantle of mother's kitchen. It made more frequent and lasting impressions on me than most any other kind of timber, and from the melody of its peculiar switching tones it caused me to dance quicker and step higher than the most fashionable music of these days.

I hardly know the wages paid here, but the people dress well, live in good houses, live well, and seem to be contented. It looks discouraging to me to see where they try to grow crops in among the rocks. I will send you a few lines now and then to let you know where we are holding forth.

Royalston, Mass., May 20th.

An Imposition or Not?

MESSRS. EDITORS:—I wish to call your attention to an imposition that is being practiced upon the unsuspecting Grangers. Last February I sent an order to a prominent nursery company for orange, lemon and walnut trees. The order was filled and received. When the bill was sent (amounting to \$46.90) they had charged me with 70 cents for two boxes which the orange trees were packed in and 40 cents for packing the other trees. When I forwarded payment, I refused to pay the \$1.10 and told them that I believed the shipper paid for boxing and packing. They sent me back a letter stating that I was mistaken and that they must insist upon my paying \$1.10 for packing and boxing.

Now I believe this is a great imposition, as I never, in my 25 years of farm-life, heard of such a thing before. I should like to get your opinion through the Press upon this, as I have so far made up my mind to stand a lawsuit for the \$1.10, for if we submit to such a thing, we will have you or any one we deal with charging us extra for the wrapper that you put around our paper, and for stamping our address on it.

This shows how all are trying to cinch the farmers. When I take a load of wheat to the dealers to sell, after it is weighed they deduct one pound of wheat for every sack, and if I want my sack again, they charge me four or five cents for it.

OLD SUBSCRIBER.

[Our correspondent is undoubtedly right in his general proposition that many buyers and sellers will cinch the farmer if they get a chance. As for packing trees, there is a different practice as to charging for the packing, and usually the catalogue states whether there is to be any charge or not. As this is the case and as some dealers have always charged for packing, our correspondent could not escape the payment of this bill, but he can deal with those who do not charge for packing in the future if he desires. If all should do that, the charge for packing would soon disappear. The practice with reference to grain sacks is clearly wrong. The farmer makes a dead loss on a grain sack anyway.—EDS.]

THE U. S. DEBRIS COMMISSION.—We learn from the Yuba City Farmer that Majors Ban-yard, Hanbury and Heuer, the Government engineers appointed by the Secretary of War under the provisions of the Biggs bill, were in that neighborhood on Monday of last week, and, in company with Dr. C. E. Stone, president of the Anti-Debris Association, and George Ohleyer, the manager, were escorted about the Marysville levee, the Sutter levees, and to the junction of the Yuba with the Feather. After lunch a drive was taken on the Brown's Valley grade to the site of the State brush dam, some eight miles above Marysville, thence further on to De Guere Point near the foothills, where a rock debris dam had been spoken of as an eligible site. The commission was disappointed in the size of the river, it being bank-full from melting snow, so that the low-water channel and sand-bars were out of sight; so, after returning to the city, the commissioners decided to end their investigations for the present, and return some time in July to complete their work.

WATSONVILLE GRANGE, at a late meeting, passed resolutions on the death of Mrs. A. Davis, a much-respected member of the Order.

The Worst of all Fruit-Pests.

Small boys, says the Fruitvale correspondent of the Oakland Enquirer, are the greatest fruit-pests that fruit-growers dread. It is not the few cherries that they might steal, but it is the damage done to the trees. When a boy gets turned loose in a cherry orchard, when the owner is not around, he is liable to do more damage than he imagines by breaking down branches and tearing off fruit buds. Sometimes whole trees are spoiled in this manner. A number of orchardists on Fruitvale avenue have been heard to say that they are not going to stand this sort of thing this year, and fruit thieves had better beware of buckshot. More than one person was filled full of holes last summer for violating one of the ten commandments.

CATCHING THE CROCODILE.—A remarkable dream story comes from Nevada, showing the good that sometimes results from obeying the indications or intimations that are given in dreams. A man was greatly opposed to lotteries and believed that their influence was demoralizing in the extreme. He dreamed three nights in succession that a certain number in the Louisiana Lottery would draw the capital prize. It made so strong an impression upon him that he determined, in spite of his fixed principles, to buy, if possible, the ticket indicated. He went to the vendor of tickets and inquired for that ticket, and learned that it had just been sold. He sought out the purchaser, but to his sore disappointment found that he also had received the same mysterious intimation as to its value. Nevertheless, after much persuasion, he succeeded in buying a half interest in it for the sum of \$500. The impatience with which he awaited the drawing may be better imagined than described; but when the list of winning numbers came, the most anxious and careful investigation did not reveal among them the number upon which he had risked his cash. Now he is more decidedly opposed to lotteries than ever.—Kern Californian.

WATER-STORING PROJECT.—The Steamboat & Washoe Lake Canal Co. has been recently organized by B. G. Clow, Irwin Orane, W. D. Hardin, R. S. Gammon, R. H. Ball and others, who are to carry by a large ditch the winter surplus of water in Galena creek and White's and Thomas' canyons into Lower Washoe lake, at the lower end of which a dam of solid stone masonry is to be erected, eight feet high and about 40 feet long. As there is but little fall to this part of the valley, this dam will set the water back for a distance of at least two miles. Twelve years ago Surveyor-General Hatch made a survey of the above-named water-courses, and learned that they would furnish 6000 inches of water during the irrigating season. This amount, with the natural flow of the other streams, will afford water sufficient to irrigate for 4½ months in the year, 14,000 acres.—Reno Gazette.

THE TEXAS SPRING PALACE, which opens this week at Fort Worth and is to remain open until the 20th instant, is built wholly of Texan products. The dome is to be entirely covered with wheat; the towers made each of some distinct staple—one of corn, another of cotton, and so on. On the floors within will be grouped the minerals, grasses, grains, fruits and vegetables of the Lone Star State, while the galleries are devoted to women's work, the flora and fauna, pictures of farm-life, historical and archaeological exhibits, etc. The whole is happily entitled a Karporama (fruits-picture) of Texas. We are indebted to the courtesy of Director-General Somerville for a complimentary pass, which we would be pleased to present in person.

THE WESTMORELAND DAM WRECKED.—A large portion of the dam built by the Mokelumne Ditch and Irrigation Co. across the Mokelumne river, near Lancha Plana, was carried away by a sudden rise of the river on the 20th ult. The dam was about 50 feet high and 150 feet long. It was built of the famous sandstone common in that section, and was apparently strong enough to withstand any flood. It is thought that the masonry was cracked and loosened by the earthquake of the Sunday morning previous, making it too weak to stand the strain when the body of water came down upon it. The breach is about 80 feet wide by 12 or 15 feet deep, and it will cost many thousands of dollars to repair the damage.

MEXICAN WHEAT CROP.—Dispatches from Guaymas report an immense wheat harvest in Sonora, and for the first time in the history of Mexico there will be a great surplus, the exportation of which to Liverpool, via New Orleans, will begin in a few days. The authorities, to assist farmers in the heavy expenses of transporting to Sonora railway stations, offer a premium of \$1 a ton.

KILLED BY A HAY-DERRICK.—Fred. Bentner, a well-known farmer of Mount Eden, was killed by the falling of a hay-derrick, Tuesday evening, about 7 o'clock. One of the ropes gave way and the heavy fork fell, struck Mr. Bentner on the head and crushed him to the earth.

HALF A MILLION sacks of barley will soon be put on the market by San Diego farmers. Last year none whatever was produced.

PALO ALTO.—Senator Stanford has sued for an injunction against the Carnall-Fitzhugh-Hopkins Co., a real estate firm. Last September they published a pamphlet entitled "Souvenir of the Leland Stanford, Jr., University." The object of the publication was to advertise a large tract adjoining the Palo Alto ranch, which it proposed to subdivide into town lots and sell at public auction. The name of the proposed town was to be Palo Alto. Mr. Stanford asks that the firm be restrained from further publication of the pamphlet and that they be compelled to abandon the use of the name "Palo Alto," as applied to any adjacent lands.

THE CHERRY-GROWERS.—According to a dispatch from Haywards, the cherry-growers miss the tender attentions of the cannery buyers this year and suspect that the canners propose to deal through the commission merchants and not buy at first hands. We do not know what reason there may be for the statement, but the fact seems to be that Eastern cherry-eaters are to be filled with California fruit. Cherries are being shipped a carload a day from San Lorenzo and Haywards, and a special agent has gone East to facilitate the trade. Our market report contains telegraphed Chicago auction prices on cherries.

AGRICULTURAL DIRECTORS.—Governor Waterman has appointed the following Directors of district boards of agriculture: District No. 26, John McFarland, for the term ending Dec. 1, 1890, vice I. N. Holman; Oliver Plummer, for the term ending Dec. 1, 1892, vice H. A. Messenger; E. J. Gregory, for the term ending Dec. 1, 1889, vice A. O. Smith; No. 18, A. W. Eibenschutz of Inyo Co., for the term ending Dec. 1, 1890, vice W. Walker, failed to qualify; No. 23, Contra Costa Co., D. N. Sherburne, J. E. Dunham, H. Raap, G. P. Loucks, J. H. Fennent, R. G. Dean, F. Sanford and R. C. Terry.

SETTLERS DISTURBED.—E. D. Angus, an old soldier, who settled at Creston, on the line of the A. & P. R. R., writes the Chronicle that the S. P. Co. threatens to drive the settlers from their homes, on the ground that the company wishes to build on its grant. The settlers are indignant and threaten to fight rather than leave their homes. Many of them have made extensive improvements on their property. There are about 1700 settlers on the grant. At the United States Land Office no information as to complaints from settlers had been received up to Tuesday last.

SECRETARY RUSK is not only sensible and honest, but somewhat of a humorist withal. "You've got the prettiest place in the city," remarked a visitor to him the other day. "Of course. Why not?" was the prompt rejoinder. "You know the Secretary of Agriculture is the tail-end of the Cabinet, and the tail is almost altogether ornamental. Its principal use is to keep the flies off the other members of the Cabinet."

AN UNCOMMON CASUALTY.—Geo. W. Coffey, of the "Summit Ranch," six miles north of Red Bluff, had ten goats killed by lightning. They had sought shelter under a large oak tree, when the lightning struck the top, following the body down to the ground, and killing only ten goats out of two hundred. Mr. Coffey was standing within twenty-five yards of them at the time.

THE LAS ANIMAS LAND AND CATTLE Co. has incorporated with Geo. W. Grayson, A. Bolland and R. R. Grayson of S. F., and W. S. Hopewell and N. Grayson of Hillsboro, N. M., as directors, and a capital stock of \$2,000,000 fully subscribed. Its field of operations will be New Mexico.

RIPE FIGS.—Briggs, Ferguson & Co. and Eveleth & Nash report the arrival of the first fresh figs of the season from Palm valley, San Diego county, where they ripened May 15th. The fruit came through in prime order and brought 50 cents a pound.

AGRICULTURAL DIRECTOR.—A Sacramento dispatch, May 24th, says that the Governor has appointed P. H. Klinefelter a director of the 28th District Board of Agriculture (San Bernardino county), vice Joseph Jarvis, who failed to qualify.

HORTICULTURAL COMMISSIONERS.—A. F. Kercheval of Los Angeles, Hiram Hamilton of Orange and J. A. Driffell of Pomona have been appointed Horticultural Commissioners for their respective towns, and qualified May 23d.

BAD FIRE AT RENO.—Last Sunday afternoon a fire broke out in the old Theater building at Reno and consumed hotels, flooring-mills, shops and residences to the value of \$250,000—about half insured.

NEW postoffices have been established at El Verano, Sonoma county, with Wm. H. Keeler as postmaster, and at Largo, Mendocino county, with Lemuel F. Long as postmaster.

REV. E. E. HALE says: "The public schools do not fit children for life. They merely prepare them for examinations."

A HEAVY white frost on the night of May 23d is reported from Grand Forks, D. T.

Showers.

[Written for the Rural Press by MINNIE W. EDWARDS.]

The Unwelcome Shower.

The farmer gazes on wet new-mown hay—
"Just my luck to have it spoil this way."

The farmer's wife sighs sadly and says, "O dear!
There'll be no new 'tall hat' for me this year."

While the farmer's boy says with woe-begone face,
"Pears like I'll get no cash from this yere place!"

And the little one says, looking up in the air,
"I don't see any 'cats and dogs' coming down here!"

The Welcome Shower.

The farmer gazes and says, "Ha! ha!
'Twill give me fine crops I'm sure, Tra-la!"

And the farmer's wife laughs and says "Te-he!
'Twill give me soft water for washing, I see."

And the farmer's boy laughs aloud "Ho! ho!
I'll hie to the barn and pick my banjo!"

While the little one says as he looks at the sky,
"What for's it all turned into one big cry?"

The River Rhine.

[Translated from the German of G. B. Mendlesohn by PROF. GRANVILLE F. FOSTER.]

The German may well be proud of his river Rhine! Not, however, because of its size. Many other streams, even in Europe, excel it greatly in length, breadth, quantity of water and extent of region drained, but to none of them can there be assigned, as to this, so noble a symmetry, so complete a proportion, so perfect a development of form and beauty, and in not one of them can there be found united on the banks in such eminent degree, both art and nature—the memories of the past with the living realities of the present.

Amid the loftiest peaks of the mighty Alps, in the very central regions of the same, where glory and sublimity reign supreme, there hang, girdled within heaven-high barriers of rocks, more than three hundred glaciers, which contribute to the Rhine their overflowing, rushing, roaring, turbid torrents of water. Where they issue from the mountains they repose and purify themselves—these wild and impetuous children of the Alps—in some fifteen lakes of considerable extent, and of surpassing beauty, unfathomable basins of emerald here confined by inaccessible rocks, or there surrounded by vine-clad hills and by meadows of living green almost as interminable as the lakes are deep. Streams, crystal pure, issue from these lakes in swift and yet in already quieted currents. Finally all at length mingle in one river-bed and the Rhine is born, which now goes peacefully and yet powerfully surging along, through smiling fields, past noble and stately castles and lofty and magnificent domes, by lively and active cities—cities rich in the accumulated art of the past—cities busy in all the industries of the present—a river which bears on its bosom to the inhabitants of these cities rich and valuable cargoes from all parts of the world.

Out of the dim, blue mystical distance, lofty forest-clad hills nod from afar and mirror themselves in the beautiful stream, as the delighted traveler descends toward the sea. But now at length it reaches the great plain—wide, boundless, where it hastens toward the bosom of the sea, to contribute to it its mighty supplies of water and to build up within its watery realm, new made land.

The traveler meets at the source of the Rhine poor, but free and happy herdsmen. At its mouth he finds an equally free, but a rich and art-loving people—industrious in trade, enterprising in business—a people, too, who construct floating houses with which to navigate the most distant seas to visit the most distant lands.

What other stream has a Switzerland at the streams of its fountain-head and a Holland at its mouth? What other stream has its whole course through such a free and happy land?—a land, too, abounding in the most fruitful fields, and in landscapes of the most charming and picturesque loveliness? Do other rivers excel it in the quantity of water borne to the sea, in length, depth and breadth? Then does it excel other rivers in unsurpassing clearness and transparency, and in its fullness of waters which vary in quantity but little throughout the year? This last fitting it admirably for raft or ship, and for every purpose which the commercial needs of the people may make requisite, while at the same time its banks are not so far separated from each other but that a wink or a bow may be acknowledged from the opposite shore, or a loud call distinctly recognized across its waters.

Mighty enough to command respect and beautiful enough to fill the soul with the spirit of its loveliness, there it appears like a moving water-mirror bound in between frames of picturesque landscape, in contrast to mightier streams which look like huge watery deserts bound in by far-distant, indistinct, misty outlines of shores.

Grass Valley, Cal., May 11, 1889.

Mrs. Mary A. Woodbridge.

We present on this page a portrait of Mrs. Mary A. Woodbridge, the talented and popular Recording Secretary of the National W. C. T. U. It would be impossible, in a sketch as brief as this must necessarily be, to give a just estimate of the life and labors of this gifted woman. Born on the hardy New England soil of Nantucket, and of the lineage made illustrious by such representatives as Prof. Maria Mitchell of Vassar College, and the poet-preacher, Phoebe Hafford, she comes legitimately by her natural endowments. Her father, Capt. Isaac Brayton—a name which has about it a smack of the salt sea air, and a suggestion of the thrifty New England skipper—was a man of sterling character and ability, whose best traits have been inherited by his distinguished daughter. Her mother, who bequeathed to her her own tender, lovable and sympathetic spirit, was a sister of Prof. William Mitchell, the brilliant astronomer and amiable gentlemen. Under such careful guardianship she passed from infancy to maidenhood, the light and joy of home and the prodigy of the school-room.

At Ravenna, where her parents resided for a number of years during her girlhood, she became acquainted with her future husband, Frederick Wells Woodbridge, a respectable young merchant of that place. It was a case of mutual attachment. An early marriage was the result, and at eighteen she had assumed the cares and duties of wife and mother. The fruits of this happy marriage are two daughters, and a

ful reports of Union meetings, to take part in, or even preside over, local meetings; it was another thing to address, or preside over, monster meetings in metropolitan towns and cities. But with the enlarged demands and opportunities came enlarged capacities, and the enthusiastic consecration to duty which inspires her has enabled her to rise to the dignity of every occasion.

In 1878 her eminent qualifications suggested her as the one best equipped for the position of Recording Secretary of the National Woman's Christian Temperance Union, and year by year, down to the present time, her re-election has demonstrated her eminent fitness for the onerous position. In this capacity she is almost constantly in the field, lecturing before large audiences in various parts of the country, or by wise counsel strengthening the hands of her co-workers in the cause; now conducting a political campaign with pre-eminent ability and success, and now with equal ability and success conducting a newspaper.

In 1884, at the St. Louis National W. C. T. U. Convention, she was unanimously chosen Superintendent of the Department of Legislation and Petitions. She is also Secretary of the American World's W. C. T. U., in which capacity she attends the annual convention of the British W. C. T. U., where she will deliver an address.

With all these multifarious responsibilities and duties, she still finds congenial occupation in cultivating the domestic affections. Blessed in the love of husband and children who adore her, in a home made beautiful by flowers and books and artist's bric-a-brac,

MRS. MARY A. WOODBRIDGE.

son growing into young manhood, while an elder one early passed over to the great majority.

The cares of a home and family did not stop the mental growth of the heroine of our sketch, nor prevent her from enriching a mind preternaturally acute with the choicest stories of literature. Books, after her family, were her "next of kin." Her marriage had necessitated her removal to Cleveland, Ohio, and here, in her capacity of secretary of a literary club, she was brought in contact with the late President James A. Garfield, who was president of the club. Thus she was unconsciously, but effectively, preparing herself for the life-work which was awaiting her.

It is not supposable that a woman of such culture and refinement, and having such broad, clear and intelligent views of things, should not have had her sympathies stirred to their utmost depths by the gigantic evil of intemperance, and we are not surprised that her whole soul revolted at it, and that she early enlisted in the army fighting for its suppression with all her heart and great abilities. Very early in her life she was chosen president of a local Temperance Union, while residing in the town of Ravenna, and the ripening experience she gained in this, and similar experiences later on, fitted her for the high honors and responsibilities to which she was ultimately called.

Up to this time she had been abundantly equal to all the emergencies which duty had imposed upon her. The time came, however, when all her resources of courage, moral and physical, and all the acquirements of learning and experience which she had been quietly storing up, were called into active use. It was one thing to write grace-

with a most lovable disposition and troops of friends, she is a model wife, mother, housekeeper and Christian woman.

Man or Monkey.

There are people who are very sensitive on questions of genealogy. They are extremely anxious to have it known that they have descended from a certain line. Their chief element of pride is that they have come from their grandfathers. Sometimes this is their only ground for boasting. There are other people who prefer to think that they have descended instead of descended. We do not undertake to say which form of egotism is the more objectionable, though we are inclined to think that one who is on the ascending scale morally and intellectually is in a more hopeful condition than one who is descending.

The doctrine of evolution, with its intimation that man may have descended through some ancient form more or less closely allied to the monkey family, has been a source of some irritation to those people whose pride is mainly in their descent. They would rather think that they had degenerated from a mythically perfect man like Adam than that they had come up from some really imperfect chimpanzee who preceded him.

Perhaps he whose pride has been wounded by the evolution theory may be ignorant of the fact that there was a period in his own personal embryological history when it would have been impossible for anybody to distinguish him from the chattering ape or ugly baboon he derides. And, if in the space of a single lifetime he could develop into something very different from the animal whose relationship he disowns, it is possible that in millions of years the human race may have differentiated from the same type.

Darwin, Haeckel, and other prominent evolutionists have been particularly careful not to ascribe human derivation or line of descent to

any particular branch of the existing monkey family. Yet when, a few days ago, we saw the chimpanzee at Central Park sit down at a table with his food in a plate before him, and eat with a knife and fork, and drink from a mug, and wipe his mouth with a napkin, we felt that a very good argument might be made for the chimpanzee as the original Adam. Certainly, in his use of forks he was somewhat higher in the social scale than our Puritan fathers, to whom so many people are anxious to ascribe their origin. The fact that he wore through meal-time his keeper's hat was not due to his own lack of manners, but to the lack of manners of the keeper in putting it on. To be sure, after the food was removed, and the keeper had stepped into the adjoining room, the chimpanzee lost no time in jumping upon the table from which he had just taken his meal. But this seemed to us far more creditable than if he had fallen under the table in a state of beastly intoxication, like some of our English forefathers whose servants had to carry them out after the dinner. The chimpanzee seemed also to have certain physical advantages which have been sacrificed in the development of man. After his dinner, a large wooden ball was rolled to him by his keeper. In whirling it about his feet were just as useful as his hands. He reminded us somewhat of the professional gymnast, who lies on his back in the circus and keeps a large ball in motion in the air with his feet. What a valuable acquisition of agility and skill a trained chimpanzee would be in the great base-ball pines in the country! Indeed, we believe a cultivated chimpanzee nine could play two games of base-ball at once—one with their hands and another with their feet.

There are other situations in life in which the pedal accomplishments of the chimpanzee would be of great value. There is many an organist who would like to have as much facility in using his feet as he is able to acquire in using his hands. In nautical pursuits, in stringing telegraph wires, in the work of the fire department, in every occupation requiring agility, power to leap to a great distance, to climb a great height, to hang some time with the head downward, the accomplishments of the chimpanzee would be invaluable. His capacity for turning somersaults would be an admirable preparation for political life. So that much can be said in favor of the chimpanzee as a contemporary, if not as an ancestor.—*Christian Register*.

An Object in Life.

[Written for the Rural Press by M. E. TUTTLE.]

There is an ability rare and hard to describe, by which one person can attain to prominence and competency, while another, with just the same apparent opportunities, sinks into hopeless obscurity and indigence. All over the country we see farms side by side, yet one is fairly bristling with thrift and we can almost feel the breezy life and energy which seems to fill the atmosphere, while the other is steeped in lethargy and indolence and bears unmistakable signs of misdirected efforts or want of forethought.

It would certainly be a great thing for the world if this peculiar trait of character could be traced out and then propagated in the young. It is no doubt composed of several attributes, the most important of which is energy and industry combined with a subtle principle in the mind called common sense, which, by the way, is far from common. The ability to reason or to look at a subject from several different standpoints with unprejudiced vision and to grasp with almost intuitive judgment the effect or result of experimental action, is a natural gift; but still, with certain material, might be acquired or cultivated with satisfactory results.

The young man or woman who starts out in life with the earnest resolution to "have something and be somebody" has made a master stroke in policy, and if they unite their destiny in marriage, then so much the better for the resolution. They will not be miserly, for that would defeat their object in being "somebody" in the world. They will not be extravagant and snobbish, for then they could not gain and keep that competency which is to be an important part of their attainments.

The plain way to their destination would be to make the most of themselves possible. They would not trammel themselves with bad habits, which would blunt their sensibilities and make inroads into their savings, and instead of ostentation and show, they would substitute scrupulous cleanliness and refined taste. Their habitation might be the simplest cottage, but it would be adorned by nature's sweetest ornaments, fruits and flowers, and furnished simply and tastefully. Their amusements would be the most innocent, which brings no aftermath of regret and weariness, but leaves them bright and fresh for their daily tasks. The best part of their life should be their life at home, for I do not think there ever was an individual whose existence blessed humanity and who was loved and revered by his fellow-man but that grew up out of a home life of conscientious action and continued putting aside of self for the good of all. The world is but a larger family. And at last when they have succeeded in their object by honest endeavor, like the righteous man in Scripture, all things seem added to their possessions. Then to rest and think of duties done, of work accomplished, of pleasures temperately enjoyed, to feel that life has been a real success and to wait in ease and comfort for the end.

Watsonville.

Beware of Nagging.

Whatever else you do, young wife, don't "nag" the man you have married. Burn his bread, give him pinks and cake that you learned to make at the cooking-school, allow his heels and his toes the inestimable privilege of free ventilation, spend his money, if you can get it to spend; but, for sweet charity's sake, don't "nag" him.

A husband is a fellow-creature. He has rights which ought to be respected. And a fault finding woman is worse than a smoking chimney in a perpetual northeast rainstorm.

The nagging woman will meet her husband in the hall and open fire on him before he gets off his overcoat.

"James, did you get that braid I sent for? No? Well, I hardly expected you would. This is the third time you have forgotten it. Why didn't I write it down? Write it down? Dear me! If I was a man, and managed a business like yours, I'd see if I couldn't remember such a little thing as ten cents worth of braid without having it down in black and white.

"Now, James, I must speak to you about that sink pipe before I forget it. It leaks into the cellar. We shall all die of diphtheria and typhoid fever if that pipe is not attended to. I had the headache all night, and it must have been the gas from that pipe. No, James, it was not the cold cabbage I ate just before going to bed. Indeed it was not. How absurd you are!

"And there is Mary Ann so put out with the coal at the bottom of the bin that she declares she will give notice to-morrow. And dear mother just coming to make her annual visit, too!

"And the man that painted the front door was here yesterday with his bill. Such a bill! Ten dollars for painting a door! Why, I could have painted it myself for half that money.

"And oh, James, I do wish we could have stained glass in our hall, as the Joneses have got in theirs! I'm sure Jones doesn't make any more money than you do, and stained glass has such an aristocratic look. It impresses one, when one goes into a house, to meet it. Can't afford it? Well, I am not at all disappointed. I expected that is what you would say. That's what you always say when I have particularly set my heart on anything. It does seem, James, as if you sat up nights to study out how to vex and thwart me! Oh dear! how much better off a woman is not to marry. If I had only known as much before marriage as I know now—But there! it's no use to wish! James, if we can't have anything else like other folks, I should like you to wipe your boots before you step into the parlor. Of course, I don't expect that you will do so, now that you know that I want you; but I thought I would speak of it. Some men are so careless! But then, others are not. Now there is Mr. Roberts. He never carries in a grain of dirt, I've heard his wife say, time and again, and he puts on his slippers in the hall.

"James, the clothes-wringer handle is broken. Mary Ann declared yesterday that she'd never try to wring another rag of clothes with it. And I declare, James, you must speak to the milkman. The milk this morning was blue as the sky. Oh dear, I wish you would put down that newspaper long enough for me to tell you about it. Reading about Harrison's new appointments, are you? Well, do let them wait. There's been too much fuss about them already. I hate politics! A man is always reading politics when his wife wants to talk to him about household matters."

And then she goes out of the room in a pet, and slams the door behind her.

Don't be like her.—K. Thorn in N. Y. Weekly.

Chaff.

DR. REID, well known by his medical reports in the *Monthly Magazine*, was requested by a lady of literary eminence to call at her house. "Be sure you recollect the address," said she, as she quitted the room, "No. 1 Chesterfield street." "Madame," said the doctor, "I am too great an admirer of politeness not to remember Chesterfield, and I fear too selfish ever to forget number one."

LANDLADY: "Does the turkey suit you, Mr. McGinnis?" Boarder: "It is excellent, Mrs. Hashwell. I do believe that cook of yours could roast a side of sole-leather and make it tender and palatable. That is (feeling confusedly that he has made a blunder), I mean, of course, tender enough for me. I'm not—at all particular, you know. I can—er—worry down any kind of cooking, Mrs. Hashwell." Landlady (icily): "Thank you, Mr. McGinnis."

A PAISLEY minister was accosted once in the high street of that town by a poor-looking man. "Excuse me sir," he said, "I was aince a coo-feeder in a guid way before the ploory broke oot amang the kye, when I lost a'. Some o' my freends were thinkin' that, if I could jist get a beginnin' again, I wad dae weel, an' they hae been subscrib'ing to buy me a coo. Wud ye mind helpin' me awae?" The minister gave the man two shillings. It was evidently more than he expected; for, with an expression of great satisfaction on his face, he said: "I'm very much obliged to ye. Indeed, I'm extraordinary obliged to ye! Ye are the minister o' the Middle Kirk, are nae ye? Aweel, I maun come up some time and gie ye a day's hearin'."

YOUNG FOLKS' COLUMN.

Echoes.

[Written for the Rural Press by D.]

We wandered on the verdant hills,
One bright but wintry morn,
'Mid babbling brooks and rippling rills,
While playing bugle horn.
We stood beside a live-oak tree,
And looked far o'er the main,
And shouted "Echo" in our glee;
"Echo" came back again.

We tried our new-found friend to please
With flattery and praise;
He answered with the self-same ease,
That caused our pride to raise.
We changed our words, and thought to scold,
In cross tones talked to him,
He answered us in words as bold
And language just as grim.

We loudly laughed "Ho ho! Ho ho!"
And sang that sweet refrain,
"Echo, echo, echo, echo;"
'Twas echoed back again.
Remember this, then, girls and boys,
That what you say or do
In saddest hours, or brightest joys,
Will echo back to you.

Among the Fairies.

[Written for the Rural Press by NANCY JONES.]

Little Roselba had, oh, such great large velvety brown eyes! and with her eyes wide open and an expectant expression upon her countenance, she was always looking about for fairies.

When she was in the country visiting her grandma, or at the seashore for a few weeks' recreation, she was ever inspecting crevices of rocks, leaves, toadstools, old shoes, hollow stumps of trees, rusty old tomato-cans, sea shells, and everything in which there was the slightest possibility of finding one or a number of these little midgits.

So it happened that Roselba, with her mamma, papa and ever so many cousins, uncles, aunts and servants, went far away to Geyserland to make a tour of the country and take in all the points of interest.

Now Geyserland was a true Wonderland in itself. "Here, surely," thought Roselba, "I will get a glimpse of a fairy, if indeed there is or ever was such a thing as fairies."

One chilly morning, as the sun was just beginning to peep from behind a great mountain in the soft blue distance, Roselba (who was sleeping with her mamma and nurse in a big covered wagon) looked out from under the great buffalo robes and blankets with a cold nose and finger-tips; for the air was undoubtedly very frosty for the middle of August.

"Well," murmured Roselba, as she turned over, "I might as well give up all hopes of meeting fairies in this place, for I'm certain fairies must much prefer a warmer climate than this."

Presently a shapely little hand shook some dewdrops off a blade of grass upon Roselba's eyelids. Instantly Roselba's musings grew misty, and shortly she was going down, down, down, through the opening of an extinct crater, through dark by-ways and long passages, and behold! she stood in a golden chamber embellished in silver and precious stones. A tiny Queen called Dewdrop sat upon a throne. At sight of Roselba, she raised a golden cane and smote upon the floor. Instantly many fairies came from the different chambers and passages, formed in grotesque figures, and bowed and courtesied before Roselba, some standing quite on their heads.

Then a domesticated trained bear came from some remote corner, crossed the chamber and struck up a tune with his great paws upon an instrument wrought of silver (looking something like a woven wire bed-spring), and the fairies all danced the nimblest, funniest dances, and sang the jolliest, sunniest songs, making such faces and maneuvers; and one little fellow called Primp, winked and threw kisses at Roselba.

A bevy of birds sang sweet songs in a crystal cave near by, fawns skipped and jumped, while mice played hide-and-seek. Everything was so lively and perfectly enchanting. The instrument upon which the bear played they called Life, and said it was invented by Warmth and was calculated to make the earth dance, the waters recede, the flowers bloom, and all nature rejoice and greet the sun.

"Time! time! time! You must keep perfect time," the King (whose name was Gurgling Waters) would say to the bear. "If you do not keep perfect time, woe unto the people who are watching for me above; to them it would mean instant death."

These fairies were not all well behaved, some of them enjoying a little mischief occasionally, and as they meet few people, they make the best of the tourists when they come their way.

One little fellow with a pug nose was sitting in a corner, on a little stool, eating a sandwich he had stolen from a tourist's lunch-basket; another was chewing spruce gum, drawing up his face like the prize chewers at a dime museum; while another was smeared from head to foot eating wild gooseberry jam, for they really have something of our own "bad boy" in them.

Primp, who had fallen quite in love with Roselba, showed her a wig he had stolen from a titled English tourist who was trying to work himself into the good graces of an American heiress who was also doing Geyserland, and

might have succeeded only for Primp's timely interference of exposing the worthy gentleman in moonlight effects.

They also did a great deal of exploring through the bowels of the earth, and told of having been far enough to communicate with Chinese fairies, who mostly dwell in deep caves; but the Chinese fairies were much given to washing and were not very desirable companions. They took much delight in rowing about upon the subterranean lakes (which were of pretty blue, green and red waters), and bathing and fishing. They fished a great deal and lived principally upon fish, and they considered it capital fun to spirit the fish out of the fisherman's hamper as he was angling along a stream, puckering up his mouth for a grand trout supper. Sometimes they spirited something into tourists' pockets, too—yes, specimens of pretty things and curiosities; then the bewildered tourist would have to pay a fine for "attempted smuggling," and the fairy would stand behind a tree and shake his sides with laughter.

Their garments were mostly woven of wool in pretty patterns, trimmed with a lacy network of silver and gold. Handsome fur rugs adorned their chambers, and the hangings were rich and picturesque.

Master Primp wanted Roselba to stay with them, but the Queen vowed she would be happier with her own sweet mother. So the Queen fixed a costly jewel in Roselba's tresses, whereupon the King (Gurgling Waters) roared like a lion, and up they all went—in the shape of myriads of tiny rainbows—among mist and spray.

"The jewel! the jewel!" cried Roselba; "where is it?"

And when she told her mamma all about it, her mamma was very much afraid her darling had been dreaming. But Roselba is certain that it is all true, and that some miscreant stole the precious jewel the Fairy Queen had given her while she was still asleep, and that she was really and truly among the fairies.

GOOD HEALTH.

Health and Morals.

A writer in the *Providence Journal* makes the following remarks, among others, on the causes of vice and crime:

The relation of physical disease to immorality and crime is doubtless difficult to trace, but it is clear that in large degree it is that of cause and effect. We know that irritability, petulance and many other forms of ill temper are directly due to nervous disorders, and they increase in direct proportion to the increase of their cause; perhaps it can be shown also that anger, hatred, avarice, lust, and most, if not all, other species of immorality are due to physical defects. It is clear that the latter stages of intemperance, resulting in debauchery that at first would have been inconceivable to the unfortunate victim, are the result of diseased conditions of body gradually produced by indulgence; perhaps it is also true that there is a subtle connection between the earlier symptoms of a love for strong drink and inherited physical conditions. * * * Doubtless it will be said that man's power of will and sense of right are strong enough to control evil tendencies, and that guilt lies in not so controlling them. But the only proof of strength lies in its use. If a man does not use it, the presumption is that it does not lie in his nature to use it; that is, he does not really possess it.

Whether all this is true or not, it is certain that it is largely true. Our physical diseases are the cause of much of our immoralities and crimes. We are not likely to be much different from what we are at present until we change our wrong methods of living and regain our lost physical health. The real sin of man lies in neglect of the laws of health, which, disobeyed, force him into a course of action which is immoral and disastrous and compel him to travel therein at an ever-accelerating rate. What we need is a physician, if one could be found, who has skill enough to discover the ancestral taints and weaknesses of our bodies, which cloud our mind, dwarf our moral sense, weaken our will and cause our sins.

So far the *Journal*. Now while the foregoing is true to some extent, it is quite as certain that an awakened consciousness of man's essentially spiritual nature and moral powers has enabled many who had been deemed "hopeless cases" to rise up out of diseased and depraved conditions into the health, mental and physical, which is Humanity's true estate.

Without undervaluing the importance of learning and obeying the "laws of health," we must insist that a cheerful courage and a hopeful trust are the most potent medicines, while doubt and fear are depressing and killing. Although a locomotive jumps the track sometimes, with fatal consequences, it must still be borne in mind that the engineer plans and builds the engine in the first place, and often puts it in repair—the engine never creates nor medicates the engineer! An understanding of this truth lies at the root of the marvelous cures effected by "metaphysical" treatment and "Christian science." Man is a soul and has a body.

COCOANUT FOR TAPWORMS.—In this country, remarks an exchange, comparatively few people harbor that troublesome parasite the tapeworm. Americans are no lovers of raw meats—the com-

mon source of infection. There are a number of drugs held to possess qualities destructive to tapeworms, but most of them have been proved unreliable. Recently attention has been called to cocoanuts as a vermifuge. Prof. Pareasi of Athens, when he was in Abyssinia, happened to discover that ordinary cocoanut possesses vermifuge qualities in a high degree. He took, one day, a quantity of the juice and pulp, and shortly afterward felt some gastric disturbance, which, however, passed off in a few hours. Subsequently he had diarrhea, and was surprised to find that there had been expelled a complete tapeworm, head and all, quite dead. After returning to Athens he made a number of observations which were most satisfactory, the tapeworm being always passed and quite dead. He orders the milk and pulp of one cocoanut to be taken early in the morning fasting, no purgative or confinement to the house being required. A correspondent writes to the *Pharmaceutical Journal* that the cocoanut has been used as a vermifuge in India for probably 40 generations by the beef-eaters of the country, and is so well known there as a means of expelling the flat worm that he cannot conceive how information of the fact has not reached England before. When properly prepared and intelligently administered, he says it is equally efficacious with male fern, kousso, pomegranate root, turpentine, etc., while it is as pleasant for the palate as they are offensive.

DOMESTIC ECONOMY

The Rationale of Bread-Making.

The action of the heat in baking causes certain changes to take place in the starch, by which it is rendered soluble, and to some extent converted into another substance resembling gun, and known as dextrine. The outside of the loaf is altered to a greater extent, forming the crust. These changes have the effect of rendering the bread both nutritious and palatable; but to prevent its becoming a heavy, solid mass of dried dough, it must be "raised" or inflated with gas, so as to convert it into light, spongy substance which can be easily masticated and digested. The gas used for this purpose is always carbonic dioxide, and the best method to develop it in the mass of dough is to set up a vinous or alcohol fermentation by the addition of yeast. This substance is a most remarkable living organism, which, when introduced into the dough, begins to feed upon the starch, which it changes into alcohol and carbonic acid gas. Owing to the tenacious nature of the dough, the gas cannot escape, but as it expands renders it spongy and light. The heat of the baking oven still further expands the gas, and completes the process, at the same time killing the yeast and preventing further fermentation. If the fermentation continues too long, it passes over into the acetic variety, the alcohol is changed to vinegar, and the bread "sours." The alcohol produced in the process is nearly all dissipated in the baking, but it is an appreciable quantity, and some years ago a company was formed in England to introduce appliances for condensing and saving it. The method was found impracticable, but it created considerable excitement, and one baker advertised to sell his bread "with all the gin in it."—*American Miller*.

CHICKEN CUTLETS.—Trim the remains of a cold roast or boiled fowl into nice cutlets. Cut pieces of bread of the same size and shape. Fry the bread to a pale brown in butter and put in the warming oven, with door open to keep warm. Dip the cutlets in melted butter, mixed with the beaten yolk of an egg; roll in cracker dust, season with salt and pepper and fry for five minutes; serve each cutlet on a piece of bread.

BAKED IRISH POTATOES.—Slice Irish potatoes very thin, butter an earthen pudding-dish and put in a layer, cover with bits of butter, pepper and salt. Continue this until the dish is about two-thirds full; have plenty of butter on the top. Then fill up the dish with sweet milk and cover close; bake two hours in a slow oven; eat hot.

HOMINY MUFFINS.—One large cup of white flour, two teaspoonfuls of baking powder, two teaspoonfuls salt; mix together dry. Add two cups of cold boiled hominy, beaten smooth, three eggs, one-half cup of melted butter, two tablespoonfuls white sugar, and sweet milk enough to make a thick batter.

POTTED BEEF.—Take a solid lump of lean beef and put it in water sufficient to cover it; boil till tender and season with salt, pepper and summer savory; remove the water from the kettle, leaving about a cupful; cover tightly and let the meat steam until all of the water is absorbed.

OATMEAL GEMS.—Soak over night in one pint of sweet milk one pint of oatmeal. In the morning add two beaten eggs, two and a half teaspoonfuls of baking powder, one teaspoonful salt; bake in gem pans in a quick oven.

TAPIoca PUDDING.—One-half cup of tapioca soaked in one pint of milk three hours, add five beaten eggs, one pint of milk, one-half cup of sugar, a pinch of salt, a small piece of butter; bake one-half hour.

JELLY CAKE.—Two cups of sugar, one-half cup of butter, one cup of sweet milk, two eggs, three cups of flour, two and a half teaspoonfuls of baking powder; bake in a buttered cake tin.

The Week.

The advance of the season is marked by the arrival of new wheat in San Francisco—a carload from Tulare and another from Stanislaus—Friday, the 24th. This, it is stated, is the first time new wheat has reached the city in May. The weather generally has favored the ripening grain. Heat has not been excessive nor has the too frequent blast of the norther struck the tender kernels this year. Wherever moisture has been adequate for a good growth, the present prospect foreshadows a satisfactory output, but some regions have suffered from drouth, and smut has done some injury.

The fruit crop comes on apace and overland shipments by passenger train of carloads of cherries and apricots are going out daily. Large quantities of vegetables have also been shipped this spring. This year's overland fruit business promises to reach high figures.

Vacation indications multiply, courts are adjourning and lawyers and judges are laying in stocks of fishing-tackle and snake-bite antidotes. The summer resorts are brushing up

their attractions. Several leading private schools have "commenced," and soon the public schools will loosen their grasp upon the restless youth. Those who desire will probably find both recreation and pin-money in the fruit harvest.

The Market for Dried Grapes.

Though there are some indications of an improvement in the outlook for California wines, it does not yet seem that improved conditions will appear soon enough to elevate wine-makers' views of the value of this year's crop of grapes. There is, of course, some little time before the question will press, but it seems altogether probable that a considerable part of this year's wine grapes will have to be dried.

An important meeting of the Vine-Growers' Association, held in this city on the evening of May 24th, shows that the committee, acting in harmony with the officials of the State Viticultural Commission, is doing energetic work toward ascertaining just what may be expected from the distant demand for dried grapes.

The committee reported that during 1888 Eastern shipments brought prices ranging from 3 to 4½ cents per pound, according to quality, packed in white cotton sacks, and that these grapes have gone into consumption among the bakers, restaurant and hotel men, in lieu of the cheap Valencia stock. It is believed that the demand from the East can be largely increased.

The committee's investigation further reveals the fact that France is a large consumer of dried grapes—perhaps the largest—and that Bordeaux is the receiving-point for importations. The question then presented was, "Can Californians export dried grapes to France with profit to the producer?" The only way to settle this question is by practical tests, and the committee recommends that growers make up a quantity of not less than 50 tons of dried grapes, to consist of 25 tons of Zinfandel and 25 tons of Mission, to be placed in the hands of responsible commission merchants and forwarded to Bordeaux; that the shipment be made by the cheapest freight and earliest practicable moment; that the grapes be packed in sugar barrels, pressed in compactly, as they will carry better this way than any other. The returns from this consignment will enable the producers to determine whether or not they can forward dried grapes to France with profit to themselves.

In the discussion following the report of the committee, Mr. Wetmore deplored the lack of interest in the subject by the producers who are to be benefited. Mr. Turrell suggested for discussion at the next meeting of the association the following resolution:

Resolved, That a committee of five producers, practically interested in drying wine grapes, be appointed with full power to organize a co-operative union among all growers who intend to dry their grapes this year, such union to perfect plans for receiving in depots all dried grapes offered and to employ agencies to dispose of the same.

The discussion proposed for the June meeting was agreed to, and the committee will continue its investigations and report at the same time.

A United West.

Colorado deserves the thanks of the States and Territories on the Pacific Coast for its efforts to secure Government aid in redeeming the arid, desert lands by means of irrigation reservoirs. The first convention of the West to consider that subject was held in Denver, about one year ago, and as a result of that convention the Government has sent out explorers to locate sites for these reservoirs, and Congress has made an appropriation for this work. Now Governor Cooper of Colorado proposes that Western States hang together in irrigation and other kindred matters regardless of politics. He suggests that there are certain broad subjects in which all the West takes interest, but which have no pertinence in the East. Although politically divided, yet both parties combine when a measure is introduced which is beneficial to their section, and they get about what they want while the West goes begging. The number of Western States interested in irrigation have a representation in the electoral college nearly equal to the State of New York, which will give them influence whenever it is felt that they will vote together where their own interests are concerned. Such a course would secure nearly every improvement we need, and bring in a crowd of home-seekers which would increase our power in the Union.

The Bench Show.

The display of dogs, poultry and pigeons, under the auspices of the Pacific Kennel Club, which was just opening in the Mechanics' Pavilion as the Rural went to press last week, remained open four days and nights, and proved very interesting to those who attended.

We dropped in several times while the show was in session and enjoyed strolling among the benches and making desultory notes—many more than we can afford space to print.

As one drew near the entrance of the building, there broke upon the ear an inharmonious medley of yelps, barks and howls not unlike the sea-lions' chorus at the Cliff House, punctuated with cock-crowings from the poultry annex.

Arrived within the portals, we found the benches supporting the dog-pens conveniently disposed in four rows running lengthwise of the hall. The pointers and setters stood foremost, in nearly equal numbers (87 entries, all told), constituting more than a third of the canine forces. Those charming red Irish setters, "Lady Elcho" and "Mike T.," which took the highest honors a year ago, were again exhibited by A. B. Truman, and again, together with their offspring "Dash T.," pronounced the finest of their breed. There was also a handsome showing of English setters, among which Judge Graham gave the preference to Thos. Higgs' "Rover" and to P. D. Linville's "Florine," whose beautiful domed head, black and tan, with a white stripe down the middle, was very striking. Fred Tafts of Truckee again exhibited the veteran Gordon "Dorr," now in his 14th year, who delighted the spectators by his performance as a trick dog.

Of all the choice pointers, G. W. Bassford's lemon and white "Blossom" fascinated us with her pleasant, friendly ways; and besides, critically viewed, she was the very best heavy pointer bitch in the pavilion.

Next to the bird-dogs, the greyhounds were largely represented, and there were a few stag and fox hounds also.

There were more than a score of those trim little favorites, the fox terriers; half a dozen black-and-tans—the most noticeable being Dave Eisman's slim and sleek little "Dixie," weighing but a pound and an-ounce; and 8 or 10 of the "blue" Yorkshire terriers, with their long flossy coats nicely groomed, and in some cases quite hiding their eyes; and a sprinkling of rough-coated varieties, with a few dachshunde, beagles, poodles, retrievers, faithful collies, and several spaniels, than which none were more attractive than H. P. Rennie's black cocker "Giffie," a civil, sociable little beastie who quite won our heart.

Then among the curios there were Mr. Roos's queer, unclassified Mexican morsel, "Chihuahua," and Mrs. Zammit's Esquimaux, "Wolf, Jr."

On the opposite side of the floor were ranged the mighty mastiffs, mostly fawn-colored with black muzzles—Rich. Scott's "Dick" and Mrs. Preston's "Actress" wearing the blue ribbons—and Perham Nahl's Great Danes, with a few St. Bernards and Newfoundlands intervening—Mr. Manning's "Judge," which attracted such favorable notice last year, being again honored.

William Graham, whom the P. K. C. brought all the way from Ireland to judge the dogs, did his part with a quiet, keen and brisk intelligence which "won golden opinions from all sorts of people," barring some few malcontents.

Bat besides the 229 canine entries (some of which included half a dozen winsome puppies under a single head), there was a choice and fascinating array of feathered bipeds, set apart by themselves under the South gallery.

The pigeons—called for brevity the Columbarian division—are treated of on another page by an expert contributor.

The cocklers embraced 111 entries of pairs and breeding-pens, by well-known poultry-folk. There were magnificent Brahmas, both light and dark; Langshans, both black and white; plenty of splendid Partridge-Cochins, and a few of the buff and the white; Dorkings; spangled Hamburgs; lots of Leghorns, white, brown and black; the funnily-hooded Houdans and big-wigged Polish; slender, lithe-looking Game fowl; dainty Bantams of various sorts; black Minorcas and Javas; Dominiques; sundry strains of Wyandottes and Plymouth Rocks, and

the curious Mino-Hikis—the cock's long, black tail-feathers trailing all about the coop.

Then, to complete the list, there were single coops of Bronze turkeys, Toulouse geese and Rouen ducks—the last-named being very much absorbed, at the time of our visit, in endeavors to catch every fly that invaded their quarters. Hoping to publish the poultry awards in a future issue, we refrain from further particulars to-day.

The Pacific Kennel Club, we are sorry to hear, is somewhat out of pocket by the show; but they are certainly to be congratulated on their admirable exhibition, which, otherwise than financially, was a brilliant and pleasing success.

The Modern Advertiser.

Enterprise wins. Those who are contented to do things in the old way may keep up with the average, but they can never expect to lead them. Some of the largest merchants in the country, like Wanamaker, started small but advertised judiciously and persistently until they towered above all competitors. The leading stores and advertisers of the country employ a man at a good salary for the express purpose of writing their advertisements. One of the pioneers of this wide-awake advertising had the mysterious sentence "S. T. 1860 X" widely displayed, which men tried in vain to decipher, until it was interpreted, "Started trade in 1860 with \$10." This was a fact, but a fair proportion of that amount was spent in advertising which was increased as the returns came in. Advertising is a fine art; many of the pictures and cards issued gratuitously for advertising purposes are handsomer than those which our grandparents purchased to ornament their walls. A great deal depends on catching the popular fancy. A prominent San Francisco paper has adopted the scheme commonly used in the East of announcing the baseball scores as telephoned from the field, and blocked one of our main thoroughfares by a crowd anxious to know the results. An Eastern advertiser, seeing that the "Pigs in Clover puzzle" was the fad, put five young pigs in a window, where the circular windings of the toy were introduced, and hired a messenger boy to drive them into the pen. This was a great attraction. It is hard to do business in the United States without doing something to attract attention. Unless our attention be called in some marked degree, we are sure to be captured by the gaudy flies on the hook of the veteran advertiser. While various devices are employed, the shrewd manager never neglects the papers. He knows their influence, and whatever else he may do he intends to keep his name in the public press.

NO ESCAPE FROM LABOR.—The motto, labor conquers all things, might be changed to nothing without labor and be equally true. There is a foolish desire on the part of American youth to avoid work, or at least what is termed hard work, but no one need expect to succeed without work and plenty of it. That which appears easy looks differently when we can get at the actual facts. Many, tired of farming amid the stones and stumps of New England, come to California, buy an orange grove or a fruit farm, and imagine that all they have to do is to sit down and watch their fruit grow. They soon learn, however, that the scale attacks their orange and nearly every variety of fruit has its pest. We are not saying this to discourage the would-be immigrant, for it is not to be compared with the endless work and small profit per acre of Eastern farming, but we believe it is better for one to know the difficulties before he enters upon them. He will be surer of success. The successful California producer has work before him.

SEEDLING FIGS.—The growth of seedling fig trees from the seed of the imported Smyrna is employing the leisure of some of our fruit-growers, and the effort is interesting and promising. The Placerville Republican speaks of the enterprise of A. Ryder, who, like E. W. Maslin, another fruit-grower of the same county, is an experimenter with fig seedlings. Mr. Ryder has 135 fine young seedlings which are growing from the seeds of a box of the best imported Smyrna figs he could obtain in New York. There is every reason to believe that these experiments with trees from the imported seeds may soon give us a new fig which will be in every way superior.

Pigeons at the Bench Show.

[Written for the Rural Press by A. P. THEOBALD.]

The San Francisco Pigeon Society may be congratulated on having conducted the largest and best exhibition of pigeons which has ever been held on this coast.

The birds entered were, speaking generally, particularly high class. The competition, too, was, in most instances, very keen, for, although not many of the recognized classes were represented, the entries were, in baseball parlance, so well bunched as to make the judges' office no sinecure.

A word of praise must also be given to the excellence of the arrangements for housing the birds, the wire cages of the Pigeon Society presenting a neat appearance which added not a little to the attractiveness of the show. The pigeons drew their fair share of the visitors to the combined exhibition, and the society sees reason to hope that a considerable impetus has been given to the local breeding of fancy birds.

Coming to a consideration of the different classes, there was a distinctly good though not a large exhibition of Pouters. G. T. Marsh's pair of whites were very fine and decidedly up to first prize form. A red hen in this class, also the property of Mr. Marsh, deserves mention as one of the best-marked birds in the show.

The English Carrier class was not up to the average. The pair of reds belonging to G. F. McConnell of Ashland, Oregon, were good, but did not show to advantage on account of the long journey they had recently made.

A. N. Bayley's short-faced Tumblers were a good pair, but better adapted for breeding stock than for show purposes, the bad points in one bird being counteracted by similar good points in the other. Mr. Marsh was again to the fore with his pair of long-faced Tumblers. They thoroughly deserved their place.

J. D. Bryan's Birmingham Rollers were only fair, but with the young shown with them made a pretty exhibit.

Mr. McConnell's yellows with white tails were good birds and made a pretty combination.

The exhibit of Homing Antwerps was first class and numerous. H. H. Carlton's red chequers deserved their place. The cock of this pair, "Old Sol," was one of the few successful birds in the flight from Soledad to this city, a distance of 116 miles. Mr. Carlton won another first in this class with his pair of white with black tails—a novel combination of color in the Homer line.

The fine Homers of F. Magee were especially successful, he carrying off three first prizes—one for black chequers, one for blue chequers, one for winner of old birds' race from Soledad, in addition to winning the special silver cup for the best built chequer cock in the show.

A. N. Bayley won a first prize for the best marked pair of blue chequers, though Mr. Carlton's pair were a close second, and there was little to spare between the two sets. The pair of blues, belonging to Mr. Marsh, carried off first and special prizes. These birds were lately imported from the Vowerman loft and each has a record of 520 miles.

The young champions of the Homer class, perhaps, attracted more outside notice than any other exhibit. These were birds hatched in 1889 and had all made a distance of over 40 miles. The special prize of \$10 offered by the Pacific Kennel Club went to Mr. Marsh, his bird having the record of the United States for its age—two months and 20 days—flying from San Jose to San Francisco in one hour 58 minutes.

In the Barb class, Mr. Carlton's Blacks deserve special mention. They were quite up to first-class form and as good as any pair in the show. The Dams, also Mr. Carlton's, were younger and consequently showed to less advantage. The Yellows, the property of J. D. Ladd of Vacaville, which secured second honors, were fair but a trifle coarse. Newton Knox's Whites were a fair pair and looked worse than they should have done from being out of condition.

The Owls were a particularly strong exhibit, no unfair birds being shown. This class was almost monopolized by Mr. Bailey, who won no less than four well-deserved first prizes for Blue Chinese, Silver Chinese, Silver African and White owls. The neat pair of Red Africans

(Carlton) were also well up to first-prize form.

The largely represented class of Fantails brought Mr. Marsh again to the fore, his five White pairs winning five first prizes, and every bird well deserving its rank. The Yellows (Bayley) were very good birds. McConnell's Blacks were hardly up to the standard of the Whites. Carlton & Bryan also exhibited Blacks, carrying off second and third honors respectively, but both pairs were below the high form of the Whites. Marsh was again successful with a pair of Blues, a pair above the average though their tails were broken. Mr. Connell's pair of Blues well deserved second place, the tail being good but off in color.

A young white Fantail belonging to Mr.

Blinn Observatory.

Chabot Observatory.

SEISMOGRAPH RECORDS OF SUNDAY'S EARTHQUAKE.

Marsh attracted considerable attention by its tameness while out of the coop and wandering around at its own pleasure. The bird is particularly interesting to fanciers on account of its perfect shape. The tail is not yet fully developed, but the youngster has the making of the best bird yet in the State.

McConnell's one pair of Runts attracted considerable attention on account of their large size. The pair weighed four pounds.

Two first prizes and one second in the Trumpeter class went to Philander Williams of Taunton, Mass., who exhibited three pairs of Russians. McConnell's two pairs of Trumpeters fairly deserved the two second prizes they won.

The exhibit of Jacobin's was eminently satisfactory, and made one of the handsomest classes in the show. The pair of Reds exhibited by Carlton deserve strong commendation. These birds, valued at \$100, were imported from the famous Crawford loft. They are perhaps not good show birds, but owing to the bad points in one being counteracted by the good in the other, are the finest pair for breeding purposes in the State. Mr.

Marsh had a notable triumph in this class, winning no less than five firsts for pairs of reds, blacks, yellows, strawberries and blues, and a special for a pair of whites. This prize, awarded for the handsomest pair on exhibition, was decided by the votes of visitors to the show. Two third prizes went to Mr. Bryan for good pairs of blacks and reds.

Mr. Bryan was again successful in the Dragon class with a pair of imported Germans, though

THE OLD PROSPECTOR.

The entries in the Turbit class were disappointing. McConnell's yellow-winged pair were very fair and pretty birds.

Bayley's Magpies, a pair of imported blacks, carried off the first prize, with little to spare from McConnell's. The yellows (Bayley) in this class lost first prize on account of condition.

J. D. Ladd's Nuns were a good pair quite up to first-prize standard, but both being males, they could not compete for a prize.

The Archangels of Jesse W. Bryan, a pair with young, took a first prize, though the birds, being considerably in molt, did not show to great advantage.

Mr. Carlton's pair made a good and close second. Carlton's pair of young birds secured a third prize.

In the Starling class a cock of Mr. McConnell's won a deserved first. The hen had escaped on the way down and it was felt that the accident ought not to deprive him of a prize, particularly as he had been put to much trouble and expense to have his birds in place.

The awards were made by H. F. Whitman, a gentleman of large pigeon experience and well known in Eastern fancier circles. The exhibitors had thorough confidence in his judgment, and have no reason to complain of the correctness of the decisions.

The Recent Earthquake.

Early on Sunday morning, May 19th, an earthquake of unusually great duration occurred in this State which was felt from Santa Cruz on the south to Calistoga, and eastward to Nevada City. The shock was not a sharp one, the movement being slow, but the vibrations were prolonged. Prof. Holden of the Lick Observatory, Mt. Hamilton, says: "Our earthquake machine shows the up-and-down movement lasted 84 seconds. The period of each wave was about 1.7 seconds, which is very gentle and slow, and the double amplitude of the vertical waves was never more than .08 of an inch. The east and west movement consisted of strong tremors for nearly four seconds, when the waves began and lasted as strong decided movements for 29 seconds, after which the tremors continued until their trace was lost. Ninety seconds after the beginning, the periods of these waves is .8 of a second (very slow) and the double amplitude is about .03 of an inch. The most remarkable motions were in the north and south direction. The tremor was felt for 3 seconds, 10 large waves for 45 seconds succeeded by tremors until 132 seconds from the beginning. Their period was .6 of a second. The double amplitude is .05 of an inch. The duplex machine shows results agreeing with the above and indicates the very complex nature of the motion of the ground."

Through the politeness of Mr. Blinn, of Highland Park, East Oakland, and Mr. Burckhalter, of the Chabot Observatory, Oakland, we are enabled to reproduce the registers made by their respective seismographs. The seismograph is an instrument by which a pendulum communicates its movement to a pen which records it upon a plate of smoked glass, and from the lines thus traced a sunprint is made. These lines are shown in the engravings presented herewith. It will be seen by reference to these that the movements were a series of ellipses. In the diagram made by Mr. Burckhalter's instrument, the first of these were north and south, and the last from southeast to northwest, while the final mark was a swerve to the northwest before the pen came to rest.

The marks made by Mr. Blinn's seismograph are northeast and southeast, and the register is double the size of that of the Chabot Observatory. In fact, this is ten times longer than any other record ever made since the instruments have been in position. The diagram represents the motions of the earth, but amplified four times. The actual motion was thus one quarter of that indicated. We had a very sharp shock on the 18th of last November, but there was ten times more motion in this case.

The time as given at the Chabot Observatory was 3 h. 10 m. 44 sec., when the mean time clock was stopped. At the Davidson observatory in this city there was a difference of only two seconds. Prof. Davidson timing it as 3 h. 10 m. 42 sec. Clocks were stopped in many places in this city and Oakland. The peculiar feature was the length of the vibrations. It was the most severe in that respect felt here for many years, but its slowness was such that no damage was done anywhere within the area affected.

The Old Prospector.

Many a man now wholly given to agricultural arts began his California life as a prospector and can entertain you by the hour with reminiscences of his tramp over desolate places in search for precious metals. All such will be interested in the life-like picture we give on this page. It is a photo-facsimile of a photograph from life made not long since in one of the mountain counties. The "Judge" who is handling the pan is a veritable "49er," who still sticks to prospecting as an occupation. The scene is a characteristic one in the California mining counties. The old man was digging away on the edge of the bank of the river with perfect contentment, while the photographer who was immortalizing him was nearly melted by the fierce rays of the sun which were beating down with 106-degree power at the time. He seemed surprised that any one wanted to photograph him, but was pleased as well when one of the "pictures" was promised him.

This particular prospector, it is remembered by the writer, had not been "in the city" for 20 years. He had been digging away in the creeks, canyons, rivers and on the mountains

and hills for so long that he cared for no other life. But his is by no means an isolated case. There are hundreds of others as well contented to remain away from the centers of civilization, and who are wedded to the nomadic but free life they have led so many years. They are perfectly contented, being constantly buoyed up by the hope of striking it rich some day.

But the chronic prospectors are few compared with the thousands who have temporarily packed the pick and shovel and pan and have afterward sought livelihood in other pursuits. City and country are full of old-time prospectors whose rugged life in the open air has given them strength and health for long years of usefulness in other industries, and in the gaining of these blessings the years of prospecting were not spent in vain even if not directly profitable otherwise.

From Northern Kern.

EDITORS PRESS:—When we homesteaded in the foothills about a year ago, we had a conviction that this region is especially adapted to horticulture and viticulture, and the letter of Prof. Hilgard on this subject, which you published some time since, corroborated the conviction.

We took up our claims with the view of making horticulture and viticulture our business, and therefore planted a large number of grapevines and fruit trees, among which the olive figures conspicuously. Our plantations are flourishing to our satisfaction, and although we have to water them in this their state of infancy, we feel confident that this task will soon become unnecessary, perhaps even next year.

We also tried wheat, and could show 60 acres of that grain as fine as any until the dryness of April induced, rather than compelled, us to cut the wheat for hay, the possession of eight horses making that staple a necessity.

We have also planted forest trees on a small scale and intend setting out eucalyptus trees next spring in large numbers, having no doubt whatever that industry and judgment are the only requisites for the success of our enterprise. The chief drawback is the great depth to which one has to dig or bore to get water. We have dug down 132 feet without finding any trace of water, and expect to have to go 100 feet deeper to accomplish our purpose.

Have any efforts been made in the State to introduce and cultivate the tea plant? If feasible, this would open a rich source of revenue for the farmer, and you would greatly oblige me by stating in one of your nearest issues whether and where a few tea plants could be obtained. If no attempt has ever been made, I should deem the subject worthy the attention of such a man as Prof. Hilgard, and you would surely earn the gratitude of many of your readers if you could induce him to give them a paper on the subject. With the assurance that the arrival of the Rural Press is always a treat to us,

RUD. LEONHART, SR.

Delano, May 22, 1889.

MR. BURKE'S SALE.—The auction held at Mr. Frank Burke's Menlo Park ranch, on May 18th, realized extremely low prices. The draught brood-mares and colts, mostly yearlings and two-year olds, averaged \$145 a head; the Polled Angus cows \$75 a head—the total amount realized, including the farming machinery for a 2300-acre ranch, being but \$8500. Mr. Burke desires us to correct the impression that has gone abroad that he is going out of the stock business, and states that he still intends to raise trotting stock, Holstein-Friesian cattle and Berkshire pigs, and merely closed out the heavy draught animal line and the beef-producing Polled Angus, as he has given up general farming for the present. He was obliged either to buy more land or sell out these two branches, and chose the latter course.

HE GETS HIS HOMESTEAD.—Assistant Secretary Chandler of the Interior Department has just reversed a decision of the Commissioner of the General Land Office in the case of Dominio Morrettini, whose final proof for a homestead entry of land in section 18, township 12 north, range 16 east, Sacramento district, had been rejected on the ground of non-compliance with the law in regard to the place of residence. The claimant offered as an excuse that the snow was so deep in winter that he had to vacate and remove his cattle and other stock to the foothills. He returned, however, every spring, and continued upon his homestead until the following winter. The assistant secretary thought he had acted in good faith and ordered the issue of a patent to him.

STANFORD UNIVERSITY.—Inquiries come to us, now and then, with regard to the date of opening the Leland Stanford, Jr., University; the cost of living there, etc. Mr. Nash, Secretary of the Board of Trustees, informs us that the University will probably be open for pupils in about a year from now; but no details have yet been definitely settled.

RATS AND SUNFLOWER SEEDS.—A story comes from Washington that Capt. Weedin at the "Zoo" has accidentally discovered an irresistible rat-bait in sunflower seeds, the rodents fairly crowding the traps thus baited.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

BARLEY.—Haywards Journal, May 25: Schwable & Benter have a number of fields of fine barley, but the best 30 acres in this valley is early-sowed chevalier near Mt. Eden Station. Mr. Schwable examined a number of the heads this week and counted 40 kernels in each head. Those who have looked at the field admit that it is the finest-looking grain seen this year.

Fresno.

FRESNO RAISIN CO.—Republican, May 24: The raisin-growers at Oleander have organized to pack their own raisins. One-fifth or more of the stock has been taken. Stock will be issued to actual fruit and raisin growers only. The following officers have been elected for the first year: Pres., O. B. Olufs; V. P., A. C. Bryan; Sec., C. A. Libby; Treas., Farmers' Bank of Fresno; Directors, J. W. Brooks, A. C. Bryan, O. B. Olufs, C. A. Libby, C. A. North, Capt. Robertson and E. J. Wilson.

Kern.

HARVEST HOPES.—Echo, May 23: Everything now points to the greatest harvest in Kern county that has ever been known. In the irrigated portion it goes without saying that the harvest will be a full one. Out on the plains, above and beyond the canals, there will be some crop. Up in the mountains and foothills the most flattering reports are given. Wheat and barley, the principal crops, are heading out, the earliest sown is ripening and all promises a big yield. As these sections are not subject to the north winds of the lower San Joaquin and Sacramento valleys, nor to the scorching east winds that sweep up along the coast, there is little to be feared before the grain is harvested.

Lake.

HOME CANNERY.—EDITORS PRESS: At the foot of Blue Lakes and near the famous Bachelor valley in Lake county, Mundy & Wambold are building a \$2000 cannery. One of the firm has spent two years at San Jose and Vacaville learning the business, and operated a still smaller cannery long enough to have secured a fine home reputation for his goods. The other member is an old orchardist and gardener. As the lake recedes they follow it up with their gardens and so keep one crop following another. They propose to work 20 hands and put up their fruit and vegetables the same day they are gathered. They can none but extras, drying all inferior stock. They use heavy syrup, and all who have bought their goods once want them again. They will depend on home custom and orders from city visitors for their trade. It is a business proposition.—F. S. CHAPIN.

Los Angeles.

THE LAGUNA IRRIGATION CO. has filed articles of incorporation at Sacramento. The principal place of business is Los Angeles, and the capital stock \$70,000. Directors: L. T. Garnesey, T. W. F. Richards, W. H. Goucher, E. A. Hall, G. W. King, D. Burbank and H. L. McNeil.

Mendocino.

AGRICULTURAL ASSOCIATION.—Ukiah Republican: The Board of Directors of the 12th Agricultural District Association convened at the Grand hotel, Ukiah, on Monday, May 20th, Pres. L. G. Simmons presiding, and Sec. Q. V. P. Day, and members M. Keatinge, L. F. Long, F. O. Townsend, John Mewhinney and J. M. Mannon present. The financial report of the secretary showed a deficiency of \$420 71 for the year 1888. The following officers were elected for the present year: Pres., L. F. Long; Sec., S. H. Rice; Treas., S. Wheeler; Ass't Sec., Carl Purdy. The salary of the secretary was fixed at \$100 per annum, and that of Ass't Sec. at \$50. Bond of secretary and treasurer each fixed at \$2500. The following were made Executive Committee for the present year: Long, Townsend, Mannon, Mewhinney and Keatinge. Time of holding the next annual fair set for Oct. 1st to 5th inclusive.

Napa.

DISTRICT FAIR.—Vallejo Chronicle, May 17: The Board of Directors of the 25th Agricultural District, comprising the counties of Solano and Napa, met in Napa City Thursday to fix the time and place for holding the next fair; also to elect officers. Napa was fixed upon as holding the next fair of the 25th Agricultural District; the premium money allowed by the State is \$3000. This will be spent wholly in Napa county. We earnestly hope the fair will be a success. We shall ask to have it next year, and shall expect from Napa people the same good wishes. Lee James has been elected President vice Fred W. Loeber.

Placer.

STRAWBERRIES.—Auburn Republican, May 22: G. W. Haines of Christian Valley has made a specialty of strawberries for several years with splendid success. This year he has been experimenting with different kinds, and last week brought in magnificent specimens of six varieties. They were the Triumph, the Sharpless, Capt. Jack, Monarch, Forest Rose, and Manchester. The last two are new varieties in that part of the county and, according to Mr. Haines, the most valuable. The Sharpless is a good berry for the local market, but a poor shipper. The Captain Jack is a fine shipper, but it is sour. The Triumph is a shy bearer. The Forest Rose is a good "all around"

fruit, but the Monarch was thought by Mr. Haines to be the best until he found the Manchester. This last is solid and firm, sweet, large, and a fine berry to ship. He thinks it promises to be the best of all.

San Benito.

EDITORS PRESS:—The weather is fine for the growing grain. Generally speaking, the grain crop will be good. The late rain has been a great benefit to the whole county. There have been a large number of trees planted this season, which are making splendid growth.—G. B. Hollister, May 13th.

San Bernardino.

MOUNTAIN APPLES.—Chino Champion: Jas. Birch of Yucaipa visited Chino on Tuesday. He brought with him some Wine Sap and Nickajack apples, figs, of his own raising and curing, and a sample of his own make of elderberry wine. The apples are solid, and would keep to July or later. They are grown at his home, at an elevation of about 4000 feet, to the east of San Bernardino. The Champion has before mentioned this fruit, but it can hardly be done too often, for there is a too prevalent idea that California apples are inferior. This is in a degree true of those grown in the valleys, but the San Bernardino and San Diego county apples are not excelled in flavor and keeping qualities in the United States, and Mr. Birch has realized over \$300 per acre from his trees, ranging in age from 8 to 12 years. His cherries are equally good and more profitable. The successful growing of figs at so high an altitude is news to some people.

San Joaquin.

WEST-SIDE PROSPECTS.—EDITORS PRESS:—A clipping in a late Rural from the Stockton Independent so overestimates our West-Side prospects, I am impelled to send a correction. I have never thought whether under or over estimating was for the farmer's interest, but I like to see those who report such things pay a careful regard to facts, and the fact is, no great expectations have here been indulged in the past two months. The season set in most auspiciously, as I think I wrote you; then a long dry spell retarded the growing grain and caused considerable anxiety. Spring showers revived our hopes, but were not sufficient to insure a heavy crop. Late hot weather seems to have shrunk most of the grain, and while we thankfully hope for considerable above expenses, it will fall short of the years '76, '81 and '86, to say nothing of that wonderful '72, the hope of a repetition of which has been like a delusive mirage before our eyes these many years.—MRS. J. M. K.

Santa Cruz.

AGRICULTURAL ASSOCIATION.—Watsonville Pajaronian, May 23: The Pajaro Valley Agricultural Association met at the town hall Tuesday P. M. There was a large attendance. Pres. Waters called the meeting to order. The present Board of Directors (Messdames A. P. Roache, G. B. Card, B. A. Osborne, H. S. Stipp, and A. A. Libbey, and Messrs. Jas. Waters, G. W. Sill, A. N. Judd, A. P. Roache, N. A. Uren and H. S. Stipp) was re-elected. The organization of a new Association of District No. 24 was then discussed. It was decided to continue the old association as a separate society, and to memorialize the Governor to appoint Messrs. Waters, Judd, Sill, Stipp and Roache as Directors of the new association, so that both might work in unity. The name of Mr. Uren was not included because he is not a resident of District No. 24, and the ladies were omitted as they were not eligible. The association then adjourned and the Board of Directors met. They organized by electing James Waters, Pres.; Mrs. E. Z. Roache, V. P.; G. W. Sill, Sec. It was decided to open the next fair Sept. 11th, and continue four days. Treasurer Uren's report showed a balance on hand of \$609.38 on Feb. 1, 1888; receipts of last fair, \$1616.70; total, \$2224.08. The disbursements for the past year, including premiums and fair expenses, were \$1663.45, leaving a balance on hand of \$560.63.

AT THE BEET FACTORY.—Several additional hands have been put on at the beet factory this week, and work is being pushed to have the machinery in readiness to start up on June 7th. The first work, after starting, will be to boil the syrup stored from last year. The work of well-boring has been finished, and Sup't Waters feels confident that the large well will continue to give a big supply of water throughout the season. The well is 90 feet in depth and five in diameter, and the water rises to near the surface.

BERRIES.—Several Chinese companies are engaged in the business of raising strawberries in Pajaro valley this season. Their fields are a portion of the cleared slough land east of town. Thurber & Co. are shipping over 100 chests per day, and other growers are making proportionately large shipments. It is probable that the daily berry product of this valley at present is not less than 300 chests. The raspberry crop is backward all over the State this year. J. R. Strange's prolific home-patch has been producing a fair crop, and he informs us that raspberries are so scarce in the San Francisco market that he finds no trouble in getting from \$1 25 to \$1 50 per drawer for his shipments.

Shasta.

EDITORS PRESS:—As an evidence of the growth of this mountain country, steps are being taken to have five new postoffices in a strip 25 miles long by five or six miles average width, consisting of the Battle creek and Digger creek

bottoms, and of Battle creek plateau, with from 20 to 30 families at each postoffice. Everywhere we see new houses, new fences, new barns, here the clearing enlarged, there some fruit trees set out, and in another place a new ditch or other improvement. This country does not grow like Oklahoma, or Jack's bean-stalk, but we keep on growing all the same. There is one plant that does so remarkably well here—the hop—that many are thinking seriously of going into that business largely. Land is cheap, and any one who understands hop-raising would have a fine opening and plenty of help. We have had rain—rain till we are tired of it. Prospects for all crops, good.—W., Shingletown, May 14, 1889.

ON THE HILLSIDE.—Redding Free Press, May 25: Those of little faith in the productiveness of the soil and climate of Shasta county should visit the garden of Mr. R. Bestwick on the hill. What care and cultivation will do with the roughest of stony soil, has been there demonstrated. His two-year-old fig trees loaded with fruit, his large bed of strawberry vines, full of luscious berries, his orange trees, which passed through the severe winter of 1887-8, his peach trees, and his fine cabbages, peas, and other vegetables, prove that cultivation only is necessary to make the hillside blossom like the Garden of Eden.

Sonoma.

TROUBLED WITH CATERPILLARS.—Santa Rosa Democrat, May 25: Gardeners say that the leaf feeding caterpillar is present in larger numbers among the orchards and gardens of this city than for many years before. Nearly every variety of tree and shrub is infected with the insect, and many of the rose-bushes have been attacked and shorn of their foliage. Besides being very destructive to the plants infected by them, they are a source of great annoyance to the tidy housekeeper who would preserve the neatness of her front door yard and porches. Paris green and London purple solutions are effectual remedies, but caution should be observed in their application.

FRUIT PROSPECTS.—We learn from George Ragle of Green valley that early peaches in his neighborhood will be of good quality and abundant. Later varieties, which are used mainly for canning purposes, such as the Crawford and Orange Clings, were seriously affected by the cold weather and late rains, and will not yield more than a fourth of a crop. Blackberries will make a full crop and are of excellent quality. Cherries will average fairly and apples promise a third of the usual yield. Spitzenberg and Yellow Bell-flower will be the most plentiful. The earlier varieties of apples, like peaches, are in the best condition.

Sutter.

CASH FROM CHERRIES.—Appeal, May 24: From 75 cherry trees on the Bunce place, near Yuba City, the Sutter Fruit Co. has sold this season 400 boxes of cherries at a dollar a box. The yield of these trees was comparatively light this year, but a cash return of \$400 from an acre of land is not unpleasant to contemplate. There is little said of the cherry in print, but it is one of the most profitable fruits grown in California.

BOGUE'S NURSERY.—Farmer, May 24: To obtain a fair conception of what is going on at the Bogue nursery, the reader must, as we have, come and see for himself. There is nothing like it in the county, and we judge the Sacramento valley contains nothing superior. Jas. T. Bogue, a lifelong nurseryman, comes to California for his health from the interior of New York. He finds what he came for, and after extensive traveling in search of a suitable location for a nursery, chooses 100 acres of the recent Abbott purchase near Shanghai Bend. Mr. B. began operations at once, and having studied our horticulture with his Eastern experience, he was soon able to decide what to propagate to meet the coming market. The soil is a rich, soft loam, easily cultivated, which is done to perfection. This gives life and vigor to the young sprouts and renders the whole a scene of beauty indescribable. Our host acknowledged himself an enthusiast with sprouting buds and trees, and said "he would grow shrubbery for bonfires if he had no market." There are 95 acres in trees and nursery, and over a million trees in different stages of growth. There will be 500,000 in condition for the next planting season, and the entire plant embraces pear, peach, plum, apricot, cherry and apple. In large portions of the nursery the ground is also planted to orchard. Mr. Bogue has not only created a mint for himself, but has taught our older residents a valuable lesson which will redound to the benefit and reputation of the county.

Tulare.

THE HARE NUISANCE ABATING.—Delta, May 23: At the rabbit-drive east of Tipton last Saturday only 40 or 50 of the animals were caught. Not many months ago such a drive would have resulted in the capture of many hundreds. Surely jack is going.

EARLY STONE FRUITS.—W. A. Smith brought to market the first apricots of the season on Tuesday morning. They were raised on his ranch in Stokes valley, in this county. His family had been eating them at least ten days previously. On the 15th of May ripe peaches were first eaten from his trees.

MOUNTAIN APPLES.—Mr. and Mrs. Harry Trauger, near Mineral King, sent a box of last year's apples to Miss Florence Dinly this week. No finer apples than those have been ever seen in this town. They are sweet, firm and juicy,

and are as solid as though lately picked from the tree. They were grown at a height of 6000 feet above sea level.

Ventura.

FRUIT AND HONEY PROSPECTS.—EDITORS PRESS:—The apricot crop, which was so abundant in this county last year, will be nearly a total failure this year. The peach trees have taken a new departure in the leaf business, starting irregularly, and on some branches—generally the high ones—not starting at all. It is found by some orchardists that peaches will also be a failure. Certainly, in some localities prunes and plums are quite uncertain. Apples promise well, though it is early to form a definite opinion....The honey outlook is doubtful, some apiarists declaring they will not take a pound; while others, more hopeful, are going over the hives taking what there is and preparing for a good run, which we shall have if the weather—fickle jade—proves propitious, for the honey-producing flowers are out in full bloom. All harvest work is being pushed to the utmost.—S., Fillmore, May 21st.

HANDSOME POPPIES.—Ventura Free Press, May 24: The grandest display of poppies in this town is to be seen in the yard of W. G. Adams at the foot of Oak street. There are stalks there fully six feet tall and covered with large, double flowers of beautiful and varied tints. The poppy does not appear to be cultivated much by florists, but it is one of the handsomest flowers grown.

Yolo.

AN AMATEUR COCOONERY.—Woodland Mail, May 25: Mrs. E. H. Baker has a little army of silkworms which are exciting considerable interest. About a year ago she secured a few eggs from a lady at Dixon, and these have propagated until she now has 198 fine worms, besides those she has given other Woodland ladies. It has long been supposed that silkworms would not thrive upon any leaf but that of the white mulberry, but Mrs. Baker is feeding hers upon the leaves of a red mulberry tree, and they are doing well. They are about two inches long, greenish-white, and are very lively before deciding to retire and spin. As they eat the leaves they make an audible noise. When the worms, which are very clean pets, begin to turn yellow, and give other evidences of a desire to yield their silken store, Mrs. Baker carefully places them in a little paper shell and removes them to a quiet place. Here they go assiduously to work, and in a short time completely shroud themselves in a roll of raw, yellow silk, and go to sleep to await the butterfly state. This is the proper time to scald the cocoons and reel the silk, but Mrs. Baker has no facilities at hand for this operation. She may, however, send 100 of the cocoons to San Jose, that the silk may be reeled.

GOOD WHEAT.—W. B. Young brought a sample of wheat to the Mail office Thursday, as fine as any grown, from George Horgan's place, in the hills, five miles northwest from Cacheville. It was of the "Club" and "Australian" varieties. The latter heads are over six inches in length, well filled and already beginning to turn yellow. Mr. Young estimates the crop, whence this sample was taken, as being good for 20 sacks to the acre, and adds: "The farmers were more frightened than hurt by the late rains."

Yuba.

CUCUMBERS.—Marysville Appeal, May 24: For several weeks past Chinese market gardeners have been shipping cucumbers from Marysville to the bay by express. Next week they will be going forward by the ton. There is a fine opening for white men here to engage in the growing of early vegetables for shipment to Nevada and other Pacific Coast markets.

FINE WHEAT.—Sutter Farmer, May 24: Geo. V. Bennett has growing on the Jas. Clark farm, in Yuba county (now the property of Bennett & Walton), 600 acres of Royal Australian wheat, which is hardly excelled in the Sacramento valley. The soil is of the Yuba county upland and was carefully summer-fallowed a year ago by Mr. Clark. The wheat stands about five feet high, is remarkably well headed and filled with large, plump grain.

NEVADA.

A BETTER OUTLOOK.—Gazette and Stockman, May 23: No one, unless actually engaged in farming or the live-stock business, can appreciate the great good that will come of the last storm. The localities where the ground was parched for want of water are coming out in good shape, and very good crops are assured. The grain in Long and Honey lake valleys, which was choking out and was of a pale, sickly green, has revived and looks healthy and strong. The meadows in those localities were stunted, and would not have produced any hay at all had not the storm come just as it did. Farmers now look forward to a prosperous season.

ARTESIAN BORING.—Theo. Winters Friday finished the boring on an artesian well 265 feet in depth and succeeded in getting a flow of 150 gallons per minute. This is the third flowing well in Washoe valley....James Miller of Long Valley, after sinking 1130 feet for artesian water, has abandoned the project. The first 700 feet they went through a sand formation and then came to clay, which they were still in when they quit. The machine was only calculated to bore 600 feet, but they went down 1130 with it, and were obliged to stop. The machine will be moved to Jack Forsythe's place, about two miles south, and another well sunk.

A Cent a Stocking

Is all it costs to change white cotton stockings to a fast black that will not fade or rub off. A ten cent package of Fast Stocking Black DIAMOND DYE colors five pairs of stockings a rich, full, fast black. Simple to use. Failure impossible.

DIAMOND DYES, 37 colors, color anything any color. Warranted the strongest, fastest, handsomest, simplest, of all dyes. Beware of imitations. Ask for and take only Diamond Dyes, the old reliable. Sold everywhere, or mailed on receipt of price, 10 cents. Sample card and direction paper free.

FRUIT MARKETING.

The Golden Gate Fruit Association.

We alluded last week to the formation of a new association for shipment of fruit to the East. The following official statement of officers and the constitution under which they will act will give all our readers information of the aims and methods of the new organization:

OFFICERS FOR THE YEAR 1889.—President, A. T. Hatch; Secretary *pro tem*, Wm. M. Jenks; Treasurer, California State Bank. Directors—Edwin T. Earl, Earl Fruit Co.; Chas. W. Reed, Sacramento; A. T. Hatch, Suisun, Solano Co.; Chas. W. Pike, Rancho Chico Fruit Co.; Geo. D. Kellogg, Newcastle, Placer Co.; R. C. Kells, Yuba City, Sutter Co.; T. H. Buckingham, Vacaville, Solano Co.; R. B. Blowers, Woodland, Yolo Co.; W. S. Kendall, Sacramento, Ingleside Fruit Farm.

Executive Board of Managers—A. T. Hatch, Edwin T. Earl and Chas. W. Reed.

Auction houses—Chicago, Richard M. Montgomery & Co.; Boston, Snow & Co.; New York, E. L. Goodsell.

Constitution.

This association is formed for the purpose of shipping and marketing California fruits for all its members in Eastern markets, and for cheapening transportation thereon by shipping by special trains whenever practicable; also, to furnish its members with information during the shipping season of the state of Eastern markets, and to endeavor to obtain reduced through and local freight rates, and, as far as possible, to attend to the furnishing members with cars and forwarding fruit in carload lots to their destinations. And for the purposes aforesaid, we, the undersigned, do hereby establish the following articles of agreement and rules for the government of its business:

ARTICLE I.—The name of this association shall be The Golden Gate Fruit Association, and its principal place of business shall be at Sacramento City, California.

ART. II.—All persons, corporations or companies, who desire to ship fruit, may become members by signing these articles and paying the sum of five dollars annually into the treasury of this association.

ART. III.—The officers of this association shall consist of a president, vice-president, a secretary, a treasurer, a board of nine directors and an executive board of three managers. The board of directors shall be elected by ballot at the annual election of the association, the date and time of which meeting shall be appointed by the president, to take place at the office of the association during the month of April in each year. The secretary shall mail to each member a notice of the time and place of such annual meeting immediately upon the date being appointed by the president, which date must be at least two weeks prior to the meeting. The board of directors shall meet at the call of the president, or the secretary may call a meeting whenever three members of the board of directors shall request, in writing, that a special meeting be called; and at each and all of these meetings five members shall constitute a quorum for the transaction of business; and they shall immediately, upon their election, at their first meeting, elect from their number the president, the vice-president, the treasurer and the executive board of three managers. All of the above officers to be elected by the board of directors, shall hold office until their successors are elected.

ART. IV.—The executive board shall have full power to carry out all business arrangements made in accordance with these articles. They shall appoint a secretary, who shall also act as secretary for this association at its annual meetings, and also as secretary of the board of directors. They shall also appoint a dispatcher and such other assistants as may become necessary. And they shall fix the amount of their salaries and define their duties. Except, however, that no person shall be appointed or kept in the position of dispatcher who is, directly or indirectly, interested in the shipment of fruit on his own account or for other parties.

The executive board shall also appoint agents for this association whenever requested so to do by shippers, and shall require of such agents a good and sufficient bond as security for the faithful performance of all their obligations.

And they shall require all such agents to remit proceeds of sales direct to shippers, and duplicate accounts of all sales to the secretary of this association.

ART. V.—All shippers must make application and designate in writing or by wire to the secretary, on or before Saturday of each week, the number of cars wanted, and the date of their shipment for the succeeding week, together with the name of the consignor and consignee, and they must also furnish an invoice of the contents of each car as early as possible on days of shipment. Shippers must guarantee the payment of all freight charges, and must prepay or authorize the prepayment by this association of all charges for expedited service on cars shipped by special train. The destination of cars may be changed at any time before delivery.

ART. VI.—Whenever more cars are offered for shipment on any one day than can be shipped by special trains, such additional cars shall be forwarded by passenger train, and the cost for

freight of all cars shipped from Sacramento, whether by special or passenger train, shall be aggregated and apportioned equally to each car shipped on that date by this association.

ART. VII.—All markets shall be open and members of this association may ship without restriction to any destination or agent that they may elect, but all fruit that is to be sold at auction at any destination must be sold by the auction houses of this association.

ART. VIII.—The auction houses of this Association shall be appointed by the executive board, but such appointment must be ratified by the board of directors at their first meeting thereafter.

ART. IX.—The sum of ten dollars shall be paid in advance to the secretary for each car shipped, to create an expense fund, and all money received from this source remaining unexpended at the expiration of each fruit shipping season shall be refunded pro rata for each car shipped.

ART. X.—In the event of the death or withdrawal of either of the members of the executive board, the president shall at once appoint a member of this association to fill the vacancy until the first meeting of the board of directors, at which meeting the board of directors shall either ratify such appointment or elect some other member to fill the unexpired term of such executive manager.

ART. XI.—The secretary shall keep all shippers informed of the condition of all markets and of the applications made to him for cars and their destinations, and by whom said applications are made, as soon as he receives them by letter (or by wire at the shipper's expense when desired).

ART. XII.—These articles may be altered, amended or abrogated at any annual meeting by a vote by ballot of two-thirds of the members present, or at any stated meeting called for the purpose by the president; provided that written notice of said contemplated alteration, amendment or abrogation shall have been mailed to each and every member of this association by the secretary at least two weeks prior to such meeting.

The Santa Rosa Boys' School,

Which was established there last July by Rev. S. M. Dodge, has proved a great success. Over 50 pupils have been enrolled during the year, with an average attendance of 35. The school has gone on increasing in favor and the prospect is that its limits will be reached at the beginning of next term, as only 12 boys are admitted to the family and the accommodations for day pupils are already filled.

Mr. F. C. Foster, formerly of Hopkins academy, is associated with Mr. Dodge in the school, and all branches preparatory to college or business are thoroughly taught.

Friday night, May 17th, the Literary Society gave a reception at the home of the principal. About 200 guests were present and the occasion was enjoyed greatly. Many favorable comments were made upon the pleasant rooms and excellent appointments, which render the home department one of the most desirable upon this coast. Oration, essay, select reading and debate reflected credit alike upon teachers and pupils.

THE SANTA ANA NURSERY reports to one of our correspondents that its sales of fruit trees the past season have been large and satisfactory. Compared with the seasons of '87 and '88, there has been much less demand for ornamental stock, which was in great request during the boom, when private yards, as well as considerable acreage property, were set out to fancy trees, shrubs and flowers. A good percentage of the sales this season have been of walnuts, which are being quite largely planted near Santa Ana. Geo. W. Ford of the Santa Ana nursery has been in business in Los Angeles county since 1877, and has many acres of good stock for sale. He understands his business and furnishes healthy trees.

CATTLE AND HORSE SALE.—Readers should not overlook the announcement of a sale of Shorthorn cattle, horses and brood mares by Robert Ashburner of Baden Farm and H. Van der Straten of Hopland. These two lots of fine stock will be offered at the same time and place—Bay District Track, San Francisco, on Tuesday, June 11th, at 12:30 P. M. Killip & Co. will officiate. The sale is to be absolute, and catalogues can now be had of either of the parties named or of the auctioneer. The animals can be safely commended and the sale will give people a chance to get good stock at their own prices.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

QUERIES AND REPLIES.

Alfilerilla Seed Wanted.

EDITORS PRESS:—I have tried through San Francisco and other seedsmen to get an ounce of alfilerilla seed, but without success. As I am desirous of trying it experimentally, will you, or any of your readers, tell me where I am likely to obtain a small quantity? As it promises to become a most valuable forage plant in the arid regions, it is surprising that some seedsmen of prescient enterprise has not secured a supply of seed and brought it to the notice of cattlemen.—J. D. EMERSLEY, *Des Moines, Cal.*

Alfilerilla seed, owing to its character, is exceedingly hard to secure and will probably never be a commercial article. Perhaps some reader may be disposed to hand-pick a few plants and send to Mr. Emersley as a favor. If he gets a few plants it will spread rapidly enough if the situation favors it.

Ointment for Sore Teats.

EDITORS PRESS:—The best ointment for cows' sore teats is made by thoroughly mixing three parts of pure mutton tallow and one part of wood ashes. Pure white ashes from oak wood are best.

Our family cow jumped an old barb-wire fence 15 days ago and tore three teats open, one of them the whole length. I've been applying the above ointment at every milking, and to-day the last teat is entirely healed up.

Last winter, when children were eating second-crop fruit from the orchards and vineyards, some of which was frost-bitten, sores came out on their legs and arms. These were refractory and refused to heal with the usual doctor's remedies of carbolic ointment and vaseline, etc. We had recourse to our tallow-and-ashes remedy and they healed like magic.—W. A. SANDERS, *Sanders P. O., Cal.*

Incomes From Small Farms.

EDITORS PRESS:—Will you kindly permit me the use of your columns to request your readers to give me actual figures as to the products and profits of small farms ranging in size from 5 to 50 acres? There appears to be so much doubt in the minds of Eastern people on this subject, and I am having so many inquiries, that it has seemed best to ask from fruit-growers all over the State a kindly co-operation in making a statement that cannot be called in question.—F. H. BARCLAY, *30 S. Spring St., Los Angeles, Cal.*

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, term of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

THE VALUE OF LONGEVITY.

Dr. Felix L. Oswald, in writing of the value of longevity, says:

"Can there be a doubt that Burns and Keats foresaw the issue of their struggle against bigotry, or that Cervantes, in the gloom of his misery, could read the signs of the dawn presaging a sunburst of posthumous fame?"

"Spinoza and Schiller died at the threshold of their goal; Pascal, Harvey, Macaulay, Buckle and Bichat left their inimitable works half finished; Raphael, Mozart and Beethoven died at the verge of a summit which perhaps no other foot shall ever approach."

"Who knows how often, since the dawn of modern science, the chill of death has palsied a hand that had all but lifted the veil of Isis' temple? Or in how many thousand lives time alone would have solved all discords into harmonies? An increase of longevity would indeed solve the vexing riddles of existence; it would furnish the peculiar indorsement of Mr. Mallock's conclusion. It would give the vicissitudes of fortune a chance to assert their equalizing tendencies, it would supply a missing link in the arguments of that natural religion that trusts the equipoise of justice in the apparent caprices of human fate."

"The price of longevity would redeem the mortgage of our earthly paradise"—and it can be prolonged and should be, with care and the use of proper medicine at the right time.

Owing to the stress, the worry and the annoyance of every-day life there is no doubt but that tens of thousands of men and women yearly fill premature graves.

Especially after middle life should a careful watch be kept over one's physical condition. The symptoms of kidney disease, such as becoming easily tired, headache, neuralgia, feeble heart action, fickle appetite, a splendid feeling one day and an all-gone one the next, persistent cough, trouble in urinating, etc., should be diligently looked into and at once stopped through a faithful use of Warner's Safe Cure, which has cured tens of thousands of such troubles and will cure yours.

Experiencing no pain in the region of the kidneys is no evidence that they are not diseased, as those great purifying organs have very few nerves of sensation, and oftentimes the kidneys are positively rotting and being passed away through the urine before the victim is aware he is suffering from advanced kidney disease, which is only another name for Bright's Disease.

To preserve life and to be well while you live are two cardinal virtues, and it is time well spent to give this vital subject earnest and careful attention, and to use the knowledge acquired in a judicious and intelligent manner.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if requested the following articles (while this notice continues), at the very greatly reduced figures named at the right:

First dam Abbess (dam of Solo, 2:28) by Albion, sire of Vanity Fair, 2:24, and of the dam of Favorite, 2:25; he by Halcorn, a son of Virginian. Second dam by Marshal Ney; he by Imp. Emancipation. Third dam by Bertrand, a son of Sir Archy.

Steinway full brother to Solo, 2:28, and Soprano (the dam of C. F. Clay, 5-year-old stallion, record, 2:18); also Eminence, 4-year-old, record, 2:21, and Stockbrige, 2:28.

TERMS, \$100 for the season.

CRESCO 4908.

Full Brother to SPARTAN, 2:24.

Sired by Strathmore 406, sire of Santa Claus, 2:17; Tucker, 2:19; Skylight Pilot, 2:19, and 25 others with records better than 2:30, and of the dams of 5 with records from 2:18 to 2:28.

First dam Alla, record 2:32 (the dam of Spartan, 2:24), by Albion, sire of Fanny Witherspoon, 2:16; Piedmont, 2:17, and of the dams of J. T. Thompson, 2:17, and Catchfly, 2:18. Second dam (the dam of Henderson, 2:27) by Brignoli, a son of Mambrino Chief, the sire of King Wilkes, 2:22, and Lady Turpin, 2:28. Third dam by Cripple, a son of Medoc (thoroughbred). Fourth dam by American Eclipse; he by Duroc.

Strathmore by Ryadyke's Hambletonian, the sire of Dexter, 2:17, and of the dam of Trinkett, 2:24, and Tamboul, 2:14; Albion by Alexander's Abdallah, sire by Goldsmith Maid, 2:14.

First dam by Mambrino Chief, sire of Lady Thorn, 2:18, and sire of the dam of Director, 2:17. Second dam by Pilot Jr., sire of the dams of Maud S, 2:03, and Jay Eye See, 2:10.

TERMS, \$25 for the season.

CHARLES DERBY 4907.

2-year-old trial, 2:36.

Sired by Steinway (1808), record 2:25, the sire of Strathway, 3-year-old, record, 6th heat, 2:26.

First dam Katie G (the dam of H. R. Covey, 3-year-old trial, 2:37), by Electioneer, the sire of Massineta, 2:16, and of Sunol, 2-year-old record, 2:18, and of eight others with records of 2:20 and better. Second dam Fanny Malone, record, 2:36, trial, 2:23, by Niagara (sire of Cobb, 2:31, double team record, 2:26), and of Lady Hoag, trial, 2:18. Said to be by Mambrino Chief, the sire of Lady Thorne, and of the dam of Director, 2:17. Third dam Fanny Wickham, record 2:43, by Imp. Herald (thoroughbred). Fourth dam by Imp. Trustee (thoroughbred).

CHARLES DERBY will be limited to 10 approved mares. Terms, \$100 for the season.

CLEVELAND BAY.

BARON HILTON.

No. 584 E. C. B. Stud Book. Vol. 1, American C. B. S. B.

Winner of Sweepstakes at Golden Gate Fair, 1888, and Sweepstakes open to all breeds and ages at California State Fair, 1888.

Sired by Luck's All (189).

First dam by Sportman (291).

Second dam by Luck's All (188).

Third dam by Cardinal (47).

Fourth dam by Emulator (103).

Baron Hilton is a grand, rich bay with black legs, a noble crest and carriage; is perfect in style and action and has proved himself a great breeder.

TERMS, \$25 for the season.

ROYAL STUDLEY.

No. 68, Vol. 1, A. C. B. S. B. Foaled 1883.

Winner first premium Illinois State Fair, 1885; first at Contra Costa Fair, 1886; first at Sonoma County Fair, and first at the Sonoma, Marin and Napa, and Solano District Fairs, and second at Golden Gate Fair in "all work" class, 1887, and first at Golden Gate and first at California State Fair, 1888.

Sired by Young Candidate, winner first premium at St. Yorkshire, beating 20 others.

First dam Whalebone (355), first premium St. Yorkshire.

Second dam by Luck's All (188).

Third dam by Summercock (302).

Royal Studley is a very handsome, bright bay, 16 1/2 hands high, weight 1500 pounds, with superior style and action.

TERMS—\$25 for the season.

NAPOLÉON 754, E. C. B. S. B.

Foaled 1885. Imported 1887.

Sired by Luck's All 189; he by Luck's All 188, by Cardinal 47; he by Emulator 103.

First dam Daisy by Luck's All 188.

Second dam by Providence 248; he by Master George 203, by King George 160; he by King George IV 168.

Napoleon is a fine, rich bay with black legs and very superior action. He is very deep in the girth and has wonderful style. He took the premium at London, England, and also Silver Medal where he was shown against horses of all ages. He also took first premium at Midleton in Teesdale, and second premium at Bowes, England, in 1885; first premium at Illinois State Fair and first at Fat Stock Show at Chicago, 1887.

TERMS, \$25 for the season.

The Standard Bred and Cleveland Bay Stallions

Will serve Mares the present season, commencing Feb. 1st and ending Sept. 1, 1889, at Cook Farm, Danville, Contra Costa County. All bills payable before the animal is removed. Mares not proving in foal will have the privilege of return the following season, providing the same parties who bred the Mares still own them, and the Stallions are still owned by the Cook Stock Farm.

PASTURAGE, \$4 per month; Hay and Grain, \$10. Best care taken, but no liability assumed for accidents or escapes.

Mares sent to Fashion Stables, Oakland, Bennett's Stables, Martinez, or to Geary & Grindle's Stables, Haywards, will be forwarded to Farm Free of Charge.

Address:

SHEEP MEN,
ATTENTION!

ADMINISTRATOR'S SALE

By order of Probate Court, in the matter of the Estate of JAMES ROBERTS, Deceased.

I will sell at private sale to the highest bidder, for cash, on or after May 1, 1889, at the Ranch in Irvington, or at my office in Oakland, 946 Broadway, Alameda Co., Cal., the entire flock of Thoroughbred French Merino Sheep, consisting of 280 (Two hundred and eighty) Ewes, 79 (seventy-nine) Bucks, and 180 (one hundred and eighty) Lambs. These Sheep are the get of the original flock imported by Robert Blacow of Centerville. Mr. Roberts, as foreman, having charge of the flock for several years prior to Mr. Blacow's death, after which he became the owner of the entire flock, which he has kept purely for stock purposes.

All interested in Thoroughbred Sheep should be familiar with this flock, which has become famous under the care and management of Mr. Roberts; always receiving first premiums, having been sold to Europe, South America and all parts of the United States; individual members having repeatedly sold for from \$500 (five hundred) to \$1500 (fifteen hundred) each. Sheep Men should seize this opportunity to secure some, as they must be sold to settle up the Estate. Address, JAMES STANLEY, Administrator Estate J. Roberts, Deceased, Mission San Jose, or 946 Broadway, Room 17, Oakland, Cal.

THOROUGHbred
SPANISH MERINO SHEEP.

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, May 29, 1889.

The weather the past week continued favorable for maturing crops. There can be no doubt but the cool weather in several of the counties is causing grain to fill out well. The fruit crops are maturing quite rapidly. Garden truck is coming forward quite freely, with low prices ruling. Trading the past week in garden truck and fruit was quite active, but in cereals it was only fair. The market for wheat after receding abroad and at the East has held fairly steady.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	May.	June.	July.	Aug.	Sept.	Oct.
Thursday....	6.85d	6.90d	6.95d	6.91d	6.85d	6.85d
Friday.....	6.85d	6.90d	6.95d	6.91d	6.85d	6.85d
Saturday....	6.85d	6.90d	6.95d	6.91d	6.85d	6.85d
Sunday.....	6.85d	6.90d	6.95d	6.91d	6.85d	6.85d
Tuesday....	6.85d	6.90d	6.95d	6.91d	6.85d	6.85d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday....	33.6d	33.9d	33.9d	Dull.
Friday.....	33.6d	33.9d	33.9d	Dull.
Saturday....	33.6d	33.9d	33.9d	Steadier.
Sunday.....	33.6d	33.9d	33.9d	Slow.
Tuesday....	33.6d	33.9d	33.9d	Firm.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

Day.	May.	June.	July.	Aug.
Thursday....	80.	80.	81.	81.
Friday.....	81.	81.	82.	81.
Saturday....	81.	81.	82.	81.
Sunday.....	81.	81.	82.	81.
Tuesday....	81.	81.	82.	82.

The closing prices for wheat have been as follows, at Chicago for the past week:

Day.	May.	June.	July.	Aug.
Thursday....	81.	80.	76.	76.
Friday.....	81.	80.	76.	76.
Saturday....	81.	80.	76.	76.
Sunday.....	81.	80.	76.	76.
Tuesday....	79.	79.	77.	74.

Foreign Grain Review.

LONDON, May 27.—The *Mark Lane Express*, in its review of the British grain trade for the past week, says: Heavy deliveries of English wheat caused a decline. Flour is lower. Foreign wheats are almost unsalable at any price—there is a general decline of 1s. Barley is lower and corn is weak. At to-day's market English and foreign wheats were firmer; corn was better, while oats and barley were flat.

California Raisins.

NEW YORK, May 26.—Col. Forsythe, one of the leading raisin-producers of the United States, has just returned from a careful inspection of all the raisin-growing districts of Europe, and says that American raisins, in addition to supplying the American market, are destined soon to take a large share of the London business. He says that the phylloxera is constantly diminishing the best crops of Spain in an increasing degree, and that even if they should now get a remedy for it, which is not probable, it will be five years before the Malaga district can recover its former position. A heavy consignment (given by the Rural Press at the time at 2000 boxes) of California raisins was disposed of in London this season, being the first shipment of the kind on record.

Wool.

NEW YORK, May 25.—Liberal transactions in wool indicate that buyers take kindly to the firmness of prices for the new clip, which is helped by its attractiveness. Prominent Texas clips are reported sold as follows: Part speculative, to dealers, Lyttell, 22c; Callahano, 21c; E. Benaides, 23c, delivered North.

Mail advices are as follows from the *Boston Daily Advertiser*, May 17: "There is no doubt but the market this year shows up several cents above last year's prices, and buyers who expect to be able to purchase wool at low figures in the country bid fair to be disappointed, as sellers' views there still hold up very high. On the spot, however, prices cannot be quoted firm, and it is only in a moderate way that buyers can be tempted to operate at all. Stocks here are small, and on this account there is no pressure to sell, and as buyers are in need of supplies they are paying about former rates. The weak point is still the manufactured goods, and until the market improves for them there is nothing to tempt buyers to operate very freely in wool. Some new wool is being received, but it opens slow. Moderate lots have been sold, but it is mostly small lots which are being taken and mostly in a sample way. The mills generally have considerable old wool on hand left over from their last fall's purchase, but they seem to feel that values are going to hold up, so they are willing to purchase good lots if they appear cheap. The general situation at present is not a satisfactory one to dealers, and they feel that considerable caution is necessary on their part to keep from losing money."

From the *Philadelphia Record*, May 17: "Locally it is a buyers' market to the dealer who wants to sell, and a sellers' market to the manufacturer who needs wool. In other words, the opportunity for selection from the present limited stock is so small that it puts the buyer at a disadvantage when he actually needs a certain pile of wools, and in order to get it he is generally compelled to pay a comparatively full price. On the other hand, demand is so light that any effort on the part of the dealer to force business would necessitate sharp concessions. The stock, however, is too small to cause any anxiety to realize, as very little new wool (other than few fat sheep lots) has yet arrived, and there is little prospect as yet of getting any considerable supply at figures low enough to undersell present local prices. The country has had its views inflated by the predicted stimulation of trade to follow the changes in tariff rulings on waste and worsted cloths, and although there has been no such improvement

in trade, the people who would now like to buy wool cheap from the grower are confronted with the effect of their own over-sanguine promises made before the new clips were ready for market."

California Fruits East.

CHICAGO, May 23.—The agents for the California Fruit Union held an auction of California fruit to-day; 1467 boxes of cherries from San Jose and San Lorenzo brought \$2303. Black Tartarians sold at \$1.40 to \$1.80 per box. Black Bigarreau sold at \$1.60 to \$1.80. Black Rockports sold at \$1.25.

NEW YORK, May 24.—A few lots of California fruit were recently sold here by agents of the California Fruit Union. Being small lots, they were not auctioned. The few boxes of apricots sold for \$6. Now there are daily arrivals. Cherries are bringing from \$3 to \$3.25 per box. The cherries are not all sound.

CHICAGO, May 27.—An auction firm to-day sold for account of the agents of the California Fruit Union two carloads of choice California fruit, consisting of seedling and Pringle apricots, peaches, cherries and cherry plums. There was a good lively demand, and as the bulk of the fruit offered was in fine condition, good prices were realized, apricots selling at \$3@3.65; peaches, \$2.65@3.65; cherry plums, \$1.90@2.15; cherries, 60c@2.10, according to condition. The gross sales on the two cars amounted to \$5100.

Miscellaneous.

NEW YORK, May 25.—Lima beans are strong at \$3.25@3.30.

Hops are still regarded as safe property, but have not as yet obtained the sharp advance predicted.

Prunes are scarce and wanted. Two and three-crown raisins are active and better; 5000 went to Chicago at \$1.35@1.40, and \$1.60@1.65, respectively. The closing prices are \$1.40@1.75. With three months ahead of the new crop the fall will find a clear market.

A few special export orders support 23c for the best State hops. Brewers use fair quantities of good quality, under-priced, taking State at 20@22c, 15c for 17c Red Pacific, 10@20c good to prime others. Exports of the week, 841 bales State.

New.

BAGS—The market for Calcuttas is very strong, at a slight advance. The call, as yet, is only fair. It is claimed that when the demand sets in, active prices will advance still more. The market is quotable to-day from 8 to 8 1/2c for spot, and 8 1/2 to 8 3/4 for July-August delivery.

BARLEY—Sample parcels continue slow, with the market reported to have a firmer tone. In futures, prices after receding have advanced some, as values are below the cost of production.

BUTTER—The market has been crawling throughout the week, under liberal receipts and a light call. Many places that drew from here are now being supplied by local dairies. Packers are disposed to bid lower prices, owing to creamery from the Central States being offered on the market. Gilt-edged butter only moves fairly; all second-class is hard to sell, except at low prices.

CHEESE—The market is very heavy, under heavy stocks and free receipts. From the store, gilt-edged is obtainable at 7@7 1/2c, while choice is obtainable at from 6@6 1/2c.

EGGS—With warm weather, choice, selected fresh eggs are in favor at full prices, but all others are slow. Dealers do not like to keep much on hand in warm weather.

FLOUR—The market is weak. Only concessions tempt buyers. The consumption is lessened, owing to the abundance of fruit and vegetables.

WHEAT—The market has been going from bad to worse at a fairly active pace. It seems as if buyers are determined to take advantage of farmers who will be compelled to sell so as to meet maturing bills. The tonnage here and to arrive is small to market so large a crop as we will have. On Call, futures have been dealt in more freely, with only slight fluctuations noted.

[COMMUNICATED.]

Cereals.

H. Kains Jackson writes to the *London Farmer* of May 11th as follows: Harvest is nearer by a fortnight than it was a week ago, owing to the great burst of summer heat that followed a spell of rainy weather. Now the fields are like so many forcing beds, and the growth of plant life is rapid and strong under solar light and heat. The great changes that

occurred irregularly at the end of last week, and which are continued in this week, were of an electrical character, and extreme in their variations. Probably the passage of the November meteors—now between the earth and the sun—are the causes of the great and sudden heat, which was much needed to stimulate and strengthen plant life. The markets are affected by the brilliancy of the weather, as regards attendances and sales off stands; but the value and demand for cargoes have scarcely been affected, since the earliest European harvest is still distant, and a regular demand should take off all supplies at present in sight. The quickness with which the last large fleet was absorbed has revived spirit, particularly as the United Kingdom took the cargoes without continental aid. But now the forces of spring are everywhere extending, and shipments of Russian wheat, oats, Danubian maize and barley, Egyptian beans, etc., should become active—all the more through the active rivalry of American competitors, who have climbed down from their tree of 37s. to 32s., and therefore at negotiable terms in comparison with other sorts. At present buyers appear to prefer "other sorts," but as a couple of large cargoes are coming to London, perhaps the American wheat may be found to grind up satisfactorily. Indian business keeps limited, and it is not easy to buy any sorts below quotations, 36s. downward to 37s. per quarter. Sales forward for future delivery of wheat, over the next three months, are offered within 1s. per quarter of "spot" prices, and this fact demonstrates the dead level to which value has fallen.

A carload of 1889 wheat was received in this city on last Saturday from Reedy, Tulare county. It was shipped by T. L. Reed, and was sold at \$1.37 1/2 cwt. The grain was not well filled. Last year the first consignment came from Modesto, Stanislaus county, and was sold at \$1.31 1/2. Never before have we received new wheat in May, and the indications point to an early harvest. Following are the dates of the arrival of first lots of new California wheat at tide-water for a number of years, together with the prices paid:

Year.	Month.	Price.
1859.....	July 14.....	\$1.90@3.00
1860.....	July 3.....	1.50@1.55
1861.....	July 24.....	1.50@1.62
1862.....	July 11.....	1.02@1.65
1863.....	June 25.....	1.50@1.60

1885.....	June 2.....	1.42@1.42
1886.....	June 5.....	1.30@1.30
1887.....	June 10 (Port Costa).....	1.75@1.75
1888.....	June 15 (Wheatport).....	1.31 1/2@1.31 1/2
1889.....	May 24.....	1.37 1/2@1.37 1/2

The stock of old wheat in the State will be taken on the 1st of June. There is considerable new offering on the market at \$1.25 for June-July delivery, but buyers, at this figure, are not free purchasers. Everything that is possible is being done to depress the market, not the least of which is the paying of a small sum of money for the privilege of putting a stipulated number of hundred tons at very low figures, ranging from \$1.10 to \$1.15 per cental for No. 1 white shipping—of course, the man who buys the privilege of putting the wheat does not expect to put it, but such low figures are used as the handle to buy wheat from farmers at low prices. Old wheat is weak and inactive, with buyers offish. Harvesting has commenced in several sections of the State. The returns so far received show a larger return from each locality than were received from them last year.

Barley has held to low and unsatisfactory prices throughout the week, under strong selling pressure of poor and weevily. Harvesting is reported in several localities, but as yet no new has been received; probably the very low prices ruling here prevent shipments.

Continued free receipts and buyers bidding low cause oats to rule weak at the low quotations. Crop advices in this State and up north are of a flattering character.

Corn is without essential change. The demand is of a steady character, which is met by holders without trying to force sales.

Rye is still weak. The crop this year promises to be the largest on record, while the quality will be good.

Feedstuff.

In ground feed, the market shows more life, but the heavy supplies keep the market in buyers' favor. The consumption of ground barley, at the low prices, appears to be increasing.

In hay there is nothing of interest to report. The offerings are free, but the quality is not up to last year's output. It now looks as if choice to extra choice hay will fetch good prices throughout the year, while poor to fairly good will be in oversupply, and, probably, with strong selling pressure, rule low.

Fruit.

Dried fruits show a steady, firm tone, but no advance is looked for. The *New York Fruit Trade Journal*, May 18th, says: "There is absolutely nothing to say about the market for prunes. The stock has been distributed, prices averaging from 7 to 7 1/2c for 60s to 90s. There are no prunes in New York in first hands. Receivers are all out. Choice California raisins are scarce in this market. Even ordinary grades are not plentiful, there being quite a moderate supply for the time of the year. Prices while not advancing are looking up."

The market for seasonable fruits has remained fairly steady for berries and cherries. Canners are still taking strawberries and cherries. The receipts of the latter have been quite heavy, necessitating, at

times, a marked concession on the poor keepers so as to work off the consignments. Quite a percentage of the receipts the forepart of the week, under review, were cracked. Cherry plums have come in, but the quality being poor, they were hard to place. Peaches are still poor.

In citrus fruits, choice, well-selected, good-keeping oranges are strong at full prices, under an active shipping and local demand. Limes are stronger.

Vegetables.

Heavy receipts of new potatoes depress the market for the small and those not evenly matured. Fair-sized, good keepers sell well under a good home and shipping inquiry.

Onions have receded still more for poor keepers, but for good keepers prices keep fairly strong, even in the face of free receipts.

In season vegetables, trading continues active, with prices fluctuating from day to day. Cucumbers, tomatoes and asparagus are lower. Choice string beans and sweet peas move off well. Canners are taking asparagus, peas and beans. Cabbages are unchanged. Summer squash is weak at the lower prices.

Live Stock.

The market for all kinds is without essential change. Liberal supplies of fruits and vegetables, with many persons going out camping or else to the seaside, lessens the consumption in this city. Prices are not quotable lower, yet to force sales lower prices would have to be submitted to. In horses and milch cows, there is nothing new to report.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, grain fed, 5 1/2@6 cwt lb.; dressed, 8 1/2@9 cwt lb.; soft, 5 1/2@5 cwt lb.; dressed, 8@9 cwt lb. Stock hogs, 5@6 cwt lb.

BEEF—Stall fed, 6@6 1/2 cwt lb.; grass fed, extra 5 1/2@6 cwt lb.; first quality, 5 1/2@5 1/2 cwt lb.; second quality 4 1/2@5 cwt lb.; third quality, 4@4 1/2 cwt lb.; bulls and thin cows, 2@3 cwt lb.

VEAL—Small, 7@8 cwt lb.; large, 6@7c. MUTTON—Wethers, 5@5 1/2 cwt lb.; ewes, 4 1/2@5 1/2 cwt lb.; lamb, spring, 6@8 cwt lb.

Wool.

Receipts the past week were light, notwithstanding Oregon has sent us more liberal supplies. The light receipts give color to the report that Eastern buyers are operating quite freely in some parts of the interior. The changing fashion calls for wools from which alpaca and other luster goods can be made, and also from which soft woolen goods can be produced. The changing fashion in men's wear calls for wools from which chevot goods can be made. These changes will bring wools from the Down sheep into more general favor. Fashion is also calling for mohair and cashmere goods, which will cause wool from the Angora goats to fetch better prices. It now looks as if the coarse to medium wools will fetch more money proportionately than will fine wools. Sales of fancy clips are reported at a slight advance on quotations.

Miscellaneous.

Poultry the past week was essentially unchanged, receipts and the demand having been about evenly divided. The general feeling at the close was fairly firm, under light receipts.

Hops are steady, under light obtainable supplies and a fair inquiry. Crop prospects are good. The feeling for new crop supplies is unsettled.

Colored beans are steady, with a firm tone, but whites have a weak tone.

Nuts are in fair request. Crop prospects are reported to be good.

In honey, there is a fair movement. A shipment of 600 cases to Liverpool was made the past week.

From the *Commercial News* of May 29, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port.....	189,255	292,975
On the way to neighboring ports 28,327		127,425
In port, disengaged.....	24,595	33,691
In port, engaged for wheat....	48,982	13,950

Totals.....291,159 468,041

To get the carrying capacity, add 60 per cent to the registered tons as given above.

From July 1st to May 28, the following are the exports from this port:

	1889.	1888.

Cassidy's Petaluma Fruit-Drier.

We would call the attention of Fruit Men to the Celebrated

PETALUMA FRUIT-DRIER,

Which has THREE PATENTS, covering all the practical points—combined in one.

After twenty years' experimenting on the different modes of curing fruit, I feel confidence in coming before the public with a FRUIT-DRIER, which is as

NEAR PERFECT AS THEY CAN BE MADE.

The Points Claimed Are:

- 1st—Fruit-Raising by Mechanism.
 - 2d—Air Equally Distributed Through the Fruit, which obviates burning or sweating.
 - 3d—Using Petroleum or Wood for Fuel.
- These Driers are built of good material, and will, with care, last for years. Remember, one good Drier is worth more to you than several cheap, poor concerns. Please give us a call before purchasing elsewhere.

THE HURRICANE—Size A.

A mounted, horizontal hay press. Size of bale,
when in the press, 14x24x46 inches. Average weight of
bale, 220 pounds. Capacity, from 16 to 20 tons per day.
Uses 4 men and works with 2 horses. Requires no
tramping. Puts 10 tons or over in a box car.

Price.....\$1000.

THE HURRICANE—Size B.

Size of bale in press, 22x24x46 inches. Average weight
of bale, 260 pounds. Capacity, from 20 to 35 tons per
day. Uses 5 men and works with 1 or 2 horses, at option
of baler. Requires no tramping. Uses rope or wire.
Puts from 7 to 8 tons in a box car.

Price.....\$1000.

The SELF-TRAMPING JUNIOR MONARCH

Size of bale in press, 22x24x46 inches. Average weight
of bale, 260 pounds. Capacity, from 15 to 20 tons per
day. Uses 3 or 4 men, at option of baler. Works with
1 or 2 horses. Uses rope or wire. Does its own TRAMP-
ING. Puts from 7 to 8 tons in a box car.

Price.....\$500.

THE MONARCH.

Same principle as Junior Monarch, only smaller and
heavier. Size of bale, when in press, 17x20x40 inches.
Average weight of bale, 220 pounds. Capacity, from 12
to 20 tons per day. Requires 3 men and 2 horses. Uses
wire only—rope will not hold. Does its own TRAMPING.
Puts 10 tons or over in a box car.

Price.....\$600.

THE GENUINE PRICE PETALUMA.

Size of bale in press, 24x24x60 inches. Average weight
of bale, 250 pounds. Capacity, from 10 to 18 tons per
day. Requires 4 men and 2 horses. Uses rope or wire.
Hay must be tramped into the press. Puts from 5 to
6½ tons in a box car.

Price.....\$350.

THE IMPROVED EAGLE.

Size of bale in press, 26x26x60 inches. Average weight
of bale, 235 pounds. Capacity, from 10 to 15 tons per
day. Requires 4 men and 2 horses. Uses rope or wire.
Hay must be tramped into the press. Puts from 4½ to 5½
tons in a box car.

Price.....\$250.

— AGENTS FOR —

INGERSOLL'S HAND PRESS.

DEDERICK'S TOP-FEED REVERSIBLE LEVER PERPETUAL PRESS

During many years' experience in the sale of presses, we are fully convinced that the INGERSOLL PRESSES will be found to have overcome the great objections heretofore existing against hand power presses. They combine a quick, convenient, and effectual working power, and everything liable to break has been done away with. With a double ratchet wheel combined with a chain pulley and loose sheaves, a TWO, THREE or FOUR-FOLD lifting chain power is obtained, which, when acted on by only ONE PERSON with a light lever of only 5 or 6 feet long, will exert a force on a bale reducing it to SMALLER dimensions than has heretofore been accomplished.

No. 1.—Size of Bale, 46x25x24; Weight of Bale, 200 pounds; Weight of Press, 850 pounds; Price, \$125.

No. 2.—Size of Bale, 49x27x28; Weight of Bale, 300 pounds; Weight of Press, 1500 pounds; Price, \$175.

IMPROVED FOR 1889.

Price (17x22, Variable Length, Mounted on Truck, Weight 4700 pounds) \$450.

These Presses may be operated by either one or two horses, and they press two sections to each half-turn and reverse of the horse, which is twice as fast as any other Press, operating half-turn and reverse; with all other Presses the horse must turn about to draw the power back, besides having to stop to bind and remove the bale, whereas our Reversible is our Patent Continuous Press without stopping to bind or remove the bale, and the power is reversed by the reaction of the pressed material, which method is secured to us by patent, hence the movement of the horse either way presses a section of a bale. Reversing the horse requires a driver, but gives satisfaction. The Press is otherwise the Perpetual or Continuous Press, with open feed orifice, screen bottom and all improvements. By a late improvement we have doubled the power of this Press; one horse will now do the work on it that two will do on Presses made in 1881, and we have also adapted and added our Patent Condensing Hopper, by means of which it may be fed with much greater ease and rapidity, as it is hard and disagreeable work to feed hay in its loose state into any Press without the aid of our Condensing Hopper.

For Further Information, Address

HAWLEY BROTHERS HARDWARE COMPANY, San Francisco, Cal.

NINE YEARS IN THE FIELD.

500 IN FIELD USE.

None Ever Returned.

They have a larger sale than all other Harvesters combined. Built for heavy work and large grain fields with heavy grain. Always victorious in competitive trials. They have reduced the cost of Harvesting to less than \$1 an acre, and save three bushels an acre over and above Heading and Threshing. Have our Premium Extra "Star" Double Shoe Cleaner, the only successful Harvester Cleaner made. Received First Premium in 1885.

WOODLAND, Sept. 19, 1888.

Stockton Combined Harvester and Agricultural Works
GENTLEMEN: The 11-foot Houser I bought of you this season fills the bill right up to the handle. I have cut 1200 acres; have threshed 625 bags of wheat in one day, averaging 30 bags for six days. The Star Cleaner and Improved Shoe are perfect, and last, but not least, I turn a square corner and save all the grain.

J. R. JONES.

YUBA CITY, Sept. 13 1888.

Stockton Combined Harvester and Agricultural Works
GENTLEMEN: I have one of your Star Cleaner and Improved Shoes on my Houser Combined Harvester, and can say that the cleaner is far superior to any I have ever seen in barley, being able to return unboarded barley and pieces of heads direct to the cylinder, something that everybody can appreciate that has run a Harvester. The cleaner is of sufficient capacity, I having threshed 650 sacks a day. It is well made and very durable. The new shoe is perfection. I consider the Houser very strong and durable, and as light draft as machines of lighter build of same capacity.

A. GRAFFIS.

HOGA, Nov. 25, 1888.

Stockton Combined Harvester and Agricultural Works
GENTLEMEN: I bought one of your 16-foot Houser Harvesters this season and cut my crop of 1200 acres with same without any expense for extras. The Star Cleaner and Improved Shoe are perfection. Heretofore, when using another make of Harvester, I had to have all my grain recleaned at an expense of \$800 or more, but with my machine it was not necessary, as the grain was clean enough for seed as it was taken from the spout, and I only regret that I did not buy one two years ago, and I would have saved over \$5000. I prefer the Improved Houser to any other make of Combined Machines, and would recommend it to my friends in need of a Combined Harvester.

W. S. RIDDLE.

YUBA CITY, Oct. 15, 1888.

Stockton Combined Harvester and Agricultural Works
GENTLEMEN: The 16-foot Houser Harvester that I bought of you this season, with the Star Cleaner, gave entire satisfaction, and, I think, is the best Harvester in the market. Will recommend it to anybody or friend that wants to buy a Harvester.

J. W. HUMPHREYS.

The "STAR"
Double Shoe
CLEANER

FOR -
COMBINED HARVESTERS,

Awarded First Premium at State Fair, Sacramento, Sept. 24, '87.

(PATENTED.)

The "STAR" Double Shoe CLEANER

FOR -
STATIONARY THRESHERS

We also build to order the "Star" Cleaner with sufficient capacity for any threshing machine. It is mounted on trucks and can be set by the side of any "thresher," the power being transmitted to it by means of a counter shaft on the thresher, or belt from the engine. The grain is conducted to the hopper by an elevator extending from the grain auger of the thresher to that of the Cleaner.

Also Manufacturers of "Star" and Angle Sieve Grain Cleaners, Curved Standard Gang Plows and Plow Extras, Passenger and Freight, Motor, Cable and Horse Cars.

The Great Disaster in Pennsylvania.

Amid such charming natural scenery as is portrayed in the engravings on this page has just occurred a calamity which the *London Daily News* describes as the "saddest and most striking and most overwhelming misfortune that ever befell the people of the English race." At five o'clock on Friday morning, May 31st, a tremendous reservoir at the headwaters of the Conemaugh river, in Pennsylvania, burst its restraining dam under pressure of an unusual fall of rain upon its watershed and precipitated its immense volume of water upon the valley through which the river flows. This reservoir, the accounts say, was maintained for the pleasure of a Pittsburg club, who gave bonds of three million dollars as a surety to the dwellers along the river bank who protested against the maintenance of a body of water three miles long, one mile wide and 70 feet deep as a constant menace to life and property in the valley below. But the waters had no respect for the bonds of the Pittsburg club, and when the floods came its water was thrown into the Conemaugh, a bright little stream which empties into the Alleghany river about 30 miles above the point where it joins the Monongahela to form the great Ohio river. One of our engravings shows the Conemaugh at what is termed the "Packsaddle," a riotous portion of the stream where freight has to be carried on saddle from smooth water above to smooth water below the rapids. The other engravings are of scenes in

(Concluded on page 548.)

THE CONEMAUGH AND ADJACENT VALLEYS—SCENES AMID WHICH THE GREAT ACCIDENT OCCURRED.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Vacation Days in the N. C. B.

EDITORS PRESS:—In the earlier springtime a certain weariness of one's external surroundings steals on as surely as the budding leaves and the shower of blossoms. City life, and even the well-ordered suburban gardens, grow strangely contracted and unsatisfactory. The mathematical precision of the street-crossings are a weariness; the equidistant lines on concrete walks, and the interminable lines of shade trees, are not less so—they may be a product of high civilization, but in such conditions of the mind, grow sadly unsatisfactory. There is even a lack of picturesqueness in the adjacent roofs and chimney-tops. There is a longing to hie away to an unbroken wilderness, where there shall be no lack of breathing space or wideness of landscape. One needs, in these moods, miles of length and breadth, so far as the eye can reach or be carried by a fine field-glass. In the long ago, a primitive method of securing machine-power was a treadmill, set at an angle and perambulated by a yellow dog of most discouraged aspect. The longer he climbed the less the hope grew of reaching beyond his present standpoint, and the head and tail dropped lower and lower.

Just when one comes into full sympathy with this ancient yellow dog, is the time to look up stoche and ulster, turn the key on Lares and Penates, and take the first train which follows the rivers to their sources—away among the mountains, to revel amid wild flowers, water-falls and rivulets, for the "healing of the leaves" is a promise to the uttermost. Friends may fail us—Nature, never! Thus irresistibly drawn we sallied forth, fresh from the Easter surroundings, to look for the emerald velvet mantle, sure to be in evidence—fringed and girdled with starry blooms—with which mountain and valley would surely honor the Easter-tide. We found them before the sun-light had risen above the fog-bank; and like a kaleidoscope were the variations. It is said that Worth, the man milliner, came recently to the end of his inspirations, and, in his extremity, sought them anew in the lights and shadows of the valley—in the uncurling fronds, with their terra-cotta lining and pale-green tips—in the gray-greens of the olive and the brighter tints of the pussy willows; and lo! the draperies of the fashionable world and the delight of its votaries therein.

All of these we saw—and many another. The valley of the Sacramento would be a bonanza at this season to the artist and the weary caterer, to whom a fresh combination of color is a revelation. The rose-gardens were in their fullest glory as we dashed along, and lilac and syringa and snow-ball added their fragrant charm. Above Sacramento we enter the cream of the valley. Culture and patient waiting is rendering it a garden wherein grow fruits of all climes; while wild flowers, prized and cultivated in Eastern gardens, are brightening valley and hillside.

Before reaching Marysville we come upon the promising colony of

Colmena.

The youngest of the family, if not the least ambitious. One needs no vivid imagination to picture orange groves and umbrageous shades, whose promise lies in infant rows of citrus and deciduous trees, to which the plentiful spring rains have given a fostering care. A new life seems inspired all through this region. Slow to develop faith in the results of the anti-debris law, now one can see it everywhere in the bright little homesteads and budding orchards, of which multiplied thousands are needed in this State. It is in this direction that the enterprising colonies are doing a work whose value the future will fully illustrate. With climate and soil, and more than all, water assured, the owner of a young orchard has only to summon a reasonable store of patience, either as a resident or non-resident, and the reward will surely follow. The next colony we visited was

Thermalito.

Than which no other possesses a stronger claim to future attractiveness and value. Still in its incipiency, and backed by no colossal bank account, it is quietly making good its claim to a paramount natural beauty of location and adaptation of soil and climate to citrus culture. It lies eighty feet above the pretty little town of Oroville, and on the opposite bank of Feather river, overlooking the beautiful valley beyond, defining at the horizon line the distant Bates on the one hand and on the other Table Mountain and the far distant snow peaks of the Sierras. The amphitheater form of the plateau insures its thermal conditions, as also its altitude. A red clayey loam, charged with gravel, gives at once strength, warmth and drainage. The little ten-acre citrus and olive orchards are a promising feature in a landscape of great beauty. In a few years these will be capable in themselves of supporting a numerous population. Even now some lovely little homes are in course of preparation, and the Bella Vista, a handsome and commodious hotel, will be a rendezvous in the near future, helping to solve the question of "Where shall we spend the spring months?" Nowhere is a sweeter atmosphere or purer mountain water at this season. The Citrus Association's fine young three-year-old orchard

will bend beneath its weight of golden fruit later in the season, and a portion will be required to be removed to avoid injury to the trees. The Citrus Exhibitions of the last two years have drawn attention to Oroville, and many visitors have admired the gardens, whose crowning beauty is either in their roses or orange bloom. One can hardly at this season decide in which lies the greater attraction. Commercially, the latter, perhaps, and esthetically, the former.

Palermo.

The following day we were invited to visit the finely developing colony of Palermo, of which one sees and hears so much of late. The drive over five miles of perfect highway gave evidence on either hand of enterprise—young nurseries springing into life—and every one at their busiest to make these spring days tell on their future fortunes, men and teams working at high pressure, but the reward is with them, and before many days.

We passed the new grounds, just assuming shape, of Villa Verona, with its fine location and frontage of palms. A limited amount of work has been done here, but the future will doubtless show some fine developments.

Soon we reach the scattering groves of white oak, the queen regnant of the Oak family, just enough of them to suggest shade for the heated days of midsummer. Then some artistic dwellings built for non-resident owners, and orchards planted for them as well. All this sounded a little after the fairy-land legends. Houses and citrus groves and flower gardens do not usually grow without hands, and the hands of the owners at that. One rarely is given the privilege of walking out of a train of cars into one's own home all prepared for him, in a new country so recently almost a wilderness. It seemed like magic, but a visit of a few hours revealed the secret. The manager's hand and eye were everywhere, and apparently at one time, reminding one amusingly of the days preceding a Presidential election; in the button-holing process at every turn. Col. Ludlum shows to visitors the beauties of Palermo most satisfactorily, with a full understanding of soils and locations adapted to each want. The orchards planted last year are a standing witness to the value of the soil and location. No expense is being spared to develop the resources of this colony, and every variety of fruit, tropical and semi-tropical, and temperate, is finding a home there. Senator Hearst is trying some valuable experiments in this colony, where he has purchased 800 acres of land, nearly all of which is being put out into fruit. One of his experiments is the culture on a large scale of the Adriatic fig. Being warned of the imperfect knowledge at command concerning the perfect curing of the fig in California, he replied: "Then we will import a man who does understand it." So with the possible advent of a veritable "Smyrniote," the Gordian knot may at last be managed. Certainly no greater boon could be given to orchardists at this juncture than a shipload of "Smyrniotes." So large a part of the State will raise the fig to perfection that the world might be supplied from the "land of the setting sun." In this region the fig becomes a monarch of the orchard, its arms reaching forth to the right and left regardless of neighboring growths and overshadowing all. Next to the citrus and olive it has the most manifest destiny in the near future.

All too soon came the homeward drive, and as we journeyed swiftly forward, we drank in new draughts of freshness and beauty, and longingly wished that Easter week possessed countless properties, stretching onward many days.

Oakland.

I. G. WINTON.

In San Luis and Santa Barbara.

EDITORS PRESS:—Eight miles south of Arroyo Grande, of which I gave some account on a previous visit, is the new town of Nipomo. Unknown on map and perhaps unborn in the imagination of its energetic projectors two years ago, it sprang forth within about one year a full-fledged city, only lacking the machinery of city government. A destructive fire visited it last fall, sweeping away a number of the best buildings. This calamity being succeeded by a dearth of immigrants, leaves it, mildly speaking, just a little dull at present. The site is in the heart of the Nipomo valley, so named from the Indian tongue, and meaning "at the foothills." It is a beautiful tract of country bordered by smooth, rolling grass-covered hills on either side, and is embraced by the Nipomo Rancho, 38,000 acres in extent. The early proprietor, Capt. W. G. Dana, deceased, is represented by eleven sons and one daughter, nearly all of whom still reside in the valley and are highly respected. The estate has been sub-divided into small tracts by the Danas, and the placing of the same upon the market caused the marvelous growth of the town. To Mr. Krider, editor of the Nipomo News, whose printing office was among the first buildings erected, much credit is justly accorded in the matter of attracting attention to the advantages of the town and valley.

About six miles farther south is located the

Santa Maria Valley.

And the young city of that name. The population of the latter is about 1200, has several good stores which carry a heavy stock, shops of different kinds, hotels, restaurants, etc.

Of the hotels, the Hart house is worthy of more than a passing notice, being one of the best in the State for a town of the size of Santa

Maria. It was erected in 1887, by Reuben Hart, its present proprietor, at a cost of \$35,000; is of brick, two stories high, and contains 60 large, airy rooms. The grounds to the rear are being improved in the highest style of art by the introduction of an endless variety of tropical and semi-tropical plants, trees, vines and shrubbery. Mr. Hart supplies a large portion of the town with water from his steam pumps. R. D. Cook, another enterprising citizen and business-man of the place, furnishes a portion of the water. Mr. Cook's homestead furnished a portion of the land upon which the town is located. Other intelligent, thorough-going business-men of the place whose acquaintance I formed are the Kaiser brothers, real estate dealers and orchardists, and L. E. Blochman, connected with the mercantile house of Weilheimer & Coblenz, and a practical fruit-grower of the valley. The Kaisers' fruit farm is located 12 miles southeast of town, consists of 70 acres of English walnuts and 50 acres of prunes, the largest devoted to these special varieties of any fruit farm in the valley. The trees are just coming into bearing and promise a great success. The proprietors intend to enlarge their orchard speedily to 250 acres. Mr. Blochman's fruit ranch is in the same neighborhood. This gentleman makes a specialty of Bartlett pears and apples, of which he has 2000 thrifty young trees, and is also preparing to greatly augment his tree planting. This section is evidently destined to become a great fruit-growing center, from the fact of its being in point of soil and climate so admirably adapted to the business.

The New Town of Garey.

Named after its energetic proprietor, Thos. Garey, late of Los Angeles, is centrally located here, 11 miles from Santa Maria. Though still in embryo, the people of the neighborhood predict it a bright future. It has a good country to support it. Mr. Garey is a practical nurseryman and fruit-grower, having pursued horticulture in Los Angeles county. He has established a nursery at Garey with 15,000 orange trees ready for the market. Olive-tree planting is beginning to engage attention. Mr. A. Ontiveros has the largest plantation of olives in the valley.

The extent of the Santa Maria valley is estimated at 200,000 acres, about two-thirds of which is good, tillable land, the price of which ranges from \$25 to \$100 per acre. Between Santa Maria and the ocean, about a dozen miles, the chief pursuit is dairying. There was shipped from Santa Maria depot during the month of March 132,000 pounds of butter, and during April 170,000 pounds.

That your numerous readers elsewhere may have a more definite idea of the progress that has been made here in horticulture during the past two seasons, prior to which it was chiefly a stock range, I will give the figures, carefully compiled from the Santa Maria Times of the 11th inst., of the fruit trees planted during '88 and '89. This list embraces only such orchards as have been planted for profit, and does not include family orchards:

W. L. Runnels & Son, assorted.....	13,000
Kaiser Bros. (walnuts, 1700; prunes, 5000; assorted, 300).....	7,000
Jones & Son, apples.....	1,150
Jones & Mauleby, assort d, 5000; oranges, 600.....	5,600
A. Weilheimer, apricots, 3500; prunes, 1500; assorted, 300.....	5,500
W. Hudson, nectarines, 1000; assorted 500.....	1,500
Mauleby & Baker, Bartlett pears.....	1,000
Perry & Hudson, assorted.....	500
J. Holloway, assorted.....	650
J. F. Goodwin, assorted.....	1,000
Thos. Boyd, peaches, 1000; apricots, 2000; prunes, 1000; Bartlett pears, 500.....	4,500
Wm. Smith, assorted.....	1,000
Capt. Williams, apricots.....	5,000
Isaac Miller, prunes and apricots.....	4,500
J. K. Triplett, assorted.....	2,250
Bagby & Lucas, assorted.....	2,700
M. Beeson, Bartlett pears.....	1,000
M. Carranza, assorted.....	300
W. F. Johnson, assorted.....	2,500
L. E. Blochman, assorted.....	2,000
Jas. Mahoney, assorted.....	1,000
J. G. Prell, assorted.....	500
O. Carranza, a s rted.....	500
Chas. Bradley, assorted.....	500
Wm. Irwin, peaches and pears.....	1,650
H. Carpenter, assorted.....	550
Paul Bradley, assorted.....	6,500
A. F. Clark, assorted.....	2,500
T. A. Garey, assorted.....	500
John Tunnell, oranges.....	1,000
Mr. Huston, assorted.....	1,000
Mr. Woods, assorted.....	1,000
Brookshire & Hobbs, assorted.....	1,000
Abram Ontiveros, assorted.....	800
Sisquoc and vicinity, assorted.....	3,000
Mr. Teatson, assorted.....	2,500
P. Ontiveros, assorted.....	500
E. Morrison, assorted.....	6,000
J. M. Goode, assorted.....	450
Total.....	92,100

In addition to the above, the following are the planters of vines, with their respective amounts set opposite:

J. K. Triplett.....	600
L. E. Blochman.....	2,000
A. Ontiveros.....	60,000
Mr. Teatson.....	1,000
P. Ontiveros.....	5,000

I found many warm friends of the Rural among the citizens of this valley, some of whom have been constant readers for upward of 20 years, and say they should be at a great loss without it. Doubtless your subscription-list will be more than doubled in this valley in the near future. At present the fact must be admitted the farmers are "hard up," notwith-

standing the progress I have noted in this article. The very fact of the improvements mentioned would account in some measure for the deficit, there being no return therefrom as yet. But the unusually low price of every kind of product of the farm is one of the chief reasons that may be assigned for the depression, which fortunately may be regarded as but temporary. The sun of financial prosperity is bound, within a reasonable time, to shed his cheerful beams over this fruitful region.

F. B. L.

POULTRY YARD.

Fanciers and Farmers.

EDITORS PRESS:—It would seem to be quite natural, and in accord with the fitness of things, for the great majority of poultry-fanciers to be farmers. Certainly the farm, or "ranch," as Californians term it, is with its broad acres the ideal place for successful poultry-keeping. A hot, small lot, bald and bare, in city or village, is but a prison pen for fowls compared to the average ranch. Yet it is a singular fact that on this coast, in the Eastern States, and in England—the home of what is known as the "poultry fancy"—the great majority of poultry-fanciers are not farmers. The merchant, the mechanic, the clerk, the lawyer, doctor, all sorts and conditions of men, in villages and cities, make the majority of our poultry-fanciers; here and there is the *rara avis* a farmer who pays some attention to poultry-breeding. The cause of this apparent anomaly is not far to seek. Poultry engages the interest of those city people who have an inborn liking for pet stock and who find in breeding a few fine fowls considerable wholesome pleasure and profit. Often it is taken up as the pastime of an invalid requiring gentle exercise and light employment of both body and mind. Cases altogether too numerous to mention have come to my notice in which poultry-breeding has stimulated hopeless invalids so that they took a new hold on life. Some of them have assured me that but for poultry they would have long since been in their graves. But such considerations as these do not appeal very strongly to the farmer. Generally speaking, he is healthy enough, and the reason he is not a poultry-fancier is solely because he thinks there is no money in it for him. That he is seriously mistaken in so thinking I have not the least doubt in the world. He can't afford to bother with it; has too much other work to do; wife hasn't any too much time to spare, either, he will tell you if you interview him on the subject. Right here is where he makes his mistake. He can afford to bother with it, just as much or more than he can afford to raise wheat, or hay, or vegetables, or fruit. It is something that, all things considered, pays better than any other farm crop, if rightly handled, and if not rightly handled, no farm crop pays. This has so often been demonstrated as a fact that it is almost a truism, still, farmers, as a class, look with suspicion upon the assertion that it will pay an able-bodied ranchman to keep more than a few dozen mongrel hens. Especially does the average farmer look askance at "fancy" poultry, whereas it is the very kind he should keep. Not only is it the best, and the best is none too good, but it is bound to make the farmer a fancier, and nobody who was not a fancier ever yet succeeded largely in the poultry business. Stick a good big pin into that point, for it is worth remembering. The very first essential to success in any business is that one should be thoroughly interested in it, and one great reason why only thoroughbred fowls should be kept is that they are far more interesting than mongrel. It is not the only reason, however. They can be made vastly more profitable. At the present time, on this coast, of course, the demand for fine specimens of thoroughbred fowls is limited, but it is sure to grow and grow fast, too, till it reaches a size approximating that of the East, where such a trade amounts to hundreds of thousands of dollars annually. Even now the money which goes East each season for blooded poultry to supply the yards of California breeders is no small amount. But the indifference, almost hinting at stupidity, of farmers concerning this matter is as general in the East as it is here; in fact it is rather more so there than here. As an illustration: In a certain town in New England there is a shopkeeper who, a few years ago, began to breed poultry. He was not afraid to exert himself and his trade in so-called "fancy" fowls and eggs soon outgrew the accommodations of his village garden. So he went to a farmer, reported shrewd and keenly alive to the main chance, and to him he proposed that they form a partnership, the farmer to supply the fowls and the other sell them. If each performed his part faithfully, it could hardly have failed to be a profitable business. But the farmer doubted and refused to embark. He would not go into any such business, but he agreed to hatch and rear the chicks at so much per head each season. Instead of interesting himself in it thoroughly and sharing the profits, he does all the work, hardly knows one variety from another, while his keen-witted friend has extended his trade to all parts of the United States and is gathering in more coin in one year than the farmer does in five out of poultry.

Another case is that of a young farmer left

with a worn-out farm on his hands six years ago. He thought he saw money in poultry. He went into it determined to succeed. The neighboring farmers were, of course, skeptical as usual; this is a free country, he had a right to make a fool of himself if he so chose. But now, if you chance to visit the neighborhood, you will hear everybody telling of the pile of money this young man has made from his hens, and if you ask him about it, he will show you his books, which demonstrate plainly enough that the old worn-out farm is far and away the most profitable one for miles around. He is both a poultry farmer and a poultry fancier.

This is not to be taken as enthusiastic advice to all farmers to rush at once into poultry raising. Far from it. Make haste slowly applies in this as in so many other undertakings; but though it is best to go slowly, it is best to go. Don't keep a flock of mongrels any longer than it takes you to replace them with handsome thoroughbreds. Don't be afraid to devote some time and some money to your fowls. Don't go into it blindly, but read up the subject, study it, experiment, get interested, become a poultry fancier; and, though you may not grow wealthy exceedingly fast, still your poultry business is pretty sure to pay you well in more ways than one. CHAS. R. HARKER, Santa Clara, California.

"Dead in the Shell."

EDITORS PRESS:—Under above heading Mr. Chas. R. Harker, in the Rural of May 11th, asks: "If I was so soon to be done for, what was I ever begun for?" and states, "This season there is a wide-spread wail that incubator chicks died in the shell, row after row of eggs containing perfectly formed chicks all ready to hatch, but lifeless," and asks that the remedy may be given through the Rural Press. Turning to page 458 of the same issue, F. S. B. of Kelsey states: "We have another incubator full of chicks out to-day. Three weeks ago we placed 280 eggs in the incubator, and to-day we have 240 live chicks in first-class condition." Now it would seem that F. S. B., by giving a detailed description of his methods, could solve the difficulty. In the absence of the same, allow me to suggest that the fault lies in the eggs themselves. At Hammondsport, New Jersey, the business of raising broilers for the New York market is carried on more extensively than at any other place in the United States. This same difficulty of "dead in the shell" met them there, but has been overcome by purchasing eggs from parties who make the production of eggs for incubators a special and profitable business. The conditions required to obtain the best results are: A young, vigorous rooster not akin to the hens; hens to be two years old, as pullets' eggs don't hatch well; chickens to be kept in lots of one rooster to ten hens; fowls to have a good range, an abundance of meat, bone, grass and pure fresh water, in addition to grain, due care being exercised to prevent the fowls becoming fat, as the eggs from a fat hen are either infertile or the offspring weak.

I would like Mr. Harker to try the above, and if, in addition, he will use only eggs laid early in the season, when the fowls are vigorous, I think he will have no cause to complain of bad hatches. E. H. SCHAEFFLE, Murphys, Cal.

SHEEP AND WOOL.

Wool Facts and Figures—No. 8.

[Written for the Rural Press by J. R. F.]

In my last article on "Wool Facts and Figures" an incorrect statement regarding the tariff on wool was made. In 1832 the tariff was amended so that all wools costing eight cents or less a pound should be imported free, and on all wools going above eight cents a pound a duty was imposed of four cents a pound and 30 per cent ad valorem. In 1842 this was changed by Congress imposing a duty of five per cent ad valorem on all imported wools costing seven cents or less a pound, and on all others three cents per pound and 30 per cent ad valorem. In 1846 the tariff was again changed, this time at the urgent request of manufacturers. The duty on all wools costing seven cents or less a pound was retained, but on all others it was reduced to 30 per cent ad valorem. The high tariff, it was alleged, being too onerous on manufacturers of wool, Congress in 1857 passed an Act admitting all wools costing 20 cents or less a pound free, and on all others the ad valorem was reduced 24 per cent. This law continued in force up to 1861, when the exigencies of the civil war caused Congress to levy the following duties: On all wools costing 18 cents or less a pound, five per cent ad valorem; over 18 cents and not exceeding 24 cents a pound, three cents a pound, and all on wools costing over 24 cents a pound, nine cents a pound. At the same time a high range of duties was levied on all goods manufactured from wool. In 1864, what is known as the "Morrill Tariff" was passed and went into effect the same year. By this law a high range of duties was put on manufactured goods to compensate for the duty on the raw material. The duty levied on wool in 1864 was as follows: On all wools costing less than 12

cents a pound, 3 cents a pound; costing from 12 to 24 cents a pound, six cents a pound; costing over 24 cents but not exceeding 32 cents a pound, 10 cents a pound, 10 per cent ad valorem; costing over 32 cents, 12 cents a pound, 10 per cent ad valorem. To meet the urgent requirements or demands of wool growers, Congress in 1867 changed the tariff as follows: On clothing and combing wools, costing 32 cents or less a pound, the duty was made 10 cents a pound and 10 per cent ad valorem; on carpet wools, costing 7 cents or less a pound, three cents a pound; and costing over 12 cents a pound, six cents a pound. On all washed wools a double duty was levied, and a treble duty on all scouring wools. In 1872 the duty was reduced 10 per cent, but in 1875 it was raised to the figures of 1867. In 1883 and which is now in force, the ad valorem percentage was stricken off of clothing and combing wools, leaving the duty 10 and 12 cents a pound according to first cost. The duty on carpet wools was reduced to two and a half cents on all costing 12 cents or less a pound, and one cent on all costing over 12 cents a pound.

The following table, compiled from official sources, shows the quantities of wool produced in, and imported into, this country, from 1839 to 1887:

Year.	Production. Pounds.	Imports. Pounds.
1839.....	35,802,114	79,898,740
1840.....	52,516,959	18,095,294
1849.....	60,284,912	26,282,955
1862.....	106,000,000	75,121,728
1863.....	123,000,000	91,250,114
1864.....	142,000,000	44,420,375
1865.....	155,000,000	41,287,988
1866.....	164,000,000	38,158,382
1867.....	163,000,000	25,467,366
1868.....	180,000,000	30,275,926
1869.....	162,000,000	49,230,199
1870.....	160,000,000	63,058,028
1871.....	150,000,000	126,507,400
1872.....	158,000,000	85,496,049
1873.....	170,000,000	42,939,541
1874.....	181,000,000	54,901,760
1875.....	192,000,000	44,642,836
1876.....	200,000,000	42,171,192
1877.....	208,250,000	48,449,079
1878.....	211,000,000	39,005,155
1879.....	232,500,000	128,131,747
1880.....	240,000,000	55,984,236
1881.....	272,000,000	67,861,744
1882.....	290,000,000	70,575,478
1883.....	300,000,000	78,350,651
1884.....	308,000,000	70,596,170
1885.....	302,000,000	129,084,958
1886.....	285,000,000	114,038,030

For the year ending September 30th; others for the fiscal year ending June 30th.

In connection with the above, the following prices for clothing fleece wool, in the New York market, in the month of July, for the following years, as compiled by Maugur & Avery, of that city, will prove of interest. (Currency prices from 1862 to 1878):

Year.	F.	M.	C.	Year.	F.	M.	C.
1834.....	55	40	70	1856.....	55	42	36
1835.....	50	41	32	1857.....	56	50	40
1836.....	37	30	26	1858.....	43	37	30
1837.....	37	31	25	1859.....	56	40	35
1838.....	48	38	33	1860.....	55	50	40
1839.....	46	36	32	1861.....	38	30	22
1840.....	60	50	40	1862.....	48	47	45
1841.....	75	65	70	1863.....	75	70	65
1842.....	50	42	30	1864.....	100	100	90
1843.....	61	54	40	1865.....	75	73	65
1844.....	60	50	40	1866.....	70	67	60
1845.....	63	56	42	1867.....	55	49	43
1846.....	70	60	50	1868.....	46	45	43
1847.....	52	52	36	1869.....	48	48	47
1848.....	46	36	30	1870.....	46	45	43
1849.....	67	43	40	1871.....	62	60	55
1850.....	45	39	33	1872.....	72	70	65
1851.....	50	44	34	1873.....	50	48	44
1852.....	43	37	30	1874.....	53	53	45
1853.....	35	30	26	1875.....	52	49	46
1854.....	45	37	32	1876.....	38	35	31
1855.....	40	36	30	1877.....	50	44	37
1856.....	38	32	27	1878.....	36	34	32
1857.....	46	40	31	1879.....	37	38	34
1858.....	38	32	28	1880.....	16	18	12
1859.....	40	35	28	1881.....	4	44	36
1860.....	45	37	30	1882.....	42	45	34
1861.....	47	42	37	1883.....	39	41	33
1862.....	45	38	33	1884.....	35	34	30
1863.....	60	53	48	1885.....	32	31	28
1864.....	46	37	30	1886.....	33	33	29
1865.....	50	40	33	1887.....	34	38	35

I take the prices ruling in July, for that is generally the month in which the heaviest offerings of new clip are made at the East. The average price of wools in currency over the gold parity was about 20 per cent. For instance, in the above table fine wool was quoted in 1867 at 55 cents, when in gold it was 47½ cents. The gold prices of fine wools were as follows in the following year: 1868, 36½ cents; 1869, 36½ cents; 1870, 35½ cents; 1871, 43 cents; 1872, 64½ cents; 1873, 64 cents; 1874, 49½ cents; 1875, 48½ cents; 1876, 42½ cents; 1877, 40 cents; 1878, 45½ cents.

Taking the production and importation of wools in connection with the duty and prices, and it is an interesting study to wool-growers as well as wool-dealers and manufacturers.

The tariff of 1832, according to the veteran wool broker, G. W. Bond, of Boston, Mass., was known as the compromise tariff, and offered ample protection to manufacturers, giving them fairly prosperous times up to 1837, when the first serious financial crash in this country came. In this panic the wool interests suffered along with all other industries, but began to rally in 1839, which proved only temporary owing to the reduction in the duty on manufactured woolen goods being greater than was that on the raw wool. The United States being practically out of the markets of the world, allowed of less competitive buying, and consequently foreign wools declined in the supply markets abroad, which gave foreign manufacturers of woolen goods a decided advantage over American manufacturers, causing our markets for the goods to be flooded with foreign imports, and forcing American manufacturers either out of the market for wools or else compelling them to pay very low prices so as to compete with foreign imported goods. Under the tariff

of 1842 there was for a while quite an impulse given to the manufacturing industry and wools slowly revived; but it was not until after the passage of the tariff of 1857 that the industry was put on a good footing, for by this Act the tariff on manufactured goods was higher proportionately than on the raw wools. The history of that period states that just before the law went into effect there was a spasmodic revival of the woolen industry, which was followed by a disastrous crisis, forcing many corporations to the wall, and for a time in 1858 prices were very low, but they soon began to advance, and in 1859 they were again quite high. This was brought about, to a certain extent, by the advance of wools in the foreign supply markets under stronger competitive buying, which necessarily forced up the price of woolen goods abroad, and in sympathy with which the markets moved up. Following the passing of the "Morrill Tariff" in 1864 the wool-growers of the country held a convention at Syracuse, New York, so as to bring strong influence on Congress to have the Act revised, for it was found that by the "Morrill Tariff" large quantities of Buenos Ayrean wools, dirty and burry, but otherwise good, came into this country at less than 12 cents a pound, paying a duty of less than three cents a pound. At this convention it was insisted that the Act should be revised to read, by adding a clause as follows: "Wools costing 12 cents a pound, except such as are of merino blood, immediate or remote." This had a contrary effect to what its authors expected, for as soon as Congress conformed to the wool-growers' wishes the sheep industry received a decided impetus, and led to the extension of wool-growing west of the Mississippi river. This gave to the older States a stronger competition than they had received from abroad.

Confident of the passage of the Act, wool-growers not only improved their breed of sheep, but increased their flocks; besides, many new men embarked in the industry. Manufacturers and wool-dealers also, in anticipation of the passage of the Act, sent orders abroad for wools, and when the tariff went into effect the markets in this country were overstocked. In addition to this, large quantities of army clothing, accumulated during the war, were thrown on the market at exceedingly low prices, which added largely to the dullness of the demand for wool from manufacturers.

Writing on the depression of that time, one of the largest and best-informed wool-growers in the Central States wrote about three years ago to the *National Live-Stock Journal* as follows:

"In 1862 the quantity of domestic wool produced was, in round numbers, 106,000,000 lbs.; in 1872, 158,000,000 lbs., and in 1882, 290,000,000 lbs. The product of 1886 is estimated to reach 308,000,000 lbs. The number of sheep in the country increased in the 20 years from 1840 to 1860, 16 per cent; but the increase in wool was 41 per cent in the same time. From 1860 to 1880 the percentage of increase in numbers was nearly 100, while the increase in yield of wool was over 300 per cent. These figures show great increase in weight of fleece, as compared with increase in numbers. In 1840 the average weight per fleece was 1.85 lbs.; in 1860 it was 2.68 lbs.; in 1870 it was 3.52 lbs., and in 1880 it was 4.79 lbs. From 1859 to 1865, under a nominal tariff, fine wool brought the highest prices ever known for a series of years. In 1867 the wool was protected by a high tariff, and prices went down so low that in the one year, 1868, the records of the Department of Agriculture show 4,000,000 sheep killed for their hides and tallow alone. The depression in wool-growing was far greater than since the lower tariff of 1883. In 1865, under a low tariff, I sold merino wool for \$1 per pound. The next year I got 65 cents, and in 1868, less than 40 cents. I learned then to look for some other cause than tariff duties which would influence prices of wool. The kind of cloth chiefly worn in 1866 has gone almost entirely out of use. Tastes have changed on both sides of the water, and the manufacture has changed accordingly. Different goods are now needed to satisfy general demand, and different materials are required for these goods. To produce the woolen goods made in 1866 it took about 155,000,000 lbs. of domestic wool, and 76,500,000 lbs. of imported wool. In other words, we produced two-thirds of the wool used in making the cloth we needed."

While the wool-grower quoted above gives much valuable information, yet there were other influences at work to depress the market, as given in my remarks preceding the above extract.

The depression of the wool market continued up to 1871, when it is claimed that the home production had fallen off over 30,000,000 pounds a year. Besides this, about this time the surplus of woolen goods which had weighed heavily on the market was worked off, consequently more buying orders for goods came in, causing the industry to change front for the better. Machinery that had been idle was started up, and the wool market began to revive under renewed orders which carried prices well up. The upward move in prices was stopped at about this time by a rapid fall in the prices of wool abroad, causing dealers and manufacturers to send abroad large orders for wools. The depression abroad was caused by the Franco-Prussian war. This war caused, for a time, prices in the supply markets abroad to sink to lower figures than were touched either before or since, except, perhaps, in the latter part of 1885. The large purchases made by this coun-

try in 1871 and 1872 aided, with the return of peace, in bringing about a reaction abroad, and caused prices to advance quite rapidly. High prices were maintained up to about 1879, or at least they did not go below low-paying rates previous to that year. Another favorable influence on the market was the destruction of a large quantity (31,000,000 pounds) by fire, in Boston, Mass., in 1872.

Soon after 1879 opened, wool, particularly second-class, was in light demand abroad, falling in prices comparatively as low as did fine wools in 1870. This was caused by alpacas and other luster goods for women's wear having gone out of fashion. (These goods are now coming into fashion.) This necessitated the using of large quantities of second-class wools for the making of coarse fabrics generally known as "cheviot goods" for men's wear. As our fashions are largely taken from Europe, these goods had to be brought from England, and at the same time large orders from our manufacturers went abroad for wools for similar use here. The prices by this competition were advanced in England alone from 10d in August, 1879, to 18d in April, 1880. This checked the further importation of cheviot goods to this country. In this country the demand for these goods was met by manufacturers who mixed the coarser grades of home wools with the finer wools, which gave them a feeling and character resembling English cheviot. In 1880 the demand for these goods fell off, which reacted against the wools that entered into their manufacture. This falling off caused the inquiry for this class of wools to cease, sending prices down to low figures and thereby entailing heavy losses on holders. It is stated that one large importation of wools to manufacture cheviot goods was sold in Boston at less the cost of duty alone.

HORTICULTURE.

Exemption of Fruit Trees and Vines from Taxation.

EDITORS PRESS:—The Legislature at its last session so amended the State revenue law as to exempt fruit trees and vines from taxation.

This Act of the Legislature is ignored by the State Board of Equalization as contrary to the provisions of the State Constitution, and they have issued a circular to the several county assessors to disregard its provisions.

Now as to county assessors, their duties are defined by law. They are not to observe the advice of the State Board of Equalization when such board advises the county assessors to disregard the law and be governed by a decision of the Supreme Court in its construction of the law as it stood in 1884.

In the case of *Cottle vs. the Assessor of Santa Clara county*, the Supreme Court held (and perhaps properly) that by the term growing crops under the common and restrictive acceptance of the term, nothing more would be understood than the products of annual plants or cereals, maize, etc., and the latter appears to be the sense in which the term is employed in technical legal parlance. The court further decides: "It may be conceded, and correctly, that at the present day in this State at least, the word 'crop,' taken in its most comprehensive sense, includes fruit grown on trees; but we think it can be affirmed without serious contradiction that trees themselves never have been included in the term."

Now I believe the right and power of the Legislature to define terms, to enlarge and change their meaning, has never been denied. Up to last winter's session of the Legislature, the term "growing crops" had received no legislative definition, and the Supreme Court in the case above referred to felt compelled to restrict the meaning of the term to its ordinary acceptance. It had no legislative definition to guide it in its decision. But the Legislature having now defined the term "growing crops," as under its power to give and enact the meaning of terms it has an unquestioned right to do, the decision of the Supreme Court on this question has no application.

The Constitution nowhere defines the term "growing crops," but simply exempts them from taxation. The definition of terms is by the Constitution wisely left to the wisdom and discretion of the Legislature.

The State Board of Equalization in its instructions to county assessors, in its zeal to have everything in sight specially assessed, seems to have overlooked the power of the Legislature in the matter. But this is not the worst feature in the case. In those counties where assessors observe the directions of the State Board, the legality of the whole assessment is put in jeopardy. The courts have uniformly held that when an illegal assessment has been made, any tax levied therein is void, and a sale of property so assessed, by reason of non-payment of such tax, conveys no title to the purchaser of such property. The State Board of Equalization has no power to determine judicially any law on the statute-books, and when they undertake to set aside an express statute upon which no court has passed or made any decision, they assume a grave responsibility—one which, if acted upon, may vitiate the tax-roll of certain counties.

Some Things in Our Grange Edition.

In our Grange Edition to-day the following matters of interest are mentioned at more or less length:

The Joint Picnic of Eden, Temescal and San Jose Granges. Judge Blackwood's Address. Oregon State Grange—Address of Welcome. Response, Welcome to Visiting Patrons from California, California's Response to Oregon's Welcome; Lower Willamette Valley Business Council, The Grange in Washington Territory. From Woodburn.

Oregon State Grange.

The 16th annual session of the Oregon State Grange convened in the Senate chamber of the State Capitol, with full delegations (64 in number) from the different counties of our jurisdiction present. Our State Master Hayes fulfilled his promise of opening promptly at 10 A. M. of Tuesday, May 28th, and at an early hour the hum of greetings began.

California was represented by a delegation of five, Bro. McConnel, wife and daughter and Brother and Sister A. T. Dewey. These visitors were the means of adding much to the enjoyment of the session, and if these are representatives of California's Grange, we hope for twice "forty" next year. Our members greatly enjoyed the presence of the amiable Matrons from our sister State.

The following delegates are present:

Benton County—Mrs. Mary J. Harras.
 Clackamas County—Dr. Joseph Castro, Mrs. Julia A. Castro, E. Skirving, Mrs. Eliza Skirving.
 Clarke County, Wash.—C. J. Moore, Mrs. Julia Moore.

Columbia Council, Wash.—James Nevins, Mrs. Eliza Nevins.
 Gilliam County—W. J. Edwards, Mrs. Jane Edwards.

Gilliam County Council—O. J. Kizer, Mrs. Maggie Kizer.

Lane County—Mr. and Mrs. T. A. Riggs, Mr. and Mrs. J. F. Kirk.

Lane County Pomona—Mr. and Mrs. J. A. Crow.

Linn County—Mr. and Mrs. J. H. Scott, N. P. Payne, Mrs. Rosina Payne, M. H. Wilds, Mrs. J. B. Wilds.

Linn County Council—F. M. Kizer, Mrs. Mary Kizer.

Marion County—J. P. Robertson, Mrs. H. Robertson, W. M. Hilleary, Mrs. I. L. Hilleary.

Marion County Pomona—Charles Miller, Mrs. N. Miller.

Umatilla County—J. A. Gross.

Umatilla County Pomona—Mr. and Mrs. Clark Waters.

Wasco County—John Meddler, John End, Mrs. B. End, Mr. and Mrs. A. M. Allen.

Wasco County Council—Geo. H. Riddle, Mrs. Riddle.

Yamhill County—Timothy Goodrich, Mrs. N. A. Hembree.

Morrow County—Mr. and Mrs. E. H. Andrews, J. A. Hughes.

Polk County—P. W. Halery, Mr. and Mrs. B. F. Smith.

Polk County Council—J. C. White, Mrs. M. M. White.

The standing committees of the State Grange, as appointed by Worthy Master H. E. Hayes, are as follows:

Credentials—W. M. Hilleary, Marion county; W. J. Edwards, Gilliam county; H. Robertson, Marion county.

Order of Business—F. M. Kizer, Linn county; J. A. Crow, Lane county; M. J. Harris, Benton county.

Co-operation—Benj. Schofield, Washington county; J. P. Robertson, Marion county; N. A. Hembree, Yamhill county.

Resolutions—Mrs. I. L. Hilleary, Marion county; Hon. Chas. Miller, Marion county; Dr. J. Castro, Clackamas county; W. A. Sample, Umatilla county.

Good of the Order—O. J. Kizer, Gilliam county; J. A. Scott, Linn county; Mrs. Mary Kizer, Linn county.

Finance—J. A. Gross, Umatilla county; John End, Wasco county; Mrs. P. Kelly, Multnomah county.

Appeals—T. A. Riggs, Lane county; A. M. Allen, Wasco county; Mrs. J. A. Crow, Lane county.

Agricultural College—Judge R. P. Boise, Marion county; John Meddler, Wasco county; Mrs. B. Schofield, Washington county.

Education—Mrs. A. L. Castro, Clackamas county; T. Goodrich, Yamhill county; I. F. Kirk, Lane county.

Agriculture—E. Skirving, Clackamas county; Plympton Kelly, Multnomah county; Mrs. Jane Edwards, Gilliam county.

Division of Labor—N. P. Payne, Linn county; Moore, State of Washington; J. F. Kirk, Lane county.

Legislation—N. P. Payne, Linn county; J. P. Robertson, Marion county; Mrs. M. H. Wilds, Linn county.

Transportation—Charles Miller, Marion county; F. M. Kizer, Linn county; Mrs. Rosina Payne, Linn county.

Memorial to the Memory of National Master—Judge R. P. Boise, Marion county; Wm. Cyrus, Linn county; A. R. Shipley, Clackamas county; Mrs. E. Skirving, Clackamas county.

Woman's Work—Mrs. N. A. Hembree, Yamhill

county; Mrs. J. White, Polk county; Mrs. B. Schofield, Washington county; Mrs. M. J. Harris, Benton county.

The Secretary's report shows 20 new Granges and five reorganized. The membership foots up 3094.

The afternoon session was an open one, and the large Senate chamber was filled. Worthy Master Hayes called the meeting to order and introduced Governor Penoyer, who gave an address of welcome, setting forth the condition of the agriculturists of the land. The picture drawn by His Excellency, while it portrayed many truths as to the husbandman's condition, certainly made it very strong when he depicted them as a class of nomads through the machinations of corporate power and greed. However, the Governor's welcome to the Grange was hearty and wholehearted and offered in well-chosen words.

Mrs. I. L. Hilleary responded, giving a rendition of the history and growth of the Order and its aims, objects and accomplishments. At the close of Mrs. Hilleary's remarks, Mrs. Strickler sang a beautiful solo.

Judge E. P. Boise, in behalf of Salem Grange, gave one of his most excellent addresses welcoming the State Grange. He ably presented the matter of the trusts and corporations. At the close of his interesting and valuable production the audience was favored with a most excellent vocal duet by Mrs. I. A. Manning and Miss Mabel Gray.

W. A. Sample of Umatilla county, a most worthy "sample" of our great and fertile "Inland empire," replied to Judge Boise in a happy and earnest manner, mapping out a course to pursue to relieve the husbandman from his present difficulties, being the simple fact of working together as a unit.

At the close of the remarks, Mrs. Strickler again favored the audience with a beautiful solo.

Mrs. S. L. Hayes then delivered a very pleasing address of welcome to the visitors from California.

Secretary Dewey of California responded in as beautiful and appropriate words as the bright, beautiful climate and productions of California, closing with a poem upon California and Oregon brotherhood.

Second Day.

The session this morning opened in secret with a full attendance of members and visiting members.

The Worthy Chaplain, the Assistant Steward and the Lady Assistant Stewardess made valuable reports, which were ordered printed in the proceedings of the session.

The Committee on Woman's Work in the Grange made a report on that subject, showing that a great amount of work had been performed.

The Committee on Resolutions brought in one upon the subject of assessment and taxation, which was discussed, and on motion made a special order for Thursday afternoon.

A resolution recommending the increase of power to the railroad commission so that exact justice could be accorded both railroads and the people was adopted.

A resolution of thanks was voted to Hon. J. H. Mitchell and Hon. Binger Hermann for efforts toward getting a change of the National Constitution, making the election of U. S. Senators by the people instead of by the Legislature.

A resolution recommending the Executive Committee to send the Lecturer or his deputy into Washington Territory to organize a sufficient number of Granges to enable the establishment of a State Grange was adopted.

For convenience in work it was decided to move from the Senate chamber to the Good Templar hall.

An invitation to visit the penitentiary was accepted.

A request from Eastern Oregon for an organizing deputy was referred to the Committee on Good of the Order.

A series of resolutions by J. P. Robertson went to the Committee on Resolutions.

Three proposed amendments to the National Grange Constitution were adopted and one was rejected.

The matter of the Australian system of voting and similar resolutions were made a special order for 7 o'clock.

The Grange voted to take a recess to-day from 12 to 3 P. M., and attend Decoration services.

Evening Session.

The special order of discussing the report of the Legislative Committee upon the resolutions asking the support of the State Grange for the Australian system of voting was taken up.

A. T. Dewey of California read an exhaustive and highly entertaining paper upon this system. Judge R. P. Boise followed with remarks in its favor.

Hon. O. G. Fisher of Polk county also favored its adoption, and stated that it was favorably considered in the last session of the Legislature.

Mr. McConnel of California spoke upon the subject, thought the Australian system a little clumsy, but that it could be modified so as to be acceptable.

Hon. John Minto thought that the system would be an improvement and a step in the right direction.

The report was adopted.

Mrs. S. L. Dawson read her annual report, giving good suggestions; Miss Nellie Boise rendered an effective recitation; Mrs. Hannah Walters read a practical and well-written es-

say; Mr. John A. Gross of Umatilla county gave a report from his part of the jurisdiction.

Third Day.

Resolutions favoring Government aid in opening the Columbia river were favorably received.

Resolutions relative to a change in the law in regard to exemptions of property, regarding the election of U. S. Senators, and salary of the Lecturer were referred to Committee on Appropriations.

The Committee on Co-operation recommended closer co-operation in business and better study of the situation.

The Grange refused to amend the by-laws removing the meetings of the State Grange from Salem.

The Transportation Committee reported favorably upon the Columbia river improvement proposition, which report was approved.

Thursday P. M. Session.

At the re-assembling of the Grange, a memorial exercise was held in memory of the late Put Darden, the deceased Master of the National Grange. Judge Boise delivered a fine tribute to the memory of the deceased.

Professors Grimm and Lake of the Agricultural College addressed the Grange.

Resolutions on the death of Past Chaplain Shumway were read and adopted.

The Executive Committee were authorized to extend lecture work in Eastern Oregon.

The Committee on Resolutions thanked Mr. and Mrs. Hilleary and the Press for the efficient advocacy of Grange work; Salem Grange for its kindly reception of the State Grange; the officers for their efficient services; and the Secretary for carefully conducted business.

The subject of assessment and taxation was presented to the Committee on Legislation, and was referred to the subordinate Granges for discussion. The evening session opened with the re-election of J. P. Powell for member of the Executive Committee for two years.

Mrs. Cook, Worthy Flora, read an interesting essay, as did also Mrs. E. S. Sample. F. M. Nighwander gave a fine literary production.

J. A. Gross offered resolutions in regard to reports from different sections, and also on the representation to the Grange, which were adopted.

Fourth Day.

The special order of consideration of the report of the Committee on Agricultural College, recommended a change in the law so that a majority of the regents must be practical farmers, and that the curriculum of studies shall be only practical studies which will specially aid the work of agriculture and practical mechanics.

Prof. Grimm was called out and explained the workings of the college.

Mrs. Casto offered a resolution asking that one or more women be appointed upon the Board of Regents of the Agricultural College, which was adopted.

The afternoon session passed a resolution asking that the Agricultural College Experiment Station organize experiment stations in both Eastern and Southern Oregon.

The degree of Flora was conferred Friday evening. Quite a number of the delegates left for their homes Friday morning.

Sister Hembree, State Chairman Women's Work, was taken quite ill on Thursday evening and has not been able to appear among us since. She has the fraternal sympathy of the Order.

Lucerne Grange.

MESSRS. EDITORS:—I am happy to say Lucerne Grange is holding her own. At our last meeting we gave the third and fourth degrees to a new member—a brother—after which we enjoyed a Harvest Feast. We concluded to meet only once a month during harvest, as the nights are so short, but as soon as harvest is over we shall meet once a week as formerly. Lucerne Grange will meet during harvest on the first Tuesday in each month at 8 o'clock P. M.

I am sorry to say our Worthy Master, S. Walker, met with quite a loss about three weeks ago. He had built him a new house costing \$5000. It was all completed with the exception of about two days' work by the painters, when it took fire from some cause unknown and was burned to the ground in 15 minutes. I believe the house was insured for \$2000. Brother and Sister Walker have the sympathy of all the members of Lucerne Grange in their loss. Yours fraternally,

Armona, May 27, 1889. WM. OGDEN.

Sebastopol Grange.

MESSRS. EDITORS:—I wish to report Sebastopol Grange as having quite a boom. We have just fitted up a new hall and feel well pleased with our new home. Our Grange is steadily growing in interest and numbers. We expect to confer the first and second degrees on a class of three at our meeting on the 15th, at 2 P. M. On next Saturday evening we have an officers' drill meeting, at which time we hope to have our new combined rituals. On Thursday evening, the 13th inst., we have a strawberry and ice cream social, to which all are invited. Yours fraternally,

M. LITCHFIELD, W. M.

The National Grange Session.

MESSRS. EDITORS:—As it seems to be about settled that the next session of the National Grange will be held in this State, one of the most important questions for all California Patrons to settle soon is what plans can be adopted that will make it the grandest success possible, not only in the way of making it pleasant for visiting Patrons, but of the greatest possible benefit to the farmers of this State.

I believe one of the best ways to make an impression on the parasites of the State, who consider the farmer their legitimate prey, and convince them that we are awakening to our interest and purpose to stand together in the future in self-defense, would be to have an immense meeting at the National Grange, as well as the State, for there is nothing that makes corrupt politicians and law-makers tremble like thorough and determined organization; and it has been the lack of this among the farmers that causes them to be so imposed on by all classes and to have so little influence in the halls of legislation. And now is the golden opportunity to convince the farmers of this State as to what the Grange is and what we mean to do, and convince the press and politicians that we mean to make them respect our rights more in the future than they ever have in the past.

Then the question arises, what will be the best way to secure the largest number of Patrons at the National Grange session? Now, my plan would be (and I know it to be the idea of many others here) to hold the State Grange session one week, or at most ten days, before the National Grange, thus making it possible for Patrons at a distance to arrange their business so as to attend both sessions with the expense of but one railroad fare at least, and most of them would be able to go that otherwise will not be able to do so where the sessions are some five or six weeks apart. I believe that there would at least two go from this part of the State if they could take in both sessions at one trip, where there would only one go otherwise for the reason they don't feel able to stand the expense of two trips or remaining from home long enough to attend both.

I have no doubt that the first solid objection to this plan will be that the constitution fixes the time of meeting, etc., and it seems that it could be the only reasonable one urged. But as a remedy for this objection, could not the officers of the State Grange meet at the constitutional day and hour, and after the opening preliminaries adjourn to meet at a fixed date about a week previous to the meeting of the National Grange? I believe in this way we would have two grand sessions that would exert a great influence for good throughout the State for the benefit of the farmers in general and the Order in particular. And no doubt many friends from Oregon and other States would come in time to attend both sessions, and important measures could be discussed in the State Grange (if time permitted) that would be brought before the National which would give them many more chances of success in that body.

Space will not permit telling of the many advantages such an arrangement would have now, but I hope that the matter will be fully discussed in every Grange and through the Press soon, and let us see if such a thing is possible or agreeable to a majority of the members in the State. Fraternally,

Tulare, May 27, 1889. J. M. MOORE.

Barbed-Wire Fence.

The Supreme Court has just rendered a decision in the case of Loveland vs. Gardner, in which the question to be settled was one of damages to the owner of some horses which came in contact with a barbed-wire fence, injuring some and killing others. The decision says that there was evidence to show that the wires were not properly stretched, but were left hanging between the posts, which were 36 feet apart, in such a way that the stock could not see them. The case is similar to that of Seek vs. Crump, 112 Indiana, 504, where it was held that a barb-wire fence, the strands of which were negligently suffered to sag down and hang loosely from the posts, was not such that a good husbandman would construct or maintain, and that the defendant was liable for injuries occasioned to plaintiff's horse while attempting to pass from the street to defendant's field.

The court in the case at bar instructed the jury that the plaintiff could recover only one-half of the damage sustained by the horses owned by them and Knight jointly. The verdict and judgment were for the plaintiff, while the evidence showed that the damage suffered amounted to \$300. The case was remanded, with directions to the court below to enter an order requiring plaintiff within a certain time, to be fixed by the court, to file with the clerk a waiver of a greater sum than \$300. Unless such waiver is filed a new trial will be granted.

It was only a few days ago that Gov. Stanford ordered all the barb wire removed from fences on the Vina ranch.—Red Bluff Sentinel.

MERCED GRANGE added one new member to its roll on the 1st inst.

Bro. Flint in Michigan.

The following letter from Bro. Daniel Flint, Worthy Lecturer, dated Lansing, Michigan, May 16th, has lost none of its interest to our readers by being delayed on the route:

MESSRS. EDITORS:—The Legislature is in session and has been for several months, and the people begin to find a good deal of fault on account of the way their taxes go. It appears they apply themselves so closely to State affairs that the common statesman must have rest and recreation, and they cannot keep up a continuous session, so they take a recess and deliberate on State affairs with their constituents.

We with Miss Flora Buck called on Governor Luce, Past Master of State Grange. We had to wait a few minutes for an audience, he was so much in demand by the callers. He laid his ponderous State papers one side and gave us a pleasant reception. The Governor is spoken of in the highest terms, and as he is in his second term, I think he gives good satisfaction. The Governor, his wife, and daughter, called on us at Mr. D. W. Buck's house in the evening, where we spent an hour or two very pleasantly.

I find the Governor has lost none of his good talking qualities since we met him in the National Grange. Mrs. Luce holds an office in the National Grange, and he assured me that if it meets in California he and his wife would be sure to be with us.

We visited both bodies of the House and took a good look at the lawmakers of Michigan. In the Senate they were trying to smother a bill that had passed in the Assembly—to allow women to vote at municipal elections. A delegation of ladies were present, and the Senators were apparently afraid to face their smiling and determined faces and were playing for time. The Governor told the members to pass the bill and he would sign it the moment it was presented to him.

I saw that there were some very sensitive members in the Assembly, for they had up a bill to regulate the railroads of the State, and the point of discussion was a motion to strike out three cents a mile and insert two. The prominent speakers were friends of the road, and one said they should not be unjust to the roads because they held the power. One said only one road in the State was paying dividends, and that was the Michigan Central.

Lansing has one of the finest capitol in the United States, and the people of Michigan may well be proud of it. The grounds are large, sloping and grassy. We rode through the large, finely arranged grounds of the Agricultural college. They have made extensive improvements since I was here a few years ago. The surroundings look thrifty and healthy. It is the best conducted and arranged, and I might add, nearly the only really agricultural college in the United States. The students that I saw in the grounds did not look as though they had just come out of a band-box, but looked like good types of farmers' sons, there for a purpose.

We passed through the grounds of the boys' reformatory school, and where a few years ago there was a high board fence to keep the boys from running away, was no fence at all. Extensive improvements could be seen here, and it was a pleasure for me to see how much Michigan was doing for her young men and women, for girls are educated at the Agricultural college as well as the boys.

It is wonderful to see how all the places on the line of the Western roads are being built up. Unless a Californian comes East frequently he is liable to take too much stock in conceit. He will find them alive here with an eye to business. Many of them scarcely seem to know there is such a place as California.

"Voting Together."

MESSRS. EDITORS:—I wish to extend thanks to Bro. S. C. Carr, Master Wisconsin State Grange, for the explanation as to what he meant in his speech at Stockton, Cal., Feb. 6th, when he said: "We must vote together." I have carefully read his communication, and while I approve of every sentiment contained, I must confess that I am unable to see any "vote together" business in it.

I formerly lived in California, and have resided in Washington Territory for two years past. All my California friends well know that I was earnest and enthusiastic in my efforts to favor the forming a new party for the purpose of making it possible for farmers to vote together. In the year 1886, by the support of Rural Press and California Patron, we managed to get a conference meeting of the farmers at Sacramento. There was considerable enthusiasm on the part of many good Grange workers, those who had for years, through the influence of the Grange, laid aside their old partisan harness, and felt just as though they wanted a place to vote, realizing as they did, that it was, as you express it, "an insane idea to talk 364 days against monopolies and the 365th day vote for them," but none of the Grange leaders whom I had the honor of meeting, favored a movement of that kind. Finally, late in the season, when there was no earthly chance for anything like success, another effort was made and a ticket put in the field, but not supported by prominent and representative members of the Grange.

The above facts constitute the circumstances

which led me to make my inquiries as to what Brother Carr meant by "voting together." I had hoped that I had found one Master of a State Grange who favored the formation of a new party, for one can readily suppose that when you say "we must vote together," and then qualify it by saying "I meant just what I said," that you were in favor of making a place to vote together, or else you had a place you could recommend. But it seems that you have nothing even to recommend, but, at some future time, providing the political parties do not act to suit, you "shall advocate forming a new party."

What is the matter with advocating the new party at once? All the present generation of farmers and Grangers will long have passed away before those four farmers in Congress will be able to outvote the 397 monopoly advocates. Come, Bro. Carr, let us hoist our flag now. The importance of our purpose is sufficient to enable us to clasp hands even from Washington Territory to Wisconsin. Let us put the flag high up the pole and set the ball rolling, and may it continue to roll through every hamlet in this fair land until it completely crushes the insane idea of neutralizing all our power, all our strength, and all our glory which the beneficent institutions of our country clothe us with by going like sheep to be always slaughtered in the old parties.

We are shouting "vote together," while we are trailing behind us in the dust every particle of power we possess. It looks very much as though insanity itself had gone crazy. One word more and I am done. It does seem to me that the glaring importance of this question is sufficient to place it before the members of every Grange within the jurisdiction. Let the question, do the interests of the farmer demand the formation of a new national party? be discussed candidly, and I guarantee a new party will be the result.

As the law forbids the discussion of party and party measures in the Grange, it was the habit of many Granges in California to declare a recess for an hour or more, and during the recess elect Chairman, and together with all former party feelings cast aside, and without prejudice, discuss that which is really the most important question to the farmer of the day.

Therefore I insist that voting together means a new party, and on my banner is inscribed the words of Bro. Carr: "We must vote together." Seattle, May 20th. L. B. ANWAY.

A Model Oregon Grange.

The leading newspaper of the Northwest has this to say of Hillsboro Grange, Oregon:

The Grange at Hillsboro has 150 members, and is rapidly growing and every way prosperous. It meets twice a month at its own hall in Hillsboro, which is in the upper story of a brick block in the best business portion of the town. The Grange owns the whole block and has an income from the rents. A Grange store occupies the lower floor and did a large and prosperous trade during 1888. The business proved so successful that it paid its stockholders an annual dividend of 12 per cent, and also 5 per cent was repaid members on their purchases of goods during the year.

A fine bank building is also in process of erection, intended to be occupied by a national bank, the stock of which is all subscribed inside the Grange. Hon. W. D. Hare is one of the leading spirits, and he remarked: "This Grange believes in itself; we don't go around complaining about railroads and denouncing banks and merchants. We have our own store, and after two years' experience it is a decided success. We own this brick block and have our hall in the upper part, where we meet twice a month and have interesting and valuable discussions and a good time generally, never failing to have a good feast. Our ladies wished to give the Farmers' Institute a good dinner, but we were afraid they would think we were too forward in so doing."

"Our Grange has other enterprises in view. Washington county farmers are the kind that make money by farming, and they have means. It is talked of that we are to have a good flouring-mill of our own soon, and such a mill would help the town. We also intend to build a cannery and make the most of our fruit and our vegetables. This Grange is entirely harmonious and is progressive. It does not believe in growling, but in working. We propose to control trade in our own interest."

Hillsboro and vicinity have a Grange that probably cannot be excelled in the State. Its numbers are increasing, and they hope to have it represent the entire farming community of that vicinity. It makes a study of farmers' interests and discusses live topics of farm life. In many respects it sets a good example to other counties and communities, and especially to those who spend their time showing how farmers are imposed on and ground into the dust by "greedy monopolies." They don't tolerate any monopoly, are not imposed upon, and are not the kind of farmers who make a failure of their profession. They thrive and succeed.

The State Grange of Illinois has offered \$10,000 to be paid to any one who will invent a machine that will bind wheat and oats with straw. This forward step has been brought about by the twine trust. Who will say the Grange of Illinois is not awake and ready to act for the best interest of the farmers?

The Grangers' Picnic at Alvarado.

MESSRS. EDITORS:—It seems to me that the readers of the Rural Press can scarcely imagine what an enjoyable event the Grangers' picnic of the 25th of May at Alvarado was, from the brief sketch copied into last week's issue. Those who started from San Francisco feared a cloudy day, since gloomy banks of nimbus hung over the Golden Gate, but by the time these vapors had floated up to Alvarado, they had brightened into the pearly cumulus of spring, tempering the warm sunshine and fragrant zephyrs into balmy coolness.

The grove at Alvarado is one of the most delightful for picnicking. Tall, slender trees with a foliage as tender as maple shut out the glow of noon with the dappled sea-green shadows of dancing leaves and waving boughs. Wild flowers looked out with bright faces from every nook; while a miniature meadow of new-mown hay filled the air with its own delicious fragrance and invited the rosy, gleeful children to a rare haymaking. Picturesque groups, forming and dissolving beneath the woodland arches, caught the eye on every hand, and visions of youthful bloom and beauty floated about in airy lawns, tinted like roses and forget-me-nots.

Shortly after the San Jose train arrived, music by the boys' band of the Reed Street School of San Jose, attracted hundreds to the speaker's stand, when President Dewey announced the officers of the day and the order of exercises. An invocation was offered by Rev. S. Goodenough of Oakland. Mr. Dewey then congratulated the Grange upon the progress it is making, and after many interesting remarks, introduced F. B. Granger, Sr., who welcomed the visitors. Then Joaquin Miller was presented by Mr. Dewey, and delivered one of his most beautiful poems, "The Fortunate Isles."

"The old Greek isles where the yellow birds sing,
And life lies girt in a golden ring."

Major E. A. Sherman delivered an oration, and at the conclusion of his address the president announced that Gov. Waterman, who had been expected, would not be present because he had been called to San Bernardino.

An intermission was then taken, during which lunch was served on long tables arranged in cool, leafy aisles of the grove, through which the murmur of many voices echoed. Cherries and strawberries from San Jose, still bright with dew, vied with the golden tinge of oranges to give tempting color to the feasts of good things upon the snowy spreads; but most grateful of all to many a thirsty palate was the Grange coffee, so unlike the usual picnic coffee. This surely deserves generous praise, since the fragrant steaming cups, dashed with cream, were deliciousness itself.

After lunch the speaker's stand proved more alluring than sportive games, or even the pavilion, although the latter was soon animated by many a whirling pair who could not resist the invitation of the sweet dance music. Along with more serious sentiments, wit and humor was indulged in by the speakers and responded to by perfect volleys of laughter at every pause. Speeches were made by Judge W. C. Blackwood, W. T. Gibbs, C. J. Cressey, Judge E. M. Gibson and Mrs. L. J. Watkins. Joaquin Miller was persuaded to recite a second poem, and this was generously spiced with humor. He delivered it in an original fashion, consequently "William Brown of Oregon" was doubly interesting.

There were many charming and talented ladies present who brightened the conversation with their sparkling repartee. Among them may be mentioned Mrs. Miller, Joaquin Miller's mother, Mrs. A. T. Dewey and her fair daughter, and May Blossom Davis, whose name is familiar to the readers of the Rural Press.

A couple of artists with a camera obtained a good picture of the general assembly, while several small parties were subsequently delighted with their success in picturing the happy Grangers in artistic groups upon the tiny meadow, with its delightful background of trees.

Some remembered a sweet presence who had brightened one of our Grange picnics not so long ago—one whose pen had frequently contributed to the "Home Circle" of the Rural—Fannie H. Avery, whose untimely death was remembered with regret.

Oh, we still miss her tender lines,
Those soft notes echoing still—
The song bird flitting from the shrines
Upon the muses' hill.

In spite of the pensive thoughts of absent ones, the hours spent under these benign influences soothe the heart and leave a balm which returns unbidden again and again until memory itself brightens with a prismatic glory.

With the lengthening of the trembling shadows and softening sunbeams came the puffing train, recalling us to our homes, and as we hurried to meet it, many a farewell glance lingered upon the sylvan spot where life had found one of its happiest days.

MARGUERITE DAVIS BURTON.

BRO. B. F. FRISBIE of Yuba City and Sister Edith S. Shriver of Merced were married in the hall of Merced Grange on the 1st inst. Mrs. Frisbie is a daughter of Mrs. Ella S. Elliott, Secretary of Merced Grange. We wish Bro. and Sister Frisbie the utmost happiness through life.

Bennett Valley Grange.

MESSRS. EDITORS:—The regular meeting of Bennett Valley Grange to-day was well attended. A class of 14 candidates was initiated in the mysteries of the first and second degrees. Several visiting members were present, and the meeting was made very interesting.

At our next regular meeting, Saturday, June 15th, the third and fourth degrees will be conferred, and we will have a Harvest Feast, to which all Patrons in good standing are invited.

RHODA WHITAKER, S. C.

Bennett Valley, June 1st.

A Portrait of Bro Chandler.

To the Brothers and Sisters of South Sutter Grange:—In behalf of Sister A. L. Chandler, Bro. R. S. Alges presented to South Sutter Grange, May 25, 1889, the life-sized portrait of Bro. A. L. Chandler, deceased. A motion was made that we accept the picture, and that we extend our heartfelt thanks to Sister Chandler for her benevolence. By order of the Grange.

PACIFIC HALL, S. C.

Pleasant Grove, May 30th.

The Committee on Arid Lands.

The State Board of Trade Committee on Irrigation of Arid Lands held a meeting in this city on Tuesday. There were present M. M. Estee, W. H. Mills, W. M. Merry of this city; E. W. Jones, Los Angeles; N. P. Chapman, Tehama; C. S. Wright, Stanislaus; L. M. Holt, Riverside; F. H. Cunningham, Oceanside, and Jesse D. Carr, Monterey. Capt. Merry having resigned, Senator Thompson of Nevada was elected to fill the vacancy.

Chairman Estee read a letter from Col. R. J. Hinton, stating that the Senate Committee will leave Washington for this coast Aug. 18th.

Speeches were made by Messrs. Mills, Estee, Wright and Carr with regard to gathering data and making other preparations for the expected visitors, and the committee decided to meet alternate Mondays.

IRRIGATION DISTRICTS ARE PUBLIC CORPORATIONS.—The Supreme Court has filed an opinion in the case of the Central Irrigation district vs. De Lappe et al. from Colusa county. This was an application for mandamus to compel the secretary of an irrigation district to sign and seal certain bonds. One of the property-owners of the district was allowed to intervene for the purpose of contesting the validity of the bonds. The court below awarded the mandamus and the defendant and intervenor appealed. The Supreme Court says: "The district was organized under the Act known as the Wright law. This Act was held to be constitutional in Turlock Irrigation District vs. Williams (38 Pac. Rep. 379). In that case irrigation districts were likened to districts organized for the reclamation of swamp lands, and the court said it was inclined to think that they were to be regarded as public corporations. We think that the analogy between the two kinds of corporations is strong. The purpose of the one is to make large bodies of land fit for cultivation by removing the excess of water, and that of the other is to make large bodies of land fit for cultivation by distributing water over them. Their general powers are similar in many respects, and they are organized upon the same plan. It is settled that reclamation districts are public corporations * * and we think that irrigation districts must be held to be so—to the same extent." The secretary, De Lappe, was ordered by the lower court to sign the bonds, and the Supreme Court, in an opinion by Commissioner Hayne, affirms that order.

SETTLERS AND THE S. P. R. R.—In regard to the report last week that some 1700 settlers are alarmed lest the S. P. Co., or more correctly the S. P. R. R. Co., should drive them from their homes, the Chronicle gives the following: In answer to inquiries at the land department of the company, William H. Mills said that there is little cause for alarm. Judge Ross' decision against the company probably settles the question of its claim to the land referred to by the startled settlers, which is the 40 miles square at the intersection of the grant to the A. & P. with the subsequent one to the S. P. R. R. Co. The only land that is likely to be involved is that known as the indemnity lands, the two strips each ten miles wide outside the forfeited 40-mile grant to the A. & P. The land already settled is not likely to be affected.

AGRICULTURAL DIRECTORS.—The Governor has appointed the following directors for Agricultural District No. 22, San Diego county: J. A. Stice, O. C. Watson, Chester Gunn, Charles McDougall, John Judson, W. H. H. Dinwiddie, Jacob Gruendike and W. W. Stewart. R. Bostwick was appointed a director of District No. 27, Shasta county, vice J. Culverhouse, resigned.

POMONA GRANGE, through J. D. Huffman, Secretary, and Ezra Fiske, Treasurer, wants \$500 from the "Advertising fund" of the county to make San Joaquin county exhibits at the State and district fairs. The petition is on the Supervisors' file and will be taken up in a day or two.—Stockton Independent, June 4th.

The Gardens of Hope.

[Original—By L. S. H.]

Rise up, O my spirit!
Rise up and be strong!
Unloosen thy fetters
And make thee a song
Exultant and strong
As if caught from some Heaven remote.
Love is long,
Lift thy song,
For the gates are ajar
Where the sun bowers are,
In the beautiful Gardens of Hope.

Look up, O my spirit!
Look up—all is fair;
The clouds are aglow
In the clear crimson air.
Doubt and despair
Have fled to some cloudland remote.
Long and low,
Sweeps my pathway aglow.
See the stars all afire
With my love, my desire.
In the radiant Gardens of Hope.

Be alive, O my soul!
Hear the music divine,
Hear the life-giving strain
That is thine.
'Tis the unction and wine
Sent down from some Heaven remote.
There is balm for thy pain,
And lifted again
Is the right arm of power.
Brave is thine hour
In the enchanted Gardens of Hope.

Make a crown, O my soul!
For thy light,
With a glory and sheen
For thine own inward sight,
And fair as one seen
Through the gates of some Heaven remote,
Shine forth in the night.
All is well, all is right,
All things are thine own
On the glorified throne
In the wonderful Gardens of Hope.

A Few New England Women.

[Original—By FLORA M. KIMBALL.]

Wherever we meet New Englanders, we find a people doubly proud. Proud of their birthplace, and proud that the same gigantic hills and mountains that in youth towered above them, cast their shadows also over the homes of the intellectual giants that have made their little corner of the Union so justly renowned.

We dwell with satisfaction upon our heroes, statesmen, literary men, theologians and scientists. We talk long and lovingly of our honored Adams, Webster, Morse, Cass, Mann, Everett, Channing, Edwards, Whittier and Longfellow, and a host of others who have left their impress on our nation's history; and it is indeed a brilliant galaxy of minds that has illumined one of the roughest, wildest spots on earth.

We do these dead and living men no injustice when we assume that every great man in New England who has performed deeds of daring or mercy, delved in science or reveled in literature, has his peer among the women of New England, whose historic names are forgotten on national holidays and Centennial laudations of heroes.

Let us draw aside the curtain that hides from view

Our Uncrowned Queens.

That we may catch a glimpse of a few of those whose birthplace was New England, but who have made the whole nation glorious.

The dark days of the Revolution were brightened by the unfaltering courage and cheering words of

Mercy Otis Warren.

Whose Barnstable home was the resort of patriots, and by her fireside, and through her counsel, political plans were made that led to the country's independence.

It was she who based the struggle of the Revolution upon "inherent rights," a sentiment afterward made the corner-stone of political authority. Jefferson sought her counsel, and the Declaration of Independence, if not altogether her work, bears unmistakable impress of her clear, independent mind. John and Samuel Adams, Dickinson, Gerry and Knox were wont to consult her before making any important political move. Mrs. Warren was the very first person who counseled separation from England, and she urged her views upon John Adams, who

asked her advice before opening the first Congress.

Abigail Smith Adams

Of Weymouth, wife of John Adams, was one of the stirring spirits in the political events of her time. Her husband gracefully acknowledged her his superior, and to her wise counsel and clear-sightedness he ascribes the success he attained in national affairs.

Deeds of daring, as well as fireside counsel, distinguish New England's daughters of "ye olden time." The tragic feat of

Hannah Dustin

Almost one hundred and ninety years ago, has never been excelled in bravery, and today Haverhill, Mass., is distinguished as having been the home of one of the most courageous souls in our nation's history, and the statue of granite on that lonely island in the Contoocook which marks her heroic exploit, will crumble to dust before the heroism of that loving wife and mother will cease to be remembered as a part of our early history.

But a more unselfish courage than that arising from a desire to save the mortal lives of those we love, actuated those two self-sacrificing daughters of New England,

Ann Haseltine Judson and Harriet Newell.

In our day of luxurious ease we can scarcely comprehend the strength of will and moral purpose that actuated these two first women ever sent as missionaries to foreign countries by the American Board. They bade, as they thought, a final adieu to homes of ease and comfort for the privations and trials of the country of the then unknown Burman. A journey of eighteen months, attended with perils, imprisonments and trials a thousand times worse than death, these uncomplaining, heroic girls bravely endured for the sake of those they had never seen, but whose souls were to them a sacred trust. Mrs. Judson was the first American who mastered the language of that barbarous people. The laurels fairly earned by

Lydia Maria Child.

Whose birthplace was Medford, Mass., have unjustly decked the brows of masculine celebrities. The famous speech accredited to James Otis was the product of the brain and pen of Mrs. Child. The patriotism of the men and boys of that day was fired by the eloquence of this distinguished lady, under the false impression that the famous "incendiary of New England" was the author of their favorite, stirring speech. The deception was equally complete when her own sermon passed current as the effort of the great preacher Whitefield.

One of the first and largest anti-slavery books ever written was the work of Mrs. Child. In it she advocated the immediate emancipation of the negro slave. What suffering and bloodshed might have been avoided had her advice been heeded!

"Uncle Tom's Cabin," following in the wake of Mrs. Child's strong and well-expressed anti-slavery notions, weakened the bondman's chains, so that at the last they were easily broken.

Mrs. Harriet Beecher Stowe.

A brave New England woman, did her country as royal service as any general who led his armies to battle. No novel ever written has had so large a circulation as "Uncle Tom's Cabin," and probably no one has ever exerted such a wide moral influence. In the little town of Newport, N. H.,

Sarah Josepha Hale

First saw the light nearly seventy-five years ago. Few women wrote books in her girlhood time, but the bright, energetic

Sarah Buell

Devoted herself to authorship from childhood on. Her books are numerous, and the most voluminous historical work of the kind ever published, "Sketches of all Distinguished Women from the Creation to 1854," was perhaps the masterpiece. Although born before the close of the last century, when the doors of the professions were barred against women, she pursued successfully for several years the study of law with her husband, David Hale, a lawyer of eminence. When the name of

Julia Smith

Of Glastonbury, Conn., meets our eye, we are apt to think merely of a resolute little woman who defied unjust laws and every year paid the penalty of her convictions by the sale of her pet cows. But instead of a woman given over to butter-making and housekeeping exclusively, she has been through life one of the most diligent students. More than half a century has elapsed since she performed the literary feat, never attempted by man, the translation of the Bible from the Hebrew and Greek, five times, unaided.

As inventors, the women of New England have done their country good service. To a Massachusetts lady and her daughter belong the invention and perfection of the deep-sea telescope, by which vessels can be ex-

amined without elevating them into drydocks, wrecks inspected, lost treasures found, and obstructions to navigation discovered.

Mrs. Mary Parsons

Of Gloucester gave the name schooner to the first of that certain style of vessel, for which it was named in her honor the "Lovely Polly." As time passed, the Lovely was dropped, and finally when schooners were no longer a novelty, it was known as "Old Moll," keeping pace, as Mrs. Parsons used to say, with her own advancing years.

The fact is apt to be overlooked by educators who reap the advantages of a Normal-school training, that they are indebted to

Emma Willard

Of Berlin, Conn., for the Normal system as well as female seminaries. A long list of Willard's schoolbooks and scientific works were a part of the life-work of one of our most industrious countrywomen.

It was a high compliment, and a well-deserved one, paid

Margaret Fuller

Of Cambridgeport, by Horace Greeley, who said of her: "Mentally, she is the best instructed woman in America." She was the high priestess of transcendentalism. She was given precedence over our immortal Emerson and Ripley on editorial work on the *Dial*. She was also literary critic and the first woman on the editorial staff of the *New York Tribune*.

Prof. Maria Mitchell

Of Nantucket is recognized as one of the leading astronomers of the day. At the age of eleven she was both student and teacher, and now, at the advanced age of seventy-one, is the presiding genius of the Vassar Observatory, a position she has dignified nearly a quarter of a century. When in the flush of girlhood, she received substantial recognition from the King of Denmark, a gold medal for the discovery of a comet, and won golden opinions from eminent scientists all over the world. She was the revered fellow-worker of Agassiz, Sir John Herschell and Mary Somerville.

Harriet Hosmer

Of Watertown, Mass., stands at the head of American sculptors, bearing off prizes for best work in Rome among many male competitors. Her services are sought by the crowned heads of Europe, for whom she has filled many orders.

Worcester is justly proud of having been the birthplace of

Dorothea L. Dix.

The great American philanthropist. Through her untiring efforts, lunatic asylums were founded in Rhode Island, New York, Indiana, Illinois, Louisiana and North Carolina. For three years she besieged Congress to grant a donation of ten million acres of land for the relief of the indigent insane. When success seemed certain, and the bill had passed both houses, it was vetoed by the President on the ground of its unconstitutionality.

More like romance than reality is the life of

Josephine Sophie White Griffing.

A native of Hebron, Conn. Actuated by spirit loyal to justice, in the days when abolitionism was most unpopular, she worked untiringly in public and private and suffered as martyrs only can for the cause she espoused. In 1861 she went to Washington and presented to President Lincoln and Sec'y Stanton her plan for providing for destitute blacks. They acquiesced in her proposition for Government aid. With the help of her two young daughters, she fed one thousand daily; visited alleys, attics and hovels. She originated the Freedmen's Bureau, submitted it to Sumner, Wade and Wilson, who approved the measure, and two hundred thousand dollars was intrusted to her hands, every dollar of which was wisely and economically distributed among the needy blacks.

Royal Clara Barton

No queen ever wore a crown more deservedly than this noble queen of hearts wears the crown of affection, a loving tribute of every soldier, North and South, who was blessed with a sight of her saintly face. Oxford, Mass., was her birthplace, and there, at the age of sixteen, she began her brilliant career as an educator. She established the public-school system in New Jersey. Without solicitation she was appointed to the first clerkship ever held by a woman under Government—Hon. Charles Mason, Commissioner of Patents, giving, among other good reasons for his appointment, that men could not keep the secrets of the office, but sold them for money. She vacated her clerkship for the battlefield, and for four years endured the exposure and rigors of soldier life on the hardest fought fields. Being under fire in the severest battles, her clothing was often torn by shot, to which she gave less heed than to the sufferings of

the wounded soldiers around her. With a Spartan firmness that astonished the bravest, she worked for humanity alone, regardless of the color that enrobed the dying.

Neither did her service to her country end when the smoke of battle cleared away and peace was restored. She conducted an expedition sent by the United States Government to identify and mark the graves of those who fell on the field of battle. The graves of thirteen thousand soldiers who fell at Andersonville were thus identified. Her report of the expedition was issued in 1866.

She also devised and laid before President Lincoln a plan for searching for missing men. It received his sanction, but she was obliged to conduct the work at her own expense, employing and paying fifteen clerks. When her private means were exhausted, Congress appropriated fifteen thousand dollars to continue the work.

Nor did Miss Barton's labor of love and mercy end with our Civil War. Aided by experience dearly earned in her own country, she rendered similar service in the Franco-Prussian War. She extended succor to the poor of every besieged city of France. Honors were heaped upon her. She was decorated with the Gold Cross of Remembrance by the Grand Duke and Duchess of Baden, and with the Iron Cross of Merit by the Emperor and Empress of Germany. At New Haven, Miss Barton was tendered by the Admiral Foote Post a reception of precisely the same kind they gave to Gen. Grant and President Hayes on the occasion of their visits to that city. Our beloved

Mary Livermore.

After more than thirty years of public work in hospitals, on the field of battle, on the rostrum and in the pulpit, is as vigorous and active as ever, and the achievements of her future cannot be foretold. She is well known on both continents, and is as patriotic and earnest in her work as any statesman in New England.

Elizabeth Peabody and Julia Ward Howe. Learned, philanthropic and renowned; their lives should be written in letters of gold, and their memory will be embalmed in the hearts of an appreciative and grateful people.

Lucy Stone.

And her "mother's own daughter," Alice Blackwell, are revolutionizing the world of politics as no living man has done or can do. They are an honor to womanhood, their country, journalism, and their home city, Boston.

Other Eminent New England Daughters

The roll of names of New England's eminent and worthy daughters unfolds to my mind, and many, very many famous women must remain unnamed in this already lengthy article.

This great army of women have through perils and persecution inscribed their names on the scroll of fame; they have stood steadfastly by our country in its hours of peril; with timely counsel and heroic deeds they have purchased liberty and prosperity; home's sweetest blessings are their boon; the rough byways of science and literature have been cleared of thorns and rubbish by their brain and muscle; the old political parties are tottering beneath their womanly methods and the light of that day's dawn is breaking when such women will stand side by side in the popular mind with men of equally good works.

Culinary Maxims.

EVERY bee's honey is sweet.

THE house showeth the owner.

HE that is at ease seeks dainties.

ANGER at a feast betrays the boor.

IN a good house all is quickly ready.

AS the year is so must your pot seethe.

EVERYTHING is of use to a housekeeper.

BETTER be meals many than one too merry.

MANY a good dish is spoiled by an ill sauce.

THE biggest calf makes not the sweetest veal.

NEVER haggle about the basket if you get the fruit.

HE that saveth his dinner will have the more supper.

THERE is winter enough for the snipe and woodcock too.

SQUEEZE not the orange too hard lest you have a bitter juice.

THEY who have little butter must be content to spread thin their bread.

WHEN the stomach chimes the dinner hour don't wait for the clock.—*Table Talk.*

IN 1888 the United States sent abroad \$2,600,000 worth of sewing machines.

An Editor's Eggsperience.

Bro. Tafts of the Auburn Republican has been experimenting with setting hens and tells about it in a late issue of that excellent paper. He says:

We have been reading in an agricultural paper an article on the profit to be made by raising good poultry. It is written by a lucky dog named Smith, who goes on to tell how he began six years ago with a flock of six hens. Last New Year's Day he had 240 head of poultry, and he gives the most alluring table of figures for each month—so many eggs at so much a dozen, etc.—and his profits during 1888 were \$345.80.

About three months ago we bought some hens. There were five hens and a rooster which we got from Billy Crutcher for the very moderate sum of \$7.50. He brought them down one night after dark, and left them in the press-room where we found them later, and wondered why they did not try to get away. The Wyandotte rooster did try, but the hens couldn't be driven away. They had been selected with great care and they all wanted to "set" right where they were. They had selected various articles for incubation. One was fostering a bundle of paper, another a monkey-wrench, while one was trying to hatch out a glass miniature of Plymouth Rock which we use for a paper-weight. She was a Plymouth Rock herself, and the office boy thought she had selected that article because she knew her own breed when she saw it, but that probably was not the reason. It is more likely that she was attracted by the date, 1620. She wanted to tackle something of nearly her own age. We tore them away, however, and bore them down to the back yard, which had been provided with a high fence, and left them in the new Queen Ann hen-house specially prepared for their reception. But they brooded over their troubles for a week or two, during which time eggs at the store remained up to 40 cents a dozen. Then the egg of commerce dropped to 30 cents and one of our hens came out of her trance and laid an egg of home production. That week we fed them a dollar's worth of grain. In ten days more Rock Creek eggs came down to 20 cents, and then all of our hens laid. The cheaper eggs became, the faster they laid. The rats killed one and carried off the eggs of the others, but, to save the rodents that trouble, the sagacious hens began to lay under the building out of human reach but just where the rats congregated. The place was boarded up, but just before Easter they became dissatisfied and wouldn't lay at all, and of course grocery eggs went up. Then the ancient Plymouth Rock determined to "set" again. We threw a good many obstacles in her way, but her patience is invincible, and at present she has been straddling an old benzine can for two weeks. Another one is keeping part of a large stone warm and wears a Roderick Dhu expression which says "this rock will fly from its firm base as soon as I."

The other two spend their time loafing around waiting for store eggs to come down to 10 cents a dozen, while the rooster flies over the fence in to Warmington's strawberry patch. Scientific agriculturists say that a strawberry dist makes very superior eggs, but we cannot get the two hens over nor get the rooster back. Mr. Warmington himself has had some splendid exercise with the rooster. They have races together up and down the lea, but that rooster has developed sprinting qualities like a Red Bluff ostrich and it is economy to let him stay. The Republican's service in putting up the price of strawberries is alone worth a year's subscription to Mr. Warmington. He has our permission to kill the invader, but good stalkers and sharpshooters are scarce.

There may be something about the hen business we do not understand to make it profitable, but up to date our poultry account is something like this: Cost of plant and interest, \$7.75; feed, \$12; time devoted to caring for stock, \$50; total, \$69.75. As an offset we have had three dozen eggs at 20 cents a dozen, 60 cents; loss, \$69.15.

MAKING ALLOWANCES.—That is a very lovely disposition which excuses the faults of others, albeit severe with its own, on the plea that there is some reason, unseen and unsuspected, which, were it revealed, would go far to modify a harsh judgment. We are told of, or we observe in some fellow-creatures, actions which our tastes or our principles condemn; or we are pained by something which a friend says or does. Let us have patience not only, but also let us be tolerant, since we cannot know all the difficulties with which another must contend; nor can we estimate the weights with which another is handicapped in the race of life.—*Selected.*

STREET CAR DRIVER.—"Me and that off harse has been workin' for this company for 12 years."

Passenger.—"That so? The company must think a great deal of you both."

"Wall, I dunno; last wake the two of us was taken sick, and they a got a doctor for the harse and docked me. Gid-ap thare now, Betsey."

DISGUSTED HUSBAND. "Is there no way to stop you from kissing that nasty pug dog?"
Wife. "You might teach him to chew tobacco."

YOUNG FOLKS' COLUMN.

Tangles.

Enigmatic Snarls, Hard and Easy, for Young People of all Ages to Untangle.

32.—PICTURE PUZZLE.

Find in the picture:—1. The cause of many railroad accidents. 2. Something very inflammable. 3. Something used to fire powder. 4. A spirit. 5. The stem of a tree. 6. What physicians try to do. 7. Affirmative and negative votes. 8. One hundred and twenty pounds of glass, or a narrow vein of coal. 9. The way that cattle feed. 10. What soldiers do. 11. A timid quadruped. 12. What Boston is sometimes called.

33.—ARITHMETICAL PROBLEMS.

A schoolboy, Euclid was my dread,
 Its sines and tangents turned my head;
 Algebra, too, I am afraid,
 Was not my line;
 In arithmetic it was said
 That I might shine.

This problem then to me was given:
 So take a third of six from seven
 That what remains will then be even;
 'Twas past my power.
 You try—perhaps it may enliven
 An idle hour.

Another one I call to mind:
 Take two from five, leave four behind;
 A sum like that was sure to find
 A dusty shelf.

I think the problem was designed
 By Satan's self.

The crowning task was still to come:
 Write down the number six and from
 The same take one, and leave the sum
 Remaining nine;
 I found the task so troublesome
 I couldn't shine. W. WILSON.

34.—THE ROYAL PRISONERS.

An old king, a beautiful princess and a page were imprisoned in a high tower to which there was but one opening, a window 150 feet from the ground. The only means of escape was afforded by a rope which passed over a pulley fixed to the outside of the tower and on each end of which hung a basket. Whenever one basket was at the window the other was on the ground below the tower. The rope itself was inclosed in such a way that a person in one of the baskets could neither help himself by means of it nor receive help from the other prisoners. In short, the only way the baskets could be used was by placing the heavier weight in the one than in the other.

Now the old king weighed 195 pounds, the princess 105 pounds, the page 90 pounds, and they found in the tower an iron chain weighing 75 pounds. The weight in the descending basket could not exceed that in the ascending basket by more than 15 pounds without causing a descent so rapid as to be dangerous to a human being, although such a speed would of course not injure the chain. Furthermore, only two persons, or one person and the chain, could be placed in the same basket at the same time.

How did the party manage to escape and take the chain with them? J. H. FEZANDIE.

35.—CHARADE.

A common bird a first no doubt is;
 A second what no bird without is;
 But the two in combination
 To a bird have no relation.
 Now, smart solver, tell me whether
 You can put my parts together,
 And if you are a mechanic skillful,
 And if of tools you have a till-fall,
 You can make a whole completely,
 And do it workmanlike and neatly.
 NELSONIAN.

36.—WORD TRANSMUTATION.

[Each "move" consists in changing one letter, furnishing a substitute bearing the same relation to the other letters in the word, and still giving a legitimate word. Example: Change Sin to Woe in three moves. Answer—Sin, son, won, woe.]

1. Change Man to Boy in three moves.
2. Change Wife to Aunt in five moves.
3. Change Star to Moon in five moves.
4. Change Good to Vile in five moves.
5. Change Less to More in four moves.
6. Change Corn to Meal in four moves.
7. Change Home to Jail in five moves.

ROBERT.

37.—ANAGRAM.

Nice perception, neatness, care,
 In what we do, in what we wear,
 Good judgment shown in what we choose
 For ornaments we wish to use,
 Lie in one word which I have spelt
 In this droll way: "Nast uses felt."
 NELSONIAN.

Teddy's Lesson.

[Written for the Rural Press by ALBERTA.]

"Now, Teddy dear, don't go near the river. Won't you mind mamma and be good?"

"No'm, I won't go," replied Teddy, at the same time casting a longing glance toward the forbidden pleasure.

"Well, dear, good-by. Mamma must go now. It won't be for long, and Ponto is here. He will take care of mamma's boy." So saying, she kissed his upturned face, and stepping into the low carriage, picked up the ribbons and was soon out of sight.

Teddy returned to the now deserted house and began to play with his new puzzle. At last he flung it aside, and calling Ponto, wandered off in the direction of the troublesome river. It is not a very large stream at this time of year, but in the winter months is converted into a raging torrent by the snows in the mountains.

He played along its banks for quite a while, and at last, in running down a steep declivity, fell and rolled into the stream at its deepest point.

Ponto, who had been sitting looking on until now, gave a short bark and frantically ran up and down the bank two or three times; then seeing no one took it upon himself to rescue his young master, he plunged into the water and grasping the now sinking boy firmly by the clothes began to head for terra firma. Teddy just had strength enough left to throw his arms around Ponto's neck. In this way Ponto got him home, stopping once to rest.

Teddy had fainted on the way, and when Ponto got home he let him slide off on to the grass and began to lick his hands and face. In a short time Teddy had revived, but lay there looking up into the blue sky, wishing he had minded his mamma, and trying to imagine what she would do when she got home. Finally he fell asleep.

When mamma came she found her boy in a raging fever. Tenderly she carried him into the house and laid him in his little white cot. Under the doctor's care Teddy rapidly recovered, and in about four weeks was able to go out in the yard and play as usual.

He never forgot the lesson, and from that time on never disobeyed his mother. Ponto in the meantime was petted and fondled to his heart's content, and as soon as Teddy was able to be around was his constant companion.

When Teddy was older he went away to school, and at one time he was asked to "play hockey," as the boys say, and go into a neighboring forest and gather birds' eggs. The forest belonged to an old man named John Randall, who was a miser and very cross at that. Teddy was about to consent to become one of the thieving party, when he thought of his former escapade and told the boys he would not go. They called him a coward, and the next Sunday four of them went out quietly and without being found out. When they were brought back in irons and by a policeman, Teddy felt more grateful than ever to his mother for her kind advice.

Boys, listen to your mothers and do likewise.

The Yellow-Hammer.

[Written for the Rural Press by HESTER.]

Some six years ago, while living in one of the pleasant suburbs of Oakland, we had an unusual lodger.

Our house was an old-fashioned cottage completely embowered in running roses. The rooms were all on one floor, nothing above but the little peak formed by the roof. Often just at evening we would hear a little scratch, scratch, over our sitting-room.

We paid no attention to it for some time, supposing it caused by rats or mice. But soon we noticed that the scratching was heard only late in the afternoon, and about the same time. Then we began to wonder what caused it. Late one afternoon, while sitting by the window, I saw a yellow-hammer on a cherry tree a short distance from the house. He seemed so very happy I could but watch him. Soon he flew directly toward the house, and above the window where I was. After a few moments the scratching commenced. Then I thought it time to see how Mr. Yellow-Hammer gained an entrance to his sky parlor.

I went out and looked up over the window, and, sure enough, there was a knot-hole in the siding of the house, and the wide-awake bird had enlarged it with his strong bill. Ever after we enjoyed the scratch, scratch, for we knew our lodger was in his snug little home.

When the rains were over and the bright spring days came he left us, without saying good-by or paying his rent. All the long summer we saw nothing of him, but suppose he

and his wife had a home amid the green leaves and fragrant flowers. When the fruit was gathered, the leaves falling from the trees, and the sky darkened by the heavy rain clouds, we looked for our lodger's return. But alas! he did not come; his wife may have found pleasant quarters or the dear bird have fallen by a stray shot.

DOMESTIC ECONOMY

This and That.

EDITORS PRESS.—Have a bag with a large wire or hoop in the top to keep it open hung near the kitchen stove as a receptacle for waste papers, for kindling, etc.

Have a shelf or stack of shelves near the stove or range for salt-can, pepper-box, and other conveniences in preparing meals, to save steps.

As the dishes are "picked up" after a meal, place them immediately in a pan or pail of water, and let them remain while you are folding the cloth and setting away the food; it will wonderfully facilitate the dishwashing, and is a neat way.

Wash potatoes and all vegetables with a cloth.

Use spirits of camphor, made by putting the gum into alcohol, for burns. Apply instantly, and often, as long as it smart, which will not be long. It will not "smart;" will prevent blistering, if used immediately, and will take all soreness out.

For a deep burn or any old, obstinate sore, use a salve made by stirring well together equal parts of unsalted butter, strained honey and white flour (common flour). This I know to be an excellent remedy.

Hang up the broom or stand it on the handle. Drive three or four tacks under the hoops of your pails and tubs so they cannot fall off these hot days. It will save much annoyance by saving the tubs.

Put scraped onion on a felon and roast onion on the ear for gathering in the ear.

Use five drops spirits camphor in a teacup of water well stirred; doses, one teaspoonful once in 15 minutes until vomiting ceases, for cholera morbus, and once an hour after it ceases, for four or five hours. This has been known to cure the genuine cholera. But do not use camphor freely internally, under any circumstances, unless you are prepared for serious results. The above dose is for adults.

For bowel troubles—diarrhea—make a cordial of ripe blackberry juice, obtained by scalding and straining, and sugar in equal parts, strongly seasoned with ground allspice and cinnamon, simmered slowly one hour; bottled hot, corked tight. Dose, one teaspoonful. Will keep for years.

Use home remedies; mustard plasters are the stand-bys for pains. Don't send for a doctor every time you ache, but don't tell the doctor I said so.

Use up your inferior peaches, plums, grapes, or quinces as follows: Wash clean, scald, press out the juice and place it in porcelain, granite, or earthen, not in metal nor in stoneware, as a crock or jar; set on the back of the stove where it will scald but not boil, or in the oven, is better still, until it is reduced in quantity two-thirds; then add sugar to the taste; bottle hot and seal. Eat all you want as syrup or sop; it will keep you healthy and tastes good. Peaches and plums are delicious mixed—two-thirds peaches and one-third plums.

Having just read in last week's Press how to make coffee, I append another way which I can recommend: Brown your own coffee (old Government Java is the best) very carefully in the oven, not overheated, so that not a particle of the oil is lost. This can be told by the blotches of oil on the dripping-pan in which it is browned. Don't burn it. Grind very fine; a heaping teaspoonful for each person is plenty this way: Place in a hot pot, pour on boiling water, cork up the spout of the pot, cover tightly, set on the back of the stove; do not let it boil; let it stand 20 or 30 minutes. It requires no settling process. The aroma in all its perfection is fully preserved by this process, as in French coffee.

Frying eggs, covering the skillet tight so as to retain the steam will cook the tops to perfection and thus save the trouble of dipping the fat over them or making them so unsightly by turning them?

For moths, pour crude benzine over your carpets, clothing, or furniture. It will not hurt anything, but will brighten the colors and is a specific. Try this. Pour it on liberally. The odor will soon disappear. Rub your silver with baking soda made into paste.

What is the difference between the Bertha Baron and Mad. Hazard roses? The above hints have all been fully tested by your friend,

AUNT JERUSA.

P. S.—Some one please send soon a recipe for preparing conserve of roses and oblige.

Santa Cruz.

FRUIT PUDDING.—One pound raisins, stoned; one pound of currants, one-half pound of chopped suet, one-quarter of a pound each of bread crumbs, sliced citron and candied lemon, one-half cup of sugar, one nutmeg, grated, ten eggs, yolks and whites beaten separately; one-half cup of blanched almonds. Put in a pudding-bag and steam six hours.

The Week.

Again we have cause to rejoice at the peace and quiet with which Dame Nature regulates her California affairs, and the comfort and safety which she vouchsafes to our citizens. For the terrible disaster in Pennsylvania, to which allusion is made elsewhere, however, Nature is not to blame, for it appears that it was merely for the sport of selfish magnates that the destroying water was pent up by a leaky dam. Would there could be some way by which some requital could be forced upon these men. But aside from this disaster, Nature has done ill at the East. There are other floods which have destroyed life and property, and in Michigan on Decoration Day there was a snowfall with snow enough to form drifts and do great injury to crops.

While such things are afflicting our Eastern friends, we are enjoying summer warmth and freedom from storms and disasters. It is but proper that we should send of our abundance to succor the distressed, and the \$10,000 which has been telegraphed from San Francisco is but a part of the contribution which will be made by the city and the State.

Canned Fruits Rates.

Shipments of canned goods by rail overland have been resumed since the rate was dropped to \$1 per 100 pounds, and large quantities are now going forward. The statement is made in several journals that Mr. A. D. Cutler is largely to be thanked for the reduction secured from the Transcontinental Association, and that he came very near getting a much better concession than was finally obtained. It seems that while Mr. Cutler was conferring with the railway men and claiming his greater reduction, there was a meeting in this city, which agreed that \$1 would be acceptable, and that that made any lower figure impossible. Mr. Cutler's argument, prepared for the Transcontinental Association, contains some very interesting data, which will be acceptable to our readers, who are specially interested in the distribution of the fruit product.

The schedule of rates which Mr. Cutler asked for is as follows:

Missouri Valley points.....	\$ 75
Mississippi Valley points.....	85
Chicago points.....	90
Buffalo points.....	1 00
New York City and N. E. points.....	1 10

In connection with this schedule, it is interesting to know what is Mr. Cutler's idea of the way in which California canned fruits are distributed at the East. He says that the approximate natural division of business under any existing rule is as follows:

Utah and Idaho.....	2'
Montana.....	3%
U. P. R. R. points from Ogden to Cheyenne.....	0 1/4
Colorado.....	5
Arizona and New Mexico.....	2
Kansas, Wichita, Topeka, etc.....	1 1/2
Missouri Valley.....	31
Texas.....	4
New Orleans.....	0 1/2
Mississippi Valley points.....	27 1/2
Chicago.....	10
Chicago to Buffalo.....	5
Buffalo to New York City.....	5
New England.....	3

Total.....100%

The territory above named, when on a longitudinal basis, covers everything from north to south, when not excepted. The importance of the great Central West as a customer for our canned fruits, and the insignificance of the old Middle and New England States, with their millions of people, would indicate that more effort should be made to secure more liberal patronage in that quarter. Of course local packers have an advantage, but they cannot put up such fruit as ours and more should be sold to them.

So much has been said of shipping canned goods by Cape Horn and by rail from New York to purchasing regions in the Mississippi valley, etc., that Mr. Cutler's figures as to the cost of that route are of especial interest. He says:

In this connection it is also fair to compare the following computation as to the cost of sail vs. rail freights on our goods to the seaboard, in accordance with which an equivalent of 60 carloads has left San Francisco within the past month by sail for New York.

Memorandum of cost of laying down 2 1/2 pounds canned goods in New York, Chicago and Missouri river points via Cape Horn:

Sail from San Francisco to New York, 2300 tons long weight (2240 pounds) for \$16,000 is \$6.95 per ton; per 100 pounds.....	.3103
Add 5 per cent contingent expenses.....	.0153
Add 4 months interest at 7 per cent is 2 1/2 per cent on 1 1/2 cases at \$1.75 per dozen.....	.0125
Add insurance 1 1/2 per cent, 10 per cent on 1 1/2 cases at \$1.75 per dozen.....	.0083
Total per 100 pounds.....	.3464

CHICAGO.
To New York as above......3464
Add by rail New York to Chicago......25......5964

MISSOURI RIVER POINTS.
To New York as above......3464
Add by rail to N. Y. to Mo. river......50......8484

The above being all rail from New York west bound, should be as well compared with lake and rail during a part of the year, aggregating considerable less.

This shows that we have a route by sea which should be effective in holding railway rates to decent figures. If the Nicaragua canal should be soon completed, and work upon it has now actually begun, we shall have a remedy for all such troubles as the canners have had with the Transcontinental Association. And the isthmus canal will help many other producers as well as those of canned fruits.

A MOVEMENT has been inaugurated to procure a telescope for Napa College.

The Shot-Hole Fungus.

The conditions this year seem to favor fungoid growths, and much complaint is heard of rust and smut in grain, curl-leaf of the peach and nectarine, shot-hole fungus on the apricot, etc. The last unwelcome visitant seems to be making itself exceedingly numerous this year and is ruining large quantities of apricots in several parts of the State. Those who are figuring on the value of their apricots should remember that this disease is somewhat reducing the amount of merchantable "cots," for canners cannot use the blotched fruit, nor will it be likely to sell for any purpose to which the fruit is now applied.

These fungoid diseases of fruit trees need more general attention on the part of the growers. Now that the friendly insects are going to eat up the injurious ones, the fruit-grower needs some other evil to fight to keep him out of mischief, and the fungoid affords such opportunity. As to the shot-hole fungus, it does most conspicuous work on the apricot because the dark blotches show so clearly on the yellow fruit, but the fungus works sadly on the plum, cherry and some varieties of peach. The popular name is given from the fact that the fungus kills a small round portion of the leaf substance, and this drops out, leaving a small round hole. These occur in large numbers on the leaf and give it the appearance of having been riddled with shot. By this common test the disease is easily recognized.

What to do for the shot-hole fungus is not so well known, for but few experiments in its repression have been tried as yet. The remedies to try first will be those which are known to check fungoid growth—bluestone, sulphur, lime, etc. Mr. Klee, who has given attention to the subject, writes as follows:

I incline to the opinion that in the sulphides of either potash or soda we will find a remedy, but this must be applied immediately on the appearance of the fungus to kill the spores. Mr. Thurber of Vacaville applied this year whale-oil soap and sulphur, and judging from the appearance of the trees, it did considerable good. Air-slacked lime, dusted, also at the first appearance of the fungus, has been tried at Hayward by Dr. E. Kimball, and, as he claims, with good success. The application was made several years ago, and no perceptible amount of fungus has shown itself since. As the shot-hole fungus no doubt spreads rapidly from tree to tree, the spores being borne by the wind, any case appearing in an orchard ought to be stopped as soon as possible.

Danger of Fire.

The dry season of 1889 is now fairly commenced, and the field fires already reported from different portions of the State warn us of the increasing need to beware of all those small beginnings which may end in disastrous conflagrations.

This is the time to clear away and carefully burn up the dead grass and light rubbish, which, if allowed to lie beside the barn or gather in fence-corners, will presently become as dry and inflammable as tinder, ready to blaze up on the least occasion.

Henceforward, till the next autumnal rains begin, beware of the thoughtless picnickers' abandoned campfire; of the half-burned matches and cigar-stubs tossed away by the inveterate smoker in the edge of the grain-field or along the roadside; yes, of the unused match dropped in the hot, sunny stubble, where the wheel of a passing wagon may ignite it; and even of the paper wadding shot from the sportsman's fowling-piece. But look out especially for the foolish brush-burner, the reckless tramp and the cigarette fiend, lest you have reason to exclaim again: "Behold how great a matter a little fire kindleth."

ARID LANDS.—Secretary Noble has approved the plan for continuing the irrigation survey of arid lands proposed by Major J. W. Powell, director of the Geographical Survey. The area to be surveyed in California will comprise the unmapped portions of the drainage basins of the Yuba, American, Cosumnes, Mokelumne, Stanislaus, Truckee and Carson rivers. About 300 square miles in Nevada and about 4000 square miles of the basins of the Truckee and Carson rivers are also included.

"CALIFORNIA ON WHEELS" reached the Hub week before last and came to a standstill at the Park Square station of the Old Colony railroad, where the cars and their contents won ample notice and praises from the fastidious Bostonian.

The Great Disaster in Pennsylvania.

(Continued from page 541.)

the same vicinity and similar to those through which the roaring waters passed until they reached and destroyed the villages and towns in the broader valley below.

Governor Beaver of Pennsylvania, in his account of the disaster which is telegraphed as an appeal for aid and succor for the distressed people, says:

The valley of the Conemaugh, which is peculiar, has been swept from one end to the other as with the besom of destruction. It contained a population of 40,000 to 50,000 people, living for the most part along the banks of the small river, confined within a narrow limit. The most conservative estimates place the loss of life at 5000 human beings and the property loss at \$25,000,000.

Whole villages have been utterly destroyed and not a vestige remains. In the more substantial towns the better buildings to a certain extent remain, but in a damaged condition. These who are least able to bear it have suffered the loss of everything. The most pressing needs, so far as food is concerned, have been supplied. Shoes and clothing of all sorts for men, women, and children are greatly needed. Money is also urgently required to remove the debris, bury the dead, and care temporarily for the widows and orphans, and for the homeless families.

Other localities have suffered to some extent in the same way, but not in the same degree. Late advices would seem to indicate that there is great loss of life and destruction of property along the west branch of the Susquehanna and in localities from which we can get no definite information. What does come, however, is of the most appalling character, and it is expected that the details will add new horrors to the situation.

Other accounts place the loss of life at far higher figures, even as high as 12,000, summoned into eternity almost in the twinkling of an eye by the relentless waters. The river was so filled at places with the wreckage of buildings, etc., that the raging waters beneath could not be seen. In this debris were hundreds of people, and as burning lamps and stove fires were borne along on the flood the accumulating masses of debris took fire and a conflagration completed the destruction of life and property which the waters had begun. The scenes are altogether beyond description and still the peril is great. Bodies are found by dozens and scores all along the banks of the streams to which the waters have taken their course. Hundreds more are held in the debris which chokes the channels, and the cities below which depend upon these streams for their water supply fear the pestilence which will follow unless the waters are freed from their burden of the dead.

Relief work is progressing as rapidly as possible. The General Government, the people of other States and of foreign countries are telegraphing large sums of money to aid in giving food and shelter to the homeless, and in rescuing the unburied dead from the places into which the waters have hurled them. It will be weeks before the full extent of the disaster can be known.

WOOL-GROWERS' PETITION.—Asst Secretary Tichenor has received for transmission to the President a petition from the delegates to the convention of wool-growers, held at Washington last January, asking that an extra session of Congress be called to consider the question of tariff legislation, with special reference to woolen products. The petition, which is dated Columbus, May 24th, also urges the Administration to sustain the N. Y. appraisers in assessing duty at 35 cents per pound on imported worsted goods.

HAYWARDS FRUIT-GROWERS have just organized to ship their own fruit East and aid each other in finding a market. The cherries sent to Chicago thus far this season have been sold at from \$1 to \$2.25 per box, while the prices obtained here in S. F. hardly pay for picking and packing.

STONE FRUIT IN CARLOADS.—Two cars of fruit were shipped East from Sacramento May 29th, one consisting of cherries from San Jose and San Leandro and the other of peaches and apricots from Vacaville and Winters.

ORANGE COUNTY, CAL., is to be. The election on Tuesday was largely in favor of the division, except in Anaheim and thereabout. Out of 3000 votes thrown only 500 were against the measure.

DURING the past two weeks a remarkable series of mirages has been reported at different points all over Southern California.

The State Fair of 1889.

Preparations now in active progress foreshadow a notable display both at park and pavilion during the State Fair of 1889. Improvements are going on at the park both at the cost of the society and by individual enterprise, for it is the policy of the society to give ground room to private individuals who desire to erect stock buildings for their own use of a style approved by the management which may be afterward purchased by the society. Ex-president Shippee recently constructed the finest stable on the park at his own cost, and others may like to do the same. Besides these private efforts, the society has under way substantial improvements of its own, of which it is too early to speak in detail, but of which we shall keep our readers duly informed.

The pavilion department of the fair will also show many new features and an extension of old ones which have proved popular. The grand building will be freshened by a new coat of paint throughout and will generally be fitted to harmonize with the exceptionally fine and extensive county displays which will be made this year. It is expected, too, that the machinery and other departments will also be unusually full. The progress we are making in the invention and manufacture of tools and implements suited to California conditions is wonderful, and the State Fair affords the best opportunities in the world to bring such mechanical triumphs to the attention of those interested in their work.

As introductory to our customary work in the aid of our great State exhibition, we give on this page the portraits of those officers of the society upon whose shoulders rest the most important labors and the greatest responsibility in connection with the fair. The face of Christopher Green will appear a familiar one to many readers of the Rural. He has been a staunch friend and promoter of the State Agricultural Society since the earliest times, and for the last 16 years has been a member of the board of directors, and is now the president of the organization. Mr. Green is still young, as he is under 60, and he is younger in vigor and spirit than he is in years. He has been a resident of California since 1852, and has held many important positions. Two terms, or six years, he was Mayor of the capital city of Sacramento, and he served three years as postmaster of the city. Since 1859 he has been engaged in the live-stock industry, both as a grower and as a purveyor of cattle products. He is a man of great cordiality and affability, and has a wide circle of friends. During his incumbency of the presidency of the State Society he may be trusted to use his utmost efforts for the success of its enterprises.

Another well-known face is that of Edwin F. Smith, who has been secretary of the State Society since 1880, and during his administration the receipts of the organization have advanced from about \$53,000 to over \$94,000. This is certainly one impressive way to show the growth and progress of the work in his hands.

No one who knows Mr. Smith need be told of his earnest devotion to his work and of the acceptability with which he discharges his duties. He is a Sacramento boy, having been born in that city in 1853. He is son of Capt. T. C. Smith, the originator and founder of the Sacramento horse market, and he has thus been familiar from his youth up with the matters which now largely enter into his official duties. He is also a most admirable clerk and accountant, and has served several terms with distinction as secretary of the State Senate. His executive ability is of the highest order, and he has labored with zeal for the last nine years in the upbuilding of the State Society.

With these chief officers in charge, and with an unusually harmonious feeling in the board of directors, it can hardly be doubted that this year's fair will be made a notable success.

INOCULATING FOR ANTHRAX.—Mr. Griffin, U. S. Consul at Sydney, reports to the State Department that anthrax, or splenic apoplexy, which for so many years has been devastating herds of cattle in New South Wales, is being effectually checked by Pasteur's system of inoculation.

TIMBER constitutes a great industry and represents an annual expenditure of \$1,365,000,000. Its consumption throughout the world has increased 50 per cent since 1850.

A Needed Postal Change.

The postal service of our country is wonderful, and it is excellent, considering the character, extent and sudden growth of much of our territory. That there should be some friction amid so much machinery was to be expected, but we are not true patriots unless we endeavor to correct anything whatever that is at fault. The idea of immediate delivery was good, and no one objects to pay ten cents extra for expediting correspondence when haste is necessary. There is need, however, of improvement in one particular. Often it is necessary to com-

buy the stamp there. To illustrate the inconvenience arising from the present system, let us refer to the Oakland postoffice, the second largest city in our State. Some of their most important mails close between 7 and 8 A. M., yet the stamp window is not opened until 7:30 A. M. Either the stamp clerk should be required to have his window open for the sale of stamps by 7 A. M., or our proposed amendment should go into effect and we should have the privilege of putting on 14 cents, and a letter so stamped should be treated in all respects as if it had the appropriate stamp. The mailing clerk would have no difficulty because the un-

CHRISTOPHER GREEN, ESQ., PRESIDENT CALIFORNIA STATE AGRICULTURAL SOCIETY.

EDWIN F. SMITH, ESQ., SECRETARY CALIFORNIA STATE AGRICULTURAL SOCIETY.

municate more fully than we can afford by telegraph, and at a time when we cannot obtain the peculiar ten-cent immediate delivery stamp. Let such cases be provided for by treating any letter overpaid 12 cents, as if it had the regular immediate delivery stamp upon it. This would not be a means of relegating the present stamp into "innocuous desuetude," but it would be a great convenience, while the extra expense would protect the present stamp so that it would always be used except when not obtainable. Now while ordinary stamps can generally be obtained of the news-dealers, at least in denominations of one and two cents, there are few, if any, who keep the immediate delivery, because the very nature of that stamp requires attendance of the buyer at the postoffice to mail his letter, so that he would naturally

usual number of stamps on a letter, not overweight, would sufficiently indicate the writer's desire. But this could be clearly defined by writing the words "for immediate delivery" directly above the stamp. It is exasperating to compel a man to wait over a mail to get the regular stamp when this proposed substitute would seemingly cover the ground.

WE WANT HIM HERE.—There is said to be a dog in Americus, Georgia, that lives on English sparrows, which he catches by slyly creeping upon them. Such a quadruped *Vedolia* would be welcome here in California. "May his tribe increase."

THE NICARAGUA CANAL.—Men, tools and stores are now on their way to Nicaragua.

ENTOMOLOGICAL.

Codlin Moth Notes.

EDITORS PRESS:—This is considered by old residents here an earlier spring than the average and with less cold weather. Therefore the condition of the codlin moth in Sonoma county to-day cannot be considered abnormal. There has been less low temperature since spring opened than the average. Therefore I would say that this month is as far advanced in egg-laying and larval growth to-day as in the average of seasons. If so, we have made mistakes in our recommendations about spraying to poison this insect in the coast counties. All have recommended doing this much too early, and there have also been mistakes made on other points. I looked over an orchard very carefully on May 26th, and could find no instance where a larva had penetrated an apple, though I knew that the moth was quite plenty there. On that day I found near the orchard, in a barn where apples had been stored, 10 pupae and two caterpillars that had not changed to pupae yet.

To-day, May 28th, in the same orchard, a search of an hour rewarded me with 20 apples in which the larvæ had penetrated the fruit sufficiently to make a showing; they were from an eighth to a twentieth of an inch in length, showing that they were only one to four days from the egg. Of these 20 larvæ 14 had entered the apples from the side, two in the eye or calyx, three quite near the eye, and one near the stem. Here we find evidence of another mistake, for it has been generally said that the eggs for the first brood were nearly invariably laid in the calyx. It is so least. Twenty years or more of pretty close observation East showed me no instance of an egg laid elsewhere than in the eye of apples early in the season. But this is certainly not the case in this State; at least in the coast counties. To day the apples here at Petaluma are well grown, averaging over 1½ inches in diameter.

One good point I found to be the rule to-day, which is—in no case did I find an egg laid, except on the upper side of the fruit, in such positions that a downward or falling spraying would reach them, and, in all cases, a full moistening of the surface of the fruit with poison in solution would reach all the worms found to-day, I am quite sure.

The larval habits here, when quite young, seem to be very different from what they are East. Especially is this true of those eggs which were laid elsewhere than in the calyx, and as these seem to be very largely in the majority, they must have full consideration. East, as I have said, the eggs of the first, or earliest egg-laying moths, are, so far as I have observed, laid in the eye of the apple, and the larva at once penetrates by a minute burrow to the core of the fruit. Here there was no exception to the rule. When the egg is laid elsewhere than in the calyx, the young larva does not penetrate at once, but cuts a wide, shallow cavity, seeming to feed on the skin of the fruit alone, thus giving us an excellent chance to poison it by spraying with the arsenites.

I therefore conclude from these observations that the early sprayings, as recommended for the Eastern States, directly after the petals fall, would do no good whatever in this State; or, in plain words, it would be fully a month too early. My observations show that 6 to 10 days ago would have been as early as spraying would have been of benefit, and that a proper spraying would have killed every larva found to-day save possibly one. I should say, then, if the moth is neither early nor late this spring with her egg-laying, that to gain the best results we should spray in Sonoma county on the 15th of May, again on the 25th, and again on the 5th of June. We dare not spray the early apples later than this, and even then the spray should be weak in poison. Late apples might be sprayed again June 20th.

These remarks are meant to be confined to the open orchard with a normal exposure, for it is true that in warm sheltered locations larvæ may be found half to two-thirds grown to-day.

That caterpillars of the codlin moth may yet be found that have not changed to pupæ is a most surprising fact to me, and if my observations East were correct, this moth is taking on new habits here. I will explain. I had two large, deep cellars East in which quantities of apples were stored over winter. The doors and windows of these, and all openings of every kind, were kept closely covered with wire gauze from the last of March until June 1st, or about a week after any moths were seen trying to escape; thousands died at each window, while here in much warmer California we find to-day caterpillars not changed to pupæ yet, and Senator De Long of Novato records that moths were found in his apple-house so late as August 15th of the year before brood, or at least so the account reads in Cooke's book. Well, if they are larvæ now, why may not those which had spun up in a very cool place remain so until August?

I have published this winter and spring that the larva of the codlin moth was being very generally destroyed in Sonoma county by other insects, notably, by a ladybird—the large brick red one with nine spots. This was the case everywhere out of doors that I could find—80 to 93 per cent of the larvæ in the cocoon had been destroyed by this and other insects. But the facts were very different where the

larva had spun up in buildings, which they do in immense numbers when apples have been stored or handled in or near them. There we found none interfered with, all alive and in fine condition for future destructive work. I found sheds and other buildings in large, fine orchards, where nearly every larva had been destroyed out of doors, with every crack and crevice packed full of fine, healthy worms, they even in many instances having gnawed out hiding-places on the exposed surfaces of boards, tens of thousands of them in one barn; enough to spoil every apple in a very large orchard.

In this neighborhood such buildings will constantly keep up an abundant supply. I carefully examined one large orchard, with cloth bands on the trees that had not been disturbed since last spring. An average of about 60 larvae had spun up under each band last fall. On April 1st I took off and examined carefully 73 of the bands and only found two living larvae. All the others had been eaten up. Yet near the middle of that orchard was an old shed with tens of thousands of codlin moth larvae hid away safely in it. It would have paid nicely to have burned it, or a dozen such.

—D. B. WIER, *Petaluma, Cal.*

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

FRUIT THIEVES PUNISHED.—*Haywards Journal*, June 1: Of late a gang of young hoodlums from Oakland have been raiding cherry orchards in San Lorenzo and around Haywards. They have no respect for the trees, but break down the limbs and raise Cain. As high as 14 entered Johnny Marlin's orchard the first of the week, but he used a club so effectively they fled in terror. Constable Prowse was notified, and Monday arrested three who were trespassing on Jas. Mouat's place, and brought them before Justice Austin, who sent them below for 30 days. Tuesday, George captured three more for raiding H. Marlin's orchard, and Judge Austin gave them a dose of 10 days in the county jail.

BET SUGAR.—*Call*, June 1: The Alameda Sugar Co.'s works at Alvarado are being fitted up for the handling of the present season's crop. The machinery has been much improved since last year. This season about 55 men will be employed, in two shifts, on the consumption of 200 tons of beets daily, as against 80 men on a consumption of 90 tons daily last season. From \$20,000 to \$30,000 will be expended upon improvements, and the plant will be put in first-class condition. It is calculated that the works can be operated upon a larger scale to greater profit, and probably the plant will be enlarged another year.

Butte.

YOUNG FIG ORCHARD.—*Oroville Register*, May 30: Hon. John C. Gray during the past winter and spring set out at Olive farm, near Wyandotte, 2400 White Adriatic fig trees. These were planted on a tract of land that until within a few months previous to the time of plowing had been covered with a heavy growth of timber. The trees have not had a drop of water, yet in the whole 2400 we did not see a single one that had failed to start. The figs are planted far apart so that they will have an abundance of room as they become of large size. Though the fig has been growing here for many years, yet no one in this part of the State had ever set out a large orchard until the gentleman in question planted his 50 acres on Olive farm.

TIMOTHY AND ALFALFA.—Henry Baschman has a fine timothy and alfalfa growing as can be found in the State. The altitude of Paradise is about 2000 feet, and if these two valuable grasses will grow at that altitude, land on the mountain slope will certainly increase in value for hay alone. While the alfalfa has done finely here in the valley, but few have ever tried it upon the hills, nor has it been thought possible to grow the timothy as low down upon the mountains as 2000 feet. This is a cold-country plant and in the valley the roots are killed by the hot sun.

Inyo.

HEMP AND FLAX ON TRIAL.—*Bishop Register*, May 30: J. H. Muller proposes to give the hemp and flax-growing business a test next year. He has made arrangements for the use of land near Big Pine, and will have an experienced workman on hand to take care of the product. In the conviction that the business will pay, he offers to furnish seed of either plant to any farmer wishing to experiment with it.

RYE.—*Independent*, June 1: Last fall W. L. Hunter sowed a few acres of rye near his house at Georges Creek. Chickens frequented the ground all winter; early in the spring the grain came up thick and excellent pasture for brood mares; now there is a heavy crop of rye nearly ripe. This grain should be more extensively grown; it is valuable feed.

MULBERRY TREES planted by W. L. Hunter at Georges Creek three years ago have a crop of berries this year. The trees make a good shade and wind-break, and are very easily raised.

AFRICAN BUCKTHORN.—F. McIver brought a lot of African buckthorns and planted them along the Eastside canal this spring. They are making fine growth and appear to be admirably

suited to the soil and climate. This buckthorn makes a first-rate fence, is easily and cheaply grown and makes a good wind-break.

OWENS RIVER CANAL.—For three years work has been going forward on the Owens river canal. The magnitude of the undertaking can only be understood by an examination of the work and the country to be irrigated. In company with H. H. Spear, the Supt., a trip was recently made to the head of the canal. The water will be taken from the river at a point about 10 miles west by north from Bishop, where the stream runs through a deep, narrow canyon. The canal is taken along a side hill so steep that the detritus is barely at rest and covered with huge boulders and rocks, there being in many places cement so hard that blasts were necessary to move the ground at all. By exceedingly hard labor and unusual pluck the work has been accomplished. Mr. Spear has a contract for completing the canal to the Clausen ranch, nine miles from the head-gate. The hardest part of the work has already been completed. Of the ultimate value there can be no question. The ditch is taken out at the highest practicable point in the valley, and will cover all the land now watered by other ditches. The canal stock is owned by citizens of Bishop. The success of the undertaking is purely a question of labor and energy; there is no syndicate, the owners being comparatively poor men who wish to make homes for themselves.

Los Angeles.

POMONA ORANGES.—*Progress*, May 30: W. R. Strong & Co., who have had a force of Chinamen at work packing oranges and white laborers in the orchards in this place for the past three months, closed their business season in Pomona yesterday. The firm has bought the bulk of the fruit in this place, and their total shipments for the season have been 43 carloads, or 12,900 boxes. Besides this, O'Connor and Nesbit have shipped 24 carloads, and other parties have shipped seven carloads, making the total quantity of fruit sent from here 74 carloads, or 22,200 boxes. A year ago the quantity of oranges shipped from Pomona was 38 carloads. There are 13 large orchards here that bore fruit for the first time this year, and that promise to bear abundantly next year.

HOW TO MARKET PRUNES.—One of the most extensive prune-growers in Pomona is George Rhorer, who will dry his own fruit this year and ship it to St. Louis in white cloth bags, where the prunes will be put in boxes and sold. Mr. Rhorer has given this matter much attention, and informs us that he believes the best financial results can be had from thus marketing the fruit this season.

Placer.

ORCHARDS AT DUTCH FLAT.—*Cor. Auburn Herald*, June 1: The last three years have demonstrated beyond all doubt that it pays to raise apples, pears and prunes, and particularly Bartlett pears and late winter apples. During the last year there has been a decided onward movement in planting in this vicinity. Towle Bros. have planted 1500 apple trees just above their lumber-yard at Towles. They have built an immense reservoir at Snake Valley with which to run the pulp-mill during the summer months. This water after being used to run the pulp-mill is collected again and can be used for irrigation around Dutch Flat and Gold Run. Every fruit-grower here has planted more trees this winter and will plant more again next winter. J. Chester planted over 1000 trees, mostly Bartlett pears, on his place below the station. H. A. Frost planted about 500 trees above the station on a hillside where no water for irrigation is obtainable. He is satisfied by experience that he can raise good fruit without irrigation. Last year he did not irrigate his large orchard of 2000 trees at all, and yet shipped some of the very largest and best-flavored fruit shipped from Dutch Flat. He cultivates his land instead of irrigating. Some of our other orchardists are beginning to do the same.

FRUIT PROMISES.—*Republican*, May 29: The peach crop in Placer county this year will be very light, probably not more than one-third of a crop. There is not a grower in the vicinity of Auburn, Newcastle, or Penryn who reports more than half a crop, and many of them put it at much less. Every other variety of fruit promises well. Pears, prunes, olives, figs, and particularly grapes, are almost certain to yield a full crop.

San Bernardino.

RIVERSIDE ORANGES.—*The Press and Horticulturist* gives the following review of the orange shipments from Riverside for the current season, and for former years:

	Cars.	Boxes.
December shipments.....	8	2,386
January ".....	77	22,024
February ".....	141	40,113
March ".....	171	48,043
April ".....	339	101,478
May " to 30th.....	134	38,380
Total to date.....	887	253,018

SHIPMENTS IN PREVIOUS YEARS.

	Carloads.
Crop of 1880-81.....	15
Crop of 1881-82.....	42
Crop of 1882-83.....	45
Crop of 1883-84.....	50
Crop of 1884-85.....	456
Crop of 1885-86.....	506
Crop of 1886-87.....	375
Crop of 1887-88.....	725

CHEERRIES.—The cherry trees have fruited heavily at Banning this season, and the fruit is

said to be large, juicy and of fine flavor. The *Herald* expresses the opinion that since there are few spots in Southern California where cherries thrive, it would be well for Banning to plant them extensively.

BARN AND LIVESTOCK BURNED.—*San Bernardino telegram*, May 29: The barn of N. N. Bradford was burned at 3 o'clock this morning. The contents, comprising four mules, hay and wagons, were consumed. Loss, \$2000; no insurance.

San Diego.

ON THE UPPER SWEETWATER.—*Dehesa Cor. Sun*: This season's hay crop in this valley has been very good, and vegetables of all kinds look very well. The vineyards and orchards are wonderful to behold. Trees of the various denominations are loaded to their utmost capacity, while the vineyards excel any previous year. The grape yield will probably be double that of last year. It would require, I think, over 100 cars to carry off all of our green fruit this year, take it from the Jamacha up to Alpine, and yet our nearest railroad point is six miles off. As near as we can estimate the population, there are over 300 families located and living upon their homes from the Jamacha up to Guatay, all of whom would patronize a railroad if built into this portion of the valley.

A USEFUL DOG.—J. R. McFarlan has lost his dog, which has not been seen for 10 days. McFarlan taught him some years since so that all he had to say "Quails in the grapes, Mago," and the dog would go clear around the vineyard and clear the quails. The dog was valued at \$300.

Santa Barbara.

POULTRY IN THE SANTA INEZ.—*Cor. Santa Barbara Press*: Mrs. Wm. Wyman and husband live about 15 miles from Los Olivos up the canyon Santa Agnada, where they are engaged in poultry raising. Mr. Wyman leaves the work chiefly to his wife, who has raised 1000 chicks this spring. These are now about half grown. The method followed is to take the chicks from their mother and place them in a brooder until two days old, feeding them on soaked cracked wheat. At the end of two days they are returned to the old hen, who has meanwhile been left on the nest. Mrs. Wyman says they have never refused the returned brood, but soon leave the nest with them. The object of taking them away is to allow them to get some strength under favorable circumstances, out of danger of being trampled in the nest. The work, while reported as quite hard, is, it seems, not too great for one woman and a 12-year-old boy to attend to, and with much profit. In addition to her chickens, Mrs. Wyman has raised 300 young turkeys this season.

HEATH'S WALNUTS.—*Carpinteria Cor. L. A. Express*: The famous grove of Col. Russell Heath, comprising 180 acres, the largest walnut orchard in America and said to be the largest in the world, is decidedly magnificent. Col. Heath is a native of New York State, locating on the place where he now is in '58. When he took it there was a heavy growth of oak timber, which has cost him at least \$100 per acre to clear. He has planted the trees from 33 to 40 feet apart, but thinks this too near. He plants the medium hard shell variety, discarding the soft-shell entirely, not considering it as good in any respect. About one-third of this grove is in bearing, and from this 60 acres he sold last year 80 tons of walnuts at from 9 to 13 cents per pound, or an average of 11, which would make a gross income of \$17,600. He has built a dryhouse where the nuts, after being washed, are dried so as to prevent molding and souring, assorted into three different sizes by machinery, put into sacks of about 60 pounds each, branded with his own special brand and shipped all over the world. Wherever they are used once, they are wanted again. It will pay any one to stop over a day on his way to or from Santa Barbara and visit this wonderful grove. It is no small thing to boast of the finest walnut orchard in the world, bearing an annual income of from \$15,000 to \$20,000, with a good prospect of its being doubled and trebled in a few years.

Santa Clara.

SANTA OLARA SEED FARMS.—*Dr. G. W. McCracken to Mercury reporter*: In addition to our orchards and farms we have another very important rural industry in this county—our garden-seed farms. There are fully 2000 acres of land devoted to that pursuit now. The seeds are shipped all over the Union and find a ready market. In the East the ripening seeds are frequently affected or damaged by the rain. Here we have clear days and warm sunshine to ripen them to perfection, and to enable the grower to gather, dry and pack them without injury.

Tehama.

OVINE VINE-PRUNERS.—*Oroville Register*: George Champlin, one of the largest sheep-owners in the upper part of the State, says that at the immense vineyards at Vina, bands of sheep are turned among the vines and the animals feed upon the sprouts of the previous year, thus saving the expense of pruning the vines and affording the sheep an immense quantity of feed.

Tulare.

DAIRYING IN THE MOUNTAINS during the long summers has generally proven lucrative. The consumption of milk and butter by campers, tourists, mill hands and miners has greatly encouraged the business. Besides, a groceryman in the valley knows that mountain butter is above par with his customers. The number of butter ranches has therefore been increasing.

The nucleus of another one was taken up from here last Friday by J. B. Agnew, E. J. Sorrell and C. Lillie. The dairy will be located in Kings River canyon on the land of Zumwalt and Agnew. Mr. Sorrell will have charge.

GOING TO IRRIGATE.—*Visalia Times*, May 30: The residents of Saucelito school district, on Deer Creek and in the vicinity of Belleville, are moving to form an irrigation district under the Wright law. About 10,000 acres of land will be included in the district, and the land-owners themselves will attempt to carry the bonds. The water for the canal will be taken from Deer Creek, several miles above the head of the present Saucelito ditch.

SENECA CHIEF WHEAT.—The *Times* reporter visited a 30-acre field of it growing on the ranch of Jasper Harrell last Tuesday. The field viewed was sowed in December, and was not yet entirely ripe. The stand was fine, the heads long, and the grains large and plump. Mr. Harrell stated that it was great wheat to stand, and should be planted early enough to receive all the rain possible. The field he has, it is estimated by competent judges, will yield not less than 40 bushels to the acre. The straw grows rank and is not given to falling down. The kernel is very large, and will certainly weigh heavy when in the sack. Millers testify that it is good wheat for milling purposes. Mr. Harrell says he will sow nearly all he has next season, believing it to be the wheat for this section when planted early enough. A sample grown on the ranch of R. N. Clark on Tule river has been exhibited at this office and to numerous farmers, and all agree that it is the best looking wheat ever seen here.

ALFALFA ON SANDY FLATS.—Several farmers residing on the banks of Tule river have recently tried planting alfalfa on the sandy bottomlands which skirt the river in many places. These sandy flats soon lose their productiveness when subjected to the irrigation made necessary by gardening, and in a few years cease to produce well, but when planted in alfalfa the land increases in richness, and it is found that the profit, after a year or two, is greater than from vegetables, and the labor less.

Yolo.

HOREHOUND.—*Mail*, June 3: On Saturday a party passed through Woodland with a large wagon loaded with horehound (*marrubium vulgare*), which they had gathered in different parts of Yolo county. It grows wild along Cache creek and in many other places. They were taking the horehound to Sacramento, where they will bale it and ship it to Peoria, Ill. This is not their first trip into Yolo county for the plant. They have stored at Sacramento nine tons, and with the ton gathered during the last trip will have sufficient to load a car. They value the ten tons at \$750, and will have to pay \$200 for freight. They gathered the ten tons in two months, so it will be seen that they make a profit.

SNAKE LILY.—*Woodland Mail*: Mrs. David Hamilton, who resides on Third street, sends to this office a magnificent specimen of the "Snake lily." It is of a deep, velvety purple, fully 18 inches long. The spadix, resembling an elongated red pepper, projects nearly a foot and a half, and constitutes the peculiarity in the flower which gives it its name.

REPELLING MOSQUITOES.—Many Woodland housewives are using branches of the eucalyptus tree in their windows in place of mosquito netting. Mosquitoes will not come near the eucalyptus tree or its leaves, and by crossing a couple of small branches in an open window each morning and evening, immunity from the attacks of the little pests may be secured. Mosquito netting obstructs the free passage of air, and the tree-branch substitute possesses the advantage of being a good ventilator.

Yuba.

EARLY PEARS AND BLACKBERRIES.—About 20 boxes of blackberries and a like amount of pears were shipped from Marysville June 3d, being the first of their kind from that region this year.

OREGON.

SOME BIRDS SET FREE.—Portland dispatches tell how several hundred song birds, lately received from Germany—nightingales, skylarks, thrushes, starlings, gold, green and bull finches, linnets, etc.—which have been on exhibition for several days in large cages at the exposition building, recuperating and regaining the use of their wings, were turned loose at the city park and adjoining private grounds on the 22d ult. Such a joyous twittering and fluttering as took place when the cages were opened and the little prisoners released in the bright sunshine! A number of birds have been sent to various parts of the State. No fears are entertained as to their doing well, but the question is, will they know where to migrate this winter and will they return here in the spring? The society having charge of them is already preparing for further importations and English residents think of bringing out a lot of singing birds from Great Britain, the British sparrow not being included.

COLD STORAGE AND FRUIT-DRYING.—*Salem*, May 28: Articles of incorporation were filed in the Secretary of State's office to-day by the Oregon Refrigerator and Fruit Evaporating Co.; principal office, Ashland; capital stock, \$50,000; G. W. Saow, D. F. Fox, G. W. Ganiard, W. J. John and T. P. Rideout, incorporators.

Hunting a Camping Place.

(Original By S. B.)

For many years my family have been in the habit of spending their summer vacations in camp. We have camped in almost every direction within a reasonable distance of San Francisco. For many seasons our tents have formed a part of the canvas town which have annually migrated to the woods and running brooks, from the Mission. It seems as if the people of the Mission were more inclined to spend their summer vacation in this manner than the people of any other locality; at any rate the "Mission campers" have become famous in every direction within a hundred miles of San Francisco.

Our first experience of camp life was at Felton, on the South Pacific Coast narrow-gauge road about six miles from Santa Cruz, and certainly a more desirable spot for the purpose, we thought, would be hard to find. It had the advantages of being near the town as a base of supplies and near the railroad station, which was convenient for going and coming for those of us who had to attend to our business in the city, making weekly visits—from Saturday night to Monday morning—to our families in camp. The tents were pitched in a grove of sycamores, about a quarter of a mile from Felton and the same distance from the station on the banks of the San Lorenzo creek. The grove and grounds were situated so that we could arrange our tents in a circle facing toward the center, in which at night our camp-fire was built. The surrounding scenery was delightful, and the ride through the Santa Cruz mountains romantic in the extreme. It was within easy walking distance of the Big Tree Grove on the one hand and the Lime Kilns and Boulder Creek on the other. A trip to Santa Cruz for any one who wanted to see that city or take a surf bath, was also always available, so that in many respects Felton was an ideal campground, and there we went for several seasons to the great delight of the children and the enjoyment of everybody. But although possessing so many natural advantages, Felton was not the only place where a pleasant camping ground could be found and a vacation spent pleasantly. The terrible accident to the stage returning from Santa Cruz, by which several of the young people in camp lost their lives, had also the effect of making many of the campers regard the place with a sort of horror. Nevertheless it has been patronized more or less every year, and since the completion of the road to Boulder many of the old Mission campers have gone up there.

After Felton, Sunol, on the Southern Pacific railroad, became a favorite locality. The camp-ground here was along the bank of the Alameda creek, about half a mile from the station at Sunol. The advantages of this place were its comparative nearness to the city—about thirty six miles—cheapness of transportation and the fine springs of pure water on the banks of the creek. We spent several pleasant seasons here. Its principal drawbacks were lack of shade for a large camp, and cold winds that sometimes blow up the canyon.

Then we have tried Bolinas, on the coast, whose chief attraction is its surf bathing and its chief drawback the long, sometimes cold and breezy stage-ride over the mountains from San Rafael or Sausalito.

Glen Ellen, on the Sonoma Valley railroad, next attracted us. This was another very enjoyable camping-ground, and here we spent two very pleasant vacations. The ground here stretches along the west bank of Sonoma creek, is near the town and the station and made a very pleasant camping-place, so much so that some of the old campers have been going there every year since our first season there.

Some years ago a number of the "fathers

of the camp" went on a journey of discovery toward Ingrams-Cazadero, as it has since been called, on the North Pacific Coast narrow-gauge. We found many delightful places about the paper-mills—Camp Taylor, for instance, but found difficulty in getting leave to locate a camp in this neighborhood. And then again over the divide on the slope toward Russian river. Leaving the track at Moscow, we spent an hour or two at Meeker's Grove, erstwhile a rendezvous of the Bohemian Club, and probably the finest redwood grove in the country. Words fail to convey an idea of the grandeur of this magnificent grove which is only about four miles down the river from Guerneville. There is some talk of extending the Donahue broad-gauge road through or near this grove to the coast. If this will involve cutting down the trees and utilizing them for lumber, it will be indeed a pity. These grand old forest monarchs are getting thinned out every year—there are only a few of them left—and the time seems not far distant when they, with their contemporaries the Indians and the grizzlies, will live only in tradition. This would be a grand camping-ground if it were only a little more accessible.

Cazadero.

From this place we went to Cazadero via Duncan's Mills. The road between these

were steaming past Angel Island, the peaceful hamlet of a warlike colony, looking, with its picturesque church and verdant slopes, anything but belligerent. A speedy transfer from steamer to cars, and we are on our way toward San Rafael. The jocund spring is at its lustrous prime, the trees are jubilant in bud and leaf and blossom, the verdant slopes a shining sheen of purple green and gold. Tamalpais looms grim and dark, veiled in shadowy mist on the one hand, and the factory-fortress of San Quentin stands out in relief against the shining waters of the bay on the other. San Rafael looks clean and bright. Its superior hotel accommodations, mild and equable climate and contiguity to San Francisco make it a favorite suburban town. A stay of five minutes and we are steaming away through the suburbs, made shady by an exuberant growth of eucalyptus. A hard pull brings us through the first tunnel, then down the slope and round the curve to Millers, and then to Ignacio—where a change is made to the narrow gauge for those desiring to go to Sonoma or Glen Ellen. Next comes Novato, which has been mapped off into streets and town lots. Several small and scattered hamlets are passed and Petaluma is reached at 9:40.

Leaving Petaluma, we also leave the salt marsh and the odor of salt water, that place being the last inland "seaport" on the route. The low rolling hills about Petaluma are a

tooth of the circular saws, and nothing is left of the majestic trunks but their calcined stumps and deep-reaching roots. But if the trees have been removed, there remains the rich soil covered with a luxuriant growth of alfalfa, hops, fruit trees and vines, which, after all, may be an improvement on its primitive condition.

Guerneville.

A few miles more bring us to Guerneville and the end of the road. The town has just passed through its second or third baptism of fire, and hotel accommodations are scarce. We managed to get a fair meal, however, and hunting up our old friend "Bully Boy"—the name given to the engine used for hauling the logs from the choppers down to the mill—we found that he was going to make a trip into the woods, and by the kindness of the engineer got aboard and were taken up to our old camping-ground. Alas! how changed and desolate it seemed. The immense trees, with which our six weeks' sojourn among them had made us so familiar, had all been cut down. The monarch of them all had been named the "Mission tree," after our camp, and a section of it, after being exhibited in the last Mechanics' Fair, was taken to Golden Gate Park, where the curious may see and wonder at it to this day. About a quarter of a mile farther up the canyon, however, the forest is still un-

broken and there is just as good camping as where we were. After lingering around the old haunts for an hour or two, we returned to Guerneville by the same conveyance that took us out. During our stay at Guerneville we found there were one or two other places where there were excellent camping facilities nearer to the town and the river, which is always worth taking into consideration for its convenience of bathing. Without deciding anything, we returned to the city next day.

Hopland.

Hearing that there were fine camping-places near Hopland, on the extension of the San Francisco & North Pacific railroad from Cloverdale to Ukiah, we procured letters of introduction to some good people up there and determined to take a trip and make personal examination of them. And so, taking the same train we had

taken on our Guerneville trip, we started for Hopland. The road from Fultonto Cloverdale is through the same rich and beautiful country as characterized it up to that place. Arriving there about half-past eleven, we found there was time to have dinner before continuing our journey, a circumstance which we utilized for that purpose. The company is about to change this arrangement, running the train through to Ukiah without stopping and getting to Hopland soon after 12 o'clock. After taking dinner, we resumed our journey. The road from Cloverdale to Ukiah is through a much more difficult country than before it reaches that place. For a mile or two after leaving Cloverdale it is fine, however; almost a continuation of orchards and vineyards. After that, for a dozen miles or so it is through a rough and broken country, winding along up the Russian River canyon, which is here in places a veritable mountain torrent, tumbling and rushing over boulders and rapids, sometimes through gorges so confined that one could almost leap across, and again in quiet level reaches where boating would be pleasant. Before reaching Hopland, which is fifteen miles from Cloverdale, the road passes through several tunnels, one of which is through a mountain of solid rock, no timbers being needed in its construction at all. When we get to Hopland, the valley broadens out in a fine agricultural country again, which character it maintains all the rest of the way to Ukiah.

Arriving at Hopland, we found our friends willing to extend to us every courtesy, and several places were mentioned in the neighborhood as being likely to suit us for a camping-place. As we found it to be a country of very considerable distances, and as our time was somewhat limited, we con-

A CAMPING SCENE IN THE REDWOODS.

places was built for the logging trains, but as the lumber has been almost all cut out, it has been finished and ballasted for passengers and freight to Cazadero. The road after leaving Russian river, about a mile from Duncan's, winds along the banks of Austin creek, through picturesque scenery and the blackened stumps of a once magnificent forest. Along this road are many delightful spots which are utilized by small parties of campers every year, but it is too far from the city, and takes too long to go and come, to be extensively availed of by such parties as the Mission campers. This isolation makes it a favorite locality for hunters and fishermen, and for small parties who can go and stay for a few weeks, it has unrivaled attractions.

Turning with some reluctance from this vicinity, we devoted our attention to the San Francisco and North Pacific broad gauge. We remembered two years ago spending the most delightful camping vacation in all our experience in the edge of the forest just beyond where the logging train had penetrated, about three miles from Guerneville, in Hurlburt canyon, on the banks of a cool, clear mountain stream. With Guerneville as our objective point, therefore, we recently took "a day off" to revisit our old campground and look around to see if we could discover some other place as pleasant and convenient. A rather doubtful looking—as to the weather—Saturday morning, therefore at 7:40 saw us on board the good ship Tiburon with sundry rods and lines, and a various outfit for beguiling the unsuspecting trout, en route for the town of Guerneville. Threading our way through the shipping off the wharves, we were soon abreast of Alcatraz, its great guns glistening in the morning sun. Anon, on the other bow, we

rich alluvium well adapted for fruit and garden land. Four miles out we come to Penn's grove, whose fine shade of spreading oaks make it a favorite picnic ground. And now, over a dozen miles of fine level land, stretching for several miles on either side of the track, we come to Santa Rosa. In this fine tract is comprised the Page estate of several thousand acres, every rood of which is good grain and garden land, but now used mostly for stock, large herds of which are scattered here and there over its verdant pastures. Santa Rosa is one of the most enterprising towns in Northern California, as is shown by its fine new county court-house, elegant stores and private residences, new buildings going up on every hand, and the fact of its having wrested the county seat from its rival competitors. A street railroad and a numerous representation of the genus hackman, vociferous in their attentions to the alighting wayfarer, attested its pretensions to metropolitan consideration. Four and a half miles farther through a beautiful country brings us to Fulton, where we leave the main line and charge on to the accommodation train to Guerneville and the redwood region. As we steam on from Fulton, coastward, the country gets more rugged and wooded, the cultivated farms fewer and farther between, with patches of rich bottom land, around the charred remains of ancient redwoods here and there, planted in hops or alfalfa. At Green Valley we get our first glimpse of Russian river, and crossing it, speed away on its eastern bank, the railroad running parallel with it, toward Korbels. Here we come upon the deserted lumber-mill and the empty cabins of the workmen. The dense forest of redwoods once covering the entire country has been eaten up by the merciless

cluded that the easiest and most expeditious way of getting around would be to hire a team, and this we did at the Hopland hotel. In a double-seated spring wagon, therefore, and behind a pair of spanking grays, we started on our hunt. Without going over all the ground we traversed, suffice it to say that by all odds the most desirable spot we found was in a pretty canyon covered with a growth of manzanita, with a clear mountain rivulet, promising good water for domestic purposes, and abundant room and shade for as large a camp as we should be likely to have. The place is about a mile from the railroad station and store of West Hopland, and about a mile and three-quarters from the old town and hotel. The surroundings are all that could be desired as regards scenery. The canyon is at the foot of a conical mountain called Duncan's Peak (so named after one of the oldest settlers there), whose towering shapely form seems omnipresent throughout this whole section. On a slope of a spur of this mountain, and within about a quarter of a mile of the proposed campground, are Duncan's Springs, with their picturesque cottages perched at convenient places on the hillside. These springs, or the most notable of them, are two in number, the first of which, called the Bartlett spring, because, in its ingredients and curative properties it is said to be similar to and equally as good as the Bartlett water—comes welling out of a fissure in the rock into a stone basin as pure as crystal and of excellent medicinal quality. This water is availed of for both drinking and bathing, being piped into a reservoir and from there to the bath-house. The other, a few hundred feet distant, farther up the side of the mountain, is a pure soda spring, sparkling and effervescing as it bubbles out of the rocks. No improvements, except the cottages, which have been put up to rent to summer visitors, have been made here, and the waters are free to all comers. From the side of the hill near the springs a magnificent view may be obtained of the valley around Hopland, beyond which are the range of hills dividing Lake and Mendocino counties. For bathing and swimming, Russian river is a little over a mile distant, and if the veracity of the doctor, who regaled us with fishing stories that night as we gathered round the big open fire at the hotel, is to be relied on, there is good fishing to be got by going a few miles toward the headwaters of a number of creeks that abound here. Next morning our kind entertainers at the hotel hitched up and took us for another drive up to the springs and a few miles through the valley, and our impression of the day before, as to its desirability as a pleasant place to spend a summer vacation, was confirmed, and several of the party made up their minds to come here.

Inverness.

In order that we might be able to estimate and report truthfully and comprehensively on as many places as were eligible and convenient to visit, we accepted the invitation of C. H. Street & Co. to join a party of friends to visit Inverness, the site of a newly-projected town and colony on the western slope of Tomales bay. We therefore took the Saucelito ferry-boat, and in company with a very pleasant party of ladies and gentlemen, sped over to that most picturesque of our bay towns, where we boarded the cars of the North Pacific narrow-gauge road. Skirting the bay for a short distance and crossing an arm of Richardson's bay, we speed along past Blithedale, Corte Madera, Larkspur and Ross valley to San Anselmo. Here we make a stop for a passing train, then away again, onward and upward past Fairfax, in and out along the slopes of the hills, over a piece of the most picturesque railroad climbing in the State, through the tunnel and summit of White's Hill, then down the western slope toward Tomales bay, past San Geronimo, Lagunitas, Camp Taylor and Tocaloma to Point Reyes, where we disembark and take the waiting teams for our point of destination. A fine drive of four miles over a good road, with the shallow waters of the bay on one side and the thickly wooded hills on the other, brings us to the site of Inverness. Driving in to the left, along a road which has been made through the woods, by the side of a sparkling mountain stream of pure water, we immediately come upon a natural meadow, where tables for lunch have been improvised under the spreading branches of oak, sycamore and laurel trees. Along the sides of this creek and the gentle slope of the adjoining hills, has been surveyed and staked off the new candidate for municipal favor, Inverness. On a fine plateau, a stone's throw from where we lunch, is the site of a fine hotel, the plans of which are already drawn, and certainly a more beautiful site for the purpose would be hard to find. Surrounded by magnificently wooded hills on one side, and commanding a fine view of Tomales bay on the other, with its suggestions of

bathing, boating, fishing, etc., it would seem to combine all that is desirable for a country and seaside resort. The land is a part of the McShafter ranch, and it is the desire of the proprietor and agents to found a town and colony under Presbyterian auspices. To aid in carrying out this idea, they propose to donate 100 acres of the best land and \$25,000 in money toward establishing a college of that denomination. We hope and believe their expectations will be realized, and that a few years will see these quiet woodland scenes transformed into a thriving university town. As a camping-place it has excellent advantages, fine fresh water for domestic purposes, sea bathing in the bay, plenty of shade for the tents and fuel for cooking and camp-fires, all of which are offered free to the campers. The country abounds in pleasant walks and drives, while from the top of Mount Vision, about a mile distant, may be obtained one of the grandest and most diversified views in the State. A good many campers have already decided to locate here, and some with a view to purchasing a permanent summer resort.

Camp Taylor.

We next turned our attention to Camp Taylor, which we had passed on the road. This place is about 30 miles from San Francisco, and has long been established as a favorite resort for summer sojourners from the city. The surroundings are beautiful. Here the giant redwoods tower up hundreds of feet in all their primitive grandeur, while the clear waters of the Lagunitas or Paper mill creek offer every facility for bathing, boating, etc. The proprietors have entirely discontinued picnics of every kind, and with all its advantages of nearness to the city, being close to a base of supplies, cheap transportation for passengers and freight, pleasant climate, convenience of going and coming, Saturday evening and Monday morning, a large camp there is already assured, and the hotel and cottages full.

There are undoubtedly many other places perhaps equally advantageous for camping-places, but we have already drawn this article out to greater length than we intended, and must defer a description of them to the future.

Coop and Kennel at Los Angeles.

EDITORS PRESS:—The people in Southern California have long felt that it was too much of a good thing to try to help a poultry show in San Francisco—not that they wished it any ill, but simply from the fact that it was too far away, and cost too much to go back and forth; and yet the shows have borne fruit in this part of the State, for I think that if the money sent by the people in Southern California to northern breeders for stock and eggs were put in one pile, the large amount would be a surprise to many.

In one of your recent issues, you published a list of officers of the Los Angeles County Poultry Association, which is by no means a dead one, but expects to hold a poultry show this month (24th to 29th inclusive). The officers and members mean business, and are willing to work, and that together, for a good show; and to do that they have no time to waste on pulling the personal rackets; they are as good a set of men and women, numbering over 100, as could well be drawn together.

The show is to be held in Hazard's pavilion, Los Angeles, the largest hall in this part of the State, which will give plenty of room to look in, and the prospect is good for large entries.

In connection with the exhibition of poultry, pigeons and pet stock, are to be shown incubators and brooders; and it will hardly be to the credit of any manufacturers of these articles on this coast to be left out, if they wish patronage in this part of the State.

The Southern California Kennel Club will also have a bench show at the same time and place, one entrance fee admitting to both exhibitions.

Any of your readers who may wish to exhibit and who have not received other knowledge of the show, should apply at once to Mr. J. D. Mercer, secretary, 12 West First street, Los Angeles, Cal., for entry blanks, as the entries close Monday, June 17th.

Mr. W. H. H. Jones, an old time feather-legs, will be superintendent, and Mr. A. F. Cooper of Homer City, Penn., the judge.

Now if any one has an honest doubt in his mind whether or not this part of the State is alive, let him come and see; but come and see the show anyhow. I think it will be worth while.

I wish the editors could step in upon us, enjoy the proceedings and carry back a report of the show. They would meet with a warm reception. E. C. CLAPP.

Pasadena, June 1, 1889.

[We understand that Wells, Fargo & Co. will return free of charge, to the point of shipment, stock on which full rates to the show have been paid, provided it has not changed hands meanwhile. The management seems sanguine regarding the display, which they purpose to make a credit to Southern California.—EDS. PRESS.]

Books and Authors.

BY C. L. B.

"TRAVELERS AND OUTLAWS," Episodes in American History. By Thos. Wentworth Higginson, author of "Outdoor Papers," "Oldport Days," etc. Boston: Lee & Shepard, publishers. Samuel Carson & Co., San Francisco. One finds here not altogether pleasant reading because of the horrors treated in the slave insurrections of the South, but the book contains much of interest, and is, it is needless to say, considering its author, well written.

"BIDING HIS TIME; or, Andrew Hapnell's Fortune." By J. T. Trowbridge. Boston: Lee & Shepard, publishers. San Francisco: Samuel Carson & Co. In the trials and adventures of Andrew Hapnell is given a strong argument in favor of patient industry, helping others, doing always the present duty, and biding your time, which precepts followed by the youthful hero of the story bring him to a happy solution of his difficulties. Those familiar with the many other popular tales by this noted author in boy literature will heartily welcome in book form this equally entertaining story of adventure, which recently appeared as a serial in *Youth's Companion*.

"VIEWS A-FOOT, or Europe seen with Knapsack and Staff." By Bayard Taylor. With two portraits, and a preface by N. P. Willis. New York: John B. Alden. In this attractive volume of travel one finds Mr. Taylor a most entertaining *compagnon de voyage*; the various scenes and objects of interest in Ireland, Scotland, England, Germany, Italy and France being presented so vividly that they become realities indeed. The strong and picturesque prose descriptions are here and there interspersed with bits of original and well-selected verse which give a pleasing variety and added charm to the volume, which is altogether one of the most attractive books of travel ever published.

From the "Cambridge Series of English Classics," published by Lee & Shepard, Boston, and for sale by Samuel Carson & Co. of San Francisco, come "Chapters from Jane Austen," edited by Oscar Fay Adams, author of "Hand-Books of English and American Authors and Post-Laureate Idylls," and "Readings from the Waverley Novels," edited for school and home by Albert F. Blaisdell, A. M., author of "The Study of the English Classics," etc.

In "Chapters from Jane Austen" are given representative selections from her six principal novels: "Pride and Prejudice," "Sense and Sensibility," "Northanger Abbey," "Mansfield Park," "Emma," and "Persuasion." To the readers and admirers of Jane Austen this little volume will be of special value as a book of reference for recalling the plots and principal characters of this gifted author's most noted works of fiction.

In "Readings from the Waverley Novels" we have another most valuable reference-book in admirably arranged selections from those famous novels of the great Scott, which are too widely and familiarly known to require any description in a book notice, the plot of each story being briefly given, together with a list and explanation of the principal characters who figure therein.

LAND TO RENT

On Exceedingly Liberal Terms.

The S. E. quarter of Sec. 13, T. 21, R. 23, and all of Sec. 15, T. 23, R. 24, in the artesian belt in Tulare county, will be rented at a nominal rent for winter sowing, if applied or soon. The greater part of this land is rich, level and all ready for the plow. Address L. E. Smith, Fixley, Tulare Co., Cal., or Ranch Owner, office RURAL PRESS San Francisco, Cal.

FOR SALE OR EXCHANGE.

Ranch of 200 acres on Coquille River, Coos County, Oregon; 40 acres bench land, 160 acres bottom, 80 acres under cultivation; 1 1/2 miles from Coquille City, one-half mile from steamer landing. An abundance of fine spring water on place. Price, \$4500 cash, or will exchange for California property in vicinity of San Francisco Bay. For further particulars apply to H. GOETZ, 659 Clay St., San Francisco, Cal.

THE CALIFORNIA STATE FAIR

OF 1889 AT

SACRAMENTO,

SEPTEMBER 9th to 21st, Inclusive,

WILL EMBRACE, as usual, A WORLD OF CHOICE EXHIBITS, comprising AGRICULTURAL, HORTICULTURAL AND HOUSEHOLD PRODUCTS, as well as MACHINERY, IMPLEMENTS AND LIVE-STOCK.

NO BETTER CHANCE is offered to show individual progress in the various arts of productiveness than at an ANNUAL EXHIBITION of this character.

AMPLE SPACE FOR BOTH EXHIBITORS AND VISITORS and every endeavor will be made to secure comfort and convenience for all.

NEARLY \$50,000 OFFERED IN CASH PREMIUMS in the Various Departments.

EXHIBITORS should now begin preparations. Don't forget to plan Original and Instructive Displays. The more attractive your exhibits are, the more attention they will command.

REMEMBER YOUR PRODUCTIONS WILL BE VIEWED BY THOUSANDS that know not California's capabilities, and as a source of profit we would urge the producers to come forward and make the

GRANDEST DISPLAY OF COUNTY EXHIBITS EVER SHOWN.

A BOUNTIFUL HARVEST, A SUCCESSFUL YEAR AND A GRATEFUL PEOPLE are resources any commonwealth may well feel proud of. No more favorable year to advertise your locality could be wished for, nor better opportunity offered. Let it not pass unheeded; show the character of the products your County brings forth.

PROGRESSION, NOT PROCRASTINATION, can make every county in this State celebrated. The study of the management of these annual gatherings is to provide not only a source of information, but of amusement as well, to the end that those who look forward to a holiday of recreation may not be disappointed.

THE EXCITING SPEED CONTESTS,

Wherein the choicest of our numerous breeding farms take part, are not excelled in any State.

GRAND MUSICAL CONCERTS

And other kindred amusements will be provided for the entertainment of the sight-seeing public.

The Board of Directors will give the same special attention to details that has contributed to success in the past. It but remains for the exhibitors to achieve increased results from the exhibition of the present season.

PREMIUM LISTS are now ready and may be had on application to the Secretary, who will also furnish applicants with any other information respecting the business of the Fair.

CHRISTOPHER GREEN, President.

Space should be applied for as early as possible; do not put it off until the best locations are selected.

Remember, THE SOUTHERN PACIFIC COMPANY

TRANSPORTS EXHIBITS FREE OF CHARGE

To and from the Fair, and gives EXCURSION RATES TO ALL THAT ATTEND.

EDWIN F. SMITH, Secretary.

ALWAYS USE THE BEST.

It is the Purest.
It is the Strongest.
It is Free from Lime and Pan Scales.
It contains No Insoluble Matter.
It requires No Sifting, as the Grain is very Uniform, and every Ounce can be Used.

Five pounds of HOLMES' Extra Sifted SALT is enough for 100 pounds of Butter. The quantity of Table Salt used in a family is small. Why Risk Health and Spoiling Butter by using ordinary Salt, when the extra cost of using Holmes' Extra Sifted Salt is so small? Ask your Grocer for it.

The "San Jose" all Iron & Steel Frame CULTIVATOR.

We take pleasure in calling the attention of the Orchardists and Vineyardists of the Pacific slope to our NEW ORCHARD AND VINEYARD CULTIVATOR. The most complete and easily handled machine in existence. Weight, 335 pounds. The Cultivator is raised and lowered by means of a foot and hand lever, reducing the labor of handling to almost nothing.

It is the only Cultivator that can be handled successfully on a side hill. By means of the Shifting Pole the tendency to crawl down hill can be overcome. This feature is of advantage on level ground as well. The pole is shifted by the horses and can be checked at any angle by means of a foot lever. The Cultivator is increased from 7 to 9 teeth by sliding arms into a grooved casting in the ends of the frame. We lack space for a further description. WRITE FOR CIRCULARS. Address:

Fashion Notes.

Ladies' Straw Turban.

FIG. 1.—The square turban here pictured is of dark-green straw, its rolling brim being overlaid with fancy straw of the same color. The trimming is at the back; two loops of green moire ribbon come forward on the

Fig. 1.—LADIES' STRAW TURBAN.

crown, and just back of them is disposed a mass of lilies-of-the-valley; then come more loops of ribbon, and last of all a strap secured neatly over the brim. The hat is to be placed squarely on the head, and the decoration shows well from the front. A blue straw in the same style is garnitured with pink roses instead of lilies, and a brown hat shows a great bunch of buttercups.

Girls' La Tosca Costume.

FIG. 2.—Green serge and green velvet of a darker shade are here associated, with trimmings of white silk accordion-plaiting, velvet and buttons. The skirt, which is in the usual round style, is trimmed in front

Fig. 2.—GIRLS' LA TOSCA COSTUME.

with white silk laid in accordion-plaits. The top of the skirt is gathered and joined to the lower edge of the round, sleeveless body, the shaping of which is effected by shoulder, under-arm and side-back seams. Upon the front of the waist is arranged a trimming of accordion-plaited white silk, which is included in the joining of the body and skirt. The neck is neatly finished by a high-standing collar, to the upper edge of which is seamed a dainty frill.

The over-dress is in coat style, and its shaping is performed by under-arm and side-back gores and a center seam. The fronts are turned back in velvet-faced revers that are pointed at the shoulders, and below the revers at each side three velvet buttons are ornamentally placed. The accordion plaiting on the body is nicely displayed by the flaring fronts of the coat, and is confined at the waist by a gathered girdle of velvet. The skirt of the coat is gathered quite full at the top, and finished at the bottom with a

deep hem; it is sewed firmly to the body and below the sewing falls in graceful folds to the edge of the skirt. The shirt sleeves are each completed at the wrist with a cuff of velvet and serge combined.

Ladies' Costume.

FIG. 3.—The costume is here shown developed in French-gray camel's hair, corded silk in a darker shade, silver-gray India silk, and Persian bands showing delicate shades of old-rose and olive-green interwoven with a gold thread over white; and the garnitures consist of corded silk, Persian bands and large smoked-pearl buttons. Over the front-gore of the standard foundation-skirt is arranged a drapery of India silk that falls in soft folds from the gathered upper edge to the foot and is decorated near the lower edge with a broad Persian band. Overlapping this drapery, and covering the side-gores, are straight panels that are each plait-

two buttons, and its front edge is cut away for a short distance above the lower edge. Under-arm, side and side-back seams and a well-curved center seam complete the adjustment of the over-dress; and the fullness at the termination of the side-back and center seams is underfolded to form deep plaits in the skirt of the coat that extend over the back-breadth to the lower edge. The sleeves, which are in coat-sleeve shape, are slightly gathered at the tops and trimmed at the wrists with pointed cuff-facings of corded silk; and a standing collar of silk is joined to the neck.

Henrietta cloth, serge, cashmere, foule, challis, vailing, sateen, foulard and other plain or fancy weaves are suitable for such costumes, which will develop effectively in combinations of plain and figured India, China and Japanese silks, challies and satens, or of textures similar to those here pictured. Bead or braid passementerie, ap-

Fig. 3.—LADIES' COSTUME.

ed at the top and trimmed with a band of corded silk that is turned under in a loop at its lower end and ornamented near the top with five buttons. The fashionable appearance of the costume will be insured by the wearing of a bustle, though reeds may be introduced with equally stylish effect.

The over-dress, which is a Directoire coat, has closely fitted fronts that are closed at the center and faced in V shape below the neck with the Persian band. Crossed over the fronts in the characteristic way are surplice ornaments corresponding with the drapery below; and a girdle of Persian band that is pointed at the top marks the waist-line and adds to the effective arrangement of colors on the front. The jacket fronts are fitted by single bust darts and are rolled back above the bust in broad revers that are faced with dark-gray, making a pretty framing for the dainty colors disclosed between them. Each front is ornamented below the point of the revers with

plique embroidery and fancy galloons, braids and ribbons are effective garnitures.

IT DOES SOUND SO!—The South Riverside Bee publishes this story: "I noticed a bunch of barley a day or two ago that seemed to spring from one root, and I was curious enough to pull it up to see. Finding that it was indeed a single stool, its unusual size made me curious to know how many stalks sprang from it, and cutting them off with my knife I carefully counted them and found there were just 434 of them." The remark is added that "that sounds incredible"—which we do not feel prepared to dispute.

POPPIES ON EMBANKMENTS.—It has been discovered that the planting of poppies on embankments proves a great protection to such works. They form a network of roots that can be exterminated only at the expense of great difficulty. Eminent French engineers are said to have made successful experiments in this direction.

GOOD HEALTH.

Buttermilk as a Medicine.

With the rapid growth of reconstructive medicine comes opportunely the reintroduction of old and well-known domestic remedies, among which buttermilk demands a respectable place.

A young lady patient of the writer was suffering from a severe consumptive cough. None of the usual anti-spasmodics, expectorants, etc., seemed to do any good, simply because her stomach was too weak to bear enough medicine to effect the purpose. Finally I suggested to her mother the use of hot buttermilk. It was adopted at once. Her first night's experience was one of comparative freedom from cough and pain, and a pleasant slumber for hours. It was continued for a long time with an unvarying relief of all her previous distressing symptoms, and an almost perfect freedom from cough for several hours after each draught of the hot buttermilk.

Lingering at one time for weeks from an attack of congestive fever, dosed with calomel and quinine almost beyond endurance, the writer began to desire buttermilk to drink. The physician "didn't believe in humoring the whims of patients," as he expressed it; besides, he contended that a single drink of the obnoxious fluid might produce death, as acids and calomel were incompatible dwellers in the same stomach. But I was a good persuader and my mother was a susceptible subject. The buttermilk "fresh from the churn" was procured and drank. No evil resulted; instead came perspiration and speedy recovery.—Dr. S. F. Landrey.

Bed Sores.

Mrs. C. F. M. sends the following from Pomona for the benefit of the bed-ridden: The white of an egg well beaten and spread upon a fine, soft cloth, renewing with fresh applications two or three times a day and continued until all redness of the skin disappears, will prevent bed sores, and I believe will cure them even in their worst stages. It is well to keep a close watch, and if the skin begins to look red, make the application.

DEGENERATION OF THE HUMAN TEETH.—The law of retardation exhibits itself in the teeth of the higher races of mankind in a highly inconvenient manner. The greatly developed brain requires all the available room in the skull; there is no space left for the attachment of muscles of a powerful jaw. There is consequently no room left for either the wisdom teeth or the upper incisors; the wisdom teeth are retarded, often cause great pain, and decay early. The second incisors appear in startling and unexpected places, and often (in America especially) do not cut the gum at all. Prof. Cope says that American dentists have observed that the third molar teeth (wisdom teeth) are in natives of the United States very liable to imperfect growth or suppression, and to a degree entirely unknown among savage or even more civilized races. The same suppression has been observed in the outer pair of superior incisors. This is owing not only to a reduction in the size of the arches of the jaw, but to successively prolonged delay in the appearance of the teeth. In the same way men and the man-like apes have fewer teeth than the lower monkeys, and these again fewer than the insectivorous mammals to which they are most nearly allied. When this difference in dentition has been established, civilized man may claim to place himself in a new species, apart from low savages as well as from high apes.—Popular Science Monthly.

ORANGES FOR HEALTH.—While the orange was so highly esteemed by the ancients for its medicinal qualities, it is surprising how little attention the present generation gives to the many virtues included in this little golden ball of fruit. A prominent physician once remarked that were his patients to eat an orange or two every morning they would require but little medical attention; for throughout the entire range of fruits that have attracted the attention of the medical profession as a means of alleviating many of the ills of mankind, there has been found none has so many diversified uses as the luscious orange, particularly in cases of low fevers and malarial complaint, and it should more largely take the place of unpleasant drugs so extensively used, to the great disgust of the patient. No fruit compares in cheapness with the beautiful and luscious orange, and particularly so now that our own country is raising the finest oranges in the world, the fruit selling at a price within the reach of the most moderate purse.—American Grocer.

A PRECIOUS PRESCRIPTION.—Dr. Henry Gibbons, Jr., recently closed a lecture at the Cooper Medical College with the following valuable advice: In conclusion, let me reveal to you a great professional secret, through which you will be able to diminish your doctors' bills at least one-half. It is this: Be cheerful; avoid despondent thoughts and gloomy forebodings; your labor will be light in proportion as your spirit is in it, or it may be magnified to corresponding proportions. Make exercise your nurse, diet your apothecary, and cheerfulness your physician, and the days of the years of your life will be better and your pockets will be fuller.

"GOOD TIMBER AND BONE DRY."

THE RUSHFORD WAGON

Will Carry the Earth!

From the Montague Herald, Montague, Siskiyou Co., Cal., May 1, 1889.]

One day last week a huge landslide on Ball's mountain caught an Oregon teamster's wag-
on and buried it beneath several tons of earth and rock. The horses were not touched, and the
teamster jumped in time to save himself. A force of men dug out the wagon, and as it was a
RUSHFORD, with National Tubular Steel Axle, it was not injured. The "Rushford" is beyond
contradiction the best wagon made.

PILE ON THE MOUNTAINS!

The King of Wagons Can Stand It!

Farmers, if you would be Happy and Contented, buy a "RUSHFORD" Wagon,
with either Steel Skeins, Old Reliable Concord Steel Axles, or with National Tubular
Steel Self-Oiling Axles, which are Stronger and One-Third Easier of Draught than any
other.

These Axles have recently been adopted by the U. S. Government after a most
severe and thorough test.

Dried Fruit Around the Horn.

EDITORS PRESS:—My attention was drawn to Mr. Coates' essay on "Unprincipled Fruit-Packing," which appeared in the Rural of June 1st. Mr. Leonard Coates does not seem to have a very favorable opinion of sun-dried fruit and the process it undergoes before and after being dried, viz.: Sulphuring and dipping in scalding water before packing. I will relate, in as few words as possible, how a box of sun-dried fruit, sulphured before drying and dipped in boiling water, in which there was a little glycerine mixed, before packing, turned out on its arrival in England via Cape Horn, after a passage of just six months. Let me here mention that the fruit had been dried three months before forwarding it. I got a pear-box, divided it into three compartments, lining them with oiled paper. In one compartment I put dried apricots, the center one almonds, and the third dried peaches. After pressing the fruit in thoroughly, I securely nailed the lid on and covered the box with duck, which I sewed on, wrapping the whole in brown paper. I have just received a letter from my mother and father, to whom I sent the fruit, to give them some idea of the kind and quality of fruit grown in California, in which they stated they had received the box. On opening it they found the fruit in splendid condition, there only being one here and there a little rotten; they were also highly pleased with the flavor of the fruit. Considering the sort of box it was packed in and the journey it underwent, I think this a very creditable report for sulphured, sun-dried and dipped fruit.

The fruit mentioned above was grown and dried on Messrs. Weinstock & Lubin's ranch, by whom I was employed at the time. In conclusion I may add that, in fruit, as in everything else, there are two ways of preparing it, viz., a right and a wrong, and I think judicious handling of fruit, which is going to be sun-dried by those who cannot afford an evaporator, can turn out a box to please the most fastidious person.

Hoping I have not trespassed too much on your valuable time, I have the pleasure of remaining

F. F.
Diamond Springs, El Dorado Co.

California Products at Chicago.

CHICAGO, June 5.—California Fruits.—Cherries are a shade firmer; sales are made at \$1.40@1.75 for 10-lb boxes; Peaches are quiet and easy at \$1.75@2 for 20-lb cases; Apricots are only in moderate supply and steady at \$2@2.75 for 20-lb cases; Plums are on the market and slow at \$1.75@2 for 20-lb cases.

Oranges are meeting with fair demand with prices as heretofore, and the supply is rather small. Riverside, 4¢ box, \$4.25@4.50; do, undesirable sizes, 3¢ @ 4; St Michael, paper rind, \$4.50@6; San Gabriel, 2¢@4; Duarte, 2.75@3.25; Los Angeles, \$2.25@2.75.

California Dried Fruits.—Trade is fair in peaches and prices are firm owing to small supply. Choice bright apricots are in demand and firm and plums are fair sale; there were no changes from last quotations.

Hops continue to sell fairly well; the demand, in fact, is good as compared with the supply; a firm feeling is maintained. Choice Washington Territory and Oregon, 24@25¢ lb.; Pacific Coast, prime to choice, 19@22¢.

Beans are still ruling firm, being in very fair request, and their demand appears all the better on account of there being only a small quantity of choice and desirable beans on hand. California Lima beans, 5¢@6¢ lb.

HEREFORDS FOR SALE.—Henry Vaughan, the indelible and persistent importer of thoroughbred cattle, is among us once more. On his last trip from the East he brought in one consignment of 15 head of the highest type registered thoroughbred Holsteins, which he immediately on arrival sold to Mr. Andrew Smith of Redwood City, and eight head of registered thoroughbred Hereford bulls; the latter he offers for sale at quite reasonable rates, and as cattlemen who have seen them pronounce them to be a very superior lot, he will no doubt have little difficulty in quickly disposing of the gentle and strong-blooded "white faces." Killip & Co. will furnish any information desired regarding them.

SNELL SEMINARY commencement exercises were held in the 1st Congregational Church, at Oakland, on the evening of Memorial Day. Thirteen young ladies graduated. Their essays, the musical selections and a brief address by Rev. Dr. Barrows, had an audience that outnumbered the seating accommodations. On Friday evening the alumnae gave a pleasant reception at the school, with music, dancing and refreshments. The class motto, "Character, not Reputation," had a conspicuous place among the decorations.

THE PANAMA CANAL SCHEME dies hard. Report says that the French Government will revive the work, a measure that, under the Monroe doctrine, the United States will not allow. A heavy subsidy to a private corporation to complete the canal, however, would meet with no objection. The old corporation is a bursted concern, and dead, but the works instituted by De Lesseps are valuable, and an effort to utilize them will undoubtedly be made as soon as the necessary capital and enterprise can be combined.

Preferred Poultry.

Following are the regular awards on poultry at the exhibition lately held here in connection with the bench show. There were also given a number of special prizes, which we do not attempt to enumerate:

LIGHT BRAHMAS.—1st & 3d breeding pen, J. J. Jones, Martinez; 1st & 3d pairs & 2d b. pen, Jno. McFarling, Oakland; 2d pr, Pac. Incubator Co., Oakland.

TURKEYS.—1st pr bronze, Pac. Incub. Co.

DUCKS.—1st & 2d pr Rouen, Pac. Incub. Co.

GEES.—1st pr Toulouse, Pac. Incub. Co.

Reduced Rates to Pacific Grove.

The Southern Pacific will give one and one-third rates to all who wish to attend the Summer School of Methods of the W. C. T. U. at Pacific Grove June 20th to 23d. The tickets are good for ten days, from June 20th to 30th, thus giving opportunity for all to stay to the State Teachers' and State Sunday-School Associations, which convene immediately afterward. As special attention will be given at the School of Methods to scientific temperance instruction in our public schools, it is hoped that large numbers of the teachers will come four days earlier and attend. One does not need to be a member of the W. C. T. U. to use the certificates, the only provision being that the holder attend the conference, that the secretary may so certify.

The delights of Pacific Grove as a camping-ground are too well known to need a word of praise, and no doubt great throngs will combine physical rest with intellectual culture and be present.

Send for certificates to M. G. C. Edholm, superintendent railroad rates and official reporter W. C. T. U., 519 Eighth street, Oakland.

THE BLESSED CIGARETTE.—The loss by the fire at Reno, Nev., was about \$250,000, half covered by insurance. The Gazette says: Some members of the Young Men's Institute were in the theater Saturday evening rehearsing, and it is supposed that some one threw a lighted cigarette into a box of sawdust, that the fire was smoldering all night Saturday and all day Sunday, and that when it broke out the immense structure was all on fire on the inside and broke out the entire length of the roof simultaneously.

It is said that 10,000 sheep perished in the last rainstorm in Walla Walla county, W. T.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

\$750 For a Boar.

Andrew Smith of Redwood City, the noted Berkshire breeder, whose herd ranks with any in the United States, has just bought from N. H. Gentry, Sedalia, Missouri, his sweepstakes boar Model Duke, "the best boar in America," acknowledged so to be by the most expert judges of Berkshires. Mr. Smith will breed Model Duke to the offspring of his famous sweepstakes boar Redwood Duke and prize boars Peplow, Hercules and Commodore, from his imported Sallie and Stumpey sows.

Mr. Smith says the "best in America" is none too good for his herd, and while \$750 is, perhaps, the highest price ever paid for a boar in the United States, he is well pleased with his purchase, as Model Duke is the kind of a boar he has been looking for.

He has sold his fine young prize boar, Hercules 21045, sired by Redwood Duke 13368, dam imported Redwood Sallie 13658, to R. C. Kells of Yuba City. This fine young pig promises when fully matured to be one of the best boars on this coast.

Horses and Holsteins.

Mr. Geo. E. Brown of Aurora, Ill., sailed from New York for England, Saturday, May 25th, on the Cunard S. S. "Etruria," for the purpose of bringing over his annual importation of Cleveland Bays and English Shires.

Messrs. Brown & Co. have for a number of years imported only yearlings, which they mature on their farms near Aurora, therefore having to offer only fully acclimated stallions which are raised in a plain, practical way and not forced for the sake of rapid growth. They expect to import this year somewhat larger than usual, and to make room for the increased number will give unusual bargains in Holstein cattle, of which they have a large number. Their herd is too well known to need comments. Parties thinking of purchasing should not fail to avail themselves of this chance to procure foundation stock at very favorable prices.

COMBINED HARVESTER.—John Driver, well known to thrashermen throughout the State, announces in our advertising columns that he has one of his improved combined harvesters not yet engaged which is ready for a purchaser. Mr. Driver now has the old Sweepstake shop at San Leandro, and is building machines on his own account.

ORANGE CULTURE IN CALIFORNIA.

Now that the interest in the culture of the orange is extending so as to embrace nearly all parts of the State, a book giving the results of experience in parts of the State where the growth of the fruit has been longest pursued will be found of wide usefulness.

"Orange Culture in California" was written by Thos. A. Garey of Los Angeles, after many years of practical experience and observation in the growth of the fruit. It is a well-printed hand-book of 196 pages, and treats of nursery practice, planting of orange orchards, cultivation and irrigation, pruning, estimates of cost of plantations, best varieties, etc.

The book is sent post-paid at the reduced price of 75 cents per copy, in cloth binding. Address Dewey & Co., Publishers "Pacific Rural Press," 220 Market St., S. F.

NOTE.—The cash must accompany all orders. Address his office, No. 220 Market St., S. F.

In writing correspondences, items of information, or on other business, please use a separate sheet.

Sample copies of this paper mailed free to persons thought likely to subscribe.

Send for free circular describing most of these premiums, and any further information desired.

Inform your neighbors about our offers and paper

Pacific Business College.

There are few men in this day and generation who have the hardihood to defy the utility—nay, the glory of our public schools and free system of education. But while there are millions who could testify to an all-round education fitting them for the ordinary vocations of life, there are many special occupations requiring special training and preparation, which for obvious reasons are not to be found in our public schools, and it is to supply this want that such institutions as the Pacific Business College have been established. To the perfect system and thorough course of instruction given in this establishment thousands of successful business men in this city and all over the Pacific Coast owe their start in life and all the prosperity which has attended them since. In response to the invitation of the president, an attaché of this paper called and was courteously shown through the college, and its system of education explained to him, from the primary to the finished course. For terms, etc., see advertisement.

Injurious Insects of the Orchard, Vineyard Field, Garden, Conservatory, etc.,

—WITH—
Remedies for their Extermination.

By MATTHEW COOKE.

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price \$4, postpaid. For sale by Dewey & Co., publishers, 220 Market St., San Francisco.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, term of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

By order of Probate Court, in the matter of the Estate of
JAMES ROBERTS, Deceased.

I will sell at private sale to the highest bidder, for cash, on or after May 1, 1889, at the Ranch in Irvington, or at my office in Oakland, 946 Broadway, Alameda Co., Cal., the entire flock of Thoroughbred French Merino Sheep, consisting of 280 (Two hundred and eighty) Ewes, 79 (seventy-nine) Bucks, and 180 (one hundred and eighty) Lambs. These Sheep are the set of the original flock imported by Robert Blacow of Centerville. Mr. Roberts, as foreman, having charge of the flock for several years prior to Mr. Blacow's death, after which he became the owner of the entire flock, which he has kept purely for stock purposes.

All interested in Thoroughbred Sheep should be familiar with this flock, which has become famous under the care and management of Mr. Roberts; always receiving first premiums, having been sold to Europe, South America and all parts of the United States; individual members having repeatedly sold for from \$500 (five hundred) to \$1500 (fifteen hundred) each. Sheep Men should seize this opportunity to secure some, as they must be sold to settle up the Estate. Address, JAMES STANLEY, Administrator Estate J. Roberts, Deceased, Mission San Jose, or 946 Broadway, Room 17, Oakland, Cal.

THOROUGHbred SPANISH MERINO SHEEP.

Have taken the First
Premiums at the State Fair
for the last three years.

S. F. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, June 5, 1889.

The weather the past week was more or less cool, which, taken altogether, was favorable to maturing grain. Trading outside of garden truck and fruits was quiet. The weakness in the wheat market is due to large crop prospects and an advance in charters. As information about our wheat crop becomes more fully disseminated, it is calculated to draw more ships to us, and in the end, low charters rule. The wheat market abroad has held fairly steady. The following is to-day's press cablegram:

LIVERPOOL, June 5.—Wheat—Steady. California spot lots 6s 6d to 6s 9d; off coast, 33s 3d to 33s 6d; just shipped, 33s 6d; nearly due, 33s 6d; cargoes off coast, nothing offering, with buyers and sellers apart and tending upward; Mark Lane wheat, quiet but steady; English country markets, quiet; French, steady; wheat in Paris, quiet; flour, steady.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	June.	July.	Aug.	Sept.	Oct.	Nov.
Thursday.....	69 3/4	69 3/4	69 3/4	69 3/4	69 3/4	69 3/4
Friday.....	69 3/4	69 3/4	69 3/4	69 3/4	69 3/4	69 3/4
Saturday.....	69 3/4	69 3/4	69 3/4	69 3/4	69 3/4	69 3/4
Monday.....	69 3/4	69 3/4	69 3/4	69 3/4	69 3/4	69 3/4
Tuesday.....	69 3/4	69 3/4	69 3/4	69 3/4	69 3/4	69 3/4

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	33 3/4	33 3/4	33 3/4	Firm.
Friday.....	33 3/4	33 3/4	33 3/4	Deer.
Saturday.....	33 3/4	33 3/4	33 3/4	Quiet.
Monday.....	33 3/4	33 3/4	33 3/4	Firm.
Tuesday.....	33 3/4	33 3/4	33 3/4	Firm.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

Day.	June.	July.	Aug.	Sept.	Oct.
Thursday.....	80 1/2	81 1/2	82 1/2	83 1/2	84 1/2
Friday.....	80 1/2	81 1/2	82 1/2	83 1/2	84 1/2
Saturday.....	80 1/2	81 1/2	82 1/2	83 1/2	84 1/2
Monday.....	80 1/2	81 1/2	82 1/2	83 1/2	84 1/2
Tuesday.....	80 1/2	81 1/2	82 1/2	83 1/2	84 1/2

The closing prices for wheat have been as follows, at Chicago for the past week:

Day.	June.	July.	Aug.	Sept.
Thursday.....	78 1/2	79 1/2	80 1/2	81 1/2
Friday.....	78 1/2	79 1/2	80 1/2	81 1/2
Saturday.....	78 1/2	79 1/2	80 1/2	81 1/2
Monday.....	78 1/2	79 1/2	80 1/2	81 1/2
Tuesday.....	78 1/2	79 1/2	80 1/2	81 1/2

NEW YORK, June 5.—Wheat—82 1/2c for cash, 81 3/4c for July, 82 1/2c for August and 82 1/2c for September.

Foreign Grain Review.

LONDON, June 3.—The *Mark Lane Express* in its review of the British grain trade for the past week, says: The weather promises a good harvest. Farmers, despairing of higher prices, are delivering ten per cent more than usual. Good prospects, both at home and abroad, have knocked the bottom out of the markets. American wheat is flat and languid. South American and Australian are firmly held. Flour is steady. Barley and corn are 3d cheaper. Oats are firm. To-day's market was a little firmer, although the weather was fine and arrivals ample.

Wool.

NEW YORK, June 2.—There are but few wool buyers, and a large attendance could not be accommodated here, as the few arrivals have been sold up very close, and the remnant of desirable old is insignificant. A large and successful trade sale of woolen fabrics this week lends a buoyant tone to all the Eastern markets, and if summer prices are not inordinately strained the outlook is prosperous, as stocks evidently need replenishment. Country prices remain unbroken, and some Ohio fleeces are held at 33 1/2c. Boston notes a fair business, with no decline. Sales: 135,500 lbs. California spring, 17¢@20¢; also 151,000 lbs. of foreign and domestic. Philadelphia reports the confident position of small stocks with a quiet market.

Hops.

NEW YORK, June 2.—London cables report that the attack of lice and flies on the English hop plantations is very threatening. Some accounts indicate a more active trade in the London market in which American hops share. There was during the week a number of transactions in red Pacifics at 15¢@16¢, besides a fair trade in intermediate quality stock at corresponding prices. The market shows decidedly more tone, and prices on actual trading are a good 10 cents above the best bids made early in the week.

Another telegram from New York reports as follows: There is little doing in hops, which are held full at the late rates with a steady business. Best State brought 23c and best Pacific 21c. Cheap grades of Pacific have had a steady call from brewers at 15¢@16¢, and are tending higher. London reports show an active market in which all the Americas have shared, the demand being stimulated by an adverse early crop.

Eastern Fruit Sales.

CHICAGO, May 31.—An auction firm to-day sold for account of the agents of the California Fruit Union three carloads of California fruit, consisting of peaches, apricots and cherries. Apricots sold at \$1.70@1.80 per crate, peaches, \$2.20@2.30 per box; cherries \$3 per crate. The weather was bad and bidding was only fair to-day. Some of the apricots were too ripe and decayed.

HAYWARDS, June 1.—Returns have been received from the sale of the first carload of cherries shipped from here. They were sold in Chicago at \$1.75 per box of ten lbs. The freight per car of 1600 boxes is \$600, or 37 1/2c per box, leaving \$1.37 1/2 per box after deducting freight.

NEW YORK, June 3.—Agents of the California Fruit Union announce that the first auction sale of

California fruits will take place Thursday, and a carload of apricots and peaches will be sold. The present price, in a small way, on fruit bought in Chicago and sent here by express, is about \$3.50 to \$3 per box on apricots and peaches. Reports from Delaware show less than half a crop of peaches can be expected. The grape crop of New York is seriously injured by recent frosts.

CHICAGO, June 3.—The agents of the California Fruit Union sold fruit to-day as follows: Peaches, \$1.70@2.50; apricots, \$1.50@2.90; cherries, \$1.05@1.15; plums, \$1.45@1.85.

CHICAGO, June 4.—The agents of the California Fruit Union sold two carloads of fruit to-day as follows: Peaches, \$1.55@2.05; apricots, \$1.35@2.35; cherries, 80¢@1.45; cherry plums, \$1.15. Weather cool and the demand fair.

CHICAGO, June 5.—The California fruit sold to-day by the Adams & Lewis Auction Co. consisted of one carload of apricots, peaches, and plums. Apricots sold at \$1.90 to \$1.55; peaches, \$1.95 to \$1.60; plums, \$1.15 to 80 cents. The demand is fair.

Miscellaneous.

NEW YORK, June 2.—There have been several bright commercial incidents, including increased strength of hops, stiffer sugar and large auction sales in fancy dry goods, with one in cottons and two in flannels during the week. These have rendered the closing days of May memorable ones in trade history. The results have been very satisfactory, showing a surprisingly ready distribution of nearly \$5,000,000 worth of goods—a distribution that has a specially satisfactory significance in its widely scattered character.

Fine raisins are quoted strong since the late reduction of stock.

The first apricots were well received, being quoted at \$3 a case.

Cherries arrived in irregular condition. At the close of the week they showed a wide range of from 50c to \$2.

Ten-pound cases of peaches have sold readily at \$3@3.25 a case.

A mixed car of California fruit is expected to be sold at auction next Thursday. There promises to be an enlarged distribution of California fresh fruit this season if reasonably popular prices prevail.

A surplus of hides favors buyers, and 15c is extreme for California dry, with 16c for other high grades.

Though business of dried fruits upon the surface reflects a very quiet condition, yet in jobbing quantities there is a steady movement of supplies, and a considerable quantity of stock is being distributed in this way. The better grades of raisins and prunes have a call, but the stock of inferior grades is being gradually absorbed, and the position of the market for sound grades strengthened thereby.

at BAGS—The market for Calcuttas is very strong at 8 1/2¢@8 3/4¢ for spot and 8 1/2¢ to 8 3/4¢ for July. As he call increases, still higher prices are looked for, particularly with many of the low-contract sales tied up by the death of the seller who had either hypothecated or sold the bags to a bank in this city.

BARLEY—The sample market is quiet, with probably a steadier tone, owing to the very low quotations given. In futures, dealing continues light. At to-day's Call the following are the sales reported:

Morning Session: Buyer 1889—200 tons, 77 1/2¢; 100, 77 1/2¢; 100, 77 1/2¢; 200, 77 1/2¢; 300, 77 1/2¢; 100, 78¢; 100, 78 1/2¢. Seller 1889, new—200 tons, 69 1/2¢ @ cwt. Afternoon Session: Buyer 1889—100 tons, 78 1/2¢. Seller 1889, new—400 tons, 69 1/2¢. July—100 tons, 60¢ @ cwt.

BUTTER—As indicated in last week's Press, the market is weak and lower. Receipts are very heavy, with Eastern creamery coming in on the market. Second and third grade butter, particularly the latter, are hard to sell.

CHEESE—Receipts are lighter, but the stock is large and demand only fair. Eastern continues to come to hand in a small way.

EGGS—Receipts are increasing, which causes a weaker feeling. With continued free receipts overland, it is claimed that prices will recede. The consumption is good.

FLOUR—Shipments out of the State are increasing, lower prices inducing the buying for shipment.

WHEAT—The market for sample parcels is reported quiet and weak, with buyers bidding lower. In futures, the dealing has only been fair. Some farmers are reported to have bought futures and will sell their wheat so as to save interest and storage. The following are the sales reported on to-day's Call:

Morning Session: Buyer 1889—500 tons, \$1.32. Buyer 1889, after August 1st—200 tons, \$1.31 1/2. Seller 1889, new—100 tons, \$1.24 1/2 @ cwt. Afternoon Session: Buyer 1889—100 tons, \$1.32 1/2; 500, \$1.32 1/2; 200, \$1.32 1/2. Buyer 1889, after August 1st—800 tons, \$1.32 1/2; 100, \$1.32 1/2; 200, \$1.32 1/2; 300, \$1.32 1/2; 300, \$1.32 1/2. Seller 1889, new—200 tons, \$1.25 1/2; 500, \$1.25 1/2 @ cwt.

CARR'S BIG FENCE.—A dispatch from Portland to the *Chronicle* this week says that the civil case against Jesse D. Carr for unlawfully inclosing public lands has been postponed by the District Attorney till November—it is supposed to give Carr a chance to remove his inclosure in the meantime. The criminal suit against Carr will probably come up for trial in July.

Market Information.

Produce Receipts.

Receipts of produce at this port the week ending June 4th, were as follows:

Flour, qr. sks.	110,514	Middlings, sks.	5,506
Wheat, cts.	208,532	Alfalfa, "	—

Cereals.

The first of the new barley crop arrived in this city Saturday, consisting of a carload of 180 sks., shipped by George Benson from near Dixon, Solano county. The sample shown on 'Change was bright and clean with a good plump berry, and weighed nearly 47 lbs. to the bushel. The carload was sold to C. S. Laumeister at 75¢ @ cwt. The following shows the date of arrival and the price obtained for the first barley of each season since 1870:

Year.	Date.	Price.
1870.....	June 19	\$1 20 1/2
1871.....	June 12	1 57
1872.....	June 6	1 40
1873.....	June 5	1 10
1874.....	June 9	1 45
1875.....	June 20	1 35
1876.....	May 30	90
1877.....	June 30	1 55
1878.....	June 11	80
1879.....	June 30	75
1880.....	June 24	64 1/2
1881.....	June 21	90
1882.....	June 12	1 65
1883.....	June 25	95
1884.....	June 28	90
1885.....	June 16	1 25
1886.....	May 26	1 28
1887.....	June 3	1 15
1888.....	June 6	92 1/2
1889.....	June 1	75

The writer's returns of the wheat crop from the various agricultural sections are conflicting, although the general tenor of advices are confirmatory that the outlook will be the largest in the history of the State. The yield to the acre will not be so large as in 1880, but the increased acreage more than makes this good. Taking the Sacramento valley as a whole, it is safe to claim that the yield will be from 75 to 100 per cent more than it was in 1888. In the great San Joaquin valley the yield will be decidedly spotted, particularly on the west side, ranging from one-third to a full crop. In the central southern counties the outlook will be more even, running from 60 to 110 per cent. The more northerly counties will turn out above an average. The quality of the grain will be excellent for the early sown, with more or less shrunken in the late sown. In some of the central southern counties some rust and smut is reported. Had the April weather been cool and showery, we would have had an enormous crop; as it is we will probably have more than in 1880, when the outlook was about 1,750,000 tons.

The local wheat market the past week was quiet, with buyers still bidding down. There is some buying for Australasia. The shipments hence to that country so far in this year aggregate about 17,000 tons of wheat and flour. Their total wants are placed at about 40,000 tons. English export buyers are not operating to any extent, owing to ships' enhanced views and the unsatisfactory market abroad. At less than \$1.25 here for No. 1 white shipping, farmers will have a very hard time to make both ends meet, consequently all who can will store and borrow money, provided prices should drop below \$1.25 per cental. Harvesting has not, as yet, fairly begun.

Returns from the fields where barley harvesting is under way, report the grain looking exceedingly well, being plump and heavy. The yield to the acre is large. In the sample market, barley is quiet. New is not offering; for old, buyers are still offish. At the low prices of a few days ago, large consumers are said to have taken quite freely.

Continued heavy receipts of oats cause the market to run in the same old groove, slow and weak. To effect sales of any moment, liberal concessions, even on current low prices, are necessary.

Corn holds up well, considering the condition of the market for other cereals. Receipts are free. The prospects in this State for the incoming crop are of the very best.

Rye is weak at a further reduction in prices.

Feedstuff.

In ground feed, the call shows a slight improvement, but the heavy obtainable supplies keep prices down. It is generally claimed that the consumption from now on will gradually increase.

The market for old hay holds fairly steady, but for new, prices favor buyers. New is quotable at from \$6 to \$9.50 a ton. Owing to the hot, forcing weather soon after the rains in May, a very large number of fields of grain intended to be cut for hay matured too fast, and consequently they will be cut for cereals.

Fruit.

Apples have made their appearance in the market, but the quality is poor—too green and hard. Peaches are improving in quality, although they are still small and only fairly ripe. Blackberries came to hand the past week. For the first receipts the quality was good. Figs are in the market, but hardly enough to justify quoting. Raspberries make a better showing, with prices lower. Strawberries fluctuated considerably. There has been a wide range in prices. Some sales were made as low as \$1.50 to \$2.50 a chest, owing to the fruit being soft and over-ripe. Gooseberries, under free receipts, are in buyers' favor. The receipts of cherries have been very heavy, with one or two days showing an aggregate of 10,000 boxes for each day. The quality, both in flavor and size, runs better than last year. Toward the last receipts were lighter,

when a better tone set in. Currants are coming in quite freely. Some sales were made as low as \$1.50 a chest.

Canners are in the market for cherries, strawberries, gooseberries and currants. It is very hard to get particulars of contract sales. Why, the writer cannot say, but that canners have bought of orchardists direct is asserted to be true by dealers, but particulars are withheld.

The action of the Southern Pacific and Northern Pacific in notifying the Transcontinental Railroad Association that they will withdraw from the pool after 90 days, is looked upon by dealers as a bluff, to force better terms for them. But if they should withdraw, it is to be hoped that overland freights will recede to such low figures as to admit of heavy shipments at a profit of both dried fruits and canned fruits. The freight tariff, said to have been dictated by the S. P. R. people, discriminates against this coast.

In dried fruits, there is nothing new to report. Choice, well-selected of all kinds, are in light stock. It is claimed by many that more fruits will be dried this year than were last year.

In canned fruits the situation is unchanged. The slightly lower overland freight rates favor shipments, but the Eastern market is not in condition to take large quantities. The high cost of sugar and tin is against canners.

Royal apricots are coming in more freely, causing lower prices. At the lower range, canners are in the market. Pears are coming in, but as yet the quality is poor.

Live-Stock.

The market for bullocks and mutton sheep is dull, but not more so than usually obtains at this season of the year. It is generally claimed that prices will rule low well up to the fall months, when a slight rally is looked for. Upon what this opinion is based it is hard to say. For calves and lambs the market is fairly steady. Hogs have a weaker tone. Advices from the Central States indicate a lower range of values. Milch cows are without change. In horses there is no change to report.

The market for dressed cattle is quoted as follows: To obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent.

HOGS—On foot, grain fed, 5¢@6¢ @ lb.; dressed, 8¢@9¢ @ lb.; soft, 5¢@5 1/2¢ @ lb.; dressed, 8¢@9¢ @ lb. Stock hogs, 5¢@6¢ @ lb.

BEEF—Stall fed, 6¢@6 1/2¢ @ lb.; grass fed, extra 5¢@6¢ @ lb.; first quality, 5¢@5 1/2¢ @ lb.; second quality 4¢@5¢ @ lb.; third quality, 3¢@4¢ @ lb.; bulls and thin cows, 2¢@3¢ @ lb.

VEAL—Small, 7¢@8 1/2¢ @ lb.; large, 6¢@7 1/2¢.

MUTTON—Wethers, 5¢@5 1/2¢ @ lb.; ewes, 4¢@5¢ @ lb.; lamb, spring, 6¢@8¢ @ lb.

Vegetables.

Choice, well-matured, new potatoes are in good demand, chiefly to fill shipping orders. Other kinds are in buyers' favor.

The market for seasonal vegetables is well supplied with all kinds. The very low and unsatisfactory prices for some kinds, particularly summer squash, discourage shipments to this city. Owing to the large number of persons going to the seaside and country, the local consumption is falling off.

Canners are still in the market for peas, string beans and asparagus.

Onions continue weak at low prices.

Wool.

The market is active, with more competitive buying. Sales are reported more freely at our outside quotations, while many clips are placed at still better figures. Receipts from Oregon are increasing. The grade and condition are good, better if anything than they were last year. Stocks do not appear to be accumulating, but move off freely. Scourers are large purchasers. Last year they bought heavily at low prices and turned them out at a good profit.

Justice, Bateman & Co. of Philadelphia in their late circular say: The wool market is irregular and unsettled, mainly owing to the large amount of foreign wool and foreign goods that were reported in anticipation of the recent customs changes. Semi-manufactured scoured wool, in the shape of broken tops and similar articles, now pays 60c per pound, as against 10c per pound under former rulings of the 1867 tariff, and the woolen cloths known as worsteds now pay a specific duty of 35c per pound instead of 12c, 18c, or 24c per pound, according to the value, as heretofore. The latter decision has been made by the appraisers of the various ports only, and has not been officially confirmed by the Treasury Department at Washington, but it is expected at any moment. Without such confirmation it is not thought present prices for wool can be maintained, but the belief in speedy action on this question by the Treasury Department of those who hold wool is so great that it is firmly held at present nominal quotations.

Miscellaneous.

Poultry has held to fairly steady prices throughout the week, overland receipts being the balance-wheel. Choice hops are scarce and wanted. It is claimed that this season's crop on this coast will run up to about 100,000 bales.

Colored beans continue to hold to strong prices, but whites favor buyers. The crop this year promises to be very large.

Honey is without essential change. Buyers are offish, waiting for freer receipts of new.

In nuts there is nothing new to report. The crop promises to be only fair to the tree, although an increase in the number of bearing trees will bring the total crop well up.

From the *Commercial News* of June 5, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port	197,815	292,975
On the way to neighboring ports ..	28,327	127,425
In port, disengaged	24,377	33,691
In port, engaged for wheat	50,190	13,950

Domestic Produce.

Table with multiple columns listing various domestic produce items such as Beans and Peas, Butter, Eggs, Flour, Hops, and various fruits and vegetables, along with their prices.

Table listing various fruits and vegetables including Apples, Bananas, Lemons, Oranges, Peaches, and others, with their respective prices.

INYO SHEEP TAXES.—Sheriff Eldred of Inyo county, by persistent "rustling" among the sheepmen, had collected \$3400 for sheep-license taxes up to May 23d—so says the Independent. The entire amount collected last year was \$2600.

PACIFIC COAST WEATHER FOR THE WEEK.

(Furnished for publication in this paper by NELSON GOROM, Sergeant Signal Service Corps, U. S. A.)

Table showing Pacific Coast weather for the week, including dates (May 29-June 4) and weather conditions for various locations like Portland, Eureka, Red Bluff, Sacramento, S. Francisco, Fresno, Keeler, Los Angeles, and San Diego.

EXPLANATION.—Cl, for clear; Cy, cloudy; Fr, fair; Fy, foggy; Cm, calm; — indicates too small to measure. Temperature, wind and weather at 12:30 M. (Pacific Standard time) with amount of rainfall in the preceding 24 hours. T indicates trace of rainfall. Observations taken at 5 P. M. instead of 12 M.

Cassidy's Petaluma Fruit-Drier.

We would call the attention of Fruit-Men to the Celebrated

PETALUMA FRUIT-DRIER,

Which has THREE PATENTS, covering all the practical points—combined in one.

After twenty years' experimenting on the different modes of curing fruit, I feel confidence in coming before the public with a FRUIT-DRIER, which is as

NEAR PERFECT AS THEY CAN BE MADE.

The Points Claimed Are:

- 1st—Fruit-Raising by Mechanism.
- 2d—Air Equally Distributed Through the Fruit, which obviates burning or sweating.
- 3d—Using Petroleum or Wood for Fuel.

These Driers are built of good material, and will, with care, last for years.

Remember, one good Drier is worth more to you than several cheap, poor concerns.

Please give us a call before purchasing elsewhere.

The Sheep Tax and Lassen County.

A writer for the *Lassen Advocate* shows that his county is in a pickle over the head tax on outside sheep. We have made frequent allusion to the subject in its various phases, and the present condition of affairs is interesting. It seems that Lassen first levied the tax. This led other counties to follow suit; so sheep were hampered to some extent, which promised to regulate the outside range, and protected the local cattle and horse men considerably. However, the tax was poorly collected, and finally wound up by the board taking off the tax. This leaves the matter in an unsettled condition, as the balance of the license must be collected, or that collected refunded. This has involved a heavy expense to the county and left the condition of things in a more unsettled state of affairs than when first levied.

If this state of affairs is maintained, says the writer in the *Advocate*, we are in a peculiar location, as Modoc county has levied 7½ cents per head on sheep; Plumas county has 5 cents per head; the State of Nevada has the trespass law, which leaves a low place about the size of Lassen to be inundated with numberless thousands from all sides, and as the sheep and other stock man has a weakness for good feed and mountain water, we must expect a grand rush only surpassed by the Oklahoma rush. We must expect in return poor stock; more expense in watching our stock from being driven off, or following the meandering herd to the lower country only to be thought of when the assessor is making his annual visit among us. This will be followed by other county expenses, as men become wild on such occasions, and courts will be the only relief at the county's expense.

The conclusion would seem to be that Lassen must re-enact the tax for self-preservation unless adjoining counties discard it. The situation is interesting, if not much can be said of it otherwise.

SECURE GRAIN SAMPLES.—Almost every fall when the fairs begin many people have to lament that they did not save sheaves of some extra-fine grain that they had harvested a few weeks before. This neglect to save good specimens results in far inferior displays at the State and county fairs and at the Board of Trade headquarters than could be secured by thinking of the matter at the proper time. Let all take the subject home to their own thoughts. Select good samples, bind them up neatly and put them beyond the reach of vermin. Even if you do not care to make displays yourself, some enterprising collector in the neighborhood will probably do it, and the very little effort required to lay by the material may result in exhibits which will do your farm and your section much credit. Begin early and save what is good in grain or grass, dried fruits or other imperishable products, and don't have to regret next fall that you neglected to do it.

AUSTRALIAN APPLES.—A shipment of Australian apples arrived in good order this week and is selling at \$3 per box. The receivers think a dollar more could have been had if the fruit had come by the May steamer, before our summer fruits became so plentiful. The lot included 10 varieties of apples and the fruit is commendable.

CHINESE CHEAP LABOR AND THE SCALE.—Set a thief to catch a thief might have its analogue in setting a social pest to exterminate an entomological one. At all events, according to the *Riverside Press*, Duesy Wo Lung, a boss Chinaman of that place, makes a proposition to the

JUTE AT SAN QUENTIN.—The Board of State Prison Directors last Saturday approved the contracts entered into by the Jute Committee, purchasing 300 bales of raw jute from J. W. Grace & Co. at 4 cents a pound and 1000 bales at 3.84½ cents from R. Lichtenberg. Warden

THE YAUPON Ilex Cassine.

A Native Medicinal Tree.

A famous tree with an interesting history is the Yaupon or Cassena, of which a flowering and fruiting branch is shown on this page. It is included in the series of native medicinal growths described by Dr. Vasey, U. S. Botanist, and our engraving is from his drawing. Its botanical name is *Ilex cassine*, and it is a small tree, 15 to 25 feet in height, or only a shrub, growing in the Southern Atlantic and Gulf States, near the coast, and in the southern part of Arkansas. It is said to reach its greatest development in the river bottoms of Eastern Texas. It is a handsome evergreen. The leaves are three-quarters of an inch to an inch and a half in length, thick, smooth, shining green above, pale beneath, mostly of an oblong or ovate form, sometimes entire on the margins, sometimes with small obtuse teeth. They are alternate and very short stalked. The flowers are in small clusters in the axils or points between the leaf and the twig. They are white and minute, the parts requiring a glass for their plain discrimination. The calyx has from four to six obtuse teeth. There are from four to six sepals and as many stamens. The ovary develops into a small red berry, becoming black, of the size of a small pea. These berries consist mostly of the two to four bony seeds which they contain. The leaves have a peculiar intoxicating property, and were used by the Indians under the name of black drink, both as a medicine and as a drink of etiquette at their councils. Prof. Venable of the University of North Carolina has recently made an analysis of the leaves, and states that they contain a small percentage of caffeine, or the peculiar principle found in coffee, and in the mate, or Paraguay tea (*Ilex paraguayensis*) of South America.

THE FARMER'S BURDEN.—While parasites affect our fruit, and nearly everything we raise has its enemy, the chief monster with which farmers have to contend is the mortgage, which eats like leprosy. At first it is painless, but it soon gets such a hold that neighbors notice it, and it spreads and spreads until it compasses the farmer's destruction. Were this the only enemy, the son of the soil might hold his own; but it matters not that crops fail, sickness causes loss of time and those losses which inevitably result when workmen have no head, the mortgage which gets in its deadly work night and day, like Shylock, demands its full payment. Besides, the injustice is greatly augmented by the fact that the interest is not only exorbitant, but also that the farmer has it to pay not simply for the small amount he received, but for the amount which was taken from the total sum as commissions, examination fees, fees for recording and abstract, etc. Very likely, also, the Eastern company whose agent has loaned the money has sold the mortgage, making money by the transaction before a month has elapsed. The farmer who borrows should count well the cost, and in many cases deny himself the desired improvements rather than load himself down with a burden which it is almost impossible to remove.

The Calaveras Board of Trade was organized at San Andreas Monday evening. A delegation from the Stockton Board of Trade was present and assisted. Great enthusiasm prevailed.

local fruit-growers that he is ready to make a contract to maintain the immunity from scale of the orchards of Riverside, if he can have a seven years' contract to care for the groves of the entire city. He will give a \$10,000 bond for fulfillment of contract. There are many of the citizens who are disposed to favor some such plan. His idea is to put a crowd of Chinamen at work whenever a sign of scale is found, and wash not only the limbs but the leaves on both sides as well.

McComb's report shows a daily manufacture of 13,000 grain sacks, which are sold at the uniform price of 7½ cents, while inferior bags are bringing 8½ cents in the San Francisco market.

CLOVERDALE WOOL SALES.—Wool-growers in the vicinity of Cloverdale have set Tuesday, June 25th, for the day of general wool sales.

A FEW cases of pinkeye are reported among horses at Fresno and Petaluma.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

From Sea to Sea--No. 2.

EDITORS PRESS:—Crash, rattle, bang, drive, push, rush! that's a specimen of Chicago—at any rate Chicago during the Centennial. It's a grand city, that Queen of the Northwest. Sitting there with the blue waters of the lake rippling at her feet, and girded with her ever-green parks and boulevards, she cannot fail to command the admiration of all beholders. The day preceding the memorable 30th we spent in viewing some of the many buildings and places of special interest. Chicago's business blocks are models of their kind. The Rookery, one of the finest of these, is a magnificent 11-story structure, with archways, halls and courts finished in white marble with gilt trimmings. The whole effect of the blending of the two colors is very pleasing. The Pullman is another beautiful block, finished in dark woods and supplied with every costly furnishing imaginable. From the roof of this, a nine-story building, one has a view of Lake park and the lake, with the great Exposition building near it. This huge pile, which nevertheless looks low from where we stand, is the place where Blaine, Garfield and Cleveland were nominated, and where the great Centennial Loan Exhibition is to be held to-morrow. Looking inland from the lake, the city lies before us with volumes of smoke rolling from every chimney, for we are in the thick of the business part of the city. Now come down, and don't lose your head in these rocket-like elevators. They do go almost in the twinkling of an eye.

But we come into the cold, crisp air, and steer for the Chamber of Commerce. On our way, see! There is Owing's block, towering fourteen stories high. Not being quite completed, we are not allowed to go upon its roof; but oh, wouldn't I like to!

Yes, this handsome brick building is the Board of Trade headquarters, otherwise the Chamber of Commerce. Don't be frightened; that yelling and shouting is only the men in the wheat pit bidding for stock. We turn to the left up a broad flight of stairs and find ourselves overlooking the whole scene. This is certainly Badlam, do you say? Some one just told me that to-day things are unusually quiet.

Look first at the hall itself. Directly opposite this gallery, fronting the main entrance, are three huge dials, marked respectively wheat, corn and oats, pork. The hands are connected by wires to these little raised boxes, where the recorder of each pit is stationed. As the value changes, or rather as the price fluctuates, the recorder presses a button and the hands of the dial indicate the change.

The pits are simply raised platforms, one above another with a depression in the center. Wheat is most lively this morning, and the men stand and yell and hold up both hands in a way that makes one doubt their sanity. A splendid place for character study this! I could stay all day, it's so fascinating.

Over on the left are the sample tables, while at the right sit a perfect army of clerks, scribbling away for dear life. To look at the stately pillars one would not dream but that they were genuine. Alas! "things are not what they seem." That apparently green-veined marble is only a preparation put on over a hollow cylinder of iron!

The walls and ceiling, which are divided into compartments, were elegantly frescoed, but look rather dingy now. As a whole, it is a very fine building, and the scene one not easily forgotten. If you ever go to Chicago, don't miss seeing the Board of Trade building.

Rockville, Conn. SADIE M. HARDY.

HORTICULTURE.

A Pioneer Fruit-Grower.

EDITORS PRESS:—I have just enjoyed a visit at W. H. Pepper's orchard and nursery, about seven miles from Petaluma. It is one of the oldest and best-known establishments in the State. W. H. Pepper, the proprietor, came to the State in 1850. After mining a short time, he and his brother started into the nursery business and planted an 80-acre orchard of mixed fruits at Ballard's Bar in Yuba county, buying the trees and stocks at San Jose, Santa Clara county, paying for the trees on a basis of \$2 each for cherry trees. This orchard was very profitable until the first great burst-up in the fruit business occurred in this State, or so soon as the local supply exceeded the local demand.

In 1858 Mr. Pepper left the "up country" and located on the place he has since occupied, bringing with him a large amount of stock mostly in dormant bud, from which he planted quite a large orchard, most of which is in fine condition yet. His first love among the fruits was the cherry, and if he had known exactly which varieties to plant at the start, they would have returned him a great fortune. Yet, without experience, such as he did plant were very profitable. He planted largely of

May Duke and other Duke varieties, of which the May Duke did the best. Out of over 300 trees of these planted, I believe there are only three trees left. He has gradually changed the cherry orchard into a few of the varieties of sweet cherries that experience showed were best adapted to his soil, climate and market. He now has mostly Napoleon Bigarreau (Royal Ann) and Black Tartarian, but finds he has little use for any other cherry for market except the Napoleon. The Rockport does finely, but is too late in his climate to be of value as an early cherry. Mr. Pepper has in fruit or has fruited nearly all the best standard varieties of cherries. He also planted largely of apples and pears of many varieties. Therefore he may be considered a living encyclopedia of the fruits best adapted to the coast regions of California.

Throughout these long years he has endeavored to procure from the best sources nearly every new fruit, tree or flower, and to test their value under his own eye. He has given great attention to correct nomenclature, nearly always getting new things from two or more different sources, and bringing them quickly into fruiting or flowering by skillful grafting.

Mr. Pepper's place is about seven miles northwest of Petaluma, with a climate, for Sonoma county, poorly adapted to general fruit culture, less so, perhaps, than any other point so far from the Pacific ocean. At this point the country is open, without tree or mountain, clear to the ever-cold waters of the briny deep, a great rolling tumultuous prairie of hill and "hollow," over which the winds and fogs come rolling and tumbling, sweeping and pressing. The soil is splendid, magnificent—a fine deep sandy loam, warmed with some gravel. The aspect is mostly northerly—which exposure experience will prove best for fruits, and nearly everything else in this State. The situation is on the divide between San Pablo and Tomales bays.

The climate at this particular point is best adapted to apples, cherries, plums, including prunes, pears, and most of the small fruits. A few varieties of peaches do fairly well. Mr. Pepper has done all in his power to better his climate by planting wind-breaks across his holdings north and south. These are largely of blue gum, Monterey cypress and pines. He, as well as his big neighbor across the way, Mr. H. Meacham, strongly favors the blue gum for wind-breaks and shelter. Reasons: It is as good or better than the best for this purpose, and is immensely profitable for wood when grown, and if out for this purpose it at once grows right up again, etc. But it must have room. It robs every other tree and plant near it, except its fellows; they will grow nearer together than most any other trees, and grow wonderfully fast. Mr. Meacham has room for gums (6000 acres), while Mr. Pepper has a little garden-patch of 250 acres. The moral of this is, plant blue or red gum everywhere in this State where there is room for them; also in all waste places, damp or dry, high or low, rocky or nearly pure sand, on "slickens" or moraines; they will grow everywhere. They grow while you sleep, and in treeless regions they will prove the most profitable of crops, but don't try to grow a crop of gums and any other crop on the same land, for you just can't do it. As for wind breaks for orchards and vineyards, I do not believe in their value, and may give my reasons some time.

Value of Under-Drainage.

I did not sit down to write about fruits, fruit-growing, and wind breaks, but about Mr. Pepper's establishment, "Liberty Nurseries." As I said, the soil is first-rate—"fine" with one exception. It is underlaid at a depth of 2½ to 3½ feet with what we in California call "bedrock," a kind of "hardpan," which, on the Pepper place, is, we may say, impervious to water. Mr. Pepper found that in winter, when he wished to plant or dig nursery stock, the soil was so full of water and so soft that he could not work in it, or on top of it, so he had recourse to tile-draining, and he now has the nursery land all drained with tile. He also found that his orchard trees did not show the thrift and health that he thought they should, his idea being that with their roots in the cold, fully saturated soil, and their tops in the warm spring air, the spring growth was slow, feeble, and late, therefore liable to disease. He tiled the orchards and very great benefit resulted at once in health of tree and chance for early cultivation. No one can see these orchards without at once admitting the great advantages of tile draining, even on this sloping, sandy soil, we might say hilly. If of great benefit on such a place as Mr. Pepper's, of what great value would it be in heavier and especially in stiff clay soils? The fact is, there is no soil but what tiling would be of benefit to, except homogeneous, nearly pure, coarse sand of great depth. If the sand is fine and mixed with the least bit of clay, a hardpan or bedrock will be formed in time, not far below the surface, shutting off all under-drainage. The result is, Mr. Pepper on his tiled ground can plant or dig trees at any time during winter, when not actually raining; besides, when warm rains do come in spring, the soil is in condition to absorb them, thus warming up the soil and making spring growth a month or so earlier.

As before said, Mr. Pepper has taken great pride in testing every new thing of seeming value, and has everything sent out as true to name as possible.

The collection of ornamentals on the place is very large. Nearly everything can be found growing there that can be made grow in this

wonderful climate. Five weeks ago, when there, a splendid bed of rhododendrons was in full bloom. These need some shelter over their heads from sun and rain to do their best, and in summer and fall. At the same time camellias and azaleas were in bloom in the open air. D. B. WIER.

Petaluma, Cal., June 3d.

The Department of Agriculture and California Problems.

B. Pratt writes the following letter from Washington to Dr. O. P. Chubb, as we learn from the Orange Tribune of June 1:

Dear Sir: I arrived here May 12th, and after two days spent in seeing some of the many interesting things here to be seen, I called at the Agricultural Department to find out what was being done in relation to our grapevine disease. Mr. Galloway—the successor of Mr. Scribner as chief of that section—received me very cordially and expressed himself as highly gratified at my opportune arrival, for the expert, a Mr. Pierce, from Michigan, whom the Department had engaged to investigate the disease, had arrived in the city the day before and Mr. Galloway said he would be very glad to see me. He went and found him and brought him in, and we had a long conversation on the subject. He is a young man, unassuming in his manner, and I was very favorably impressed with him. He realizes that he has a very difficult task before him and goes with a full determination to do all that he is capable of doing to discover the cause of the disease and a remedy therefor. I was gratified to see the interest manifested by all the department officials in the matter.

When my interview ended with Mr. Pierce, Mr. Galloway said that the Assistant Secretary of Agriculture, Mr. Willets, wanted to see me, and he went with me and introduced me to Mr. Willets, who received me—as you assured me he would—with unusual cordiality. He said he felt a lively interest in the matter of the California grape disease. That he saw something of it during his visit to the Santa Ana valley and saw also the discouraged feeling of the people in consequence of it. He told me that one of the first things he inquired about after assuming the duties of his office was, "What is the Department doing about the California grape disease?" He found that arrangements had already been made to send out an expert. He assured me, and wanted me to assure the people there, that whatever can be done will be, to assist them in this emergency. He also manifested an interest in the scalebug destruction, and sent for Prof. Howard—the head of the entomological section during the absence in Europe of Prof. Riley—to have a talk with me on the success of the different washes being used to kill the bug.

Prof. Howard invited me to go to his office, and we had a long conversation on the subject. He impressed me as being a keen, efficient man and possessed of a good deal of ability. He inquired if application had been made for a patent on any of the new washes, and asked me for my opinion as to the justice and propriety of granting patents on any of them. I told him my opinion was that no patents ought to be granted and gave him my reasons for the opinion. He said that was his opinion and that he would write the Commissioner of Patents requesting him to refuse all applications for patents for bug washes. He wrote the letter, for in an interview the next day with the Assistant Secretary he told me that he approved and signed such a letter.

Mr. Pierce started for California last Thursday, May 16th, and goes direct to Los Angeles, thence to Orange, Santa Ana and Tustin. He will determine where to pursue his investigation after looking the ground over.

Grape-Growers' Meeting.

A regular meeting of the Grape-Growers' and Wine Makers' Association of California will be held on the 18th day of June, 1889, at 11 o'clock A. M. at Platt's hall, San Francisco.

Subjects for discussion: "Practical experiences in maturing wines and the proper age for bottling old wine," Arpad Harszthy and Jacob Schramm. Also the formation of a co-operative union to handle dried grapes.

E. H. RIXFORD, Secretary.

THE STATE BOARD OF SILK CULTURE met in San Francisco Saturday and discussed finances resulting from the Governor's veto of the last appropriation. It was decided to move the office and machinery into cheaper quarters. The Government experimental station will buy cocoons and the reeling will be done by the State Board. A letter from Governor Waterman suggested that the flag made from silk reeled in the State flature be presented to the cruiser San Francisco instead of the Charleston. Some exceptionally fine Japanese cocoons, raised by the public school at Centerville, Alameda county, were exhibited, and silkworm eggs were granted free to the public schools of Alvarado, Decoto, Mount Eden, Alviso, Livermore and Warm Springs, and Washington College and Livermore College.—Oakland Enquirer, June 7th.

SACRAMENTO'S census marshals enrolled 1500 less children this year than last, though nobody imagines that the number has decreased.

SHEEP AND WOOL.

Wool Facts and Figures—No. 9.

[Written for the Rural Press by J. R. F.]

The number of woolen-mills of all kinds (not including fulling-mills) was placed by statisticians in 1840 at 1420. Fully 80 per cent of them were located in the States of Massachusetts, Connecticut, New York, Vermont and Pennsylvania. By 1850 the number had increased to 139, giving a total in that year of 1559, with the mills more generally distributed in the 32 States. The census returns of that year gave the amount of capital invested at \$28,118,650, and the number of hands given employment at 39,252. The value of the product turned out was placed for the year 1849 at \$43,207,545. After 1850, owing to the rapid increase in the manufacture of worsted goods, that industry had to be kept statistically separate from the woolen manufactures. Carpets and hosiery also required separate statistics, which was followed in 1870 by statistics relative to felt goods, woolen hats and shoddy being segregated from the others.

The best informed writers on commercial topics assert with a great degree of confidence that the first decided advance to perfection in woolen manufacture was in the making of flannel goods. The first record of its manufacture being equal to the best Welsh flannels was in 1821, and the mill that turned it out was located in New York. Statistics of that period state that in 1823 about 30,000 pieces of flannels were made near Boston. In 1827 there were three mills near Newburyport that turned out yearly flannel valued at nearly \$700,000. In 1829 the first large flannel factory was established. The owner was Henry Stevens. The mill had a capacity of about 150,000 yards a year. In 1849 two flannel-mills were in operation at Dover, N. H. In 1860, it is stated, the Bay State and Ballard Vale Mills and also the mills of Gilbert and Stevens at Ware, Mass., made flannels in every respect equal to the very best imported; while the shawls, balmorals, fancy flannels, shirtings and opera cloakings turned out at the mills at Waterloo, N. Y., and Laconia, N. H., could not be excelled. The high reputation achieved at that time for our flannels has been fully maintained since.

The first mention of the making of blankets in this country was in 1831, at a factory located in Pendleton district, S. C. The blankets turned out were manufactured of cotton warp and designed for negro use. In the same year a large factory was built near Buffalo, N. Y., for the manufacture of Mackinaw or Indian blankets. By 1860, blankets were made in 19 different States. In that year the number turned out was by census returns placed at 616,400, and were manufactured principally in the States of California, Maine, Massachusetts, New Hampshire and Pennsylvania. Since that year, under many improvements, there has been a steady increase in the quality and also the number of blankets turned out. According to the census returns, there were in the United States in 1860, 1263 woolen-mills, having a capital of \$30,922,654, consuming 83,608,468 pounds of wool, giving employment to 43,738 hands, to whom \$10,153,938 wages were paid. The average annual wages in 1850 was \$205, and in 1860, \$237. The average value of the product per hand was, in 1858, \$1248, and in 1860, \$1496. In 1870 the number of woolen-mills had increased to 2993, the capital invested to \$108,910,369, the number of pounds of wool consumed to 172,078,919, the number of hands employed to 92,973, and the annual wages paid to \$31,246,432. The census returns for 1880 give the number of woolen factories at 2689, of which number 1992 were classed as properly woolen factories (the remainder, 991, were classed as fulling or carding mills); the number of hands employed is given at 161,557, capital invested, \$159,091,869; wages paid, \$47,389,087; and the annual product, \$287,252,913.

According to the census returns of 1870, the following were the leading industries in this country, yielding in the order given: 1, flour and grist mills; 2, slaughter and meat packing; 3, iron and steel manufacture; 4, sawmills; 5, foundries and machine shops; 6, cotton-goods manufactures; 7, woolen manufactures. The returns of 1880 place woolen goods fourth in the list of leading industries.

An Eastern exchange of a recent date says: "Of late years the productive-power of woolen machinery has greatly increased, so that the number of mills or number of sets of cards is no index of the condition of manufacture. For example, in 1870, 8352 sets of cards used only 208,916,928 pounds of all materials, or 25,014 pounds per set; while in 1880, 5961 sets used 276,948,060 pounds of all materials, or 46,460 pounds per set, thus nearly doubling in productive power. Again, in New England there was from 1870 to 1880 a reduction in the sets of cards from 3358 to 2922 (nearly 13 per cent decrease); and during the same period the pounds of material used increased from 116,511,379 to 156,091,549 (an increase of about 33 per cent). In 1880 the great bulk of woolen manufacture was carried on in nine States, and in the order named: 1, Massachusetts; 2, Pennsylvania; 3, Connecticut; 4, Rhode Island; 5, New York; 6, New Hampshire; 7, Maine; 8, New Jersey; 9, Vermont. The following were the seven leading cities in woolen manufacture

in the order named, viz.: 1, Philadelphia; 2, Lawrence; 3, Providence; 4, Lowell; 5, New York; 6, Manchester; 7, Boston. In the same year (1880) 61 per cent of the hands employed in woolen-mills were natives and 39 per cent were foreigners."

In 1860, under worsted manufactures were included, by census returns, all-wool and cotton warp, delaines, challies, bareges, imitation bareges, all-wool and part-wool reps and worsted yarns for carpets and hosiery. Although the above goods were manufactured in several States, yet the large proportion was turned out by three mills only. In 1868, diagonal and other worsteds were added for men's wear. Owing to their rapid growth in popular favor, a decided revolution was wrought in worsted manufactures. In attestation of this, statistics show that in 1867 there were only a few combs running, but in 1880 there were 360 combs, and in 1886 there were 563 in active operation.

The census returns for 1870 show that the number of worsted-mills in the United States was 102, with \$10,085,000 capital invested. They gave employment to 12,920 hands, with a payroll of \$4,368,857. In 1880 the capital invested had increased to \$20,374,043; hands employed to 18,803, and the payroll to \$5,683,027. It is claimed by Eastern dry-goods journals that the industry has continued to increase in importance since the last census returns. In 1885 the *United States Economist* estimated the combing-wool clip of the United States to be fully 80,000,000 pounds below the annual consumption.

Southdown Breeders' Association.

EDITORS PRESS:—At the Eighth Annual Meeting of the American Southdown Association held in the Leland hotel, Springfield, Ill., the reports of the officers showed the association in good condition financially, with two volumes of the "Record" before the public, a third volume soon to be ready for distribution, and the work of compiling the fourth well advanced.

The election of officers for the ensuing year resulted as follows: J. H. Potts, Jacksonville, Ill., president; S. E. Prather, Springfield, Ill., secretary; D. W. Smith, Bates, Ill., treasurer. Three directors to serve for three years each were also chosen, viz.: C. M. Clay of Kentucky (re-elected), John Jackson, Ontario, Canada, and Levi P. Morton of New York.

To members of the association the price of the "Record" was reduced to \$2.50 per volume. The price to non-members is \$5 per volume.

The entry fees for animals bred in America are as follows:

Owned by members of the association . . . \$1.00 each
Owned by non-members of the association 2.00 each

The entry fees for animals imported from Great Britain or Ireland since April 1, 1889, . . . \$5.00 each
Animals imported prior to April 1, 1889, the same as for animals bred in America.

Entries of the dead ancestors of imported animals to complete pedigrees . . . Free
Transfers of ownership25

The association was never in better condition for efficient service in promoting the sheep-breeding interest of the country than it is to day.

PHIL THURTON.

Springfield, Ill.

POULTRY YARD.

Various Topics.

O. J. Albee gives the following notes in the *May Cackler*:

Keeping the Chicks Warm and Dry.

I think if Mrs. Geo. E. Duden had not furnished her broods with the warm coops with dry floors to run in when they felt the need, she would not have had a very healthy flock at the close of the storm. Chicks seem to enjoy a light shower of rain as well as ducks, running out and scratching as if their life depended on their working over just so many feet of the flower-bed before night; but if you are observing, you will see them frequently run in the warm coops, as if to warm their little feet a few minutes, then out and at it again. I claim that chickens can be raised with the least trouble and loss during our rainy season than any part of the year, always provided you give them warm coops with dry floors, keeping free from vermin. You will scarcely ever have a droopy chick. I keep the hen confined all the time, closing the coops at night so the little ones cannot come out until I feed. Judging by myself, I think they ought to have a full stomach before starting in on the day's work. If Mrs. Duden will try about an inch of dry earth or sand on floor of coops, she will find it preferable to straw; it absorbs the moisture, is also a deodorizer, and does not make a litter around the premises.

Green Food for the Chicks.

The plan I have followed this season so far has given me as little labor, with as good, if not better, results than ever before. After the first rains I sowed oats in a small inclosure of about 30x50 feet of ground; when about six inches high I began cutting, and it has furnished my flock with green feed, both large and small, from one brood along up to 400 chicks. I give brooder chicks all they can eat cut fine at least

three times per day, the feed just before they go to bed; old fowls supply a single case of diarrhea this season. thinning out yellow globe beets for food, of which they are very fond. For a change, cut alfalfa later; have cabbage growing; when onions get down within reach of the average poultryman's purse, I feed them chopped fine with meat twice a week; with the sprouted barley they do very well. It is all very well to talk of giving fowls the run of the ranch where there is but one variety kept, but when it comes to five or six it is quite another matter. Again, I have seen ranches that if the fowls depended on the free run of it for green feed they would have short rations, I assure you—not a spear of anything green from about the first of July to December; no use talking, fowls to do their best must be furnished with plenty of green feed.

Patching Eggs.

If eggs for hatching get slightly broken or cracked, don't throw them away in disgust. I recently received eggs from the East, and one being broken badly had wet the bottom of the basket so that the other eggs became glued fast. In trying to separate them it left a piece of shell, but did not break the inner skin. Being on the small end, I pasted over it a piece of paper and put under the hen with the rest. Result, a nice strong chick from the broken egg; have done the same thing in incubator, but never before under a hen.

EGGS VS ORANGES.—While eggs are often, though vulgarly, called "hen fruit," the raising of hens has never yet been classed as a branch of horticulture. It may not be amiss, however, since the public mind is so much bent upon the subject of fruit, particularly citrus fruit, to institute a comparison between the humble hen and the stately orange trees. An orange does not bear comparison with an egg in respect to intrinsic value as food, and the market price of eggs in San Francisco is usually greater than growers can command for oranges; the hen comes into bearing at the age of six months, without grafting, while the orange tree does not bear short of six or eight years from the seed. The hen is never injured by the frost, requires no irrigation, no spray for insect pests, flourishes on any soil and needs no cultivation. None of these claims are to be made for the orange trees. A hen will lay her weight in eggs many times over, and finally sell for a good price as a "spring chicken," long before an orange tree is anything but an expense to its owner. And yet the hen is greatly neglected in California as a source of profit. The San Francisco market is largely supplied at this season of the year with eggs and poultry brought several thousand miles from Eastern points.—*Iron Echo*.

THE APIARY.

The Bay State Reversible Hive.

EDITORS PRESS:—In answer to your correspondent who asked some time ago which is the best hive, I will say that there are two types or classes of hives, both of which are best; and from a dozen to twenty modifications of these, all of which are best; that is, in the opinions of those who designed them or are using them.

While the standard Langstroth is the most generally used and is very hard to beat, I suppose that Alley's Bay State Reversible hive is its closest rival, and is perhaps likely in the long run to come out ahead. The principle of the hive consists in eight closed-end standing frames clamped tightly together by means of iron rods which pass through the projecting side boards,

FIG. 1.—Exterior View of Bay State Hive.

one at each end just without the ends of the frames, and are provided with wing-nuts that are screwed on to the end of the rod. A good set of measurements is the following:

End bars (which are to be nailed to top and bottom bars) 9½ inches long, 1½ inches wide; and Top and bottom bars, 16½ inches long, 13-16 inch wide; both ends and tops and bottoms ½ inch thick.

This gives a frame whose dimensions are the same as those of the simplicity Langstroth. The end bars are to project just 3-16 inch beyond top and bottoms, making twice 3-16 or ⅓ inch to deduct in computing measurement of frame.

For "super," use stuff ½ inch thick for end bars and have tops and bottoms plump 17 inches long. If you cannot conveniently get ½ inch stuff, change the measurement given above to plump 17 inches for length of tops

and bottoms for brood frames, so that both stories will be of a length.

Have width of end bars of super frames 1½, 1¾, or 2 inches wide to suit width of your sections for comb-honey, but for extracted honey, have them just like the brood frames and interchangeable.

The sides of hive have width equal length of end bars and project beyond sufficiently far to give the rods a secure hold. The rods nearly touch the end bars.

The cover and bottom of hive are in width equal to width of eight frames plus thickness of the two sides, and are enough longer than hive for alighting room. I like to make cover and bottom interchangeable by having one side of the board fitted thus:

Improved Bottom-Board.

Saw two parallel cuts into one end of board, or rather into the surface at one end, and chisel out a slanting groove or gutter. Then tack or nail a rim all around one-half inch deep on which the hive is to set. This keeps the bottom bars over three-quarters inch from the bottom of the hive, which is good, especially in hot weather. The bees alight at entrance of the groove and run in under the rim just mentioned.

The sketch of the bottom which I use shows the way I apply end cleats to prevent warping. If the hive-maker choose to take the trouble to

FIG. 2.—View of Broodnest Bottom-Board, Two Sections and Honey-Board.

make it of two boards fitted together at side edges, he can make them as wide as the length of bottom and thus have the grain of the wood run crosswise, in which case the side strips may be changed to strong cleats nailed on as is the back cleat. Individual ingenuity will suggest these minor matters. End-bar projections rest upon front and back strips, and sideboards rest upon side strips. I don't know that my manner of making cover and bottom is as good as

FIG. 3.—View of Bottom-Board, Brood-Chamber and One Case of Sections. One Side of the Section-Case and One Side of the Brood-Chamber are Removed.

Mr. Alley's. Never having incurred the expense of freighting sample hive here, I cannot say whether his covers and bottoms are interchangeable or not.

This hive can be reversed either in a body or frame by frame, and can be handled very rapidly when full. Unscrew the wing-nuts a little and move out the side board slightly. Remove any frame you like, and in replacing it, slide it down between the others, thus pushing the bees out of the way. Use a little care in setting it down when it reaches the bottom; any experienced bee-keeper knows better than he can explain how to avoid crushing bees. Rods of ½-inch iron. The hive put together looks much as appears by the engraving given here with, but the bottom board is different from the one I have described.

The hive is the invention of Henry Alley, editor of *American Apiculturist*, Menham, Mass. Mr. Alley perfected his invention two or three years ago, and gave it freely to bee-keepers without a patent.

The measurements I give are not quite identical with his own. I do not know just what his measurements are. The hive secures all the modern methods of manipulation and is as simple in construction as any hive can be.

If you want the hive to be 20 inches long, outside measure, increase length of top and bottom bars to 19½. The 3-16 inch projections of end bars secure ½ inch bee-space when super is on.

Bee-keepers may, in my opinion, consider Mr. Alley their benefactor for giving them so good a hive as this without a patent.

A. NORTON.

ENTOMOLOGICAL.

"Where Moth Doth Not Corrupt."

EDITORS PRESS:—The Bible would have us believe that but one place is free from this all-pervading nuisance. In this belief every fruit-grower, be he ever so skeptical otherwise, will coincide. The moth possesses that peculiar faculty in its fullest degree of "getting there," and that on schedule time; nothing baffles him. Naturalists tell us that the male moth will scent the female, though she be several hundred yards distant and at the bottom of a long chimney. Of what use is it to try and conceal your choice fruit from so keen a "scenter"? I have tried various ways to baffle him, but he has always come out on top, and now I want a little information from some one whose experience with Mr. Moth has been the reverse of mine. I put dried fruit up in gunnysacks—moths got it. I put it in tight barrels and sealed up every crevice—moths got it. I put fruit in muslin sacks, tied up securely—moths got it. I put it—the fruit—in paper sacks sealed up—moths got it. I sulphured the fruit before I packed it. The moth that takes this abiding interest in my dried fruit is, more properly speaking, a fly—a little insignificant black fly, with purple wings; a pigmy among flies, but he's like the fly in the "apothecaries' ointment"—he spoils the whole. His larva is about an eighth to a quarter of an inch in length, a sixteenth of an inch in thickness, and is very white. What long handle has he to his name? for it's sure to be the opposite of his size and only equal to his destructive width. Next season I shall try tin cans. If then he succeeds in insinuating himself into my dried fruit, I shall quit the business and depend upon my neighbors, who have their dried fruit in open boxes, barrels and sacks, and are exempt from the nuisance.

And again, I want to know if a seedless apple will be free from the ravages of the codlin moth? Has any one tried the variety in an infected section? If so, what was the result? I don't want to give up my apple trees. A few years ago we sang:

"Lo! sweetened with the summer light,
The full-juiced apple waxing ever mellow,
Drops in a silent autumn night."

That was before Mr. Codlin Moth coddled the apple and got the "drop" on it. Now we wail:

"Lo! bored from calyx to the seed,
A mass of filthy matter
The apple, coddled by the moth,
Drops—silent to the gutter!"

That is, the apple is silent; the purchaser is generally the opposite. We were promised a friend in the lace-winged fly, but he evidently became satiated with the fullness of his feed and left for other shores, as I have not seen him, though I do see a fuzzy fly, with a rapier-like tongue, after the red spider. Who is he? But to get back to Mr. Codlin—is there no remedy for him? Is he to be one of those "yesterday, to-day, and forever" visitations? He is a bad fellow, but a saint compared with Mr. Woolly Aphis. Mexicans tell me that in Old Mexico fine apple orchards were once the rule, but the aphid took hold and they became as a tradition—a thing of the past. Mr. Rhodda of Grass Valley and Mr. T. R. Smith of West Point tell me that the "stinking ants" of the woods will carry off every one of the aphid, but when I asked, "Will they clean the roots?" they could not tell. Here a tree, and there a tree, the old apple trees are going, while the young trees refuse to grow in their place; not so much on account of the aphid as the apple blight. The bark turns yellow and then covers over with a black substance like smut, and the tree is gone. Who is the Moses that will lead the apple-grower back into his former Canaan, where

"Every prospect pleased him and only man was vile."

A few years since I was tempted to go out of the honey business. Robber bees and moths undid all my work and I had less than nothing for my labor; but I got in the Italian bees, and presto! the whole business changed; the robber from the woods found one ready to do him battle, and in every instance the Italian came off conqueror. The moth's eggs no sooner matured and started out on a search for comb than he was seized and carried out. The cool hours of the day, spring showers, or distance to bloom did not deter the Italian; in consequence, a stand of Italians would put up 250 pounds of comb honey, while the adjoining stand of black bees starved and died. Can the codlin moth and woolly aphid be met in the same way? Is there no variety of apple stock exempt from the attacks of the aphid? Would a seedless apple be free from the codlin moth?

Murphys, Cal.

E. H. SCHAEFFLE.

THE marble statue of the goddess Pomona, presented to the city of Pomona by Rev. O. F. Loop, will be unveiled on the Fourth of July. It is five feet high and is a copy of the statue exhumed about 40 years ago and now in one of the large galleries of Florence. The original is supposed to be 2400 years old.

THERE are at Los Angeles two Benedictine abbots, who are Indian missionaries. It is their intention to erect a monastery and school at San Bernardino.

Some Things in Our Grange Edition.

In our Grange Edition to lay the following matters of interest are mentioned at more or less length:

To be Effective, Suggestions for New Granges, A Compliment for Our Oregon Department, Bro. F. B. Logan's Work, The Grange in Washington Territory, From Woodburn, Short Mention, Oak View Grange, Welcome from Salem Grange, Response by Bro. Sample, Condition of the Farmers as I Have Found Them, On the Wing, Granger Campers.

State Grange Meeting.

We have not thought it advisable to publish much considering the next State Grange meeting in connection with National Grange until there was a surety that the National Grange would be held in California. Brother Moore's communication in our last issue presents some apparently good arguments for doing away with the regular holding of our State Grange meeting.

So far as we know, Bro. Talbot of Tulare (as long ago as last March) was first to suggest the holding of both sessions in conjunction. At first glance it seemed a fine idea. We are now, however, aware that there is much difference of opinion on this subject. Some of our oldest and best Patrons accord with Brother Moore in his views. But a good deal of reflection on the matter has confirmed us in the belief that we cannot afford to give up holding a "regular built" State Grange session, and that at the time set by the Constitution and at the place designated by the State Grange.

The strength and beauty of our State Grange lies much in its educational, social and fraternal features and influences. Matters are discussed in our subordinate Granges during the year and questions that arise are laid away to be finally disposed of at the session of the State Grange. Essays, addresses are written, and even speeches are more or less prepared for the State Grange. It is the popular annual meeting of Patrons and Matrons for conference, to exchange greetings and ideas, and it fills a large place in keeping life and interest in our Order in a manner not otherwise provided for.

The touching of hearts, hands and minds of four or five hundred representative Patrons, gathered from one end of the State to the other, at our annual State assemblages, and the inspiration gained thereby through the general transactions, discussions, instructions in secret work, conferring of degrees and the good time had generally, returns an influence to the subordinate Granges throughout the State that cannot even for one year well be dispensed with. To attempt to hold such a session a week before the National Grange opens, we think would be largely a failure, even if a fair attendance could be obtained. But we do not believe that more than half the usual number would attend under such circumstances.

The National Grange session usually lasts ten days. To commence to hold the State Grange a week before, or even a few days earlier, would require members and visitors to be absent from home too long a time. Many would find it so difficult that they would only attempt to spend a week or ten days in attendance. Any Patron can readily imagine that most Patrons would forego a part, or the whole, of one session of the State Grange rather than miss that of the National Grange. Therefore the State Grange would surely be the one to suffer.

Could not the Order better get on without the National Grange session than without a successful session of the State Grange? It is a question worth considering. To be sure, there are some who cannot well attend both who may stay away from the State Grange, but are there not, on the other hand, an equal number who would find it more convenient to be away from home at the time of two occasions better than to be absent from two to three weeks on one occasion?

As far as railroad fare is concerned to a large majority, the total expense of attending two sessions at Sacramento will not amount to so very much more than the railroad fare was last year to Tulare, owing to the more central position of Sacramento to the Grange as a whole.

The election of State Grange officers occurs this year. For this as well as some other reasons there should be a large attendance. There should be plenty of time for deliberate action.

There are a great many who have not yet received the sixth degree. It is best that they should take the same in ample form in the State Grange. Sacramento being a central location, there ought to be many who can and will afford to come and take that degree, and be better prepared for receiving the seventh at the National Grange.

On the first of October there will yet be considerable work to be done to prepare to make the best of the National Grange session. If we hold a good State Grange session then, the Patrons of our own State will be more enthused and more likely to return to Sacramento

to the National Grange with a larger number of enthusiastic visitors, in our opinion, than if we do not hold the State Grange at the time and place appointed.

These, however, are only our individual opinions, expressed with sincerity, and, as we believe, for the good of the Order, and in nowise for any personal interest or gratification. Let us all try to make the most we can of our State gathering. The National Grange will not like to meet but once on our coast. Can we not afford the power necessary to do it justice all extra? Cannot we make the coming of the National Grange the opportunity for holding the largest and best State Grange session of all?

San Jose Grange.

About 30 members were gathered at the hall of San Jose Grange on the 8th inst., when the Master sounded his gavel to open the meeting of the day. There were representatives from Evergreen, Los Gatos, Santa Clara, Mountain View and the Santa Cruz mountains. Numerous bouquets of bright flowers graced the tables, and several opening buds of the great flowered magnolia made each a bouquet of itself.

The routine work was speedily completed. There were none sick or needing help, and no pressing business awaited attention.

Capt. Frank Dunn presented resolutions of sympathy with the Pennsylvania sufferers, which were adopted, and \$63.50 was ordered paid over to Mayor Boring for the relief fund. Were it not for the fact that several members had previously contributed through other Orders and in other channels, the amount would have been much greater.

Mrs. Wingate, a member of the Committee on Library Work for the day, read an article entitled "How Mrs. Wiggins Painted Her House," which might be taken as a warning that when so important a job is before the consideration of the household, it is more prudent to employ a professional painter than to attempt to economize by doing it yourself.

No more business demanding attention, the regular session closed. A Mr. Frazer, representing a firm of fruit-dealers in Minneapolis, was introduced and explained to some extent the favorable nature of his city as a market for fresh fruits. Minneapolis and its neighbor city, St. Paul, had 400,000 inhabitants within a circle of 20 miles, and in all the country round about there is so little fruit raised that it may practically be said there is none at all. He was questioned as to prospects, rates and other matters, and kindly thanked for the information.—*Mercury*

Frisbie-Shriver Nuptials.

Merced Grange had a quiet wedding within her gates on the 1st instant. The contracting parties were Bro. B. F. Frisbie of Yuba City Grange and Sister Edith S. Shriver, Flora of Merced Grange. Sister Shriver is a daughter of Mrs. Ella S. Elliott and stepdaughter of W. E. Elliott, Past Master of Merced Grange. A large company was present, the Secretary having notified the members there would be a feast and unusual business on that day. The wedding was a surprise to the Grange, as only a few old friends of the bride and her mother were notified. Sisters Atwater, Healy and Ostrander assisted Bro. and Sister Elliott in entertaining their friends, it being understood there would be no cards or presents. An abundance of flowers and evergreens decorated the hall, and all the appointments of the wedding were as choice as could be wished. The wedding march was well rendered on the organ, after which the ceremony was performed by G. W. Lyons, pastor of the First Presbyterian Church of Merced. On the conclusion of the ceremony, the guests adjourned to the banquet room, where an elegant dinner was partaken of. Worthy Master M. D. Atwater in behalf of the Grange presented the bride with a solid silver berry spoon, and expressed regret that Merced was to lose one of her best Grange workers.

After receiving the congratulations of the company, the happy couple took the train for their future home in Sutter county.

A VISIT TO OREGON.—Our recent visit to the State Grange at Salem and some other parts of Oregon was one of much satisfaction to ourselves. We owe a great debt for the kindness of Patrons and many others whom we met. We were more than pleased with the country, the towns and the cities visited, and our intercourse with the people met. We are more than ever convinced that Oregon and Washington Territory have a large share of prosperity in store for them, and shall take pleasure in speaking in further mention of matters of interest observed during our very delightful journey to and sojourn in our north bordering State.

THE NATIONAL GRANGE.—From a late letter to Worthy Master Overhiser from Bro. Woodman, Sec'y of the Executive Committee of the National Grange (although not quite sure) we certainly expect that the next National Grange session will be held at Sacramento. Definite word will soon be expected from the N. G. Committee.

THE DARDEN MEMORIAL FUND amounts to \$1185.95. Massachusetts leads the list of States with \$349.40, and New Hampshire is second with \$234.31.—*New England Farmer*.

Sharp Points of a Thistle.

MESSRS. EDITORS:—Sacramento Grange held one of her rousing, old-time meetings to-day; in fact, all of the meetings lately have been old-time ones. I like enthusiasm because it bears the stamp of sincerity. Such a perfect bouquet of humanity as the young and old formed to-day, one rarely has the pleasure of seeing. May and December and June and January were there, and the hard lines of relentless age were so softened by the magic effect of wreathing smiles it certainly was hard to tell who was May or who was December. I enjoy witnessing the mingling of youth and old age. I like to see youth pay homage to old age, and I like to see old age reciprocate.

To-day we had two new acquisitions, E. Caselman and Dr. William Wood, a large vineyardist. I say large vineyardist, meaning his vineyards contain many broad acres; still if any reader construes this into meaning our brother, who is known far and near by the endearing name "Doc," is personally large, he can do so quite properly, for the genial doctor has evidently been bent on acquiring all the diameter he has found of late lying around loose, from the inflated appearance of his jacket.

Our popular brother, Robert E. Greer, who is at present connected with the University of the Pacific, attended Grange yesterday and spoke in his usual smooth, pleasing way. Whether our genial brother has actually served out his term or was pardoned by the Governor is simply a matter of conjecture.

Sacramento county Grangers are busily engaged in farm duties at present. The Grangers here believe in working like the ant in summer. They believe in laying up a store while the sun shines, for rainy days. They are right. I can't see how any mortal who lives on love and poetry and rose-leaves in the summer can have the "nerve" to expect corned-beef and cabbage in the winter. This world owes no one a living, and if you get one out of it, you have got to twist it out. I notice those who studiously avoid getting warm in the summer invariably shiver all winter. Who cares if their teeth do chatter? Not Edwin Thistle. When I see a woman shivering in January, I say to myself, "Oh! I don't pity you, because, during the summer, you were too lazy to darn socks." When I see a big, strapping fellow shivering in January, I say to myself, "Oh! I have no pity for you, for during the summer you were too confoundedly lazy to saw wood." If a man will only catch hold and pull and shove and twist a little, in this glorious land of sunshine and prosperity, he need not shiver in winter. Chattering teeth and bumping knees come because the owner wants them. They are self-imposed.

If I am correctly informed, two of our prominent young Grangers will be united in marriage this week. I think the above trustworthy, for the most advanced symptoms were apparent a year ago. The action of these wide-awake Grangers should be applauded. There are many more in Sacramento Grange who ought to do likewise. When a young man reaches the age of 30 or thereabouts and has not confidentially told Betsy Ann he adores her, and tries to capture her for keeps, he ought indeed to be pushed head first through a spanking machine, with the spanker decorated with hob-nails and driven by hydraulic pressure, with the distinct understanding if he does not mend his ways and do the right thing, the dose will be largely repeated at regular intervals until he does.

The average young man is evidently looking for a wife who is rich as Ceres, lovely as Venus, wise as Minerva, stately as Juno, graceful as Hebe, with an education sufficient to paralyze a college professor, and good as pie. And, on the other hand, many a young lady expects her Charles Algernon to be a beautiful conglomeration of Apollo, Balder, a roaring lion, a Socrates, a Granger, a Hercules, a Byron and a saint. When all of the above qualities concentrate in one poor mortal, they kill him off early in life.

When I selected Sister Thistle, I did so because I thought her as good as pie. She is as good as pie, not pie fallen from the crust, either. I walked up like a little man, threw the dice, and took the consequences. And I am far from being sorry. To be sure, after we acquired Bobby it looked a little blue at times. I don't regret having acquired him, for some day he will be, I hope, a great baseball pitcher. I hope he will be proficient enough to strike out 10 men, make 11 assists, 12 put-outs and four three-baggers, without an error in one game. Jupiter Olympus, what a record that would be! How it would cause sunshine to pour into this withered heart! Like Homer, seven cities would claim Bobby's birth. They would do him in clay. They would search far and near for Praxiteles. Let the day come. Hail Columbia, happy land! Faithfully and fraternally,

EDWIN THISTLE.

WHEATLAND GRANGE STRAWBERRY FESTIVAL.—The attendance at the strawberry festival of Wheatland Grange on the 1st inst. was not up to the standard. The ladies were in the majority, from which we may infer the attention of the Granger was needed at home to look out for his ripening crops. Nevertheless those who had assembled were in the right mood to enjoy themselves, and they did. Lunch was served at 12 o'clock, and such a lunch made up of the finest in the Grangers' culinary department and garden. Fully an hour was spent in lingering over the choice desserts of strawberries and

cream, ice cream and early fruits. Shortly after lunch all assembled in the hall to participate in a short program which had been prepared. It was composed of singing, recitation and speaking. One thing noticeable, each speaker could not refrain from speaking of the lunch; it was a hard matter for them to choose language to do justice to it and the fair ladies who prepared it.—*Four Corners*.

Babies' Rights.

A Reply to Bro. Edwin Thistle by a Sister Granger.

Being a mother of two children, I wish to reply to Bro. Thistle's letter which appeared in your issue of May 18th.

I coincide with Bro. Hancock in his statement that we are producing some of the finest babies of the land; and I also maintain that to make them the men and women of the future, we must rear them carefully and with much judgment.

If we would have them strong and blest with good health, they must have proper attention in infancy and childhood.

Knowing well Bro. Thistle's great desire to possess a promising family, I feel it my duty to give him a word of caution. I fear he may not sufficiently understand the laws laid down for babies; and through his enthusiasm for the Grange, may expose Bobby and possibly ruin his health for life. I thoroughly believe in enthusiastic Grangers. I have been a member of the Order for several years, and am deeply interested in it. I feel that much good is to result from the meetings, and that the expression of opinions and ideas by brother and sister Grangers, who speak and write from a lifetime experience, will have its benefits. But I do not believe in being so enthusiastic as to neglect or misuse the babies, our future Grangers.

Now, I think, Bro. Thistle, to take Bobby to the Grange, a distance of seven miles, expose him to the cold, with a feverish and swollen gum, caused by that new tooth, was all wrong. In fact it was cruel. You should have more consideration for your Bobby, and, above all, for your wife. It is she who will have to sit up until midnight, trying to subdue his cries of pain, and all the while you dream and snore.

If you must attend the Grange, as a loving husband you will, of course, want Sister Thistle to accompany you. Then open your purse and hire a nurse for Bobby. Leave him at home when the next tooth appears, and with such careful attention all through his childhood, he will grow to manhood with the sentiment: "My kind, generous, noble father."

Roseville Grange Advancing.

Bro. E. L. Hawk, Master of Roseville Grange, was in this city last week and informs us that his Grange is prosperous. The visit of Bros. Overhiser and Flint to this Grange last year awakened quite an interest among the members, which has been kept up since. The Grange has started a library for the use of its members. Some of the brothers built a bookcase to hold the books, ten volumes of which were presented by Bro. Hawk. They expect to increase their stock of literature, both by donation and purchase by the Grange, and hope, before long, to have a well-selected library which will be both useful and entertaining to the members.

Probably in no way can a Grange awaken more interest than by the purchase of a library. A well-selected collection of agricultural, horticultural and stock literature will be of great value to the members, who should be permitted to refer to them at all times. The sisters should also be consulted in regard to books that will suit their needs and desires.

We hope Roseville Grange will enlarge upon this new departure, and strive to make their library a valued adjunct to their sphere of usefulness.

Bro. Hawk informs us that four new members were added to the roll at their last meeting, and literary exercises are being taken up with lively interest by the members.

The Interstate Picnic.

The Williams' Grove Interstate Picnic is advertised to open August 27th and continue until September 1st. During the great storm, which flooded many valleys in Pennsylvania and occasioned a great loss of life, the Williams' Grove picnic grounds were completely submerged and several of the buildings swept away. All the bridges were also carried down the current.

As there is about three months' time in which to repair the damage, we presume that the loss will not occasion a change of date.

Williams' Grove, where the great picnic is held, is in Cumberland county, Pennsylvania, about three miles south of Harrisburg, on the Susquehanna river, where large grounds are laid out and buildings erected for the gatherings each year. The coming meeting will be the sixteenth annual gathering at this grove.

Previous to the flood, Bro. R. H. Thomas reported that never in any former year had there been as great a demand for space for exhibits so early in the season. This picnic has a national reputation as being the largest gathering under Grange management in the United States, and we think that, so long as the ground is left in the grove, the picnic will be held, as largely attended and as thoroughly enjoyed as ever.

The Elective Franchise.

Its Extension to Woman a Political Necessity, and the Greatest and Most Urgent Demand of Our Times.

[Written for the Pacific Rural Press by FRANK WILLARD KIMBALL.]

How to govern the world is every day becoming a more serious question. How to procure wise and just legislation, to enforce law and correct existing abuses and corruptions, and to lift our political life out of the "mud and mire" into which it has sunk, is a question so intimately connected with the progress or retrogression of this Republic—nay, with its very life or death, that it should challenge the earnest consideration of every thinking and patriotic American. The success of our Government has been from the outset so phenomenal and grand that its origin and nature have come to be surrounded, in many minds, by a profound mystery. Consequently our people have come to believe their institutions ideal, and have so allowed their opinions to be molded by the praises of other peoples and nations that they have been blinded to the needs of internal improvements and the danger emanating from this neglect. In fact, the eulogy upon our lands and institutions has become so common and incessant that the American mind has reclined to bask in their pleasant sunlight and quaffed its sweet ambrosia until it is intoxicated—thoroughly intoxicated—and a willing recipient of flattering words.

The pulpit as well as the press has been susceptible to the baneful influence of these cajolers and vie with the political orators in extolling the glory and excellence of our country. And I wish to say right here that if ever there was a time in the history of this Republic when it was imperatively necessary for the public press to stand in the old ways and scrutinize present tendencies in order to keep the course of the Republic straight and upward, it is now. But on all occasions they exert themselves to demonstrate the enormous advancements of our land. It thus seems as if this were the only important knowledge, and that this must be imparted to all, even from childhood. Although this is an indisputable fact, it should not be forgotten that no country is beyond the limit of danger. We, as Americans—the descendants of the "first-born of liberty divine"—have been resting too much upon the laurels and memories of our fathers; and, although the American nation has been especially favored by Fortune, and it seems she herself had made this country her most beloved abode on earth, and the people of the United States her special favorites, it ought to be intimated, yea, emphasized, that it requires greater skill to preserve power and glory than to acquire them. It would have been a far more difficult strife for Alexander the Great to have retained the sway of the world than it was to conquer it.

When we study the history of those nations which have risen to power and glory, but afterward have fallen into insignificance or nothingness, we always find reasons and causes why they did fall. But their history need not of necessity sadden or discourage our hope for the permanence of the American Republic, for their study reveals the fact that nations have perished only when their institutions have ceased to be serviceable to the human race.

A Necessity.

It is imperatively necessary in a republic like ours, where the sovereign power rests in the people, that every adult citizen of sound mind, and innocent before the law, should have the right to express opinions upon public affairs. If this right be denied or abridged, for reasons aside from ignorance, immorality or crime, it is thwarting justice, and weakens the structure of our national fabric.

It is thus fair and right that those citizens who are expected to obey the laws should have a voice in making them, and that those who are required to pay taxes should have a voice as to the amount of the taxes and the way in which the tax money should be spent.

Woman

Is subject to Government. Her consent has not been asked. She has never consented to a single law under which she lives. She has had rulers placed over her in whom she has had no choice. Because she is governed she ought not to be voiceless and impotent when constitutions are framed, laws enacted, or rulers chosen. Her weal or woe, and the weal or woe which comes to her children through good or bad government, is quite as important as the good or ill coming to other classes through the same source. Government means to woman just what it means to man, and in the language of that most able advocate of woman's ballot, Miss Alice Stone Blackwell, "the general argument for woman suffrage is the same as the argument for having a republican form of Government, rather than a monarchy."

Injustice.

To deny the ballot to one-half of the citizens of the United States, to tax them without being allowed a participation in the affairs of government, to try them in our courts of justice (?) by an opposite sex, for the violation of laws made without their assent, with no appeal except to their opposite sex, and for crimes over which this sterner sex should have no jurisdiction whatever, is a gigantic and unconstitutional injustice, a flat refusal of a right, claimed

by our revolutionary fathers, and which subsequently dissolved the colonies from the mother country, and thus established our liberty and freedom. If this boasted liberty be anything but a sham, if this coveted freedom be nothing but a reality, if this proud independence gained for us by eight long years of sacrifices, privations and almost unendurable hardships our forefathers bore so courageously in the brunt of battle be worthy the name of the American people, then why in the name of justice and civilization do we longer refuse to clothe the women citizens of this great land with the political rights which are theirs by a lawful heritage?

If it be important under the form and theory of our Government that the ballot be secured to the male citizens of this country as a proper safeguard for those so called "inalienable rights of life, liberty, and the pursuit of happiness," then it is equally important that women citizens be vested with like weapons for their protection.

A Strange Theory.

But we have gone on a strange theory that the fact of sex, and not the facts of intelligence and morality, should confer the right of franchise; although an ideal system of suffrage would be one in which neither sex, nor physical power, nor anything but patriotism, intelligence, and morality, were the conditions.

To deny the ballot to one-half of the people of the United States, who are recognized as citizens by the Constitution, is an injury to the country if those excluded have at least the average virtue and intelligence of the voting class. I claim that the women of the United States are in intelligence the equals of, and in virtue and good intentions, superior to, the men, and that their influence at the polls would purify elections and give us a better class of public officials. The State would, therefore, be benefited by their votes. It can be insisted to-day that women need the ballot for self-protection while the laws exist in so many States, putting them under disabilities as to property, inheritance, business, and even the custody of their children; and from every reason which may be urged in favor of giving men the ballot, an argument may be shown in favor of woman suffrage.

Should any one favor a restricted ballot, let such restriction be upon a basis applicable to all citizens. But to unjustly and unconstitutionally exclude woman from the franchise on account of sex, without regard to her qualifications for its uses (when the right of suffrage has been extended to the ignorant negro, which, by the way, I consider one of the most fatal acts of this Government; and when we also allow the ignorant foreigner, not in sympathy with our ideas or our institutions, to vote on his *intention paper*), is a flagrant outrage and the most crying shame in our land. As for the unconstitutionality of depriving women from the rights of the franchise, I refer the reader to the following:

Constitutional.

Section I of Article XIV defines citizenship in this manner: "All persons born or naturalized in the United States and of the State where in they reside."

The fifteenth amendment declares: "The right of citizens of the United States to vote shall not be denied or abridged by the United States, or by any State," etc.

You ask me what this means? It means a government of, by, and for, the people. It means the full, free, and never-to-be-questioned privilege of every man and woman citizen of this country to arm themselves with the ballot. Thus, by every principle of fair interpretation, the fairer sex have exactly the same right, constitutional and otherwise, to claim the power and use of the ballot, as the male citizen.

As the world moves on; as civilization advances, and progress is our guiding star, that right will be acknowledged, and their enfranchisement ensue. "Justice sometimes sleeps but wakes again."

Justice Sleeps.

When the Inquisition compelled Galileo to renounce his doctrine of the motion of the earth—a truth undisputed now-a-days—the right was strangled and justice slept. That grand old man, Socrates, was charged with disbelief in human gods, and then with the guilt of corrupting the minds of the Athenian youth (though his life was purity itself), and his belief in God was firm, was condemned to die by judges long ago forgotten; he drank the fatal hemlock with composure, and the white soul of Socrates took its winged flight while justice slept. To day one-half of the citizens of the United States—the half to whom, above all others, we must look to for the higher sentiment which precedes and sustains social reforms—are shut out from any effective part in public affairs.

Justice is sleeping. But grand and glorious will be the days when the goddess awakes in our otherwise favored land.

Women in War.

Some contend that if women obtain the same political rights as men they should be compelled in everything to do the work of men, for instance, to go to war. Now while God has made woman fully equal to man as far as physical faculties are concerned in everything except what is called brute force, yet it can be safely depended that she will never be needed to fill a place in the ranks of battle, although she is not without value to her country in the time of the rattle of musketry. Any one who

wishes to consult history will find that woman values country more than life; and that her labor, time, devotion, courage, zeal, perseverance, and overpowering conscience, have generally given an impetus and an impulse to the patriotism of the men who have led armed hosts to victory. Was not this the case in the War of the Rebellion? Did not our mothers leave their homes, their fortunes, and their loved ones, to follow the "star-spangled banner" on the bloody fields of carnage, that they might soothe the pain of the mangled hero who died that his country might live? Other facts could be mentioned, as Joan of Arc, Pauline Cushman; but enough has been said to sufficiently prove that women are as valuable citizens as men, either in time of war or in peace. Through all these years of the national life of our republic, they have been loyal, brave, and true. They have, by their patience and fidelity, their earnest endeavor, and unflinching courage, helped to create this grand civilization of ours; and hence, while full suffrage should be extended to them as a matter of right, I, nevertheless, think it is more likely to be given as a matter of political necessity, when the country in the near future takes up for solution, as it will, the great moral issues which are pressing forward for recognition, but which, as yet, are wholly ignored by the dominant political parties. The suffrage will then be given, not as a right as it should be, nor as a means for her protection, which would be just, but because her vote would be necessary to enable the better, more moral part of the community to make good laws and enable good men to enforce them.

We see that the enfranchisement of women is needed to outvote the foreign population, and make secure American institutions and republican principles. We have paid a premium upon foreign birth and ignorance long enough; yea, too long. And the time is surely dawning when intelligent, patriotic, tax-paying, native-born women will not be the political subjects of foreign paupers, alien insurgents and corruptionists.

Growth of the Movement

The movement is growing year by year. Americans are coming to their senses, and are beginning to realize that it is the only method we can pursue to secure the liberty of our country from the grasp of those who are seeking to destroy its life and its institutions. The majority report of the Senate Special Committee on Woman Suffrage, framed by that grand American statesman and true patriot, Henry W. Blair, and reported during the second session of the last Congress, is a favorable response to the entreaties of the noble women of this land, who insist that their sacred and just political rights shall no longer be trampled under with impunity by the unhallowed feet of pestilential foreigners. In order to show the reader in what light the woman suffrage question is viewed by the highest legislative body in our land, and the imminent danger in which this "land of the free" and "the home of the brave" is placed, if we do not, in the near future, arm woman with the ballot, I subjoin hereto the following significant words, which conclude the said resolution:

"Unless this Government shall be made and preserved truly republican in form by the enfranchisement of woman, the great reform which her ballot would accomplish may never be; demoralization and disintegration now proceeding in the body politic are not likely soon to be arrested. The corruption of the male suffrage is already a well-nigh fatal disease. A republican form of government cannot survive half slave and half free. The ballot is withheld from women because men are not willing to part with one-half of the sovereign power. There is no other cause for the continued perpetration of this unnatural tyranny."

"Enfranchise woman or this Republic will steadily advance to the same destruction, the same ignoble and tragic catastrophe, which has engulfed all male Republics of history. Let us establish a Republic in which both men and women shall be free indeed. Then shall the Republic be perpetual."

San Luis Obispo, Cal., June 1, 1889.

LOS GATOS WILL BE DECENT.—The Board of Trustees of the town of Los Gatos met in regular session Monday evening, June 3d, with every member present, passed unanimously an ordinance which makes it unlawful for any person or persons, either as owner, principal, agent, servant or employee, to establish, open, keep, maintain, carry on, or assist in carrying on, within the corporate limits of the town of Los Gatos, any tipping-house, dram-shop, cellar, saloon, bar, bar-room, sample-room or other place where spirituous, vinous, malt or mixed liquors are sold or given away; or any gambling-room or other place of indecent or immoral character; provided that the provisions of this ordinance shall not apply to the sale of liquors for medicinal purposes by a regularly licensed druggist, upon the prescription of a physician entitled to practice medicine under the laws of the State of California; nor shall such prohibition apply to the sale of such liquors for chemical or mechanical purposes, nor to the sale thereof in quantities not less than one gallon. The ordinance is to take effect on the 1st proximo, and the penalty for its violation will be three months' imprisonment, or \$300 fine, or both fine and imprisonment.

Two new Granges were organized in Pennsylvania during May.

Children's Day.

Bro. J. H. Hale, Worthy Master of the Connecticut State Grange, has prepared the following circular in reference to Children's Day, which contains some good ideas:

To the Patrons of Husbandry of Connecticut: The future of American agriculture and of our country lies in the hands of the children of to-day. Therefore, the earlier we can interest and instruct them in the work of the Grange and farm, the better will it be for their happiness and future prosperity. The National Grange, with far-seeing wisdom, at its last session voted to establish "Children's Day," and so annually devote one day to the children of our Grange homes. Therefore, by special proclamation, the Worthy Master of the National Grange has designated Saturday, June 15th, as Children's Day for 1889, and I most earnestly request that every subordinate Grange in Connecticut hold a special children's meeting on that day, devoted wholly to the instruction and amusement of the young people of the farm, whether their parents are members of our Order or not.

The Lecturer should call some of the most active members to his or her assistance, and plan a grand program for the youngsters. In some Granges it will be found most convenient to have the meeting take the form of an afternoon picnic. However, the officers of each Grange will know how best to work up a meeting that will give the most pleasure and profit to the farm boys and girls of their neighborhood.

Be Sure and Have a Meeting.

And make it the most attractive and instructive one of the whole year. Show up the bright side of farm life in every possible way, and give the children a chance to take part in the work, not only of the meeting, but for one day at least let them feel that their ideas are of value at home and on the farm. Why not let the boys plan and direct as well as assist in all the farm work of this one day? Ask them (even if very little fellows) to look all over the farm on the 14th, and report what work they want done, or think ought to be done, on the 15th, and then be sure to do it, even if it does somewhat interfere with plans of "the old heads."

In like manner let the girls of the family plan the meals and household matters for one day. Let mother and father for once "take a back seat." It will make fun for the young folks, and in a measure fit them to "take the front seat and drive" when the proper time comes later on. There is too much talk about "all the bright boys leaving the farm," and we often hear the girls say they "would not marry a farmer if he was the last man living." Let us teach our boys and girls of the farm that we want the use of their brains as well as muscles, and that by the right use of brains the best of returns can be secured in the shape of a pleasant, happy home on a Connecticut farm.

Remember that on some farms "the small boy" never has a chance except to "do chores" and "run for water," while the men folk are resting in the shade.

BALLOT REFORM has enjoyed an extensive boom during the last six months. Already eight States have practically adopted the Australian system. Massachusetts took the lead, and Indiana, Rhode Island, Missouri, Tennessee, Minnesota, Wisconsin and Montana have followed suit. Connecticut and New York are in the same line of reform, though not yet able to pass satisfactory measures. The indications are that the people are thoroughly aroused all over the country, and a still more sweeping movement in that direction may be expected.—*Montpelier (Vt.) Watchman*. [Gov. Bulkeley of Connecticut vetoed the bill providing for the secret ballot, on the ground that it is too radical, too cumbersome, too expensive, and that it opens the door to fraud and will result in disfranchising voters. The House passed the bill over his veto, but subsequently reconsidered the action and laid the bill on the table.—EDS. PRESS.]

RANCHER AND R. R.—A Tulare county farmer lately sent 11 tons of old baled wheat hay to this city, with the following results: The freight on the carload was \$61.51, the broker's commission at 50 cents a ton amounted to \$5.50, and it was sold for \$6.50 a ton, or \$71.50. The cost, therefore, of getting the hay to market and having it sold left the rancher \$4.50 for cutting, baling and the original sowing of the wheat. As it must have cost him \$2 a ton to bale alone, he was considerably out, and would have done better to give the hay away. The unusually heavy freight bill is what he complains of. Had the hay been first rate and had he sold it for \$13 a ton, it would still have left him but \$49 for sowing, cutting, etc.

BRO. I. C. STEELE, Worthy Treasurer of the State Grange, has been in this city the past week in attendance at the Spiritualist Camp-meeting, of which he is chairman. It is pleasant to see the abilities of our Grange officers recognized by elevation to positions of trust and honor in other organizations. As Bro. Steele was chairman of this gathering last year, it is certain that his sincere and generous efforts are well appreciated.

SANTA ROSA GRANGE.—Brother E. A. Rogers, W. M., writes that the Committee on Revised Constitution and By-laws has recommended the adoption of those published in 1889, with some amendments, which will come up for adoption at the next meeting, of which gathering we hope to hear a good report.

Limited Knowledge.

A starry aster dressed in blue
Wished through the autumn weather
That she and springtime's floral crew,
For once, might bloom together.
I often hear the South Wind sing
Of violet and lily;
I'll wake and meet them in the spring—
Although spring air is chilly."

She woke while still the grass was sere
And wet with April showers,
And thought it early in the year
For fragile springtime flowers;
I'll take a few more little naps,
The air seems cold and hazy,
And if the violets pass, perhaps
I'll meet the rose and daisy."

She slept, and woke again to see
The golden-rod above her,
But star-flower or anemone
Her eyes could not discover.
Pray tell me, wise Sir Golden-rod,"
She asked in accents winning,
Where are the flowers that deck the sod
At summer's first beginning?"

"The South Wind always sings to me
In honeyed words the praises
Of mayflower and anemone
And meadows white with daisies."
The Golden-rod shook out his plumes,
And said, with show of reason,
"They are but myths; no flower blooms
So early in the season."

"For ages I have lived, and yet,
Though neither blind nor crazy,
I've never seen a violet
Or daffodil or daisy.
The South Wind is deceiving you;
Your own good sense will show it;
For if such flowers ever grew,
Would neither of us know it?"

"They must be myths," the Aster sighed;
I'll try now to forget them.
If springtime flowers had lived and died,
We surely should have met them."
So wise in their conceit they grew,
And braved the autumn showers,
And never doubted that they knew
The truth of early flowers.

MORAL.

Life may have beauties we have missed,
Rare as the poets draw them;
Why should we doubt that they exist
Because we never saw them? —*Satanstoe.*

Married and Buried.

[Written for the Rural Press by COUSIN ANN.]

Don't skip this article, dear girls; it is not an invective hurled at you from a masculine light on the enormity of wearing a bustle, nor the hideous immorality of chewing gum; nor is it, still worse, a wholesale denunciation of your little follies by some traitor of your own sex, but a simple word of warning from Cousin Ann.

Not long since the papers chronicled the fact that a Sister of Charity had gone to the Sandwich islands for the purpose of devoting her life to the unfortunate people who belong to the colony of lepers.

Self-immolation is a characteristic of certain temperaments, generally of the gentler sex, but in order to make a life-long sacrifice it is not at all necessary, dear girls, for you to immolate yourselves upon a foreign shrine should you desire self-sacrifice—the altar of matrimony stands ever ready for a fresh young victim. Just wed some honest granger and report five years hence, if you please, if your experience differs materially from mine.

\$0.00 represents the sum total of the joint fortune possessed by John Granger and myself at the date of my marriage with that rustic gentleman; but love and youth laugh at poverty, and after a few years of toil and self-denial on rented land, we found ourselves the happy possessors of a farm of our own. "Our own," did I say? I mistake—it brought John a farm; the deed was drawn in his name only, no mention being made of his silent partner who had toiled at his side for years. And, my dears, if John had worked hard, my labors had supplemented his. What with the dairy, the poultry, the kitchen garden to attend to, and the hired men to cook for, I often used to think, as I sought my weary couch, where John had been slumbering for an hour, that my toil was quite as severe as John's labors.

Well, I hinted a little of this to John as I sat reviewing the legal document which made John sole possessor of a farm that I thought in justice should be shared with his co-worker, and John was astonished. "It makes no difference whatever," said he with energy, "which of us has the deed. I had just as lief it was in your name as mine, and you ought to feel the same," after which display of high-minded and generous sentiment I subsided with shame.

When, years afterward, a spirit of speculation impelled John to first mortgage and then

sell our farm without my consent, the inexpediency as well as the injustice of John's being sole owner of our joint earnings presented itself. But John could not see it. He is made of the stuff that all great legislators are made of, and I firmly believe will some day run for State Senator. I fear, however, he will stand little chance for election, as his peculiar virtues are shared generally by men.

Two years since, John emigrated to S. L. O. county (taking me along to cook for him), where he has availed himself of the privilege of taking public land to the extent of one pre-emption, one homestead, and one timber-culture claim, on one of which (the one of John's choosing) the law allows me to live, although it does not allow a wife to acquire a title to any land under Uncle Sam's just Government.

Last year I made a little venture of my own. I hoped. A hundred fine turkeys was the result, but not being able at the time to attend to shipping them myself, the hired man, directed by my husband, turned them in on account at the store.

And the sewing machine, and the clothes-wringer, and the incubator, and last, though not least, the books that I have been hungering for all these years—they are now a mirage in the far horizon, for John doesn't want them.

No, dear girls, if you long for self-immolation, if you want to be literally wiped out, name and nature, just marry. You will be one of those rare and happy individuals who are mentioned by the newspapers but twice under the respective heads of "Married" and "Buried."

The terms are synonymous.

[In hopes that it will be read and taken to heart and acted upon by fair-minded, thoughtful young men, quite as much as for the girls' perusal, we print this "exceeding bitter cry." No true man desires to reduce a woman to servitude in the name of wifehood; true love seeks ever to bless, never to enslave its object; and true marriage is not the subjugation of one soul—male or female—to the will and pleasure of another finite creature, but a joint and willing mutual service of the Highest in a unity of spirit which becomes ever more and more manifest as blessed oneness in the common life.—*Eds. Press*]

Impudence Punished.

The Portland *Oregonian* tells how a well-dressed but rather antiquated masher came to grief the other evening. He met two young women coming from a grocery store with a basket of eggs, and, with lifted hat, benign smile and profound bow, he said blandly, "Good evening, ladies."

The zero-like answer came: "Go mind your business."

But the masher was like the India-rubber boy and not to be flattened at one stamping; so he smiled sweeter than ever and augmented the blandness of his tone. "Ah, charming evening, ladies."

The young women, placing their basket on the sidewalk, selected several eggs for purposes offensive and defensive. One of the eggs flew to pieces when it landed on the masher's jugular vein, another struck him squarely in the breast, and as he turned to run the third hit him in the back of the neck and ran down his spinal column. A diminutive dog now came to the rescue and followed the fleeing masher for a square or two, barking at his heels.

WHO WAS THE HEATHEN?—A family in St. Paul had never employed a Chinese servant, but thought they would like to try one. Accordingly one presented himself, of whom several questions were asked. Among them were: "Do you drink?" "No, I Band of Hope boy." "Do you gamble?" "No, I Band of Hope boy." "Do you smoke?" Rather indignantly, "No, I Band of Hope boy." He was engaged and gave so much satisfaction that a dinner party was given by his employers. Wine was on the table, and the after-dinner cards and cigars were enjoyed. Breakfast was prepared next morning. John appeared, bundle in hand, saying, "I go." "Why do you go? We like you very much." "When I come here you say: 'You smoke?' You smoke. You say, 'You drink?' You drink. You say, 'You gamble?' You gamble. You heathen. I no stay."

TEMPERANCE TRAINING.—The St. Louis *Globe-Democrat* says: Twelve million of children are reported to be under instruction in public schools on the influence of alcohol and other stimulants as well as narcotics. Total abstinence is favored in all cases by this instruction, and there is no doubt but the next generation will come forward with a prejudice against drinking habits. All the New England States, with New York, Pennsylvania and Delaware, as well as the Southern and three or four Western States, have laws compelling temperance education. The Territories, also, are controlled by a United States law to the same effect. This work is slower than prohibition, but it is surer and safer.

ACCORDING to the *Nipomo News*, a Guadalupe farmer has posted up the following "Notice": "If any mans or womans cows or oxen gits in these here osts his or her tale will be cut off as the case may be."

Camping Out.

A few words of modest advice to those who may be contemplating a summer jaunt to the pinerias. To give our words a small degree of weight we will say that we have seen camping life in the mountains of Tulare in all its phases and forms, have tested it personally and viewed it as experienced by others, have seen happy, contented individuals ensconced among the redwoods and contrarily witnessed some pitiable, miserable being in the same place. We have spent months in those fastnesses without getting a glimpse of the broad valley below, and thus our unpretentious admonition comes of actual experience. We most sincerely advise a vacation spent in the pines, for the blissful pleasures derived from such a sojourn will cause the tourist to go again. The greatest part of those to be met with in our mountain resorts are those who previously have spent a vacation there.

We assert that if any one will spend a month among the pines and vary the experience by a frequent fishing trip or a hunt after grouse or perchance a deer, he will never be found spending a summer in any other place. We have diverged—it was to give some advice that space was asked.

First then, leave half, yes nearly all of the guns and bowie-knives behind. Don't load yourselves down with ammunition and make your camp an arsenal as we have seen so many do.

The greatest error of persons going to the pinerias is this fashion of carrying along all the guns they own and all they can borrow. Leave those guns at home and take instead warm blankets, flour and sides of bacon. Never judge your future appetite by what it is when you leave the valley, for if there is one thing that you are absolutely sure of finding in the pines it is an all-devouring appetite, one that calls for baked beans, corn bread and huge slices of meat.

Now if you are so unfortunate as to be elected cook for a party of tourists, just cook all your utensils will strainingly hold and abide the future—none will go to waste. Never think for a moment of taking Jowler along to clean up scraps; there will be none for him. Likewise do not bring along a pig to fatten for winter; he will never flesh up if fed from the waste of a mountain camp. We have seen these things tested and know fully whereof we write.

If you are fastidious on the matter of dress and personal appearance, just cast aside those ideas when preparing for a mountain jaunt. To keep spotlessly neat in the pines while camping out, is entirely beyond human care and patience.

Dress comfortably and warmly and strive to do no more. If you are overly particular about your looks, the pleasure of your sojourn will be marred. We have seen many a well meant trip spoiled by being touchy as to personal dress. You go to the mountains for relaxation and rest, to gain strength and spirits, and not to appear.

Some persons are timid while in the mountain wilds; they are fearful lest some wild animal might come along and wish an intimate acquaintance. Cast such fears aside; sleep with both eyes closed and as long as you wish. Do not barricade your camp nor palisade it. The wild animals never molest the haunts of man, never prowl about camps.

Stay awhile when you do pitch camp. Don't be restless nor flurried. Before leaving home fix matters so that "business" will never enter your thoughts. That will not be a pleasurable vacation if you stay in camp, while all the time your thoughts are at home in the valley. Remain some time; it will take you a week or more to get rid of that lonesome feeling occasioned by a change from civilization to solitude. Stay a month at least. A few kinds of medicines are necessary to complete a tourist's outfit; each person knows the kinds he will probably need.

For a "house" we know of nothing superior to a well-made tent; and cooking utensils—take but few. Let your main incumbrance be provisions, plenty of wholesome food. And it is after this fashion that you can best enjoy a vacation sojourn in the pine shades of Tulare county.—*Visalia Delta.*

Ah There! Those Trousers!

[Written for the Rural Press by FANNY ANN FUR.]

Ha, ha, ha, ha! I am laughing, you see. So they have taken to it at last, like sensible creatures, but alack and alas! for the wrong gender!

We wanted "it" for ourselves, but they have appropriated "it" and left us out in the cold!

But now I can use those old black petticoats that were a drug in the market. Just "bifurcate" them, and run them up on the sewing machine, and they are ready for use. All my boys can now have a pair of—ahem!—pantalons for the price of a spool of thread only. What a saving! But it was rather mean after making so much fun of every woman who attempted to wear a "bifurcated" to snatch it away from her in this manner.

But then they feel so much more comfortable, poor things, that we don't blame them. Now they need not be afraid that they will get up after a sudden sitting down, like Josiah Allen's wife's husband, all ripped from top to bottom, necessitating a sudden pinning-up process.

But then the "bifurcated" does look funny.

Floppity, flop! Floppity, flop! at every step, suggesting a Celestial washerman. The homelier the man, the wider the pantaloons. It is invariably the case. If they go on widening, they'll soon be petticoats, and then, thank our lucky stars, perhaps the sterner sex will give tit for tat, and grant us our long-cherished desire and let us wear the breech—ahem!—the pantaloons!

Chaff.

LITTLE HENRY, retelling his Bible lesson to his sister, aged three. "And you know, Mary, Lot's wife was a naughty woman, and did what she was told not to, and looked behind her, and God changed her into a pepper-caster!"—*Pick Me Up.*

"If any one should call this afternoon, Mary, say that I am not well," said the mistress to a newly engaged servant. "I'm afraid I ate a little too much of that rich pudding for dinner, and it, or something else, has brought on a severe headache. I am going to lie down." A few moments later the mistress, from her room near the head of the stairs, heard Mary say to two aristocratic ladies who called for the first time: "Yes'm. Mrs. B—is to home, but she eat so much pudding for dinner that she had to go to bed."—*Youths' Companion.*

DE BIGSBY—What makes you so down in the mouth, Rigley?

Rigley (with a long drawn sigh)—Addition to father's family last night.

De Bigsby—Then why the deuce are you so glum? Was it a boy or a girl?

Rigley—Neither. Miss Recusant became my sister.—*Buffalo Courier.*

AMONG the replies to an advertisement of a musical committee for a candidate as organist, music-teacher, etc., was the following: "Gentlemen—I noticed your advertisement for an organist and music-teacher, either lady or gentleman. Having been both for several years, I offer you my services."—*The Electro-typer.*

"THAT'S a rather unique paper-weight you have there," said Wilkins, indicating a curiously shaped article lying on his friend Johnson's table. "Yes," said the latter, picking up the object and eyeing it critically; "you know they have begun to teach cooking in the schools, and this is a doughnut baked by my sister Clara after taking only six lessons."

IN A CERTAIN Bostonian home, not many evenings since, the father thought it incumbent upon him to take his youngest son upstairs for a short outing, based upon the child's disobedience to its mother. The echoes from the interview penetrated to the parlor, and in the midst of the "boo-hoos" was heard the shrill treble: "I think it's real mean for you to spank me. Why don't you let mamma do her own work?"

"You must admit," said an admirer of Ben Butler to a New Orleans lady, "that when Butler was in command in your city you had no yellow fever." "Ah," answered the pretty creole, "God is good. He would not afflict us with two diseases at once."

WHEN a stranger makes his appearance in the backwoods of Maine, he is presumed to be on the lookout for game. Last summer a distinguished prelate of the Episcopal Church found himself stranded in that region and was compelled to put up at a farmhouse. "Do you have many Episcopalians down here?" he inquired of his hospitable hostess. "Well, really now, I don't know," she answered. "Our hired man shot some sort of a queer critter down back of the barn, the other day, but he claimed that it was a woodchuck."

TOOK HIM AT HIS WORD.—The Oakland *Tribune* is responsible for this: A teacher of penmanship in the Stockton schools, who is somewhat of a wag, as well as a great hand to stimulate the children to extra effort in their writing, facetiously remarked to a certain class that the one who exercised most care and got up the best specimen should "go and have a tooth pulled." A little girl won the prize and he gave her an order to take to a dentist to have her tooth drawn. Some days later he was surprised at receiving a bill from a dentist for \$1 for pulling the child's tooth. She had actually had a tooth drawn.

DR. HAMMOND has a wise remark on cigarette-smoking—that laws to prevent children from smoking them are impossible of enforcement; that this can be done only by educating parents to let tobacco alone. Nearly all the States have indulged in legislation against children. Minors must not do what they see their own fathers do. The manufacture of cigarettes may be forbidden, and probably ought to be stopped, as they are, almost without exception, drugged. Dr. Hammond considers the use of tobacco a greater evil than the use of alcohol, and he has the argument with the facts.—*Ex.*

SHE THOUGHT BETTER OF IT.—The Oakland *Enquirer* tells how a woman at Sacramento, the wife of a drunkard and mother of four children, went to Sam Jones and told him her life was unendurable and she had determined to commit suicide. "Madam," said Sam, "don't do it. You won't be in hell more than ten minutes before you'd wish you were back with those poor motherless children." This gave the matter a different aspect, and the much-tried woman changed her mind.

Chautauqua Assembly.

The Pacific Coast branch of the C. L. S. C. will hold its tenth annual summer assembly at Pacific Grove, Monterey, July 1 to 15, 1889.

Monday, July 1st—2 P. M., organization of Sunday-school Normal class. 3 P. M., organization of Science and Art classes. 5 P. M., vesper service in tent in the grove. 8 P. M., concert by the Jubilee Jingers.

Tuesday, July 2d—9 A. M., Science and Art classes. 10:30 A. M., introductory exercises. Music by the Jingers, and address by Rev. A. C. Hirst, D. D., LL.D., College Park. 2 P. M., Sunday-school Normal class. 3 P. M., concert by the Jubilee Jingers. 5 P. M., Chautauqua Round Table and vesper service. 8 P. M., "Men Who Win"—Rev. E. R. Dille, D. D., Oakland.

Wednesday, July 3d—9 A. M., Science and Art classes. 10:30 A. M., "Walks About Athens"—Rev. C. H. Hobart, Oakland. 2 P. M., Sunday-school Normal class. 3 P. M., "The Holy Land; a general view"—Prof. A. J. Marks, A. M., Chicago, Ill. 5 P. M., Round Table and vesper service. 8 P. M., "The Growth of Liberty"—Adley H. Cummins, LL.D., San Francisco.

Thursday, July 4th—Citizens' celebration in forenoon. 2 P. M., speeches and music. Address, "Our Country and its Dangers"—Rev. R. G. Cantine, D. D., Los Angeles. 8 P. M., concert by the Jubilee Jingers.

Friday, July 5th—9 A. M., classes. 10:30 A. M., "The Story of Monterey Bay"—Mrs. M. H. Field, San Jose. 2 P. M., Sunday-school Normal class. 3 P. M., "From Dan to Beersheba"—Prof. A. J. Marks, A. M., Chicago, Ill. 5 P. M., Round Table and vesper service. 8 P. M., lecture—Bishop John H. Vincent, D. D., LL.D., Buffalo, N. Y.

Saturday, July 6th—9 A. M., classes. 10:30 A. M., Volapuk—Dr. W. F. Rignaldi, San Francisco. 2 P. M., Sunday-school Normal class. 3 P. M., Jerusalem in the Time of King David—Prof. A. J. Marks, A. M., Chicago, Ill. 5 P. M., Round Table and vesper service. 8 P. M., concert by the Jubilee Jingers.

Sunday, July 7th—11 A. M., sermon—Bishop John H. Vincent, D. D., LL.D., Buffalo, N. Y. 3 P. M., Children's Mass Meeting—conducted by Bishop Vincent. 8 P. M., sermon—Dr. J. E. Wheeler, Sacramento.

Monday, July 8th—9 A. M., classes. 10:30 A. M., lecture—"The Mountains and the Sea"—Prof. Josiah Keep, Mills College. 2 P. M., Sunday-school Normal class. 3 P. M., lecture—Col. L. F. Copeland, Chicago, Ill. 5 P. M., Round Table and vesper service. 8 P. M., lecture—"Mistakes of Bob"—Col. L. F. Copeland, Chicago, Ill.

Tuesday, July 9th—9 A. M., classes. 10:30 A. M., "Butterflies and How to Make a Collecton"—C. F. McGlashan, Truckee. 2 P. M., Sunday-school Normal class. 3 P. M., lecture—Prof. W. C. Sawyer, A. M., Ph. D., San Jose. 5 P. M., Round Table and vesper service. 8 P. M., musical recital—Prof. F. Loui King, San Jose.

Wednesday, July 10th—9 A. M., classes. 10:30 A. M., "California Lilies"—Mrs. Lemmon. 2 P. M., Round Table and vesper service. 3 P. M., "Beneficent Results of Disease"—J. H. Wythe, M. D., D. D., Oakland. 5 P. M., Round Table and vesper service. 8 P. M., lecture—Bishop John H. Vincent, D. D., LL.D., Buffalo, N. Y.

Thursday, July 11th—9 A. M., classes, graduating exercises. 10:30 A. M., procession. Music. Prayer. Music. President's address. Address and presentation of diplomas—Chancellor J. H. Vincent. Music. Benediction. 2 P. M., classes. 3 P. M., lecture—Col. L. F. Copeland, Chicago, Ill. 5 P. M., Round Table and vesper service. 8 P. M., lecture—Bishop John H. Vincent, D. D., LL.D., Buffalo, N. Y. 9:30 P. M., banquet and reunion of the Alumni at the El Carmelo.

Friday, July 12th—9 A. M., classes. 10:30 A. M., Wordsworth—Mrs. Lydia S. B. Cox, College Park. 2 P. M., Sunday-school Normal class. 3 P. M., lecture—Prof. W. W. Thoburn, Ph. D., College Park. 5 P. M., Round Table and vesper service. 8 P. M., lecture—Bishop H. W. Warren, D. D., LL.D., Denver, Col.

Saturday, July 13th—9 A. M., classes. 10:30 A. M., "The Pines of California"—Prof. J. G. Lemmon, Oakland. 2 P. M., Sunday-school Normal class. 3 P. M., "The Air of Concord"—Dr. C. L. Anderson, Santa Cruz. 5 P. M., Round Table and vesper service. 8 P. M., lecture—Col. L. F. Copeland, Chicago, Ill.

Sunday, July 14th—11 A. M., sermon—Bishop H. W. Warren, D. D., LL.D., Denver, Col. 7:30 P. M., sermon—Rev. J. H. Garnett, D. D., Oakland, Cal.

WORK AND ALCOHOL.—Even people who are in the habit of taking alcohol as part of their daily food abstain from it when any exertion demanding special accuracy is required of them. One mighty Nimrod is said to declare that a single glass of sherry with his lunch spoils his shooting for the day, and he takes a flask of cold tea with him to the moors; while a famous violinist, who is subject, as men of genius often are, to fits of nervousness when about to appear before an audience, refuses to give himself "Dutch courage" by a single glass of wine. He says it would spoil his playing; he would blur the notes if he took it.

SPANNING THE TIME SINCE THE PILGRIMS.—That was a most extraordinary reminiscence which the speaker, Judge O. W. Holmes, cited from a letter written by the late Sidney Bartlett: "Deacon Spooner died in 1818, aged 94. I saw him and talked with him. He talked with Elder Faunce, who talked with the pilgrims, and is said to have pointed out the rock." Only three lives, one of them but just passed away, between us and the men of the Mayflower!—*Boston Advertiser*.

YOUNG FOLKS' COLUMN.

Trip and Baby Bear.

(Written for the Rural Press by MRS. MAY E. STAFFORD.)

One day mamma took Wilfred and his baby brother to have their photographs taken. Wilfred enjoyed it very much indeed. The photographer (what a long word!) was a nice man, and after he had seated Wilfred in the chair with baby's head resting on his shoulder, he played upon the flute and rang some pretty sounding bells to amuse them and keep them quiet until their picture was taken.

While mamma was waiting to see the proofs, she let Wilfred look at the pictures in an album on the table. There was one picture Wilfred liked better than any of the rest. It was the picture of a large Newfoundland dog with a basket in his mouth. Wilfred thought he would like to have such a picture of his doggie, whose name was "Trip," and what do you suppose he did? Well, the very next day he put on his big brother's rubber boots, his uncle's tall hat, which he took out of the hat-box when auntie wasn't looking, and taking Trip by the collar, started out, without telling any one, to find the photograph gallery.

How the photographer laughed when he saw his funny little visitor with the big boots and the tall hat. He stood him on a shaggy mat with his arms around Trip's neck, and bidding him keep perfectly quiet, in a moment the picture was taken.

Wilfred was greatly surprised when he saw the picture to find that his photograph had been taken as well as Trip's, and the shaggy mat upon which they had been standing looked just like grass in the picture.

The photographer bade him run home as quickly as possible and give the picture to his mamma; and just as Wilfred reached the street upon which he lived, he met mamma coming with great anxiety in search of him. She told him that he must never, never, go out of the yard without permission. Wilfred promised he would not, and then he showed his picture to her.

Mamma laughed until the tears ran down her cheeks; but she took the picture and had a pretty frame put round it, and then hung it up in the parlor. She says she would not part with it for anything, and I should not think she would, should you?

Roscoe's Baby Bear.

Roscoe is a little boy just three years old. He is a very good boy usually, and will play nearly all day with his woolly-headed dollie, Susie, or his box of "Tominoses," as he calls his dominoes, and his big drum that Santa Claus brought him last Christmas.

Roscoe loves to play, but better still he loves to climb up in his grandma's lap while she tells him a story. And what do you suppose his favorite story is? It is the "Three Bears." Roscoe thinks it the most wonderful story in the world, and always wished he had a baby bear, like "Tiny Cub," to play with.

One day a gentleman sent him a funny little Scotch terrier puppy for his very own. Roscoe was asleep when the puppy arrived, and when he awoke, his mamma put the puppy into the bed beside him, and in a minute he had his new playmate in his arms. And what do you think he called the puppy? Why, "Baby Bear," to be sure. He thought it was "Tiny Cub" come to play with him, and although mamma tried to convince him that his new playmate was a puppy instead of a bear, still the little boy would insist upon calling him Baby Bear. Isn't that a queer name for a doggie?

Not a Coward

Here is a story for you, boys, who are so splendid and big and brave, about a little girl who, though ever so nice, was so very timid that her brothers called her Mab, the coward.

Yes, Mabel certainly was something of a coward; she didn't try to deny it, but she did try to overcome it.

Horses were her particular terror; to walk through a field where they were was agony to her; and to ride behind one with any one but her father, in whom she had implicit faith, was anything but a pleasure.

Occasionally the boys, Bob and Frank, would persuade her to go out with them; but she was always sorry for it, for they were sure to frighten her in some way. They would whip up old Charlie till he went from his steady jog-trot into an awkward gallop, and then they would scream that they could not hold him; that he was running away.

It seemed they could not resist a temptation to drive too near the edge of a high bank, too near the steam engine, etc. All of which made poor Mabel most uncomfortable, though she knew the boys loved her too well to let anything happen.

I think they were taking a very mean advantage of her, don't you, boys?

She tried hard to make herself brave; for she did not want the boys to despise her, and, besides, as she told her mother in confidence, it seemed so wicked to be always afraid something would happen.

Mab was not a bit of a "goody-goody" girl, but she did not want to be wicked, so she just

asked her Heavenly Father to help her grow braver, and to make her put her trust in Him.

Toward the end of the summer Aunt Jane came to visit our friends, and with her came Bess, her little girl of about Mab's age, and Clarence, a cute little fellow, who was just beginning to talk. Bess just suited the boys. She was equal to any prank they proposed; and, generally wanting to be first in everything, there were some pretty serious tussles as to who should drive. One night after tea the girls and boys went up to the big barnyard to feed the chickens. Clarence was allowed to go without his nurse, as the four guardians promised the best of care. They mixed the meal and fed the chickens generously, and were all intently watching their little charge, who was vainly trying to catch a most excitable little duck, when they heard furious galloping and saw five horses making for the yard at a wild rate.

The children were right in their path, and the horses seemed almost upon them; but, quicker than I can write it, Bob, Frank and Bess, with faces full of terror and screaming for help, ran for the fence, and were over in the twinkling of an eye. Oh, how Bess's white skirts did fly! she seemed to go over in one bound. Of course, I'm not surprised that Bess should have run, for she was "only a girl," you know; but what do you think of our brave boys? And our little coward, what do you think she did? Ran and left Clarence to his fate? That surely would have been just the thing for a cowardly girl to do. But not she. Seeing it was too late for them both to run, she seized Clarence and put him between herself and his carriage, from which they had taken him; and then she stood with her arms round the poor little frightened fellow and put up a little prayer for help. I don't know what words she used, but she just asked her Heavenly Father to protect her; and He did.

The horses dashed into the barnyard in a mad gallop, raising so tremendous a cloud of dust that the anxious little trio on the safe side of the fence at first could see nothing of Mab or the baby, but at last caught a glimpse of the horses as they separated and went each side of Mabel, leaving her unharmed.

On they tore to the end of the yard, and in through the open stable to their own stalls. The two mammas and Mab's papa came running into the yard, having heard the screams of the brave threes as they scrambled over the fence.

Aunt Janet sprang for her baby and nearly smothered him with kisses; but she did not forget to praise his faithful little protector.

Papa put his arms around Mab and said: "I am proud of my brave little daughter;" and mamma gave her hand a squeeze that meant lots.

Then the shamefaced trio came into the yard; and, after a few minutes of awkward silence—for somehow they all felt pretty small—Frank said: "I say, let's give three cheers for the coward who has turned out to be the bravest of the lot."

So the cheers were given—good, hearty ones they were, too; and I wish I had been there to help, don't you?—*Early Dew*.

A Pet Quail.

The Santa Cruz *Surf* says that one of the pets at the beach is a pretty, plump, little quail which answers to the name of Penie, and lives at Mrs. Roth's on the esplanade. A year or so ago little Maggie Roth was visiting in the mountains, where she trapped the quail and brought it home with her. It has been her pet and companion ever since, and is very tame, bright and intelligent. Penie lives in a cage, but not in a prison, as he is allowed to go out whenever he chooses. His favorite promenade is the broad handrail of the esplanade, where he scuttles along at a great pace with his wings extended to their fullest width, scolding like a small Tar tar. He knows all the children, and will play a game of tag with them whenever invited. The little fellows run before and Penie follows, getting more excited as he nears his antagonist, and scolding roundly as he goes. When he reaches them he pecks at their legs or perches on their shoulders and pecks at their cheeks.

This is all very well for play, but if he is frightened or in trouble he flies at once to his little mistress and nestles on her shoulder. She feeds him bread and other food, but the dainty fellow likes best of all to eat flowers. He not only sips the honey, but devours the petals also. Penie is a handsome fellow with a fine tuft and beautiful plumage.

A FAST LOCOMOTIVE.—The fastest time ever made in the United States by a locomotive was recently made on the Reading road, near Woolton, Penn. The locomotive, just turned out of the Baldwin works, in an eight-mile run on the level track at full speed, averaged a mile in 39 seconds, equivalent to 92 miles an hour.

THERE are, according to the school census, 60,501 school children in San Francisco, 788 more than last year. The total number of boys this year between the ages of 5 and 17 is 30,329. The total number of girls is 30,177. There are 22,760 children under 5 years of age.

ANOTHER band of buffalo which has not been generally known to have been in existence has been discovered in the bad lands around the Bull mountains, about halfway between the Yellowstone and Missouri rivers, in Dawson county, M. T.

DOMESTIC ECONOMY

Cacao.

EDITORS PRESS.—This complaint is about the spelling of a word. Daily, and in almost every paper, the eye is offended by the word *cocoa*.

"A. B.'s fine breakfast *cocoa*," "C. D.'s *cocoa* for invalids," etc. How can the maker of a food ask the public to take his word as to its being pure, wholesome, etc., when he shows such a dense ignorance of his article as not to know how to spell it? *Cocoa* is never applied properly except in connection with the word nut—*cocoa-nut*, the fruit of the *cocoa-nut* tree.

The tree on which grows the bean from which chocolate is made is called *cacao*, and is pronounced in the Spanish countries, where it grows, in two syllables—"csh cow," with a strong accent on the last syllable.

To a lover of that delicious beverage, chocolate, the daily murder of the word *cocoa* is mildly exasperating. W.

CREAM TAPIOC PUDGING.—Soak two table-spoons of tapioca over night in just enough water to cover it; in the morning boil one quart of milk with the soaked tapioca by placing it in a tin pail set in water and boil; add two-thirds of a cup of sugar and a little salt; beat the yolks of three eggs thoroughly; when the milk has boiled ten minutes, stir in the yolks, remove from the fire and stir rapidly for five minutes so it will not curdle; flavor with vanilla; pour into a pudding-dish; beat the whites of the eggs to a stiff froth, which pour over the top of the custard; sift sugar over the top and brown a few minutes in the oven.

SAGO PUDGING.—One quart milk, four table-spoonsful sago boiled in the milk till soft, set the dish in Kettle of hot water and let the sago swell gradually. Beat up three eggs, and stir into cooked milk and sago; salt and sugar to taste. Then put in oven and bake very lightly. Sauce for this: Two thirds cupful butter beaten to cream; stir in sugar till quite thick. To cupful boiling water add cornstarch mixed with cold water till the whole is of consistency of thin starch; mix this with sugar and butter, one-half over pudding while warm and other half just before serving.

CRANBERRY SAUCE.—Pick over and wash the cranberries and put in the preserving kettle, with half a pint of water to one quart of berries; now put the sugar—granulated sugar is the best—on top of the berries; set on the fire and stir about half an hour; stir often to prevent burning; they will not need straining, and will preserve their rich color cooked in this way. Never cook cranberries before putting in the sugar. Less sugar may be used if you do not wish them very rich.

APPLE-TAPIOC PUDGING.—For apple-tapioca pudding, add one-half teacup of tapioca to 1½ pints of cold water; put on the fire and cook till clear, stirring to prevent burning; remove from the fire, sweeten, and flavor with nutmeg; place six or eight pared and cored apples in a pudding-dish, pour the tapioca over them and bake until the apples are done. Serve cold with cream.

PINEAPPLE CREAM.—Soak one ounce of gelatine in water until dissolved; whip one pint of sweet cream to a stiff froth. Cut the pineapple fine, boil with one-half pound of pulverized sugar, strain through a colander, add the dissolved gelatine, set on ice, and when it thickens stir until smooth, then add the whipped cream and mold.

BAKED APPLE PUDGING.—Pare a dozen large apples; take out the cores and put them into a saucepan with a cup of hot water; boil till they are soft and thick; beat them well and stir in half-pound of sugar, the juice of two lemons and the yolks of six eggs; bake in a puff paste. Serve with hard sauce.

FLANNEL CAKES.—Cut dry, light bread in pieces, put over it enough sour milk to cover it; let it stand over night; in the morning, wash it well, and to every quart of bread add one egg well beaten, a teaspoonful of soda, a pinch of salt and flour to make a moderately thin batter; bake on a griddle.

CREAM PIE.—One pint of sweet milk, white of one egg and yolks of three; two table-spoonsful of sugar, two of cornstarch; beat all together; let it cool and flavor. Make a rich crust and bake separate and fill; beat the whites of two eggs to a froth, spread over the top and set in the oven to brown.

JELLY ROLL.—One cup of sugar, three eggs, one cup of flour, one quarter of a cup of water, one teaspoon of baking powder. Bake in a long, square tin; lay upon a towel and roll.

SNOW PUDGING.—One pint of milk, one-half cup of sugar, one-half cup of cornstarch; let come to a boil and stir in three beaten eggs. Boil till thick and set away to cool.

COCOANUT BALLS.—Grate a cocoanut and mix with milk enough to make a paste, whites of three eggs, sugar to sweeten. Make into balls and bake on buttered tin.

SPONGE CAKE.—One dozen eggs with whites and yolks beaten separately, one pint of sugar, one pint of flour, and the juice of two lemons. Bake in a moderate oven.

NUTMEG SAUCE.—To one pint of boiling water add a half-cup of sugar, one tablespoon of butter, a pinch of salt, one tablespoon of cornstarch. Nutmeg to taste.

The Week.

Just after the Rural went to press last week came the tidings of a great conflagration by which the heart was burned out of the thriving town of Seattle, millions of property destroyed and hundreds bereft of home and livelihood. Though small when compared with the great Pennsylvania disaster, the casualty is a notable one and has called out generous response to the needs of the bereft. San Francisco having sent \$50,000 to Pennsylvania, sent \$10,000 to Seattle, and there is another \$5000 to be sent where most needed. Other California towns have also contributed well to aid the distressed.

The harvest is progressing, and reports more favorable on the whole than anticipated. Transportation companies are preparing to move a vast amount of grain from the valleys to tide-water. The rivers are well supplied with steamers and barges, and from many points rates, made reasonable by competition between rail and water will prevail. Labor is in demand in many parts and good wages are paid.

There is no need for idleness nor want in California at present—there is plenty to do for all who have the strength and the will for work.

The Press and the Corporations.

It is an interesting fact that a local railway company has sued the Lassen Advocate for libel because that journal had the temerity to publish the following paragraph:

It will be remembered that some time ago the Advocate published the rates of the N. & C. R. R., which were sent to us by that road for publication, and among the other rates was a price per pound on wool. It now seems that the railroad does not stick to its rates. We have been informed that several loads of wool were taken to Liegan, and that the Narrow Gauge refused to ship it at their advertised rates. Sheep men in this valley, within ten miles of the railroad, find it cheaper to ship their wool to Chico than to stand the extortion of this "blood-sucker" institution. Such a railroad is a positive harm to the county. Nor is it wise policy on the part of the company. If they would make and stick to decent rates, they would have much more hauling to do than at present.

This little highland railway believes it has been injured to the amount of \$5000 by the publication of the above terrible onslaught, and now prays the court for a judgment for the above sum against the proprietors of the Advocate.

It is a little amusing to see how thin-skinned the high altitude railway magnates are. Tide-water railway moguls, like the amphibious pachyderms of the animal kingdom, are so heavy hided that such a thrust from a newspaper would only be an agreeable sort of a tickle or scratch-my-back, and in return for the editor's favor would scratch his back with a free pass or a standing advertisement. They would be so pleased that the editor had not called them perjurers and horse-thieves, but had merely used the term bloodsucker, which is a very affectionate little animal, that they would certainly think some substantial acknowledgment of the favor should be made. But mountain railway men are apparently different, and though the editor, with true journalistic wisdom, refrains from making direct charges, but merely states the gossip of the neighborhood, they propose to wipe him out with a judicial process. These railway men will find that they have adopted a very unwise course—even a switch-tender on a trunk line could tell them that. They will only advertise the paper and the fact that their railway management is a subject of condemnation in the locality.

But there is a more serious side to the question and one upon which the press of the State should stand as a unit and extend both sympathy and financial support to the Advocate, if the latter should be needed. We are everlastingly and emphatically down upon unjournalistic attacks upon individuals for private ends, and are always glad when the libel or black-mailer is mulcted in exemplary damages; but for corporations which are public institutions to attempt to silence legitimate criticism by legal suits which editors of small journals usually have neither time nor money to defend is a proceeding which should be publicly and persistently condemned. The courts are not created for this purpose. Upon the face of it such a suit for libel seems to be a high-handed proceeding for the purpose of crushing out or frightening away legitimate criticism, and if this is the case, the people of the neighborhood will recognize it at once and act accordingly. There may be, of course, considerations involved in the case which do not appear on the face of it and are not discernible at a distance, but the paragraph which is proceeded against as libelous seems to us to be a legitimate criticism of the methods of a public carrier, and which any journal representing the public interest and welfare should be privileged to make—providing always, of course, that the facts warrant the remarks, and that the statements are made in good faith and with a commendable motive, to wit: loyalty to the public interest.

The Silo in California.

We have commented from time to time on the use of the silo in California, and have given all the actual experience which Californians have had with the ensilaging of fodder. It is true that the method has not commended itself here as at the East, where a long winter of dry feeding prevails, but still it is possible that the silo for furnishing succulent food during the dry summer and autumn, and the slow pasture growth of early winter, may serve a very useful

purpose in this State. The latest experience comes to us by way of the San Luis Obispo Tribune, and it only covers the construction and filling of the silo, which will not be opened until August next. The writer gives his operation thus far as follows:

My silo is 24x12 feet on the outside, built of 6x8 inches for sills, 2x2 studding 16 inches from center to center, and 18 feet high from the sills, lined on the inside with two thicknesses of redwood boards, with tarred paper between, all joints broken, and the whole girded over twice with 4x6 scantling and divided on the inside with siding planks (2x2) crosswise, and two half-inch iron bolts through them and the building, to keep the lateral pressure from spreading and bursting the building. The bottom is filled in for some 16 inches, and on top of that is laid a four-inch concrete floor. The building being prepared, I put a binder into a patch of Black Oregon oats in the milk stage, bound them, hauled them to the barn—by the side of which the silo stands—and cut it all into half-inch chop feed, and run it into the silo. Not having sufficient oats to fill it, I then cut a patch of wheat, just in the dough, and put that in, which filled the pits to within three feet of the top. I let it stand a couple of days to settle, then tramped all down hard, and covered it with two feet of long hay and tramped it down. At the time of covering the mass it had a temperature, 18 inches below the top, of 120 degrees Fahrenheit. I shall not trouble it till about the middle of August, when I will open it and report to you the result; but as ensilage-making has proved a success in the Eastern States to such a degree that some farmers make it by the hundreds of tons, I have no fears of a failure.

We shall watch for the opening of this silo, and keep our readers informed of the character of the fodder obtained and the results secured with it.

Rodents Outlawed.

Ground squirrels and gophers are outlaws in San Benito county—or they will be after the 19th instant—and those who harbor these mischievous little cave-dwellers, or give them negative aid and comfort by failing to go to war with them, are liable to come to grief themselves; for the Supervisors have unanimously ordained that the owners or occupants of lands infested with squirrels or gophers shall destroy the pests by poison or other appropriate means. "And said owners or possessors of such land shall commence said destruction as soon as this ordinance takes effect, and shall continue the use of the means of destruction until all the said squirrels and gophers are destroyed or removed from such lands. And all such lands shall be maintained and kept free from squirrels and gophers." And it is made and declared to be a misdemeanor for any one, whose land is so infested, to neglect destroying or endeavoring to destroy the noxious animals for a period of ten days after being notified to do so; "and any person so guilty may be prosecuted and punished as misdemeanors are prosecuted and punished under the laws of this State, and to the full extent thereof."

Moreover, the second section of the ordinance provides that

Any owner or occupant of lands, whose lands are free from squirrels or gophers, or who is endeavoring to destroy the same on his own lands, may give notice to the owners or occupants of adjoining lands, whose lands are infested with squirrels or gophers, and who is not using due diligence, nor endeavoring to destroy said animals, to immediately commence the destruction thereof. And if said owner or occupant of said lands so infested does not comply with said demand within ten days thereafter, then the person giving said notice, or his agent or employes, may enter upon the lands so infested for the purpose of destroying, and may destroy, said squirrels or gophers. And the expense thereof shall be a claim against such owner or occupant, and a lien upon said land in favor of said adjoining land-owner or possessor giving said notice. And said claim may be enforced in any court of competent jurisdiction, and a judgment obtained therefor against said owner or possessor neglecting to comply with said demand. And said lands of said persons shall be sold in satisfaction of said judgment.

If this measure is supported by the citizens of the county with anything like the unanimity with which the supervisors passed it, the death rate among San Benito rodents must soon show a marked increase.

WATERING OR CULTIVATING?—At the Tulare Experiment Station the work of irrigating has just been finished. A portion of the tract will be left unirrigated to test the difference between cultivation and irrigation.

HORTICULTURAL COMMISSION.—The San Benito Supervisors have appointed J. A. Scholfield, Gustav Brown and E. W. Bowman County Board of Horticultural Commissioners.

Farmers as Law-Makers.

In the early days of our republic, when everything was in a chaotic state, there was less corruption than we find now. Theft was not termed kleptomania when a wealthy person stole something, dipsomania was unknown, temporary insanity or transitory frenzy had not been invented to shelter the murderer, the base wretch who murdered a human being was not honored with the publishing of his picture and extended biographical notice, and his cell was not adorned with flowers sent by fair hands; men spoke with horror, and a murder, suicide or fatal accident, when telegraphs were unknown and news traveled slowly, caused many to pass sleepless nights. Now, from all over the country and even from across the ocean are wired accounts of terrible scenes until our minds are hardened like frequenters at bull-fights and we yearn for such news. Unless the papers have the usual sickening display, we say times are dull. Our laws are not what they ought to be. Who are to blame—the lawyers who frame and execute or the people who elect them? Kleptomania, which blinds the conscience by drawing distinctions and using a term less harsh than theft, has been invented by the legal fraternity; they have often used their brain not to make law a blessing but often a curse, for the man who can afford to pay can generally find the lawyer who can save him from punishment by some trick. In the early days there were more farmers at the helm, but as the legal profession became overcrowded, men imagined that none but a lawyer could draw up laws, and least of all, a plain farmer. So Congress and the various State Legislatures were filled mainly by lawyers, and they, with an eye to business, devised laws that they would be requested to interpret when they had lost their office. Let us try the experiment of sending more farmers and fewer lawyers to legislate for us. It might be dangerous to make a too sudden change, but let us prepare the way gradually, send only capable farmers, let their actions be well watched, and compare them with the legal fraternity. We predict that a careful comparison would lead to the election of more farmers, so that it would not be long before our Congress and Legislatures would have a membership proportioned according to the numerical strength of the classes for whom they are expected to legislate. With the best of motives, lawyers cannot be expected to enact laws which shall satisfy those whose wants they too often fail to understand.

Patriotism.

A man with strong faith may be a religious fanatic, but without faith he is an unbeliever. Faith, even the strongest, may be shattered, as we find in reading the biographies of distinguished men. Patriotism also requires faith. No man can believe in his Government unless he fully sympathizes with it and has confidence that each restrictive law is intended for the general good. How can a man who believes that the affairs of Canada or Mexico are better administered than those of our country desire their annexation? None but a selfish man could do so. A man may disbelieve in annexation and yet be a patriot because he considers that the country is as large as safe for a republic, but he could not work for the addition of other lands to our domain unless he believed it would be to our advantage. We have lately celebrated the centennial of the inauguration of Gen. Washington to the Presidency. The Roman Catholic and the Hebrew were as eulogistic of his religious character as the Episcopalian to whose communion he belonged. This was because he had banished self. No selfish man can be a patriot. The illustrious Aaron Burr is a case in point. He desired to place himself at the head of others, hence his traitorous designs. Had Washington been a selfish man, he could have been proclaimed King George I. He had the army to support him; he had all the respect which is always shown a true hero. He was a natural gentleman and as a king would have been superior to the George on the English throne. Many of the founders of the Republic were not enthusiasts—they had seceded from England not because they opposed monarchy, but because they felt they were not treated fairly, and it would have been an easy to have proclaimed a monarchy, but the Father of his Country chose the more excellent way.

The Exposition at Detroit.

On September 17th a World's Fair and Exposition will open at Detroit, Michigan. It is to be a combination of agricultural and industrial fair and exposition, and cash prizes of \$100,000 are to be given. The main building, of which we give a cut on this page, has a frontage of 500 feet, and the exhibit area is 200,000 square feet. The great central tower over the main entrance rises to the elevation of 200 feet, and is, therefore, one of the very highest towers on the continent; indeed, but six towers in the United States surpass it in magnificence of elevation. The sunlight streams into the great structure through unnumbered panes represented by 20,000 square feet of glass, an amount sufficient to cover $4\frac{1}{2}$ acres, or bound a surface one foot wide and four miles long. The aggregate exhibit surface contained in all the buildings is over 14 acres. The Art building has a frontage of 150 feet, and the stock buildings are very extensive.

Detroit's situation is in the highest degree favorable toward building up an immense metropolitan center. She has over 200 incorporated companies, engaged in a great variety of industry, and annually turning out products that are valued at millions. She has one of the largest seed industries in the world. In the manufacture of fine-cut tobacco, her position is unrivaled. Her car-shops and wheel foundries are among the most extensive. She is the center of the stove industry. Her drug and chemical trade is very extensive. Two hundred thousand dollars per year for public gas and electricity implies that she is one of the best lighted cities in America. Three millions have been expended for parks and public buildings. Her avenues are broad, beautifully shaded with oak, elm and maple, and scrupulously clean; and travelers are loud in their praises of the long and delightful drives. Belle Isle park, the gem of the lakes, attracts hosts of strangers.

The broad Boulevard encircles the city from Belle Isle bridge to Springwells, over 12 miles in length. The water and sewerage systems are estimated at over six million dollars. The vast commerce of the Great Lakes passes through her beautiful river, with a greater aggregate tonnage than enters the river Thames, or in six months surpassing that of the Suez canal for one year. On an average, a lake craft passes Detroit every $7\frac{1}{2}$ minutes throughout the season. The coming exposition will be one of her greatest undertakings, as everything is to be carried out on a grand scale. The admirable site, 70 acres in extent, is bounded by two streams, and is but a thousand yards beyond the city's western line. The grounds are penetrated by street car, electric railway and railroad, while the river offers the delightful diversion of a water trip to the fair and expo-

VIEW OF NORTHERN PORTION OF THE CITY OF RIVERSIDE.

sition. All exhibits can be unloaded from the cars or steamers directly into the buildings.

HOW GRAIN COMES OUT OF A GRAIN-BIN.—St. Paul grain men, says the *Pioneer Press* of that city, have been vexing their souls over a prob-

at the bottom, of course! W. A. Van Styke was determined to get at the facts and watched the bin with his eagle eye very closely the other day, after having caused a layer of barley to be placed on top of several layers of different kinds of wheat. The spout was opened, and,

MAIN BUILDING OF THE DETROIT EXPOSITION.

lem touching a grain-bin and contents. It is this:

"Given a bin, dump into it, separately five distinct qualities of wheat; open the spout at the bottom, and the query is, which layer of wheat comes out first? The uninitiated say at once, with a few exceptions: 'The first layer

strange to say, the barley came rushing out first.

A SETTLER in Warner valley received a notice from one of the swamp land-bosses to stop irrigating his (the settler's) claim, as he, the boss, claimed it as swamp.

Riverside.

Our Correspondent in San Bernardino County.

Riverside is the name of a thriving and beautiful city, and the title of a colony or settlement which embraces 56 square miles. All of this region is incorporated, and the city proper is merely the nucleus of the large colony. There is no similar area on the Pacific Coast, if indeed in the United States, so beautifully planned, so thoroughly tilled, and so productive of the luscious fruits of earth. We append below an interesting description of Riverside, lately issued by the Board of Trade of that place, and the engravings used herewith are from the same source. As the pioneer and most remarkable colony in California, the sketch deserves to be read carefully, and few will read it without interest and admiration:

It is but 18 years since a small band of hopeful men, wearied with the cyclones, blizzards, and other inclemencies of the Northwestern States, east of the Mississippi, sought a place upon the Pacific Coast for a more congenial home. After much investigation they decided upon Southern California, and finally selected a few thousand acres of land upon the south bank of the Santa Ana river, in San Bernardino county, including that portion of the elevated plain upon which the city of Riverside is located.

When a retrospective view is taken of the times in which this settlement was made, the condition of the country, financially and politically, and the discouraging nature of their surroundings, it must be admitted that these pioneers "built wiser than they knew," and that to most persons their venture seemed a visionary one.

Irrigation Necessary.

Southern California was an arid section, subject to long periods of excessive drouth, with an occasional wet season. No crop of any kind could be relied upon with any certainty without irrigation, and irrigation as introduced by the Padres and their successors was of a very primitive character—requiring no expensive structures to turn the water from its natural channel and conduct it along the lowlands bordering the stream.

These settlers were, however, more ambitious; they were not satisfied to locate upon the low flat lands bordering the river, but selected the high mesas where unobstructed views could be had of the magnificent horizon around them, and where health and strength were to be inspired from every breeze that crossed the plains from mountain or sea.

This required comparatively a new departure for Southern California. The water for irrigation (which was the life of the enterprise) must be conducted out upon the mesas miles away from the channel of the river, and hundreds of feet above it—through rocky hillsides and across deep arroyos, requiring a higher order of engineering skill than had heretofore been given to it, and a far greater expenditure of money. Therefore,

instead of receiving encouragement and cordial support from the settlers upon the adjoining well-watered territory of the San Bernardino rancho, they were frequently ridiculed and discouraged by the statement that they would be compelled to abandon their project, and that "their structures would ultimately be hauled away for fuel."

It must also be remembered that they came among a people largely composed of descendants of the Spanish, and a mixed Spanish and Indian race, speaking a foreign language and naturally suspicious and jealous of Americans. They were of totally different habits and customs, with whom it was difficult to communicate, and from whom no information was to be had in regard to fruit-growing by irrigation (the principal occupation in which the new-comers proposed to engage) or the varieties of fruit best adapted to this soil and climate. The plains upon which they located were simply pasture-lands, destitute of water even for domestic use, and, owing to the deficiency of the annual rainfall, had for centuries yielded but a scanty supply of feed for a few months each year to roving bands of cattle and sheep, and from June to November were dry and barren as a desert.

Construction of Flumes and Ditches.

Cut off from all associations with their kindred, and with exceedingly limited and irregular means of communication with them, and subject to the difficulties above named, it must be evident that there was not a place upon the Pacific Coast whose foundations were laid more upon the "evidence of things unseen and the substance of things hoped for" than this colony of Riverside. Yet, with probably more of the disappointments and discouragements allotted to the average settler in new places, they persevered; and with limited means and experience in such matters, constructed dams, flumes and ditches to control and lead the waters of the Santa Ana river out upon the thirsty and apparently barren lands.

Unlike non-irrigated sections of the State, it required nearly a year's time and the expenditure of some \$50,000 before the waters of the Santa Ana were flowing through the new channels to the original town plat of Riverside; and no planting of trees or vines could be safely done until the water was available in quantity and permanency. Several years more elapsed before its distribution gave even a slight promise of the rich fruitage that would result to the settlers from this large expenditure of time and money. The first plantings were made in the northern portion of the city as now incorporated. This is the principal business center of the city, in which the hotels, churches, schools, postoffice, and business houses are grouped, and the additions to these are fast displacing the beautiful blocks of orange trees that surrounded the earlier homes of the pioneers.

The Experimental Period.

The building of a home and the securing of profitable returns from horticultural investments is not accomplished in a year or two by even those familiar with all the necessities or advantages of even a favored land like Southern California. It was especially more difficult and discouraging for those who were only accustomed to the soils, climate, methods of cultivation, and productions of a semi-frigid country.

The men who were accustomed to grow pears and apples, wheat and corn in any of the Northern States had much to learn before they could successfully grow the grape and make a raisin, or plant and care for a grove of oranges, lemons or olives, especially by irrigation. It therefore required some five or six years and more of experimental work to determine what fruits were best adapted to this locality, what systems of irrigation and cultivation were the most economical and would produce the best results, and what methods of preparing and packing their products would satisfy a critical public and successfully compete with imported fruits, and also be best suited for shipment to distant markets. All of this was new and untried by the people who settled here, and most of it was new to California and the United States, and upon the success or failure of this venture largely depended the introduction of new and valuable industries to the Pacific Coast.

Up to and including the year 1874 the growth of the settlement was quite limited, only some 1500 acres having been brought under cultivation to that time; but sufficient had been accomplished to encourage others to locate around and unite with them.

During the years 1875 and 1876, the Riverside Land and Irrigating Company was organized. It purchased all the lands and water rights of the original corporation, the Southern California Colony Association. It also purchased some 3500 acres from Messrs. W. T. Sayward and S. C. Evans; and the

same number of acres from the Tin Company tract, and by these purchases consolidated all the contiguous landed interests in a territory nearly fifteen miles long and three miles wide, including all the water rights that had been appropriated from the Santa Ana river for these lands, for domestic use, irrigation and manufacturing purposes. It expended during these and succeeding years some \$200,000 in enlarging and extending the first canal, in constructing the lower canal and the distributing ditches and structures required for such an extended system of irrigation—the largest and most comprehensive at that time in California.

The new territory was subdivided into ten-acre lots conveniently located upon broad avenues, with cross-streets intersecting these every half mile. Magnolia avenue with its northern extension, Brockton avenue, is 20 miles long, extending from the business center of Riverside in a southwesterly direction to the base of the Coast Range of mountains, and through South Riverside. Seventeen miles of this distance is an air line; and the avenue through this portion is 132 feet wide, divided by rows of handsome evergreen trees into two roadways and two sidewalks.

Riverside's Growth

The growth of the settlement steadily increasing, constant additions to the systems of water supply were required; and during the years 1885, 1886, 1887 and 1888, large expenditures were made for water, both for irrigating and domestic use.

The growth of the colony from its foundation to the present time is best shown by the following summary of the population and wealth of the place: Population, 6000; acreage under cultivation, 10,000; number of citrus fruit trees, 650,000; number of raisin grapevines, 1,350,000; number of acres of alfalfa, 600; number of deciduous fruit trees, 200,000; assessed value of property for taxation, \$4,000,000; annual value of products of farm and orchard, \$1,100,750; length of main canals, 50 miles; length of distributing canals, 125 miles; length of pipe lines of all sizes, 42 miles; length of streets and avenues, 175 miles; length of street railways, 15 miles; cost of water system, over \$1,000,000; cost of street railways, \$73,000; cost of gas works, \$30,000; cost of church property, \$100,000; cost of school property, \$125,000. Incomes from fruit farms for past year: Citrus fruits, \$630,000; raisins, \$357,000; deciduous fruits, dried, \$80,000; hay, nursery stock, etc., \$33,750.

The number of acres of land in the immediate vicinity of Riverside's business center adapted to the growth of citrus fruits and the raisin grape and supplied with water for irrigation under the different systems, are as follows, viz.: Riverside Land and Irrigating Co., and Riverside Land Co., 12,000 acres; Gage system, 12,000; Vivendi Water Co., 3500; North Riverside Water Co., 2000; Jurupa Land and Water Co., 10,000 acres. In addition to these there is within the same territory an area adapted to alfalfa, corn and vegetables, mostly river-bottom lands, equal to 5000 acres, making a total now supplied with water and ready for cultivation 44,500 acres. These lands are capable of sustaining in a bountiful manner a population of 50,000 people. We have therefore room at Riverside and its immediate vicinity for 44,000 more people than we now have.

Oranges and Raisins.

The fame of Riverside as an orange-producer is almost world-wide. It was here that the first trees of the celebrated Washington Navel orange (which took the first prize at the World's Exposition at New Orleans) were planted, and to-day the orange products of the place consist mostly of that variety. They bring the highest price in the markets of the East, and practically rule the orange markets of the United States. Riverside raisins are also becoming equally famous and valuable. About 4000 boxes of these raisins were sent to London last year, and they brought better prices than the celebrated layers from Malaga. During the season the several packing companies at Riverside give employment to more than 2000 people.

Riverside is located on the new main line of the Atchison, Topeka & Santa Fe railroad, completed and in operation to San Diego via Santa Ana and Oceanside, and seven miles southeast of the Southern Pacific railroad at Colton, and connected with it by the Motor railroad. It is 53 miles in a direct line southeast of Los Angeles, and some nine miles southwest of San Bernardino, and ninety miles due north of San Diego, all county seats of their respective counties.

Thirty-three square miles of the colony tract are divided into 5, 10, 20 and 40 acre tracts for small fruit farms. Twenty-one square miles are yet used for grazing purposes, being at present above any system of irrigation. It can, however, all be irrigated

from the upper tributaries of the Santa Ana, and will be, as soon as the increase of population demands it.

The Business Portion of the City of Riverside.

The business part of Riverside is well constructed, and contains several fine brick blocks. The Rowell hotel and the Arlington House are the two largest structures in the city at present, though these will soon be eclipsed by a fine opera-house now in process of construction. The Rowell is an excellent hotel for tourists and commercial travelers and is largely patronized. The Glenwood is a splendid family hotel, with the most comfortable arrangements possible for the accommodation of sojourning visitors. As indicated in the foregoing description, the city has a splendid water supply, has a gas company, and is moving for an electric-light plant. The business streets are well graded and macadamized and lined with sidewalks of artificial stone. The residence streets are beautifully shaded. There is a fresh, inviting look to the place, and one is loth to leave a city so highly favored and so well kept. The traveler who wishes to see California thoroughly, should by all means visit Riverside. H. G. P.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

HORSE AUCTION.—Oakland Enquirer, June 7: Henry W. Woods of Napa offered for sale at auction some 40 horses last Saturday at the Gregory stable, in Centerville. The band consisted of brood mares, matched teams, single drivers, work and saddle horses. The stock was of Belmont and Norfolk breeding, from 3 to 7 years old. W. T. Ralph was the auctioneer. A three-year-old gray horse, after much talk, was knocked down to young Brewer for \$37.50. A four-year-old brown horse was sold to Judge Tilden for \$120. A four-year-old brown horse was knocked down to G. A. Eaton for \$40. A good span of matched roadsters, six years old, a mare and horse, were next offered with privilege of the span. G. A. Eaton bid \$90 and took the mare. The horse was bid off at \$95 by an unknown. This was discouraging, as the span were cheap at \$225. A three-year-old bay filly, gentle and kind, was sold for \$70 to Mr. Naismith. A young bay mare, heavy with foal, sold for \$55 to G. A. Eaton. A three-year-old bay filly was knocked off at \$57.50 to Frank Cloudings, and a brown horse, four years old, sold for \$65 to Frank T. Haws. This closed the auction, as Mr. Ralph stated that if Mr. Woods wanted to give away any stock, he could do it himself and save paying an auctioneer.

Colusa.

IRRIGATION MATTERS.—Colusa Sun, June 8: The Directors of Central Irrigation District met last Tuesday and determined to sell \$150,000 of the bonds of the district and proceed immediately with the work. The board adjourned to next Tuesday, at which time the regular advertisement required by law will be ordered. There is now no doubt as to the sale of the bonds. Already several persons have opened negotiations for the same. It is possible to have work actually begin by the 1st of August. The work that will require the greatest length of time is the excavation at the head of the canal—between that and Stony creek. It is important that the brickwork shall commence immediately, as the headgate ought to go in this fall, and it is no small job. It ought to be finished before there is any chance for a rise in the river. It will hardly be possible to get the work done so as to be of any benefit to the next crop, and hence the headgate is the principal work now to be rushed. The other will be done on the cheapest plan to have it all completed in a year from this coming fall.

Contra Costa.

AGRICULTURAL DIRECTORS' MEETING.—Martinez Item, June 6: At the first meeting of the Directors of Agricultural District No. 23, Geo. P. Loucks was unanimously elected president. H. C. Raap was elected secretary. R. C. Terry was unanimously elected treasurer. By allotment, the directors' terms of office are to be as follows: For one year—J. H. Tennent and R. G. Dean. For two years—H. Raap and R. C. Terry. For three years—D. N. Sberburne and J. E. Durham. For four years—F. Sanford and G. P. Loucks. The following resolution was passed: That the Contra Costa Agricultural District No. 23 accept the proposition of the Contra Costa Agricultural and Industrial Association to turn over its property and assets to the former organization, on condition that the said organization assume the indebtedness of the latter organization and allow the life memberships of L. L. Robinson and Joseph Esenthal, with all privileges conferred by the same, or refund to each the sum of \$50. The following committee was appointed to suggest a time for holding the fair, and to draw up a set of by-laws: Jas. H. Tennent, F. Sanford, R. G. Dean. Adjourned to meet again at Concord, June 15th, at 10 A. M.

El Dorado.

A NEW BEE JOURNAL.—Republican, June 6: Placerville now enjoys the distinction of pub-

lishing a monthly magazine, the first number of which appeared last week. It is called "The Western Apian," and is devoted to the interests of bee-raising, particularly on the Pacific Coast, which, it is said, requires different management of the apiary from that in the Eastern States in order to win success. The editors and proprietors are S. L. Watkins and F. E. McCallum. The former is a practical bee-raiser, having upward of 200 stands in his apiary. The latter is the Methodist minister, who is an amateur printer.

Fresno.

RAISIN PACK.—Fresno Republican, June 7: Frank Pasmore, of the California Raisin and Fruit Co., arrived yesterday from S. F., for the purpose of having work begun immediately upon two additions to their packing-house in this city. The additions will comprise an engine-house, a packing-house and a box factory. The main building will be 90x110 feet, and one of the additions will be 40x50 feet. When these shall have been constructed the company will be enabled to handle all the dried fruit that may be brought to their establishment. The engines and machinery have been built and nothing remains but to put them in place. "We do not propose to go into the business of buying green fruits this year, and we will give the fruit-growers a chance to do their own drying. We will buy the dried fruit and pack and ship it." "From what you have seen of the country, what do you think of the coming raisin crop of Fresno county?" was asked. "It will, I think, be tremendous. There will be over 600,000 boxes of raisins, an increase of from 40 to 50 per cent over last year. No grasshoppers have appeared and it is getting too late for them now. Everything is favorable. I have seen no grape-ly, and I never saw the vines doing so well as they are doing this year."

Humboldt.

THE SHEEP SURPASS THE PEACHES.—Eureka Standard, June 6: T. B. LeSieur of Garberville reports the finest crop prospect and the best feed for cattle ever known in that vicinity. The yield of wool and the crop of lambs is the best ever known. Mr. LeSieur says that on the South Fork, at Camp Grant and Myers', the peach crop is badly damaged by blight, and he thinks there will not be to exceed one-fourth of a crop. The earlier and better varieties suffer the most. The peach crop has never before been damaged in that vicinity.

Kern.

HAYMAKING GALORE.—Bakersfield Echo, June 6: C. W. Jackson is now running 10 camps of haymakers of 30 men each, and would be glad to employ as many more. The Poso ranch is now the largest hay ranch in the State, if not in the world. The number of acres runs into the thousands that are seeded to alfalfa and that will be cut from three to five times. Between 30,000 and 40,000 head of cattle were fed there last winter, many being shipped in from Arizona by the trainload.

RIPE PEACHES have been in market for some days. From now until the middle or last of October there will be fresh fruit of this variety to be had here, and in one or two cases ripe peaches have been gathered from the tree as late as December. Those ripening now are Briggs' Red May and are large and well-flavored for an early fruit. A score of other varieties will come along later. Of these the Orange and George's Ching are most extensively grown, the latter especially being a favorite on account of its good keeping qualities. Fresh peaches for six or seven months out of 12 ought to satisfy an ordinary appetite.

Los Angeles.

ORANGES.—Alhambra Cor. Times, June 1: Up to date 127 cars of oranges have been shipped from this depot this season. This is the largest number shipped from any station along the line of the S. P. R. R. except Colton, and that station relies on Riverside for its shipments. There are eight or ten cars more to go, mostly Mediterranean Sweets. In addition to the above, about 12 cars have been diverted to other depots—a good showing for this locality. Orange trees are being planted in every direction.

Mendocino.

UKIAH WOOL SALE.—Freight Agent Thorn writes the Republican: Owing to an error in the day of the week as date set for wool sale at Ukiah, falling on Saturday instead of Wednesday, as intended, it has been decided best for all concerned to change the day of sale from June 15th to Wednesday, June 19th. We have therefore notified wool-buyers that the sale will take place at Ukiah on Wednesday, June 19, 1889, without further notice.

Monterey.

CROP NOTES.—Salinas Index, June 6: The grain from Pajaro to Soledad will not yield more than half a crop. The early sown is fairly good. The western side of the Salinas river has a very good crop. Most of the late sown is a failure, some of it not being tall enough to cut for hay. Continuing south, there is a decided improvement, Kings City having an excellent crop. Mr. Downing's crop, on the Danphy ranch, is one of the finest in the county. For some reason the barley heads are falling off, till in some places the crop looks as though it had been headed. San Lucas and Long Valley have a fine crop, but not so far advanced as at Kings City. Paris Valley, San Ardo, Bradley and Hames valley have reason to be proud. Jolon and Pleyto also report fine prospects. Indian valley has an excellent crop, nearly all wheat.

Vineyard canyon, Ranchita and the surrounding country are waving with beautiful barley and wheat. (Two years ago a great deal of this country was vacant, not a house being seen for miles.) Upper Cholame has a fine crop; the lower end of the valley is about an average. Peach Tree and Priest valley have a fine prospect. Priest valley is about three to four weeks later than the valley section of the country. The first hay was cut here about May 25th. . . . The fruit crop of the county, so far as noticed, is good, most of the peach and apple trees being heavily loaded. In the small canyons a number of orchards have been planted during the past year and the trees are doing well.

Napa.

NAPA CANNERY.—*Register*, June 4: The well-equipped packing establishment that fronts a railroad line on one side and a steamboat line on the other, is no longer to remain idle. John R. Coe, who has already put much of his time and coin into it, now ventures upon the business of an uncertain season with more of the same precious ingredients. A big invoice of sugar has arrived for the cannery, the tin is ready, workmen are being engaged, fruit men are finding their way to the reopened captain's office. J. J. Groom, the manager, is on hand, and all is in readiness for the commencement of business Thursday. Royal Ann cherries are the first to receive attention.

Nevada.

A SWEDISH CONVERT TO OLIVE CULTURE.—*Tidings*, June 7: S. J. Segerstrand, who for the past seven years has resided at Pet Hill, where he has superintended the planting, care and cultivation of thousands of fruit trees, left on Wednesday to visit his old home in Sweden. He will also devote some time to the study of olive culture in the southern part of France, at the same time acquainting himself with the processes for manufacturing the oil. Italian olive culture and oil-making will also be studied. Having accomplished this, Mr. Segerstrand will gather about him a colony of industrious, sober people, and with them again seek the foothills of Nevada county and of Yuba. Here the colony will be established and the olive be cultivated, the manufacture of oil following in due season.

THE FAIR DIRECTORS held their annual meeting Saturday and elected officers for the ensuing year. Samuel Granger was re-elected president. Geo. Fletcher declining to serve again as secretary, I. J. Rolfe was elected to the position. E. M. Preston will account for all moneys. The Committee on Park was given further time. Messrs. Granger and Mitchell are to arrange for the pavilion. Messrs. Jacobs, Marsh and Nickerson are to make contracts for printing. The speed program was adopted without a change. As reported by the Committee on Revision, the list of premiums was adopted.

HORTICULTURAL PROGRESS.—*Cor. Alta*, June 8: To show what the soil could produce, I was taken to the Allison ranch, a short distance from Nevada City, which contains in full bearing nearly every variety of fruit and vine that is grown anywhere, except those native to tropical climes. Many other old orchards and many more new ones were pointed out to me in the short ride I took in the suburbs of Nevada City and Grass Valley. I noticed many large fields and small holdings being cleared of the pines, ready to be planted in fruit next season. On account of my time being limited, I was unable to visit the best portion of the county, where, I am told, a much further advancement has been made in tree-planting.

San Bernardino.

BUGS QUARANTINED.—*Ontario Record*, June 5: W. E. Collins confiscated some oranges that had red scale on them on the morning train from Los Angeles to Colton Saturday. They were promptly cremated, and the news and railroad companies will receive a large pointer regarding the matter. They have promised to allow none but San Bernardino county oranges to be sold on the trains, and are liable to prosecution under the insect-pest law. We are glad to note that Mr. Collins and the other members of the County Board of Horticulture are vigilant in guarding the county against all forms of scale.

San Diego.

ENLARGING THE OIL FACTORY.—*National City Record*, June 6: The present outlook for the olive crop being so favorable for a larger yield than ever before, Frank A. Kimball has decided to enlarge his factory, and Fred Copeland is now setting the stakes for a building 50x70 feet. The contract has been let for one story and basement.

SAN MARCOS PRODUCTS.—A. D. Stocking has recently been visiting at Escondido and in the San Marcos grant, and yesterday he brought to this office wild celery 7 feet high and wheat 6 feet 3 inches tall, the latter being the average in a field of 50 acres. He also displayed a new variety of rust-proof wheat which it is hard to equal for size of kernel. Mr. Stocking is very enthusiastic over the country to the north of us and the people who inhabit it, and speaks of large orange orchards that thrive without irrigation.

San Mateo.

POULTRY FARM.—*Times and Gazette*, June 1: Menlo Park has a new attraction in the shape of a chicken farm, situated at Sherwood Hall, the residence of Timothy Hopkins. The visitor is impressed not only with the extensiveness of its yards and buildings and great numbers of

fowl, but with the scientific manner in which it is conducted. The farm covers an area of eight acres and is divided into 20 yards or apartments. The brood-houses are two in number and contain the latest improved incubators—the Oxford and Monarch—the capacities of which are 400 and 600 eggs, respectively. The former is heated by gas and the latter by water. When the little chick first breaks through the shell it does not meet with the tender care of a matured mother, but the genius of man has provided a good substitute. The chickens are gathered into the first yard, which is called the "mother." Here are small heaps of sand which are heated by subterranean gas pipes. The little ones are evidently as contented as if sheltered beneath the wing of a maternal protector, for they nestle cozily in the warm sand and it is almost impossible to drive them away from it. As they grow older they are advanced from yard to yard until the main one is reached. The chickens are then ready for the market and are disposed of, principally at the Del Monte hotel and private residences around Menlo. As fast as the eggs are hatched new lots are supplied. The amount of eggs sold per month from this farm during the laying season is 6000 dozen, and the average monthly cost of feed is \$300. The farm is in charge of A. S. Benston of Philadelphia, who has made poultry-raising a life study.

Santa Cruz.

POULTRY POISONED.—*Pajaronian*, June 6: W. L. Hoyt had 300 small chickens poisoned on his place near Vega one day about two weeks ago. It is supposed that poisoned wheat was mixed with the feed by a tramp who had been ordered off the place. [Such miscreants are worse than coyotes and should be outlawed; yet we would not favor a scalp bounty for such cases.—*Eds. Press*]

THE BERRY-GROWERS are feeling better this week, for now they can make their shipments from Watsonville. The railroad company now runs a special freight from Aptos each afternoon, making connection with the north-bound freight at Pajaro. The special is a lumber and fruit train, and leaves Watsonville about 4:30 P. M., saving our orchardists the haul to Pajaro.

Solano.

EARLY FIGS.—*Bulletin*, June 10: The first figs of the season raised in the vicinity of Winters were received to-day by Onesti & Connor. They were grown on the Pleasant Valley ranch of H. & W. Brinck, are of large size, fully ripe and excellent in flavor. The consignment sold readily at 60 cents per pound.

Sutter.

FRUIT SHIPMENTS.—*Appeal*, June 7: Yesterday the Sutter Fruit Co. and the Feather River Orchard Co. loaded a car of over 1000 boxes of peaches, apricots and cherry plums, which left by the Oregon express for Minneapolis. About a half-carload of peaches and apricots was shipped to the Bay from the Abbott & Phillips place. By express the shipments were: 60 boxes cherry plums, 63 boxes blackberries and 27 boxes peaches. Over 1800 pounds of cucumbers were shipped yesterday.

HOP NOTES.—*Four Corners*, June 8: Indications point to a good average crop of hops from Bear river. The vines are strong and thrifty, and the stand is exceptionally good. The yards show a greater uniformity this year than last, and it would seem we ought to have a full yield. Two weeks ago we were in the Nicolaus yards and were surprised to see how completely the morning-glory had been eradicated from ground that was matted with it two years ago. Mr. Orth deserves especial credit for his success in this line. Mr. Grider of Sacramento, a hop-drier and expert, has planted 15 acres of new hops adjoining Nicolaus on the east. The vines are looking fine and promise 1500 or 1800 pounds. D. H. Hopkins has 14 acres of hops that would be a credit to any one.

AN ORCHARD MEETING.—*Farmer*, June 7: A visiting meeting of the Sutter Horticultural Society took place at the orchard of R. C. Kelle Wednesday. After the majority of the members had arrived, they were conducted through the large vineyard and orchard by Mr. Kelle, who took pains to interest all. In the 40-acre vineyard could be found all the varieties of grapes suitable to the soil and market. Notes were taken of the different stages of the grapes, their ripening, etc., and the conditions of the soil. On a few vines a pest in the form of a beetle was found to have been at work, but no serious damage was done. The members discussed the mode of exterminating the pest and also examined the fruit trees for indications of pests. After a very instructive and interesting hour, the party returned to the house, where the ladies had prepared a bounteous spread of ice-cream, cake and lemonade under the large fig trees. The repast was highly relished and a vote of thanks extended to Mr. Kelle and the ladies for the pleasing manner in which they entertained those present. These visiting meetings will no doubt be continued, as they are very instructive to all interested in horticultural work.

Tulare.

LIFTING WATER.—*Visalia Times*, June 6: A. P. Osborn's residence and the best part of his land are located on high grounds on the bank of Tule river, at Rural. To get water on this land without going several miles up the river and bringing out a ditch, Mr. Osborn has placed in the river a wheel 25 feet in diameter and 5 feet wide. Surrounding this wheel on

either side are 40 boxes, each holding four gallons of water, making in all 80 boxes, with an entire lifting capacity of 320 gallons at each revolution of the wheel, which is turned by the current of the river. As the boxes reach an elevation of 22 feet, the water in them is emptied into a flume, which conducts it on-ward into an irrigation ditch. This elevating the water 22 feet is only sufficient to place it on the flat whereon is done the farming, and will not take it to the knoll on which stands the residence. This is accomplished by a hydraulic ram. A part of the water reaching the top of the river bank is allowed to run back down the steep bank through a pipe, thus furnishing motive-power to run the ram, which sends water up to the house. The wheel and flume cost, when completed, \$150, and considering the small liability of its becoming damaged, it is certainly preferable to keeping in repair several miles of ditch.

THE SQUIRREL PEST.—Farmers are again coming forward with complaints of the destruction of wheat by squirrels. I. N. Wright of Tulare suggests that the Board of Supervisors let a contract, or contracts, to responsible persons to poison all that could be found. By this means all persons owning land would have to bear their proportion of the cost, and every quarter-section in the county would be visited by the persons having the contract. This plan might require the services of a large corps of men, but they would undoubtedly do effectual work, and it is a better scheme than paying bounties on scalps.

GRASSHOPPERS TROUBLESOME.—*Delta*, June 6: Grasshoppers are proving very destructive to orchards and vines west of Goshen and elsewhere in the county. Geo. West of the Viticultural Commission has been experimenting on vineyards at Minturn with a remedy suggested through the executive officer against grasshoppers, using ingredients in the following proportions: Forty pounds bran, 15 pounds mid dlings, 2 gallons cheap syrup, 20 pounds arsenic, mixed soft with water; a tablespoonful thrown by the side of each vine or tree. Cost per acre for trees, 25 cents; for vines, 50 cents. He reports that the hoppers eat greedily and die in their tracks.

TURN THE POULTRY LOOSE ON THEM.—Henry Byrd thinks the grasshoppers that are so thick over a strip of country north of Visalia were hatched in the fields and grasses along the St. John river. It strikes us that on those ranches chickens and turkeys would thrive with scarcely any attention. Grasshoppers are excellent food for fowls, and they get the requisite exercise in catching their food. A few thousand fowls in any community would naturally lessen the grasshopper pest.

A HOLD OVER PUMPKIN.—*Traver Advocate*, June 8: F. E. Stoneman, who lives near Traver, last fall secured from Mr. Stewart, a neighbor, a large pumpkin, weighing about 50 pounds. He has kept it in his barn or cellar away from the sun and frost ever since he got it. To-day it is as sound as when it was first picked, although it is drawing near the season of the year for the same vegetable to be plentiful in the market again.

Yolo.

HONEY FROM DANDELIONS.—*Woodland Mail*: Dandelions, which are deemed a pest and nuisance by many, are considered a very nice flower by a well-known Yolo apiarist, who says that his bees have pastured on the golden flowers all the spring and made a lot of beautiful honey. So it will be seen that even the despised dandelion has a place in the economy of nature; and besides forming golden honey, its leaves make good greens and its roots an excellent tonic.

IN CAPAY VALLEY.—*Esperanza Cor. Record*, June 8: For the past four weeks ripe luscious peaches have been eaten from the Cadanassa orchards. The grapes are now ripe on the Flint place above Rumsey. Large, firm, ripe blackberries were taken into Woodland last Monday from the Cache creek orchards, and all this without irrigation. Ripe peaches grown in Capay have been on the hotel table for the past week. The new orchards that have been set out here are looking unusually thrifty. Grain is ripening fast, headers are running, and crops surpass anything yet seen. There were over 3000 tons of hay out from the Bonyne tract this year, some of it going four tons to the acre from second year's volunteer.

ARIZONA.

POTATOES.—*Tucson Star*: Last year a few potatoes were raised in the Santa Cruz valley opposite Tucson as an experiment. The result

was that a very superior spud, large, dry and palatable, was produced. Last February the same parties planted ten acres. The crop is now maturing and of a very superior quality. They are larger and better than those imported from California. This ten acres will give to the Tucson market more than 135,000 pounds of potatoes from this crop.

OREGON.

NORTHEASTERN OREGON.—*Weston Cor. Oregonian*, May 30: Indications are most favorable for a more than average grain crop this season. Fall-sown wheat in many fields is heading out. Spring grain is not far behind the fall. Owing to the late rains, the growth is very rank, stalks in many fields averaging from three to four feet high at the present time.

GRANDE RONDE VALLEY, of which La Grande is the commercial center, is one of the most fertile sections in the Pacific Northwest. It supplies food for the miners, hay for the Columbia basin counties, barley for St. Louis breweries, horses for the East and cattle for the West. A crop failure here has never been known, and 35 bushels of wheat and 75 bushels of oats to the acre is not an extraordinary yield.

EAGLE VALLEY, UNION CO.—*East Oregon Republican*: Eagle valley has never before been in so prosperous a condition. Hundreds of acres of waving alfalfa, almost ready for mowing, greet the eye, and the purple bloom presents a beautiful sight. Thousands of tons will be raised this season. Last winter stock from all parts of the country was fed here. A single acre of land will produce during the season from five to seven tons of hay. . . . Another rapidly growing industry in Eagle valley is bee-keeping. Parker, Barrows & Co. are now the principal apiarists here, Mr. Parker having made it a study for a long time. The business requires close attention and a thorough knowledge of the ways of the Apis Mellifica. That this is a great bee country is shown by one colony belonging to Mr. Parker, producing 200 pounds of honey that readily sold for 25 cents per pound.

Baling Hay.

In order to test the difference in Bale Rope, about which there is much discussion, we to-day used one coil Eastern made rope, 60 lbs, which baled 67 bales hay, weighing 84 tons, taking about 7 lbs rope per ton, and one coil of TUBBS CORDAGE CO.'S make, 57 lbs, which baled 88 bales, weighing 114 tons, taking 4 lbs per ton. These facts prove that it takes about 40 per cent more of Eastern rope to bale a ton of hay than it does of the Tubbs Rope. We used six strands to a bale and not a strand of the Tubbs Rope broke.

J. R. WRIGHT, Owner. MARTIN WOLLESON, Balers
Calistoga, June 5, 1889.
I this day baled my hay with TUBBS CORDAGE CO.'S Bale Rope, five strands to the bale, and it took less than four pounds rope to bale a ton. Not a strand broke.
Calistoga, June 6, 1889. J. O. BUTTERFIELD.

\$2500—NURSERY.

MUST BE SOLD IN SIXTY DAYS!

One-half interest in a general Nursery in one of the best counties in the State. 100,000 Peach and Almond seedlings can be budded in June. This is a rare chance for a permanent and paying investment. Full particulars on application. Address

Z. D., Box 2517, San Francisco, Cal.

THE RUSHFORD WAGON

Will Carry the Earth!

[From the Montague Herald, Montague, Siskiyou Co., Cal., May 1, 1889.]

One day last week a huge landslide on Ball's mountain caught an Oregon teamster's wagon and buried it beneath several tons of earth and rock. The horses were not touched, and the teamster jumped in time to save himself. A force of men dug out the wagon, and as it was a RUSHFORD, with National Tubular Steel Axle, it was not injured. The "Rushford" is beyond contradiction the best wagon made.

PILE ON THE MOUNTAINS!

The King of Wagons Can Stand It!

Farmers, if you would be Happy and Contented, buy a "RUSHFORD" Wagon, with either Steel Skeins, Old Reliable Concord Steel Axles, or with National Tubular Steel Self-Oiling Axles, which are Stronger and One-Third Easier of Draught than any other.

These Axles have recently been adopted by the U.S. Government after a most severe and thorough test.

FRUIT MARKETING.

The Golden Gate Association.

A meeting of the Board of Directors of the Golden Gate Fruit Association was held in the office of C. W. Reed, in Sacramento, June 8th, President A. T. Hatch in the chair.

The Executive Board of Managers was instructed to require all fruits shipped to localities where the association auction-houses are situated to be offered for sale at these points.

W. A. Perry of Sacramento was appointed dispatcher for the association. C. W. Reed was unanimously elected vice-president. W. S. Kendall was elected secretary.

H. A. Thomas, Manager of the California Fruit Transportation Company of Chicago, addressed the meeting relative to the refrigerator service offered by the company to shippers. He thought it would prove profitable for the association to adopt the system. Mr. Hatch said that he had packed up a box of ripe peaches last year and sent them to Chicago by the refrigerator car, and that upon the arrival of the fruit in the East it was in perfect condition. Fruit that was fully ripe was shipped to Chicago, kept there a week in a cooling-house, sent by express to New York, and finally shipped to Glasgow, Scotland, where it was sold in market. Mr. Hatch received eight cents per pound for peaches shipped to Chicago by the refrigerator line, while similar fruit sent in open cars brought but four cents per pound.

Eastern agents were designated as follows: Chicago, Earl Fruit Co.; New York, E. L. Goodsell; Boston, Snow & Co.

The appointments for various other points will be made by the board of managers within a few days.

The first car to be shipped through the association went forward June 8th. It was a load of cherries from Haywards. Regular shipments will follow almost daily from now on.

Special trains will begin running about July 1st, as heretofore announced, and in the meantime shipments will go forward by passenger train.

Growers wishing to ship to the East less than carload lots, may do so by consigning their shipments by local freight to the Golden Gate Fruit Association, Sacramento, and the consignments will be loaded into cars and go forward promptly at carload rates.—Condensed from Sacramento papers of June 8th and 9th.

Organization of Haywards Growers.

The Journal gives accounts of the preliminary organization of the fruit growers of Haywards and vicinity for the purpose of co-operative action in the marketing of fruits. The project seemed to meet with general favor, and the following committee on permanent organization was appointed to form a joint-stock company under the laws of the State: I. B. Parsons, R. Hickmott, Wm. Knox, H. W. Meek, Geo. W. Gordon, Thos. B. Russell, F. H. Garcia, San Leandro; A. Rogers, San Leandro.

Milo Knox, who went East as the agent of the Haywards cherry-shippers, has returned from Chicago, and the Journal gives the following sketch of his experience and observation: He went as far as Chicago, the leading point for California fruits, and reached his destination about fifteen hours ahead of our carload of cherries. He watched its unloading and sale by the auction plan, which resembled a scene in the San Francisco stock board. The buyers were very eager to secure the fruit. For the first experiment it proved more than a success, for the reason that our growers found out just what mistakes to correct, and in conversation with the leading buyers for California fruits, Milo at once realized the importance of our fruit men forming an organization here, so that our fruit could be shipped and packed by one management, so as to be uniform. This fact was impressed on his mind by all the big buyers, who said they could dispose of all the fruit sent them, but unless there was an organization to deal direct with, so that they could depend on a regular arrival of fruit, it would be of course a great drawback to them. Now as to the prices secured. The fruit shipped from this section East, this season, averaged from \$1.45 to \$2 per box of 10 pounds, while at home the price has been very discouraging to our fruit-growers. The striking contrast in prices is easily shown at a glance. A ten-pound box of cherries, clear of all charges East, will average \$1 to \$1.25, or ten and twelve cents a pound. This is fully double what is paid at home. For Royal Anns the price will go much higher. What surprised Milo most was the explosion of the old theory, that cherries must be picked a trifle green. In the first carload lot was a number of boxes, picked ripe, that brought top prices, while the fruit picked green brought a much lower price. The cherries must be full size and, if packed properly, will bring a handsome price.

Vacaville Fruit Notes.

EDITORS PRESS:—About 2½ carloads of fruit and vegetables leave Vacaville daily for San Francisco. There are two fruit companies in Vacaville. The Vacaville Fruit Co. is composed of nine members. Their principal object is to ship their own fruit and to furnish their own members and others with boxes, trays and other articles used in the fruit business. J. M. Petingale is manager. The Fruit-Growers' As-

sociation of 13 members is for the purpose of shipping green and dried fruit, also selling boxes, trays, baskets, paper, nails, etc., used in the fruit business. A. Moger is manager. This latter company has shipped the past week eight cars of fruit East, and from one to three tons daily by express to Oregon and points east of the mountains.

They are now employing 25 hands and paying the highest market price for fruit.

Early fruit sold in Vacaville this season to parties to ship East: Cherries, \$4 to \$1.25 per 10-pound box; apricots, 2½ cents per pound; peaches, 3 cents per pound, and plums, 4 cents. If these prices would continue through the season, most of us would soon be rich. G.

Vacaville, June 9, 1889.

The Fruit Union.

Shipments by the California Fruit Union are now going forward freely. On the evening of June 9th five cars of fruit were dispatched to the East, one each from Winters, Vacaville, San Jose, Sacramento and Newcastle. The shipments were made up of apricots, peaches, plums and cherries. Sales of fruit by auction in Chicago are reported by telegraph, as may be learned from our market review.

Santa Ysabel—A New Health Resort.

The Rancho Santa Ysabel, situated in the central portion of the Salinas valley, Monterey county, has long been noted as a most delightful and health-restoring locality. But it is only quite recently, and especially since the railroad has been constructed through it, that any special attention has been drawn toward it. Some three years since a movement was made to establish in this valley a summer resort similar to that at Pacific Grove. The particular locality selected was a beautiful canyon near the railroad in which are several valuable medicinal springs, which have been utilized as such ever since the days of the Aztecs, as is shown by ancient relics, earthworks, etc. This canyon is surrounded on all sides by rolling hills covered in the spring with luxuriant vegetation, and at all times with sweet-scented shrubbery and scattering timber.

Adjoining these springs a town site has been laid out, with roads and avenues which wind around and to the tops of the hills, which it is expected will soon be lined with beautiful country residences, the occupants of which will be attracted thither by the beautiful outlooks and health-giving atmosphere of this charming locality.

The need of such a gathering place at a distance from the seacoast where the sea breezes may be tempered by warm hills and balmy plains is generally admitted. It is impossible to give anything like an adequate description of this charming locality in print. To be fully appreciated it must be seen. The plan is to found an inland pleasure and health resort, under semi-religious influence, such as will admit to its precincts none but the most desirable class of residents. The deeds to land will exclude forever from the premises the manufacture and sale of intoxicating drinks. In a word, the idea is to make it a place where families can go and be unmolested by any annoyance whatever.

The initial sale of residence lots was made on Thursday last by Briggs, Ferguson & Co. of 314 California street of this city. An excursion party which filled a train of seven Pullman cars went down on Wednesday night. A hotel car was included in the train and every reasonable arrangement was made for the pleasure and comfort of the excursionists. Carriages were provided by means of which all who chose to do so were taken over the ground and the opportunity given to take a view of some of the finest outlooks to be met with even in this wonderful land of magnificent scenery and natural landscape pictures. An elegant collation was also provided free to all.

A large number of residence lots and a considerable amount of acreage in lots from two or three acres upward were sold. The locality is most admirably fitted for the purpose, and will no doubt soon become a most popular place of summer resort. Persons who have not purchased and who desire to inquire into the advantages of the locality are referred to the above firm.

HOME-MADE BALE ROPE.—Those engaged in baling hay should look for the statement in our advertising columns concerning the comparative service of one coil of Eastern rope with one coil of Californian. The California gentlemen who have made the test are well-known, practical men. Tabb's Cordage Co., the manufacturer of the superior rope, is an old established concern and has earned an excellent reputation by its constant effort to win fame by meriting it.

A FIRE AT FRESNO on the morning of the 8th consumed a large portion of Simon Heury's livery-stable, with six of the horses, R. Hayes' blacksmith shop, and the outbuildings of the Southern Pacific hotel. Loss about \$10,000, fully covered by insurance. The origin of the fire is supposed to be incendiary.

JUDGE SPENCER gave judgment in favor of the Los Gatos Fruit Co. in its suit against W. N. Rodgers et al., for \$8521.73, as the contract price of two shipments of canned fruit to Liverpool in 1883.

California Products at Chicago.

CHICAGO, June 12.—California Green Fruits—Cherries are scarce; not enough are offered to make a market. Peaches are rather quiet and sell at \$1.75 @2 for 20-lb boxes. Apricots have a moderate sale at \$2 @2.25, but plums are dull and lower at \$1 @1.25 for 20-lb boxes.

California Dried Fruits—There is not much stock in this line of goods left for sale, and the market in consequence rules quiet. At the same time, what little stock there is left rules firm as follows:

Apricots—Evaporated, bleached, bxs, 9@12c; 1b; do, sun-dried, according to quality, 6@8c; do, in sacks, 6@8c. Peaches—Evaporated, bleached, unpeeled, boxes, 9@10c; 1b; do, sks, 8½@9½c; do, sun-dried, unpeeled, sks, 5@5½c; do, peeled, bxs, choice, 11@13c; just fair, 9@10c; sks, 9@12c. Nectarines—White, evaporated, bleached, bxs, 7@8c; 1b; do, sun-dried, sks, 6@7c; do, red, evaporated, bleached, bxs, 6c; do, sun-dried, sks, 4@5c. Plums—New, pitted, sacks, 5½@6½c; 1b. Prunes, according to size, in sks and dry, 7@10c; 1b; damp, 3@4c; Silver, 10@12½c; Hungarian, sks, 3@5c.

Raisins—Loose Muscatels, new, ½ box, \$1.40 @1.68; do, London layers, new, \$1.65 @2.25.

Oranges—Steady and firm, owing to small supply. Market firm for choice stock; quotable: California—Riverside, ½ box, \$1.25 @1.45; undressed sizes, \$3 @4; San Michael, paper rind, \$5; San Gabriel, \$2 @3; Duarte, \$3 @3.50; Los Angeles, \$2.25 @3.

Beans remain firm; fair demand continues; offerings small; prices a shade higher with quotations as below: Lima beans, California, 5¼@6c; 1b.

Hops—The demand is fair and market firm, with only small supply. Prices range as follows: Choice Washington Territory and Oregon, 24@25c; 1b; Pacific Coast, prime to choice, 19@22c.

Change in Management.

At the annual meeting of the stockholders of the Bull & Grant Farm Implement Company an entire change was made in the management of the company.

Mr. Charles Montgomery was elected president, and Mr. T. A. Lauder general manager. From his long experience with Studebaker Bros., and subsequent management of the Grangers' store at Sacramento, Mr. Lauder is in every way qualified to take the position of manager.

That the change of management was a wise step is evidenced by the large amount of goods daily shipped by this company and prosperous condition generally of their business. They carry only the best agricultural implements and buggies to be obtained.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. NOTE.—Copies of U. S. and Foreign Patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

Veterinary Surgeons.

W. H. Carpenter & Son, well and favorably known as veterinary surgeons, have lately built a fine Infirmary at 331 Golden Gate avenue. The main building is 55x137 feet, with box stalls and all modern improvements. They are graduates of the Ontario Veterinary College, and are provided with Tiffany's operating-table, which is considered absolutely safe for casting a horse. The growing interest in breeding fine stock would seem to warrant the large amount of money invested in this well-appointed Infirmary.

WANTED.

Young man of steady habits desires situation as Stenographer and Typewriter. Good references furnished. Address F. W. C., 39 E. Cayuga St., Oswego, N. Y.

ADMINISTRATOR'S SALE

By order of Probate Court, in the matter of the Estate of
JAMES ROBERTS, Deceased.I will sell at private sale to the highest bidder, for cash,
on or after May 1, 1889, at the Ranch in Irvington, or at
my office in Oakland, 946 Broadway, Alameda Co., Cal.,
the entire flock of Thoroughbred French Merino Sheep,
consisting of 280 (Two hundred and eighty) Ewes, 79
(seventy-nine) Bucks, and 180 (one hundred and eighty)
Lambs. These Sheep are the get of the original flock
imported by Robert Blacow of Centerville. Mr. Roberts,
as foreman, having charge of the flock for several years
prior to Mr. Blacow's death, after which he became
the owner of the entire flock, which he has kept purely
for stock purposes.All interested in Thoroughbred Sheep should be fami-
liar with this flock, which has become famous under the
care and management of Mr. Roberts; always receiving
first premiums, having been sold to Europe, South Amer-
ica and all parts of the United States; individual mem-
bers having repeatedly sold for from \$500 (five hundred)
to \$1500 (fifteen hundred) each. Sheep Men should seize
this opportunity to secure some, as they must be sold
to settle the Estate. Address, JAMES STAN-
LEY, Administrator Estate J. Roberts, De-
ceased, Mission San Jose, or 946 Broad-

S. H. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC

SAN FRANCISCO, June 12, 1889.
The past week has been uneventful, and therefore partakes more or less of the character of the preceding week. Harvesting is becoming more general in the favored localities. As a rule, the outturn is better than estimated. The wheat market, both at home and abroad, has held fairly strong throughout the week, necessitating buyers paying more money. The following is to-day's cablegram:

LIVERPOOL, June 12.—Wheat—Weaker. California spot lots, 65 6d @ 65 9d; off coast, 33s 3d @ 33s 6d; just shipped, 33s 6d; nearly due, 33s 6d; cargoes off coast, not many bids in market; on passage, quiet but firm; wheat on passage to continent, 302-000 qrs. wheat and flour on passage to U. K., 1-581,000 qrs.; English country markets, steady; French, quiet; wheat in Paris, quiet; flour, quiet; weather in England, fair after rain.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	June.	July.	Aug.	Sept.	Oct.	Nov.
Thursday.....	65 1/2	65 1/2	65 1/2	65 1/2	65 1/2	65 1/2
Friday.....	65 1/2	65 1/2	65 1/2	65 1/2	65 1/2	65 1/2
Saturday.....	65 1/2	65 1/2	65 1/2	65 1/2	65 1/2	65 1/2
Monday.....	65 1/2	65 1/2	65 1/2	65 1/2	65 1/2	65 1/2
Tuesday.....	65 1/2	65 1/2	65 1/2	65 1/2	65 1/2	65 1/2

The following are the prices for California wheat for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	33 3/4	33 3/4	33 3/4	Quiet.
Friday.....	33 3/4	33 3/4	33 3/4	Quiet.
Saturday.....	33 3/4	33 3/4	33 3/4	Quiet.
Monday.....	33 3/4	33 3/4	33 3/4	Quiet.
Tuesday.....	33 3/4	33 3/4	33 3/4	Firm.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

	June.	July.	Aug.	Sept.	Oct.
Thursday.....	82 1/2	82 1/2	82 1/2	82 1/2	82 1/2
Friday.....	82 1/2	82 1/2	82 1/2	82 1/2	82 1/2
Saturday.....	82 1/2	82 1/2	82 1/2	82 1/2	82 1/2
Monday.....	82 1/2	82 1/2	82 1/2	82 1/2	82 1/2
Tuesday.....	82 1/2	82 1/2	82 1/2	82 1/2	82 1/2

The closing prices for wheat have been as follows, at Chicago for the past week:

	June.	July.	Aug.	Sept.
Thursday.....	75 1/2	75 1/2	75 1/2	75 1/2
Friday.....	75 1/2	75 1/2	75 1/2	75 1/2
Saturday.....	75 1/2	75 1/2	75 1/2	75 1/2
Monday.....	75 1/2	75 1/2	75 1/2	75 1/2
Tuesday.....	75 1/2	75 1/2	75 1/2	75 1/2

NEW YORK, June 12.—Wheat—81 1/2 @ 81 c for cash, 81 c for July, 81 1/2 c for August and 82 1/2 c for September.

The Nation's Cereal Crops.

WASHINGTON, June 10.—The June returns of the Department of Agriculture show a light increase in winter wheat. The area in seed will be possibly a million acres more than the last crop, largely from Kansas and California. The seeded and harvested area in Kansas this year will be nearly identical, and a large breadth in California which is cut for hay in years of low yield will in part be harvested for grain this season. The condition of winter wheat still remains comparatively high, though it has fallen three points during the month, and averages 93 for the country. The following State averages are given: New York 96, Pennsylvania 94, Texas 88, Kentucky 86, Ohio 88, Michigan 90, Illinois 92, Missouri 98, Kansas 98, California 98. The area of spring wheat has apparently increased about 3 per cent. Preliminary estimates show a loss of 3 per cent in Wisconsin and 1 in Minnesota, and a gain of 1 in Iowa, 3 in Nebraska and 7 in Dakota, with an increase in the northern region. An increase of 2 to 3 per cent in the area of oats is reported, while the condition is seven points below the normal standing. Barley is about the same as last year, and its average condition is 95. Rye has made no perceptible advance in area, and its general average condition is 95.

California Fruits East.

NEW YORK, June 7.—The first carload of California fruit of the season was auctioned by the California Fruit Union this morning. The prices obtained were: W. R. Strong & Co.,—9 ten-pound boxes Madeline pears at 65 cts.; 37 boxes Alexander peaches, \$2.05; 92 crates Royal apricots, \$2.65; 85 crates Royal apricots, \$2.95; 91 crates Royal apricots, \$2.60. I. W. & F. M. Buck—129 boxes Alexander peaches, \$2.05; 86 crates Royal apricots, \$2.15; 77 crates Royal apricots, \$2.15. F. M. Buck—111 boxes Alexander peaches, \$2.05; 13 crates Royal apricots, \$2.90; 1 crate apricots and plums, \$2.40; 4 crates red plums, \$2.70. Frank B. McKevitt—3 boxes Alexander peaches, \$2; 1 crate Royal apricots, \$2.15. F. V. Buck—11 boxes Briggs May peaches, \$2.10. W. R. Strong & Co.,—100 crates red plums at \$1.30 and \$1.35.

CHICAGO, June 7.—The agents of the California Fruit Union sold by auction to-day a carload of apricots, peaches and plums. Apricots sold at from \$2.10 to \$1.50; peaches, \$2.35 to \$2.30; plums, 75 cents. The demand was fair.

CHICAGO, June 10.—The agents of the California Fruit Union sold three carloads of fruit to-day as follows: Peaches, \$1.35 @ 1.80; apricots, \$1.40 @ 1.80; plums, 70c @ 80c; cherries, 90c @ 1.50. The cherries were in bad condition and peaches fair.

CHICAGO, June 11.—The agents of the California Fruit Union sold one carload of fruit to-day as follows: Peaches, \$1.80 @ 1.85; apricots, \$1.30 @ 1.70; plums, \$1.10. The demand was only fair.

NEW YORK, June 12.—Very little California fruit was auctioned at Brown & Seccomb's salesrooms to-day, owing to the non-arrival of fruit cars. An O. and C. car, No. 1020, containing 666 half-crates Royal apricots from the Fruit-Growers' Association of Vacaville, sold at prices ranging from \$1.10 @ 1.60 each; 137 ditto from O. E. H. Garlich, brought \$1.30 @ 1.35 each; 26 ditto from J. W. Gates, brought \$1.55; 43 ditto from Robinson Bros. sold at \$1.35; four half-crates red plums from O. E. H. Garlich sold at \$1.80.

CHICAGO, June 12.—Porter Bros. Co. sold to-day, through the Adams & Lewis Auction Co. two

carloads of peaches, apricots and plums. The peaches sold at \$1.85 to \$1.75, apricots at \$1.45 to \$1.15, and plums at \$1.25 to \$1.20. The market is weak.

Dried Fruits

NEW YORK, June 9.—A leading dealer in California dried fruits says that the demand for California prunes is greater than ever before. Dealers must have a good stock, though much inferior stock is placed and is injuring the trade. The East will take up all the prunes California can supply at good figures, but producers must be more careful in the goods that are boxed for this market. Speaking of raisins, a dealer also said that New York would soon look to California for its supply. The Eastern market is strong, steady and not over-stocked. There would be an unlimited demand if prices could be made a little lower, as they are now too great a luxury.

Hops.

CHICAGO, June 8.—Hops are firm. When present supplies are exhausted it will be difficult to replace goods, for the quantity in first hands is very small. In view of this, holders are firm in their views. There is a fair demand, and sales appear to be fully as large as is desired under the circumstances. Reports from Eastern hop-yards state that the vines have made good progress, but have been somewhat nipped by frost. It is also alleged that an early season frequently means the visitation of destructive insects. And while no unfavorable predictions are made, the feeling seems to be none too good, and many growers are indisposed to part with their holdings until the crop is more confidently assured. Brewers have got little stocks in advance of requirements. Prospects for trade are, though warmer weather is necessary to move the market activity. Prices are: Choice Washington Territory and Oregon, 24 @ 25c lb.; Pacific Coast, prime to choice, 19 @ 22c.

Eastern Wool Markets.

NEW YORK, June 9.—Business in wool for the week represents forced wants too much to express a test. The market is strong. Home prices to a great extent subside the buying interest at the seaboard, but there seems to be no yielding inclination at most intermediate Western points. Texas wool may be said to be picked up fast at home rates. It is thought that Lower California clips are quite cleaned up. Sales here include 75,000 California spring on private terms; 142 spring Texas, 18 @ 22c; 25 NX, 34c; 15 fine delaine, 36 @ 36 1/2c; 20 fine medium Territory, 21c; 10 Australian, 37 @ 39c; 180 domestic, 9c; foreign, 700 bales, most of the latter to arrive, on private terms.

Boston reports a good inquiry for domestic wool from manufacturers who are in need of stock. New wool on arriving sells freely and there are no accumulations in any grade. In fine washed fleeces there is a moderate business owing to small stocks on hand. Prices of all kinds of wool are very firm.

The Philadelphia market is reported firm, with an improved demand noted.

Miscellaneous.

NEW YORK, June 9.—Lima beans are about used up at \$3.25.

Mustard seed is extremely dull at 2 1/2 @ 2 3/4c, yellow.

Choice loose raisins are scarce and firm. Layers are too plenty for the season.

Prunes are wanted, but must be upper sizes.

New-crop honey is quoted at 6 1/2c, but is regarded as high.

Beeswax is scarce, ranging from 28c to 32c for State.

There is a favorable movement in hops. Good State under grades for brewers' use participate liberally in this week's advance. Pacifics are very firm. Best export State, 23 @ 24c; common to prime, 18 @ 22 1/2c; best coast, 21c; common to prime, 15 to 20c; all old, 4 @ 10c. Exports for the week, 1094 bales.

Hides continue quiet. Sales of 5000 California dry on private terms, nominally 15c. Others also unchanged.

—New.

Local Markets.

BAGS.—All temporary wants having been met, buyers bid lower, with Calcuttas selling at from 8 to 8 1/2c. Large holders still maintain that values will go higher. This opinion is based on the impression that a large proportion of farmers have not bought yet. Time only will prove if this is correct.

BARLEY.—The sample market shows considerable strength, owing to a vessel loading for New York, with a report current that present low prices will induce more shipments. In futures, trading has been fairly active. The following are to-day's Call Board sales:

Morning Session: Buyer 1889—200 tons, 78 1/2c lb. cwt. Afternoon Session: Seller 1889, new—100 tons, 70 1/2c lb. cwt.

BUTTER.—The market is in a demoralized condition. A sale of a round parcel of choice, not fancy brands, was made to-day at 15 1/2c. Choice creamery in rolls, brought here in refrigerator cars, was offered at 13 1/2c a pound. Of course until cool weather sets in Western creamery will not keep long, yet it goes to show the competition we may have this winter. Immediately following the Seattle fire heavy shipments were made there, but they are now light.

CHEESE.—The market is stronger with an advancing tendency. Receipts are light and demand good.

EGGS.—Receipts are light. Fresh laid are in

good request at full figures. Other kinds are reported firmer.

FLOUR.—The market is weak at quotations. The demand is good.

WHEAT.—The market is stronger with sellers in different. For new milling \$1.30 is bid, without finding a seller. The large number of ships loading make the market stronger than it otherwise would be. In futures, dealings on Call have been more active with nice little fluctuations reported. The following are to-day's Call Board sales:

Morning Session: Buyer 1889—100 tons, \$1.32 1/2; 200, \$1.32 1/2 lb. cwt. Afternoon Session: Buyer 1889—500 tons, \$1.32 1/2; 600, \$1.32 1/2; 1000, \$1.32 1/2. Seller 1889, new—100 tons, \$1.24 1/2. Buyer 1889, after August 1st—200 tons, \$1.32; 200, \$1.31 1/2; 100, \$1.31 1/2 lb. cwt.

—New.

Cereals.

In their Melbourne circular of May 1, 1889, the New Zealand Loan and Mercantile Agency Co. says: "Splendid rains have fallen throughout the colony since our last monthly report, and the genial weather which followed has enabled farmers to push on with their plowing and seeding. The early-sown crops in the northern districts are already beginning to make considerable progress, and although frosts are mentioned, still the warm days and moist condition of the soil tend to make vegetation rapid. Altogether the outlook, both in Victoria and the adjoining colonies, is most satisfactory, while the rainfall in South Australia is almost unprecedented, and this will thoroughly saturate the subsoil, an event which has not occurred for many years. In Victoria a fair proportion of new land will this season be brought under crop, but to compensate for the increase the area of land in fallow will probably not be larger than last year."

Crop returns are still of a conflicting, unsatisfactory character. The general tenor goes far in confirming the estimated yield heretofore made by this paper. It is not at all unlikely that a fairly definite idea of the outturn can be formed previous to the first of next month. The cool weather is favorable to maturing grain. The barley outturn is better in many localities than heretofore claimed, while now, so far as can be ascertained, it falls below last estimates. The rye and buckwheat outturn proves to be better than looked for. The corn crop prospects are reported to be of the most encouraging character.

In the local market wheat has shown a strong tone, with more buyers than sellers. There is a

good inquiry for choice old for shipment to both Australasia and Rio de Janeiro, while English export buyers are in the market for good to choice shipping. Buyers for the European markets bid \$1.27 1/2 @ 1.28 1/4, while buyers for the other markets have paid an advance, going as high as \$1.30, and in one or two instances even more. For new wheat, exporters bid \$1.25 July delivery for No. 1 white shipping.

By referring to the stock of grain in the State on hand on June 1st, it will be seen that the amount of all kinds is less than on hand one month later in 1888. With one month to draw on, the old stocks on the first of next month will be largely below those held on July 1, 1888.

The barley sample market the past week has exhibited a firmer, stronger tone, but with no higher quotations given. At present low prices, there are many who have confidence in the cereal as an investment. The consumption will be very large, particularly on the farms and in cities, owing to more teams put into service. As yet, the consumption by contractors on the new railways under construction is quite large.

Oats continue in buyers' favor, although a steadier tone begins to set in. Advances from the crops up North are of the most flattering character.

In buckwheat and rye, there is nothing new to report.

Corn continues steady at unchanged prices.

Feedstuff.

In ground feed, there is an increasing consumption, which naturally offsets any increase in the supply. There is a prevailing opinion that while bran and middlings may go lower, ground barley will probably stiffen rather than weaken.

New hay is coming to hand more freely. As yet the quality is not of the best. Buyers continue to give old the preference, although choice is hard to get. Several large contracts for new have been made, the particulars of which it is difficult to obtain. Those who have bought the more freely are dairymen.

Fruit.

Cherries are strengthening under lighter receipts. Canners are still buying. So far the quality of the cherries was better than last year, although the bulk were poor keepers. Apricots are weak and under free receipts. Canners are paying from 1 1/2 to 2 cents a pound to orchardists. Peaches are coming in more freely, with prices receding. The quality is poor to fair, very few good coming in. Pears still make a poor showing. Apples are coming in more freely, but as yet meet with an indifferent demand.

In berries the market for all kinds has a wide range, due to the poor keeping quality of much of the stuff put on the market. Choice, well-selected good keepers find quick buyers at extreme prices, while poor keepers are hard to place even at low prices. Canners are buying strawberries and currants. The berry crop this year is turning out large.

In dried fruits there is nothing new to report. Holders are cleaning up ready for new. The stock in the market is reported to be light. Raisins are firmly held, with a very light stock on hand.

In canned fruits there is nothing new to report. The high cost of sugar is against packers. The stock of last year's pack is being worked off.

Live-Stock.

Under liberal selling offers and a lessened consumption, the market for bullocks and mutton sheep is weak. At this season of the year the consumption is always light, owing to the abundance of fruits and garden truck. Hogs are in fair request for the block, but for packing they are weak, in sympathy with the low prices ruling for cured meats. In milch cows and horses there is nothing new to report.

The market for dressed cattle is quoted as follows: to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent.

HOGS.—On foot, grain fed, 5 1/2

THE LESSONS OF THE ROCKS.—The geological history of the world develops strange facts. Geological history, says Archibald Beikie, brings before us many facts well calculated to impress our minds with the great antiquity of our planet, and with the marvelous changes by which the present order of things has been brought about. We learn from it that the mountains and valleys have not come suddenly into existence, as we now see them, but have been formed gradually by a long series of processes similar to those which are now slowly doing the same kind of work. We discover that every part of the land under our feet can yield up its story, if we only know how to question it. And strangest of all, we find that the races of plants and animals which now tenant land and sea are not the first or original races, but that they were preceded by others and these again by others still more remote. We see that there has been upon the earth a history of living things as well as of dead matter. At the beginning of this wonderful history we detect traces of merely lowly forms. At the end we are brought face to face with man, thinking, working, restless man, battling steadily with the powers of nature, overcoming them one by one by learning how to obey the laws which direct them.

SAND DRIFTS.—The ocean beach back of San Francisco is not the only place in the world where drifting sands impede the progress of improvements. Dry, loose sand, wherever it occurs, is constantly being shifted by the wind, and often buries cultivated lands, buildings and forests. On the shores of Lake Michigan are drifts 100 feet deep, and those of Cornwall reach 300 feet in depth, while the drifts of the Gobi desert are 40 miles long and 900 feet high in places. On the shores of the Bay of Biscay the drifting sand travels inland 16 feet a year; in parts of Denmark, 24 feet; and in southern India, 17 yards. In some places walls and barriers of vegetation have been created to stop the destroying drifts. Fine sand is taken up to a great height in the air and deposited many miles away. In 1882 Iceland was visited by a remarkable sand-storm lasting two weeks, which hid the sun and objects a few yards off like a dense fog, and caused the death of thousands of sheep and horses.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

Successful Patent Solicitors.

As Dewey & Co. have been in the patent soliciting business on this Coast now for so many years, the firm's name is a well known one. Another reason for its popularity is that a great proportion of the Pacific Coast patents issued by the Government have been procured through their agency. They are, therefore, well and thoroughly posted on the needs of the progressive industrial classes of this Coast. They are the best posted firm on what has been done in all branches of industry, and are able to judge of what is new and patentable. In this they have a great advantage, which is of practical dollar and cent value to their clients. That this is understood and appreciated, is evidenced by the number of patents issued through their SCIENTIFIC PRESS Patent Agency (S. P.) from week to week and year to year.

Housewives, Attention!

Two new first-class Sewing Machines for sale cheap. Will be sent direct from warehouses if desired. Address, H. F. D., Box 2517, San Francisco, Cal.

HORTON & KENNEDY'S
FAMOUS
ENTERPRISE
Self-Regulating
WINDMILL
Is recognized as the
BEST.

Always gives satisfaction. SIMPLE, STRONG and DURABLE in all parts. Solid Wrought-iron Crank Shaft with DOUBLE BEARINGS for the Crank to work in, all turned and run in adjustable babbitted boxes.

Positively Self-Regulating.
With no coil springs, or springs of any kind. No little rods, joints, levers, or anything of the kind to get out of order, as such things do. Mills in use 6 to 12 years in good order now, that have never cost one cent for repairs. All genuine Enterprise Mills for the Pacific Coast trade come only through this agency, and none, whether of the old or latest pattern, are genuine except those bearing the "Enterprise Co." stamp. Look out for this, as inferior mills are being offered with testimonials applied to them which were given for ours. Prices to suit the times. Full particulars free. Best Pumps, Feed Mills, etc., kept in stock. Address,

MERY'S IMPROVED PIONEER BARLEY CRUSHER

Using the Benoit Corrugated Rollers.

STILL AT THE FRONT.

This Mill has been in use on this Coast for 8 years.

TAKEN THE PREMIUM AT THE STATE FAIR

Four years in succession, and has met with general favor, there now being

Over 250 of them in use in California, Nevada & Oregon.

It is the most economical and durable Feed-Mill in use. I am sole manufacturer of the Corrugated Roller Mill. The Mills are all ready to mount on wagons.

DURHAM, May 21, 1887.

Mr. M. L. Mery—Dear Sir: In reply to yours of the 19th, would say that I crushed from two to two and a half tons per hour, but could crush three and a half tons per hour if my elevators were large enough to carry the barley from the machine. The No. 1 machine I used at Gridley was run on a sack a minute, but if we got behind we could run through five tons an hour, and do good work. The machine I use here is a No. 2.

Yours, WM. M. TAYLOR.

I thank the public for their kind patronage received thus far, and hope for a continuance of the same.

M. L. MERY, Chico Iron Works, Chico, Cal.

GRANLAND, BUTTE CO., CAL., June 9, 1887.

Mr. M. L. Mery—Dear Sir: We have used one No. 2 Roller Barley Crusher now for eight years and have used it steadily during that time; have crushed 45 tons a day and the Crusher is as good to-day as when it came out of your shop. I am satisfied that it is the best mill made. You may reconstruct this testimonial to the best advantage for you and sign our names, for you cannot overrate the merits of your mill.

F. E. REAM,

JOHN P. SUTTON.

HAY PRESSES!

THE HURRICANE—Size A.

A. HURRICANE, best model of hay press, Size of bale,
when in the press, 17x24x46 inches. Average weight of
bale, 220 pounds. Capacity, from 16 to 25 tons per day.
Uses 4 men and works with 1 horse. Uses rope or wire.
Tramplings. Puts from 7 to 8 tons in a box car.

Price.....\$1000.

THE HURRICANE—Size B.

Size of bale in press, 22x24x46 inches. Average weight
of bale, 220 pounds. Capacity, from 16 to 25 tons per
day. Uses 4 men and works with 1 horse. Uses rope or
wire. Tramplings. Puts from 7 to 8 tons in a box car.

Price.....\$1000.

THE SELF-TRAMPING JUNIOR MONARCH

Size of bale in press, 22x24x46 inches. Average weight
of bale, 220 pounds. Capacity, from 16 to 25 tons per
day. Uses 3 or 4 men, at option of baler. Works with
1 or 2 horses. Uses rope or wire. DORN ITS OWN TRAMP-
ING. Puts from 7 to 8 tons in a box car.

Price.....\$500.

THE MONARCH.

Same principle as Junior Monarch, but smaller and
heavier. Size of bale, when in press, 17x24x46 inches.
Average weight of bale, 220 pounds. Capacity, from 12
to 20 tons per day. Requires 3 men and 2 horses. Uses
wire only. rope will not hold. DORN ITS OWN TRAMPING.
Puts 10 tons or over in a box car.

Price.....\$600.

THE GENUINE PRICE PETALUMA.

Size of bale in press, 24x24x50 inches. Average weight
of bale, 250 pounds. Capacity, from 10 to 18 tons per
day. Requires 4 men and 2 horses. Uses rope or wire.
Hay must be tramped into the press. Puts from 5 to
6 1/2 tons in a box car.

Price.....\$350.

THE IMPROVED EAGLE.

Size of bale in press, 26x26x50 inches. Average weight
of bale, 235 pounds. Capacity, from 10 to 15 tons per
day. Requires 4 men and 2 horses. Uses rope or wire.
Hay must be tramped into the press. Puts from 4 1/2 to 5 1/2
tons in a box car.

Price.....\$250.

SAN FRANCISCO.

JACKSON'S
PATENT LIGHT WEIGHT HORSE FORKS.

Patented Nov. 13, 1877, Dec. 3, 1878.

Beware of Infringements!

Makers, Sellers and Users are all Liable
under the Law, and Determined to
Protect my Rights.

Made in Six
Sizes.

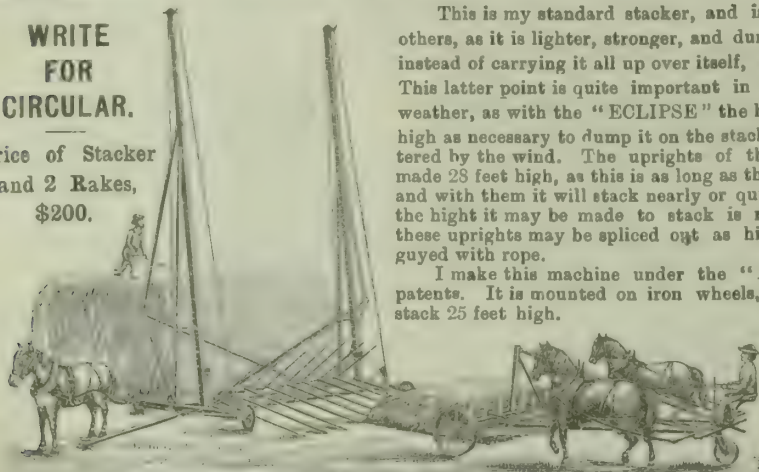

BYRON JACKSON'S MACHINE WORKS,

comprising Foundry, Pattern, Machine, Woodworking and Blacksmith Shops, fitted with the latest improved machinery and tools, corner of Sixth and Bluxome streets, San Francisco. Visitors welcome.

**WRITE
FOR
CIRCULAR.**

Price of Stacker
and 2 Rakes,
\$200.

This is my standard stacker, and is, I think, an improvement on all others, as it is lighter, stronger, and dumps the hay at any desired height, instead of carrying it all up over itself, without regard to height of stack. This latter point is quite important in stacking in windy weather, as with the "ECLIPSE" the hay is only raised as high as necessary to dump it on the stack, and is not scattered by the wind. The uprights of the "ECLIPSE" are made 28 feet high, as this is as long as they can be shipped, and with them it will stack nearly or quite that height, but the height it may be made to stack is really unlimited, as these uprights may be spliced out as high as desired, and guyed with rope.

I make this machine under the "Acme" and Oliver patents. It is mounted on iron wheels, and will build a stack 25 feet high.

Jackson's Improved "Acme" Rake and Buck Combined.

Weight, 650 lbs. Price, \$50.

The above illustrates my latest-improved Rake. In it are embodied all the improvements that my long experience with them in the field has suggested. They are first-class in design and construction.

They are mounted on 34-inch patent iron wheels, with 4-inch tires, and have the improved patent ratchet device, which enables the driver to EASILY RAISE THE HEAVIEST LOAD without leaving the very comfortable spring seat in which he rides. The swing fence automatically discharges the load when the team backs.

It does the work of all other Hay or Horse Rakes, viz., wire rakes, sulky rakes, revolving rakes, buck rakes and "go-devils." It rakes from the swath, and leaves the hay in large bunches at once, requiring no hand-work. One man and two horses will keep up with two mowers, following the mower as soon as the hay is wilted enough to be raked clean with any rake. IT RAKES CLEANER. The hay will cure quicker without bleaching by dew or sun. Very large bunches can be made by pushing two or more rakefuls into one.

JACKSON'S IMPROVED "ECLIPSE" STACKER AND LOADER,

And "Acme" Rakes and Bucks, Combined,

— MADE BY —

BYRON JACKSON, 625 Sixth St., San Francisco.

The Ertel VICTOR Automatic Folder.

The Strongest, Fastest and Easiest Operating Baler Ever Made.

Patented February 16, 1886, September 28, 1886, and May 10, 1887, by 44 Patented Claims of all New and Original Designs

1889

1889

Guaranteed to Bale Hay or Straw Cheaper Than any Other.
Full Weight to the Car. So Warranted or no Sale.

18x22 Variable Length, Price \$425.

DOUBLE-ACTING PERPETUAL HAY AND STRAW PRESS.

A MACHINE IMITATED BUT NOT EQUALED

In Symmetry, Simplicity, Durability, Ease of Management, Effectiveness of Power, Fast and Neat Baling. Needs but to be Seen to be Appreciated, and while the Machine is only Claimed to Bale 10 to 15 tons per day's work, yet many parties using the Victor are baling over two tons per hour.

FOR REFERENCE WE NAME YOU A FEW OF THE MANY PARTIES USING IT:

MR. N. MATHEWS, of Los Angeles, says his men have hauled with a Victor as many as 37 bales per hour (good weight).
CUNNINGHAM BROTHERS, of Glendora, say they have baled 4800 pounds of hay per hour.

MR. FRANK JOHNSON, Banning, says he is baling six tons per three hours.
MR. JAMES P. BURDICK, of Santa Ana, says the Victor is the only machine baling hay successfully.

SINGLE COPIES, 10 CENTS.

Scenes on a Stock Ranch.

We have had many scenes on California fruit ranches, many glimpses of beautiful natural scenery, but a set of views on a leading stock ranch is acceptable as hinting at another important branch of California industry and affording other features of the California landscape than the rugged phases which delight the tourist and recreation-seeker. The scenes presented pertain to the establishment of one of our so-called cattle kings, Wm. Dunphy, who has earned such distinction by his long career and wide interest in the industry of horn and hoof. We are indebted for the materials of the display on this page to one of Harrison's Series of Pacific Coast pamphlets, which treats especially of Monterey county.

La Posa rancho is the characteristic name of Mr. Dunphy's establishment. It is located on the west side of the Salinas river, and commencing at a point about 13 miles south of Soledad. The original Spanish grant covers the entire valley between the river and the coast mountains, for a distance of nine miles in length, and from one to four miles in width, and comprises some 9000 acres. Besides this there are a number of small farms and claims purchased from settlers in the foothills adjoining, making a total of about 12,000 acres. Nearly the whole of this land is rich alluvial soil, and capable of producing abundant grain crops. The entire tract is inclosed by a substantial fence and subdivided into fields and pastures to suit the needs of the herds that formerly grazed thereon. The valley lands are level, yet sufficiently sloping from the foot of the mountains to insure good drainage. The entire area—with the exception of a small portion called the *Monte*, and lying some 30 feet below the general level of the valley—was formerly a solid mass of bunch-grass, clover and alfalfa. The clover and alfalfa covered the space between the roots of the bunch-grass, and in springtime the entire mass was from two to three feet high. Later in the season the grasses cured, and all save the bunch-grass fell to the ground, where it all remained, sweet and wonderfully nutritious, until long after the winter rains began and the new growth took the place of the old. In this way the feed was always abundant, and of the best quality. But stock-raising has been superseded by grain-raising, and other farming, for this year Mr.

Dunphy has converted his magnificent stock ranch into a farm of mixed cultures, with every assurance that the yield will justify the change.

There are still, and will be, many animals

ranch is a picture of beauty. The coast mountains, with their bordering of foothills, which form the western boundary, rise to an altitude of several thousand feet.

The engravings are illustrative of our better

The Circus.

We notice that the circus again is abroad in the land, gathering coin from those who can ill afford to part with it, sweeping away hundreds and thousands of dollars from single communities and leaving nothing—yes, worse than nothing for the corruption of the mind. The ribaldry and moral laxity which too often prevails among circus crews cannot be publicly exhibited without more or less injury to the morals of any community.

We delight in amusement and recreation, and believe our people have far too little of it; but the circus does not afford the entertainment which can be commended. There are plenty of agencies which can be praised, and they would often be sought were it not that the blare and deviltry of the circus finds enough original sin in the human mind to induce patronage which exhausts funds that could be otherwise better used. If the circus comes into your neighborhood, think twice before squandering money upon it. Show the young folks how much more and better fun can be had for the same money otherwise expended. How much better, for example, some good, entertaining book or elegant periodical which will afford for years constant entertainment or delight, or some excursion to the vicinity of charming natural scenery, than an hour in the reeking atmosphere and immoral contagion of the circus tent. Think about this and make it the subject of conversation in the home circle.

EXPERIMENT STATION IN SOUTHERN CALIFORNIA.—A telegram from Pomona, Los Angeles county, announces that efforts are being made by citizens to secure the location of a university agricultural experimental station at that point. Several men have guaranteed to make subscriptions for buildings, and the Pomona Land and Water Company has agreed to give 25 acres of land, with water, for the station. Prof. Hilgard has always calculated to extend this work to Southern California as

soon as funds would warrant, and we have no doubt he will be glad to accomplish the result as soon as practicable.

ANOTHER BENCH SHOW.—The California Kennel Club talks of holding a dog show in this city next October.

A TYPICAL CALIFORNIA VALLEY FARM—LA POSA RANCHO IN MONTEREY COUNTY.

on La Posa rancho, as the ranch is finely stocked with cattle, besides horses and mules, the cattle being of excellent grade—many thoroughbred—and the horses all well bred, and thus the common beef animal gives place to his more illustrious relatives. Besides its great value from the standpoint of usefulness, th

class of valley farms and their improvements. Fig. 1 shows the buildings pertaining to the residence and the adjacent hay-fields. Fig. 2 gives a nearer view of ranch buildings with a herd of cattle coming to water, and Fig. 3 is a broad valley view with bands of cattle and horses enjoying the rich pasturage.

CORRESPONDENCE.

Correspondents are held responsible for their opinions.

California Farmers and the Peace Question.

THE RURAL PRESS.—The prosperity of Californian agriculture is pre-eminently dependent on the preservation of the world's peace. The consumption of our surplus products by export alone maintains our markets at remunerative prices. Even now our ever-increasing production demands wider and wider avenues of trade. Only by expanding commercial relations can our progressive farmers, vine-dressers and orchardists favorably consummate their ventures. It is needful, then, to realize that to secure and expand commerce we must secure peace.

Every step in this direction should receive eager welcome at our hands. Every proposed or projected step should be strongly forwarded and loudly applauded. On this account it is a pleasant duty to be able to inform your readers of a great European awakening to the need of an international policy worthy of our century. This is how the President of the London Chamber of Commerce lately put it:

The excessive burden imposed upon the people of Europe by their gigantic military armaments was becoming so serious as to be almost intolerable, and would render any competition with America, the British Colonies, and other less highly taxed communities more and more difficult. Arbitration had been successfully adopted in some cases, even though a special tribunal had had to be created for each case—a course to which there were manifest drawbacks. He could not but think that the time had come when statesmen should consider the advisability of establishing a permanent international court of arbitration to which any disputes might be submitted. This would, at any rate, give time and opportunity for reflection and obviate the fear of sudden attack.

In harmony with this enlightened view is the declaration of President Carnot at the inauguration of that "Festival of International Fraternity," the Paris Exposition. "These imposing festivals of labor," said he, "enable nations to meet and understand each other, and should give birth to those feelings of sympathy and esteem which cannot fail to exercise a happy influence over the destinies of the world by hastening the day when the resources of nations and the products of their labors shall be consecrated alone to the works of peace."

That some definite progress shall result, two Peace Congresses have been organized in connection with this exhibition. The first will convene June 23d at the Trocadero.

The program was formulated at a meeting held at the residence of M. Ch. Lemonnier, the president of the International League of Peace and Liberty; Mr. Hodgson Pratt, the president of the International Arbitration and Peace Association, presiding. Among those who took part in the proceedings were Messrs. F. Passy, Ch. Lemonnier, H. Pratt, E. Chénaut, H. Destrem, Conturier, Gaston Marin, Gieben, Mesdames Greiss-Trant, Taxily and Tournant.

1. Consideration of international arbitration under all the forms and in all the applications to which the principles may be adapted.
2. Permanent treaties of arbitration between two or several peoples.
3. Application of the principle of neutralization to rivers, canals, straits, Territories, nations, etc.
4. International applications of the principle of federation.
5. The creation, by the initiative of peace societies, of Colleges of Arbiters.
6. The introduction in universities, colleges and schools, of courses of theoretical and practical arbitration.
7. Reforms to be effected in international law.
8. The fundamental principles of an international code.
9. Generally: Study, examination and discussion of the means and measures which may progressively substitute between nations the juridic state for that of war or truce, and finally render disarmament possible.

Then comes an International Congress of Parliamentary or Congressional deputies, convened by a joint committee of French and British members of their respective Legislatures to meet June 29th and 30th. Senator John Sherman is one of the American delegation.

Last on the list, but to us by no means least, is the Congress of North and South American States invited to meet at Washington next October. Its deliberations will cover a wide field. The program includes not only the arbitration question, but a general family discussion on such matters as a uniform standard of coinage, etc., a regulation of customs duties on some intelligible common-sense basis, and the reciprocal furtherance of commerce.

This looks a little like the abandonment of red tape and the commencement of such a policy as commends itself to the sensible Granger. We want the American hog to go forth into all the world; we want our wine, our wheat and our wool to have free course and be appreciated in all lands; we want our fish and our fruits to fill the hungry Britisher, and our green peas and asparagus tips to tickle the Parisian epicure's palate. So Californians will be glad to give Mr. Morris M. Estee their enthusiastic support when he goes East next October to join Mr. Andrew Carnegie and the rest of the U. S. Commissioners in their friendly international deliberations. Let us hope that the commission may so successfully labor that the public moneys now being lavished on ironclads and fortifica-

tions will be the last so wasted; and that all future appropriations will be for our much-needed internal improvements, harbors, roads, bridges, irrigation works, and objects of like permanent utility.

Carmel Valley.

EDWARD BERWICK.

Vacaville Letter.

EDITORS PRESS:—Haying is about over, and people who are not already busy shipping fruit are wondering what they will do with it. The fruit business is as uncertain as courting a widow. Three months ago it was thought apricots would be scarce, and but few if any could have been bought for less than four cents per pound. Now, a few early crops have been sold at 2½ cents, and the ones who sold are said to have done well in selling.

The Fruit Crop

Is turning out small in Pleasant valley—in some instances scarcely enough to pay expenses of raising. What it will be in Vaca valley we cannot yet tell; it will depend somewhat on the price of dried fruit. The prospect now is that the larger part of the 'oots will be dried.

Help is plenty, with lots of loose men and families who want to camp out and out fruit, but cannot get a job. About all who have made calculation on drying their whole crop have for some time had their cutters engaged. Tramps who want work and something to eat, with the something to eat first, are more numerous than usual. A few days since four of them stopped at a place where no one was at home, and went through the house. Being pressed for time, they took two clocks and some other things, but were caught soon afterward. A man has taken the contract to

Poison the Squirrels

On several hundred acres of hills on the west side of Vaca valley, for which he is to receive ten cents per acre. There are not many squirrels here, but a few in an orchard soon do considerable damage. The squirrels were poisoned on a large tract of land in Vaca valley about nine years ago, at I think 50 cents per acre. For several years afterward scarcely a squirrel could be seen on the tract.

The worms and bugs have about all left us, except the grape-hoppers and the leaf lice; the latter are plenty on the prune and plum trees. The flies are worse on horses and nearly drive them crazy. If any one knows of a wash with which we could spray the horses to keep off the flies, it would be a great relief to the poor animals.

Quite an exciting election was held in Vacaville last week, at which a lady was chosen school trustee.

Vacaville, June 9, 1889

THE FIELD.

Danger Signals.

To supplement the warnings lately given as to the small beginnings of costly conflagrations, we print the following extracts from late exchanges:

On Thursday about 1 o'clock a piece of barley belonging to C. E. Sperry, near Keyes Switch, caught fire, and before it could be extinguished 12 acres had been burned over. The fire started from the carelessness of the section hands, who were burning "fox-tail" along the track, in leaving smoldering embers while they went to dinner. The barley burned was of heavy growth and fine quality, but not thoroughly dry, which appeared to be all that prevented a large field fire.

Last Saturday 30 acres of wheat owned by Frank Graves, and situated near Pennington, were burned. The fire originated through the carelessness of a sheep herder on the place.

A stack of grain on the ranch of J. B. Hockett, near Porterville, was destroyed by fire on Sunday last. The grain had just been harvested, and it is supposed some of the hands must have dropped matches near the stack, which were ignited by the rays of the sun.

As John Zumalt was returning from Visalia a few days ago, he found a fire starting up in the vicinity of Tagus, having been ignited by a spark from a passing locomotive. He shouted to one or two men a short distance away, and a section crew coming up soon after, by their combined efforts the fire was soon extinguished.

While the north wind was blowing Friday morning a spark from the blacksmith-shop on the J. C. Bail ranch set fire to dry grass around the shop and soon spread over about an acre. Fortunately there were men about the shop at the time, and the fast-spreading flames, after a short, sharp action, were put out. A narrow stripsome eight feet wide marks the distance between the burnt district and thousands of acres of tall ripe grain.

E. Browning of Maxwell expresses grave apprehension in regard to fires along the railroad track. Vegetation is drying rapidly, and already there have been six outbreaks, but so far without serious damage. Generally, fires in the neighborhood of railway lines are credited to the defective smokestacks, but Mr. Browning claims that a more prolific source of danger is to be found among the cigarette-smokers, who carelessly throw the lighted stubs from the car windows.

One hundred acres of barley has been de-

stroyed by fire on the fields of Thompson O'Brien on Roberts Island. The fire started on the peaty soil where it has been smoldering since the stubble was burnt off last fall.

H. C. N. spilt some boiled oil on the floor. Thinking to clean it up, he scattered some sawdust upon it. After the oil had soaked in, the sawdust was raked up in a pile and left to be removed later. Wednesday about noon the odor of something burning was noticed. The inmates of the store could not account for the odor. Along in the afternoon W. H. N. conceived that it might arise from spontaneous combustion, from the association of the oil with the sawdust in the oil-room. Placing his finger in the pile, he found it, as he expressed it, "red hot." The mass was heaved into the street, when it broke into a strong flame.

On all the above cases "comment is unnecessary;" readers can point the moral for themselves.

THE IRRIGATOR.

Native Plants as Indicating Character of Land.

The last issue of the *Arizona Enterprise* has the following interesting statements:

In response to a memorial of the Fifteenth Legislative Assembly of Arizona, addressed to the Secretary of the Interior relative to the classification of sacaton lands, Commissioner Stockslager submitted specimens of sacaton to J. W. Powell, Director of the Geological Survey, for his opinion of its character, value as forage, and the nature of the land producing it.

Mr. Powell's statement in relation thereto is as follows:

"The plant sent for examination is *Sporobolus Wrightii*, and is locally in Arizona and New Mexico called 'sucro' and sometimes 'sacaton.' The thick, tough roots are manufactured into scrubbing-brushes, and the seeds are sometimes used by the Indians for food. For pasturage purposes it has no value, as the stalks are not sufficiently succulent. The plant is characteristic of the arid or desert lands of Arizona and New Mexico. It grows about the margins of springs and along banks of small streams and under other conditions which require a more detailed statement.

"In the arid lands of the United States, the rainfall is concentrated on the mountains, and there is very little rain in the valleys and on the plains. For this reason the streams have their sources in the mountains. When they reach the valleys or plains below, most of them sink away in the sands. Such streams, therefore, cannot preserve channels in the lowlands; but where the waters are lost for any season this plant springs up. If the season is very dry, the stream is lost immediately at the foot of the mountains. In such a season the 'sucro' will grow up at that point. Another season the rainfall will be greater and the water will flow down farther by a mile or two miles, or 10 or 15 miles, as the case may be; and wherever the stream ends for that particular season, the 'sucro' will spring up. In the same manner, if the caving in of a bank dams it temporarily, the flooded land will bear a crop of the 'sucro.'

"For such reasons as I have given, and for many others which could be set forth, all of the arid or desert lands of the Southwest which are most valuable for irrigation are marked now and then and here and there by patches or patches of the 'sucro,' and it is considered to be one of the best guides in the proper selection of lands for irrigation.

"It may therefore be said that wherever this *Sporobolus Wrightii* is found throughout Arizona, New Mexico, Utah, etc., the lands require irrigation for agricultural purposes, and crops cannot be raised on such lands without irrigation; second, that wherever this plant is found it is evidence that the lands have been wisely selected; and third, that the plant itself is not valuable for agricultural or pasturage purposes."

This report virtually disposes of the question, and the entries under the desert-land law, held for cancellation on the report of Special Agent Slater that the existence of sacaton classed the land as agricultural, will soon be decided in favor of the settlers, as they properly should be.

Appropos of the disposition of this question and the more recent rulings of the department in the mesquite "timber" cases, the fact is made conspicuous that the settlers upon the public lands have been unreasonably annoyed and put to great expense through the inexcusable ignorance of the special agents employed for the detection of fraud. The character of the sacaton lands could have been easily determined long ago by a little inquiry or investigation, and the settlers saved the trouble and expense of a contest. The classification of mesquite brush as timber was another outrage upon the settlers arising from the same lack of intelligence, with perhaps a flavor of retaliation for the refusal of favors sought. The special agents proceeded upon the hypothesis that every settler upon public lands is an uncaught rascal, and they have acted accordingly. Their utter failure to establish their charges of fraud is sufficient condemnation of their feeble judgment, and the final determination of the fimsy pretexts set up for their action sweeps away the last grounds for useless annoyance, and the settler can now rest secure that his rights will be protected by the Government.

SHEEP AND WOOL.

Wool Facts and Figures—No. 10.

[Written for the Rural Press by J. R. F.]

Probably no branch of the wool industry of the country shows so marked an increase as the manufacture of carpets. A long and well-written article on the industry states that the first record of a carpet in the United States was a small Turkish rug, said to have been in the house of Kidd, the pirate, who was executed in 1701. In 1760 there were advertisements in New York of a few Scotch and other carpets; but prior to the Revolution carpets were very rare, and these were only in the houses of a few wealthy Dutch merchants.

The first carpet factory in this country was built at Philadelphia, Pa., by William Peter Sprague. One of the patterns wove was a national device representing the arms and achievements of the United States. In the same year (1791), United States Secretary of State Hamilton recommended that Congress encourage the industry by increasing the duty on wool carpets. Another factory was built in Philadelphia in 1801, John Dorsey, owner. In 1810, statistics show that there were manufactured only 9984 yards of carpet in the whole country, the value of which was placed at \$1 a yard.

It was not until 1827 that the industry received much of an impetus. In that year H. R. Knight & Co. established a factory in Hartford county, Connecticut. In 1828 the Thompsonville Company built a factory in the same county, which was followed soon after in the same year by the establishment of the celebrated Lowell Manufacturing Company. In 1830, Samuel Given put a carpet factory in operation at Carlisle, Pa. In 1833, three carpet factories were built in Columbia county, N. Y., and one at Rochester, N. Y. In the same year, statistics of the industry show that factories were started in New Haven and New London counties, Connecticut, Somersworth, N. H., Baltimore, Md., and Steubenville, Ohio. In 1834 there were in this country 19 factories, running 511 looms, distributed as follows: Eighteen on Brussels, 21 on treble ingrain, 44 Venetian; 4 Damask Venetian, and 424 on ingrain other than three-ply. The estimated outturn of the factories was 1,147,500 yards, valued at about \$1 a yard.

After repeated attempts, Erastus B. Bigelow of Massachusetts invented in 1838 a power-loom for the manufacture of Brussels carpets (prior to this time hand-loom were only used). This invention revolutionized the industry, although it was not until ten years later that the power-loom was perfected. The importance of this invention is readily recognized when it is stated that by its use one woman or girl can easily weave from 20 to 25 yards of carpet a day, while with the hand-loom she could not exceed four yards a day. By the latter process the cost of manufacturing had been 30 cents a yard, which was reduced by the former to about four cents a yard.

This reduction caused the price of carpets to fall about 20 per cent. When the invention was first announced it was received with incredulity, owing to the accepted belief that it was impossible to make Brussels carpets except by hand-loom. The cheapened cost of carpets created a large demand for them, so that by 1857, 5000 power-loom could not meet the demand.

The census returns of 1860 state that there were 213 carpet factories in this country, consuming annually 8,843,691 pounds of wool, turning out 13,285,921 yards of carpet, worth about 60 cents a yard. The factories gave employment to 6681 hands and had a pay-roll of \$1,545,692 a year. Although the 1870 census returns show only 215 factories in the country, yet they had a pay-roll of \$4,681,718, with 12,098 hands employed. They consumed 33,000,000 pounds of wool and turned out 22,000,000 yards of carpet, worth on an average nearly \$1 a yard. In 1880 the number of factories had fallen to 195, but the number of hands employed had increased to 20,371 and the pay-roll to \$6,835,218.

The woolen-hosiery industry in this country has made rapid strides, as the census shows. Woolen hosiery includes socks, stockings, gloves, drawers, undershirts, jackets, opera-hoods, shawls, scarfs, comforters, and other knit goods, both wool and mixed. The hosiery-mills use in their manufacture cotton, silk, flax and wool, but the latter is chiefly used. In 1850 there were only 85 hosiery-mills; capital invested, \$544,735; product, \$1,028,102. In 1860 there were 197 factories; capital invested, \$4,035,510; product, \$7,280,606. In 1870 there were 248 mills; capital, \$10,931,260; product, \$18,411,464; wool consumed, 5,600,000 pounds; and hands employed, 14,788. The 1880 returns show that the capital invested had risen to \$15,579,591, and hands employed to 28,885.

Previous to 1832 there was only one hosiery factory of any importance in the country, and that was called the Newburyport (Massachusetts) Hose Manufacturing Company. The company used hand-loom. The capacity of these looms was two pairs of looms a day, while power-loom have a capacity of 20 pairs. By the introduction of power-loom the cost of production was reduced nearly 90 per cent.

The industry received quite an impetus about the year 1838 by the invention and use of the

circular knitting machines, which make stockings without a seam. Within the past two decades several other useful inventions have been made and put into use, which have reduced very considerably the cost of production, besides turning out a better quality of goods.

In 1880 the wool-hat manufacture, and also the manufacture of woolen belt goods, were segregated in the census returns. In that year there was invested in the manufacture of woolen hats \$3,615,830, the number of hands employed 5470, and the annual product amounted to \$8,516,569. In the manufacture of felt goods there was invested in 1880, \$1,958,254, hands employed 1524, while the product amounted to \$3,619,652.

Shoddy was first used only for padding, but during the civil war was used very extensively for overcoats, army cloths, piano covers and tablecloths, etc. By shoddy is meant cast-off worsted and woolen goods, reduced by powerful machinery to its original state, to be respun and woven alone or mixed with new wool. White shoddy is used in white blankets, and dark shoddy in carpets and coarse cloths dyed to cover the original colors. In 1842 there was a small shoddy-mill at Woodstock, Vt., and in 1860 there were five small ones in New York, giving employment to 58 hands. In 1870 the shoddy-mills used about 19,372,000 pounds of raw shoddy, and in 1880 they used 52,136,926 pounds on a scoured basis, equal to about 70,000,000 pounds on an unwashed basis.

The first Angora and Cashmere goats were brought into this country in 1855, and soon after the 1860 census, mills were established at Lowell to manufacture their wool and also the wool from alpaca sheep. The returns of 1880 show that there was manufactured in this country in 1879 3,351,701 yards of alpaca woolen goods, 1,000,000 yards of alpaca worsted goods, 2,919,050 yards of cashmere, and 1,557,537 yards of cashmerettes.

The following countries in Europe admit raw wools free of duty, while levying a duty on manufactured: Austria-Hungary, Belgium, Denmark, France, Germany (the latter country has a very small duty on comb wools, but not on all other kinds), Greece, Italy, the Netherlands, Norway, Portugal, Sweden and the United Kingdom. In the Americas, Canada and Chili admit wool free of duty, while the Argentine Republic levies an export duty.

The following statistical footings I compiled from the census returns, giving the number of all kinds of woolen establishments, capital invested, hands employed, wages paid, cost of materials and value of products in the United States:

	1850.	1860.
Establishments.....	1,559	1,203
Capital.....	\$28,118,650	\$34,092,654
Hands.....	39,252	43,738
Wages.....	\$ 8,397,307	\$10,153,938
Cost of materials.....	\$25,755,991	\$39,029,062
Products.....	\$43,297,545	\$65,596,364
	1870.	1880.
Establishments.....	2,993	2,689
Capital.....	\$108,910,369	\$159,091,869
Hands.....	92,973	161,557

According to the report of the English Royal Commission, the number of persons employed in the United Kingdom in the worsted and woolen manufacture was as follows: 1856, 166,885; 1862, 173,046; 1868, 249,900; 1874, 276,702; 1885, 277,546.

The same commission reports the consumption (home-grown and imported) of raw wool (not scoured) in pounds:

	1866.	1876.	1884.
U. King'm.....	313,000,000	369,000,000	381,000,000
U. S.....	229,707,000	235,020,000	376,036,000

In scouring wools bred in the United States, there is greater loss than in that bred in England.

In commenting on the growth of the wool consumption in this country compared with that of the United Kingdom, the *United States Economist*, in one of its issues in 1886, says: "But there is something behind these figures of which no account is taken; yet this is the most important factor to be considered in the calculation. Great Britain—including Ireland—as a whole has gained nothing in population in the last 40 years; while, on the contrary, we have increased to a nation of 63 million souls from 38,925,598 in 1870."

The population, according to census returns, of the United States was as follows:

	1790.	1800.	1810.	1820.	1830.	1840.	1850.	1860.	1870.	1880.
	3,929,214	5,308,413	7,239,881	9,633,822	12,866,020	17,069,453	23,191,876	31,443,321	38,538,371	50,155,783

OREGON STRAWBERRIES.—The strawberry crop in the neighborhood of Portland, this summer, is reported to be the largest and finest ever known; but lack of a market has made it unremunerative to producers, who have not been able to get even three cents a pound. It is estimated that 20 tons of berries are rotting on the vines within a few miles of that city, and some growers will plow up their berry patches. It would seem there was an opening there for a cannery.

TWO TONS OF ORANGE SEED.—The L. A. *Express* says that Tim Carroll of Evergreen nursery, near Anaheim, has this year planted two tons of orange seed. This, no doubt, beats the world's record.

HORTICULTURE.

Forest Fruits and Flowers.

[An essay by Lorenzo G. Yates of Santa Barbara, read before the State Fruit-Growers' Convention at National City, April 18, 1889.]

I have been asked to write an article to be presented to this convention, but being neither a practical horticulturist nor a fruit-grower for profit, I doubt my ability to present anything of special interest in relation to the utilitarian side of practical or profitable horticulture; but as an amateur who takes great interest in the subject, as a pleasant recreation from the fatigue of mind and body incident to arduous professional duties and scientific pursuits, I may, perhaps, suggest some ideas which may, at least, prove of passing interest to those here assembled; albeit my attempts may be equal only to those of the late lamented author of "What I Know About Farming."

I will address this assemblage as the *F. F. F.'s* (in contradistinction to the traditional and well-known *F. F. V.'s*), for if I understand the aims and objects of this convention, it is composed of persons who are interested in and who favor and foster the preservation and extension of forests, the introduction and profitable cultivation of fruits and the growth and increase of varieties, and the improvement in the form, color, and perfume of flowers.

Our forests must be preserved and their area increased, for many and very important reasons, which were well and ably presented at the eighth meeting of this convention at Santa Rosa, in November of 1887, by Mr. Abbot Kinney, recently of the State Forestry Commission.

Among the most important reasons for the preservation of the forests are: Their economic value, their incalculable sanitary and climatic influence, and their scenic effect in clothing with their drapery of green what would otherwise appear as naked and forbidding rocks, rugged, sterile mountains and dreary, monotonous valleys.

Our native forest trees should be grown and planted out, as the selection which nature has made for us. Some of them are rare, and unless they are cared for, will soon become extinct in their native habitat.

In this connection it may be well to remember that the average Californian of the past was one whose spirit of adventure or desire for gain had brought him to the Golden State from the older settlements and countries; these adventurous spirits were imbued with a desire to obtain wealth, not by the old and steady methods of the older countries, but rapidly and without the continued exercise of the patience and economy practiced by their forefathers.

This spirit has not entirely died out; we see its manifestations in our booms, our frantic rushing to newly discovered mines, new towns and settlements, caused by the unrest of those who are not contented with doing well, but are continually watching for some opportunity to hurry matters up and do better.

This uneasy spirit, together with the further fact that the Californian of the past looked forward to the time when, having "made his pile," he could return to "the States" and settle down among his old associates, were the principal causes why so few permanent improvements were made, and why our forests were so recklessly destroyed.

Forest economy is slow in its returns and has been neglected, and the attention of the tillers of the soil turned to the cultivation of such crops as yield quick returns to enable the temporary occupants to return to the places whence they came, carrying with them the results of their labors in the mines and on the lands of their temporary stopping-places. These old time depredations are happily things of the past, and the present inhabitants of our great State realize the necessity of repairing the damage done by the careless and inconsiderate action of their predecessors, and (except that droves of sheep and cattle are allowed to pasture in our remaining forests, and the careless use of fire by individuals, cause great damage to the young growth of vegetation, leaving the surface bare to be gullied and washed out by the winter rains) our forests are being protected, and we trust to our State Board of Forestry, Board of Horticulture, State Floral Society and other similar bodies to see that our forests are protected, and to bring about the establishment of Botanic Gardens, and the introduction and cultivation of new and valuable forest and fruit trees.

Our State is remarkable for its varied soil and climate in approximate localities. One man may be the owner of real estate upon which certain trees and plants may be cultivated with satisfaction and profit, while the owner of lands adjoining may not have the conditions suited to the growth of the same products, but exactly such as are required for the growth of other and equally valuable products of the vegetable kingdom.

California needs more organized effort for the introduction and proper cultivation of plants and trees of economic value, new fruits and rare and beautiful flowers. It needs Botanic Gardens, and then we may have the material for books similar to the "Catalogue of Plants Grown in the Metropolitan Gardens of Brisbane," compiled by F. M. Bailey, F. L. S., which gives the scientific and local names, habitat, with valuable notes on their properties and uses, and their economic value.

Prof. E. W. Hilgard, in an article on

Botanical Gardens, published in 1879, called attention to the advantages, popularity and utility of the many botanical gardens established on the continent of Europe and in Great Britain and her colonies, where they are not only recognized institutions of public instruction and utility, but also as acceptable and popular resorts for the general public. He advocated the establishment of botanic gardens in various cities of California, not alone that the climate of our State is remarkably favorable for the representation of the economic plants of an unusually wide range of other climates, thus testing the adaptability of new culture plants to the several localities, but also in consideration of the instruction furnished and made available in its most attractive form.

These gardens should not be a mere grouping of such plants and trees as are ordinarily selected by the landscape gardeners as being "good" for the purpose, but where the useful and the beautiful shall be so grouped and arranged as to form a harmonious blending of the whole, and so be pleasing to the eye and attractive to the mind of every intelligent person. In this way they will form kindergartens for young and old, and afford instruction and amusement to all, from the child who is just learning to read to the old and well-informed student or traveler, to whom they will act as living reminders of far distant countries.

Private individuals are accomplishing much in the introduction of new varieties of fruits; an instance in point is that of Dr. F. S. Gould of Montecito, near Santa Barbara, who has just received from Italy 600 choice olive trees, all budded on seedling stock from two to four years old from the bud. These were a selection made to obtain the finest varieties for the production of oil; the varieties are the Cucco, Corregiole, Frantoio, Morinello, Morchiaio and Palazzuolo. Although three months in transit, the trees arrived in fine condition and were still moist at the roots, which were separately packed in straw casings similar to those in which champagne bottles are packed; each packing-case bore the seal of the Government Board of Hygiene as a guarantee against the introduction of any fruit pests or insects. The Italian Society of Horticulture advise in all cases the budding on to seedling root stock as against the use of cuttings, as is prevalent in California.

Dr. Gould imported some olive trees of the Maria and Rubra varieties from France two years ago, but the French packing proved very unsatisfactory as compared with the packing of those just received from Italy.

The date palm has not received the attention it deserves; it is more hardy than the orange, and in Florida has been known to bear fruit in four years from the seed. Avenues should be planted, which will soon become "things of beauty" and in time "joys forever" (almost). They should be grown in pots for a few years. The fruit of one variety is large and seedless.

Among other trees and plants which may be tested for profitable culture we may include the jujube (*zizyphus*), carica papaya, the vanguardia edulis of Madagascar, which grows exceedingly well in Florida, and sprouts readily from the root if frozen down; the zingiber, such as comes from China in the form of preserves, and has been grown in Trinidad; the eugenias, one of which, *E. pimenta*, furnishes the allspice; the peach palm (*guilielma speciosa*) with edible fruit, which furnishes the principal article of food in some countries; the leeches (*nephelium litchi*), and others too numerous to mention, which, with our oranges, figs, apples, plums, apricots, grapes, olives, loquats, diospyros, pomegranates, currants, bananas, lemons, limes, nectarines and other fruits which are profitably grown here, will eventually give to California a list of fruits and vegetable products that will astonish the world.

And the flowers—the florists and gardeners of other States and countries find that in order to become successful in their calling in California they must learn a great part of their experience anew. We turn the flowers of the conservatories of other sections of the United States and the old countries into our gardens, and we must look elsewhere for other plants to grow in our conservatories. The floral literature of other regions will not apply here. Each locality must gain knowledge by experience.

If our florists would imitate those of Europe we would soon have a cultivated flora of our own. The Europeans send scientific botanists and trained collectors to almost every portion of the globe in search of novelties and useful plants, while the various Governments establish botanic gardens at home and in their respective colonies in distant countries, which are under the direction of men who are selected for their capabilities and practical knowledge, and not for the reason that they have political influence and so gain preferment. Our own Government would do well to follow their example also. Many valuable and interesting flowering plants have been brought to California, and, from lack of proper care and attention to their requirements, have died out and been declared unsuited to our climate, whereas if they had been given proper care by competent persons they would have taken kindly to us and our surroundings, and made a permanent home in our land.

Mexico, Central America, South America, the islands of the South Pacific, and other countries, have beautiful flowers, multitudes of which might be introduced and satisfactorily grown and increased, but many of our flower-loving people have not the means to introduce them, nor the time nor facilities for their culti-

vation, while those who have the means, in a great many instances, have not the inclination; but if our State and municipal governments take the matter in hand, these new and choice flowers might soon be so abundant that they could be obtained by those who, although unable to import them from foreign countries, would be certain to care for the strangers, and cause them to increase and delight the hearts of many a weary toiler in our land, and materially lengthen our already long list of "conservatory plants" grown out of doors in California gardens, including the stephanotis, mandevilla, gardenias, camellias, bouvardias, begonias, fourcroya, etc., nearly all the tropical cacti, aloes, agaves, and allied genera, which are coming into notice and favor with our plant and flower lovers. With the flowering plants may be grown a large number of species of coniferous ferns from all parts of the world, which are being brought under cultivation.

In this connection I will mention that one of our citizens, Mr. E. Harper, has just returned from a visit to New Zealand, and brought with him some of the beautiful tree-ferns of that distant country to adorn his home in Santa Barbara, and furthermore, he remembers some of his friends, the writer among the number, and bought some for them, and they will join in hoping that he may live many years to enjoy the beauties of the silvery fronds of the *Cyathea dealbata* (silvery tree fern) he collected in the "bush." My esteemed friend, Mr. H. C. Ford, in his article "Ornamental Plants and Shrubs," read before this convention at its meeting at Santa Barbara in April of 1888, gave a long list of flowering plants, to which those who require more specific information are referred, and I concur with his closing statement that "our choice is bewildering," and will further state in conclusion, that, with a proper understanding of our climatic advantages and a knowledge of the wants and requirements of the trees and plants; with a rapid and continuous influx of intelligent people and the consequent increase of area and improvements in cultivation of our soil, there will practically be no limit to the forests, fruits and flowers of the California of the future.

Naturalists in Lower California.

Walter E. Bryant, one of the curators of the Academy of Sciences, has returned from an expedition to Lower California. The party consisted of Walter E. Bryant, ethnologist; T. S. Grandgees, botanist, and C. D. Haines, entomologist. They were accompanied by two Mexican guides and packers, and had a pack-train of ten mules. They traversed a space of 500 miles never before explored by naturalists, and after 3½ months' travel, embarked at San Quintin, Lower California, for home. At the meeting of the Academy on Monday evening, Mr. Bryant spoke of the results of the trip. He reports that the expedition succeeded in bringing back 100 specimens of small mammals, 200 birds, a collection of small reptiles in alcohol, a number of birds' eggs and 1000 specimens of plants. It cannot be stated how many of these specimens are new until they are compared with known specimens, though there will be many. The explorations covered most of the territory on the peninsula from Magdalena bay to Cape St. Lucas.

"Three weeks," said Mr. Bryant, "were spent in and about Magdalena and in going up the estero (a slough) 120 miles north of Magdalena to San Jorge. From San Jorge we went to Comodu, almost to the gulf shore of the peninsula. From Comodu we traveled 500 miles in 40 days with pack animals, following the mountains northward, and emerged at San Quintin, on the Pacific shore, about 140 miles south of San Diego.

"Some of our specimens were shot, but our most valuable aids we had in the way of collection were the boys at Comodu. While preparing for the expedition I got the boys in the neighborhood to bring in squirrels, foxes, mice and rabbits. I told them I would pay 5 cents apiece for each animal and 25 cents for large ones, such as foxes and squirrels. I also loaned the boys steel traps, with which to catch the animals. This plan I followed throughout the entire campaign, and by that means we were enabled to collect more animals than we ourselves could have done in a whole year."

Among the specimens are a large number of lepidoptera, many of which were new to naturalists.

At Comodu the ground squirrels were found a little larger than the California squirrel and much blacker, to which the name *Spermophilus grammurus atricapillus* (black-cap ground squirrel), was given. A male and female oivet cat of a new species are among the collection.

Mr. Bryant says the country in that section is not inviting. The coast is low and sandy, and there is much mesa land, covered with thick, thorny brush and various species of cactus. There is little or no timber.

"About the only thing that would ever populate the country," he says, "would be the discovery of mines. There are indications of mineral wealth. If a population once got into the country, through a mining craze or otherwise, no doubt agriculture would receive some attention, and, perhaps, like it was in California, uses would be found for the broad wastes of land now condemned by the natives as useless."

Oregon.

Linn Co. Business Council.....July 6

Some Things in Our Grange Edition.

In our Grange Edition to-day the following matters of interest are mentioned at more or less length:

The Circulation of the Blood, The National Banking System, Fraternal Organs Indorsed, The Educational Influence of the Grange, Marks of Noble Women of the Past and Present, The Pennsylvania Grange Business System, Concerning Trusts, The Morrow County Granges, Politics and Markets, Oregon State Grange—Reports of Chaplain, Assistant Steward and Lady Assistant Steward; Umatilla Pomona Grange, Tualatin Grange.

Temescal Grange Meeting.

The Grange met at 2 P. M. June 15th. Among visitors present were Worthy Master Overhiser, Pauline Newkom of Yuba City, Worthy Flora of State Grange, Judge W. C. Blackwood, Master of Eden Grange, and Sister Mary Smith of Yuba City Grange. Brother and Sister Woodward, formerly of Yuba City, who have lately joined Temescal Grange, were also in attendance.

The State Master declined the chair proffered him by Worthy Master Goodenough, but was prevailed upon to act as Steward, whereby all late-comers and officers admitting them were made to walk a chalk-mark closely during the session. Bro. Overhiser gave the Grange a good many valuable points of instruction, thereby rendering his visit impressive and useful.

The Secretary read a letter from Eden Grange announcing that a class of five were expected to receive the third and fourth degrees at Haywards Saturday, June 22d, opening at 10 A. M., and inviting Temescal Grange to join in the exercises and Harvest Feast on that occasion. The invitation was accepted with thanks.

Judge Blackwood being called upon, alluded to a statement made by Governor Penney of Oregon in his address of welcome to the State Grange of Oregon, wherein it was said the profits of agriculture had been reduced almost to nothing. Also that our young men shirk from farming. The products of the farm in many places had depreciated from 25 to 30 per cent. Judge B. said legislation had been for many years detrimental to farming in order to protect other industries. Nearly every other industry in the land had been protected by enactments until agriculture was impoverished. Go on with such legislation and farmers must become penurious and beggarly in condition. If they would be relieved, farmers must require different legislation.

Being awake would remedy these evils. Farmers must act together for themselves, and vote together for the best men regardless of party. The evils of the caucus system must be annihilated. He was in favor of the Australian system of voting. As nominations are now managed the honest voter on Election Day has really nothing to say in the election.

Worthy Master Goodenough corroborated most of Bro. Blackwood's views and spoke of the encroachments of the various trusts and combines and the difficulties brought upon farmers and other industrial classes by their powerful influence.

Brothers Overhiser, Woodward and Renwick also expressed similar views.

Judge Blackwood mentioned the increase of salaries by action of the last Legislature to take effect after the administration of the present incumbents, and stated the fact that the Treasurer of Alameda county would thereby receive \$4000 per annum, a sum greater than the salary of the State Treasurer.

The people never called for this increase of salary, but from the fact that candidates are so highly assessed for election purposes in order to secure their positions, such increase might not have been made. [We should be pleased to have Judge Blackwood favor our readers, giving more fully his views on the subjects discussed.] Brief remarks were made during the meeting by Brothers Frink, Harper and Dewey and Sisters Newkom, Smith, Chapman, Babcock, Paine and others.

The following were appointed a committee on Women's Work: Sisters Whidden, Paine and Babcock. Worthy Master Overhiser is in earnest to have the sisters enter zealously into the auxiliary duties of advancing the cause of the P. of H. all over the Union, and is hopeful of much good to result from the appointment of the National, State and Subordinate Grange Committees. Every opportunity and encouragement feasible should be given the sisters to progress in their new undertaking.

After the close of the Grange, Worthy Master Overhiser requested all sixth degree members to remain, and in the presence of some eight sixth-degree members, Sister Newkom (who was unable to be present at the last State Grange meeting owing to sickness and death in the family) was obligated and instructed in the mysteries of the sixth degree in order that she might fill her exalted station of Worthy Flora at the next session.

By invitation of Bro. and Sister Frink, a

goodly number of members met at their residence in the evening, and a very pleasant, sociable meeting was held. The guests were treated to choice cake, coffee, and ice-cream, and otherwise agreeably entertained. Temescalites were well pleased with the visit of the Worthy Master and Sister Flora, and the occasion will be remembered with much pleasure.

Tulare Grange.

Sister S. A. M. of Tulare Grange writes: "There is little to report from our Grange meetings now. Since we are in the midst of harvest, naturally the attendance is not large. At our last meeting, the 15th, Bro. Hawkins, Lecturer, read us an excellent paper of which he is principal editor. It is called the *Grange Chronicle*, and is to be read when important discussions do not crowd it out."

Bro. E. C. S. writes from Visalia as follows: Tulare Grange was not so well attended on the 15th instant as was usual on many occasions previous, the harvest claiming the attention of many. A goodly number of matrons were present, which speaks well for them and shows a good degree of Grange interest. The Grange paper was read by Lecturer. It being the first issue, many were anxious to hear its contents. The articles were very interesting and instructive.

Co-operation was brought up by Brothers Mackie and L. B. Hawkins, but there was little discussion on the matter. The Pennsylvania system was explained by the writer. A similar system is much needed in this State.

The Grange has appointed Worthy Master Moore, Past Master Merritt and Bro. Touhy to act as assisting committee to the State Grange for entertaining the National Grange meeting, if their assistance is required.

[Tulare Grange will no doubt desire a visitation of the members and visitors to the National Grange on their way East over the Southern route, should the next session be held in California.—Eds.]

Woman School Trustees

In noting the election of Sister Flora M. Kimball as school trustee at National City, a brother writes from Tulare as follows:

"Much as I dislike to take even a little glory from any one, especially a sister, I cannot refrain from telling you that as usual 'Tulare is ahead.' One year ago at the election of school trustees of the Enterprise district (lying five miles northwest of Tulare), two were elected, both being women—Mrs. J. B. Zumwalt and Mrs. Samuel Fowler, the latter being a matron of Tulare Grange." Good for the ladies. More information on this subject would be appreciated.

Mrs. Colman, for years, made Shasta county an excellent superintendent of public schools.

THE FARMER'S CHAMPION.—A correspondent writes as follows to the *Watsonville Pajaronian*: How right the adage, "There is always some Brutus to our ambition." The brightest hopes and best-laid plans often result in melancholy ruin. As an illustration, observe the following: This promises to be one of Nature's bountiful years, and as a consequence farmers all over the United States have been cheered by the prospects of obtaining fair remuneration for their labor and invested capital. Owing, however, to the recent formation of trusts, pools and rings it seems a matter of doubt whether they receive anything. But right here the Grange steps in, and in no weak or uncertain manner speaks out plainly declaring such combinations as damaging to all public interests, a stab at the life of the consumer, and a deliberate attempt to wring from farmers millions of extra dollars. It proposes to meet organization with organization, and in a number of such States as Iowa and Illinois hundreds of Granges and thousands of Grangers have pledged themselves, and placed a penalty behind the pledge, not to use one pound of binder twine or buy another twine-binder, while the State Grange of Illinois offers \$10,000 to any one who will invent a binder which will use straw in place of twine for binding. Farmers through the Grange are being educated and cannot be run over as in their days of isolation and helplessness.

WEST SAN JOAQUIN GRANGE met last Saturday, June 15th, for the first time in several months. Bro. J. C. Allen, Worthy Secretary, informs us that they are trying to hold the Grange together, hoping for better prospects. We sincerely hope they will be able to revive the interest of the farmers of their vicinity, take in new members and make a vigorous fight for the cause. This Grange has 15 members and is situated at Tracy, in the fertile San Joaquin valley. It was organized April 14, 1873, being the third Grange in California. At its organization it had 24 charter members, its present Master, Bro. A. P. Stocking, being one of that number. Having been in existence 16 years, the members should work hard to prevent this Grange from becoming dormant. When will Stockton Grange visit West San Joaquin. It will do both Granges good to have a conference meeting and discuss matters of mutual interest to themselves and all other Patrons. Bro. Stocking, just challenge the Stocktonians to visit you!

Politics in the Grange.

MESSRS. EDITORS:—Please permit me to say a few words about "politics in the Grange." Our wrongs are nearly all political ones, and the Grange ought to speak out, loud and often. We are fed on gush and blarney by Wall-street bankers and railroad millionaires, while they steal away our liberties and our substance, and now I repeat the question I once asked through the California Patron, "What are we going to do about it?" Resolutions, talk and grumbling, Grange suppers, and Grange picnics, will never reach the hearts of monopolists. Souls, they are said to have none. Cursing them makes them laugh and grow fat.

What shall we do about it? Nothing, I presume, but growl. What could we do? We could walk up to the ballot-box and relegate every corrupt, mercenary, drunken sot to obscurity and disgrace. Will the majority do that? No. They will vote for the man nominated by the party, no matter what his character. Do you blame any one for being a pessimist?

The farmers, laborers, mechanics, and all producers are being robbed by an infamous banking system, outrageous tariffs, watered stock, railroads and trusts of every kind, and they are awfully sore, and grumble continually, but that amounts to nothing. Let us have more politics in the Grange! Let us have more politics in our religion and more religion in our politics.

We have been legislated into poverty and scoundrels control legislation. How do they do it? In many ways, and when a plundering law is once enacted the "House of Lords" can always be depended on to oppose its repeal. The people have no use for Senators, State or National—bankers and railroads have.

If we had never heard of a senate, made or patterned after the British House of Lords, we should never have been in our present deplorable condition. With such safeguards to plutocracy, can we (the masses) ever prosper again? The sanguine may continue to hope, and Heaven grant their hopes may be realized, but it has been said that "dead republics know no resurrection."

Starkey, Cal.
C. E. TOBEY.
[More politics without partisanship seems to be the present call on the part of many of our intelligent, thinking people.—Eds.]

Fourth of July Exercises.

We hope to hear that a good many of our Granges will improve Independence Day in holding Grange picnics and reunions of farmers and their rural friends. There is many a valley and foothill district in which an unceremonious Grange picnic could be held on the 4th to advantage. There is an inspiring fitness for Patrons to gather together, talk and enjoy themselves on that great day of the year. Especially should such Granges as have failed to hold a picnic this season, or to celebrate the Children's Grange Day, take occasion to commemorate our national holiday. If you have no orator on hand and want to make a demonstration, read the Farmers' Declaration of Independence, published in the California Patron of Sept. 29, 1888, extra copies of which, if wanted, can be had on application to this office.

BULL BUTTER.—The Grand Jury of Monticello, N. Y., has indicted Alfred Gilman for misdemeanor in selling oleomargarine as butter. Gilman is a wealthy grocery and provision dealer of that place. It is charged that the oleomargarine in question came from Connecticut and was shipped on the sly in unlabeled gunny-bags to the Gilman store, where it was sold to customers as genuine butter. The penalty for this offense in New York is a fine or imprisonment, or both, and in addition a fixed penalty of \$500, recoverable by civil suit. In Connecticut the manufacture of oleomargarine and sale as butter is not prohibited. The Legislature of that State lately passed a bill prohibiting the manufacture of this article, but it was vetoed by the Governor on the ground that "oleomargarine is a healthful article of food." Connecticut has our sympathy.

CHILDREN'S DAY.—A. B. Huntley, P. M. of Plumas Grange and District Lecturer, says that the idea of "Children's Day" did not originate with the National Grange. Plumas Grange had a Children's Day some ten years ago, and last February a committee was appointed to arrange for a Children's Day in June. Plumas Grange has been an efficient helper, broadening the agricultural life of that region.

HENRY LEE HATCH of Orange, Vermont, and Miss Annie Louise Chandler of Nicolaus were married last Tuesday at the residence of the late Hon. A. L. Chandler. Rev. L. B. Hinman performed the ceremony. The happy couple have the hearty congratulations of a wide circle of friends. They will reside in Vermont. And thus Sutter county loses another of her fairest daughters.—*Sutter County Farmer*, June 14th.

ROSEVILLE GRANGE conferred the fourth degree on a class of four last Thursday, the 20th inst., and held a Harvest Feast. A general invitation had been extended to all members of the Order, and a grand gathering was anticipated. We hope to receive a report of this meeting for our next issue.

Good for Watsonville Grange.

MESSRS. EDITORS:—If all the farmers in Pajaro valley could have attended the last meeting of Watsonville Grange, we feel sure that few would have gone away without a desire to unite with it. The hall was tastefully decorated by the deft fingers of willing sisters, matrons, maids, and husbandmen, vying with each other in the pleasant task. The shrines of Ceres, Flora and Pomona were fairly ablaze with the appropriate symbols of these offices. The beautiful ritualistic ceremony was conferred in a manner to make a lasting impression on any one. Another large class will be initiated in August, which will more than double the membership in this Grange. Farmers have at last begun to see the benefit of the Grange, and are flocking to it by hundreds all over the country. An open Grange meeting with exercises will be held Saturday, June 22d, at 1 o'clock sharp, at Ford's Masonic hall, to which all having the slightest interest in agriculture are invited. At the conclusion of the literary exercises the Pomona Feast will be served in the commodious dining-hall and participated in by Grangers and their friends who hold tickets. VACEILLE.

[We hope there will be a large visitation from neighboring Granges, with representatives from different parts of the State. Watsonville is now one of the liveliest and most progressive Granges in the California circle.—Eds.]

About Bobby Thistle.

MESSRS. EDITORS:—Her Majesty, Sister Edwin Thistle, insanely shuffled off into hysterics when she read the motherly advice written by a "mother of two children" and published in your last issue. The writer of this had selected a hospital to send her to, when lo! she took a notion to be rational again, and then we killed the fatted calf and joy was indeed unconfined around this agricultural emporium. My nerves were somewhat shattered, but I am at present doing as well as can be expected under the circumstances. At one time I was confident I was either in a land of earthquakes and perched upon the epicentrum or was hanging from a tripod head downward over a boiling caldron of all kinds of burning, steaming trouble. I wish, however, to offer thanks awfully to the thoughtful sister who loaded her blunderbus with a five-gallon powder-can and peppered hot shot into Sister Thistle and the orphan who is writing this for taking Bobby, our oldest son and heir, to Grange before his dear, lovely gem of a tooth had scarcely left its chrysalis state.

We always like to receive advice concerning the successful management of babies from those who have had actual experience in this particular field and who know what they are talking about, for we admit it is a subject deeply interesting to us and one on which we are decidedly green. Hence we have a profound respect for the sister's extensive knowledge of babies, and will suggest for the edification of a million young papas and mamas that she write a treatise on "kids." We are fully prepared to say Sister Unknown writes convincingly and with an apparent air of sincerity on the subject of babies, differing greatly from Miss Lucinda Jane Oldgirl, aged 49, who writes from hearsay only. Sister Unknown is evidently free from all envy that we possess such a real live prize boy as Bobby. Most people who have boys overlook the fact that our heir is a phenomenal boy—in fact they look at Robert through leather goggles. Yet they know at the end of the season he will surely get the pennant. Perhaps the conspicuous absence of the sister's envy can be accounted for by the hypothesis that her boys somehow are girls and have bangs and wear bifurcated skirts. If this be so, one of these days, by Sister Unknown's instructions, her girls will make sheep's eyes at our Bobby and she will give almost anything to be Robert Thistle's mother-in-law. Methinks now she is sorry (as she has two daughters, I think) Bobby was not twins. I will again thank the sister for her kindness and assure her we are trying our best to make Bobby feel perfectly at home. He is enjoying the best of health. He has so far enjoyed good health, with the exception of the first two months after his birth, when his tongue was coated with omelet-colored interrogation point-shaped dots, which were highly indicative of gout coming from too high living. Faithfully and fraternally.

EDWIN THISTLE.
Union House, June 16th

BRO. T. T. HOOPER ILL.—We have received the sad intelligence that Bro. T. T. Hooper, Worthy Master of Montezuma Grange, was taken with a sudden stroke of paralysis on the evening of the 6th inst., affecting his left side and completely prostrating him. Much sympathy will be felt for Bro. Hooper by all Patrons, as his well-known kindness, generosity and fidelity to the Grange cause have won for him hosts of friends. We hope for the brother's ultimate recovery from this severe affliction.

BENNETT VALLEY GRANGE.—Invitations are out for the Grangers' party to be given soon. This party will be given in honor of the new members who have lately joined the Grange, and will be strictly by invitation.—*Republican*.

The San Jose Grange.

Fruit Selling, Drying, Etc.

The members of San Jose Grange gathered in rather more than usual force at their meeting, June 15th, and two young men, members of an Illinois Grange, but citizens of Santa Clara county of recent date, joined them. Worthy Master O. F. Alley presided and H. A. Brainard was at his post as Secretary.

E. T. Pettit read a selection entitled "The Secrets of Happiness," and Mrs. S. P. Sanders another from her scrap-book entitled the "Lifetime of Man," both of which were received with expressions of approbation from the audience.

There was quite a comparison of views on the subject of fruits and fruit markets. One member from Los Gatos said he had been offered \$30 per ton for his apricots, but had not concluded to accept. A member from the Santa Cruz mountains said that a man who dried considerable fruit last year had told him that he could not afford to give more than a cent per pound for apricots and the same price for prunes. Another said he had been offered \$25 per ton for some large-sized prunes. Another member had learned that the Chinese cannery had paid more than that for apricots when they found what suited them. Another said he had visited that establishment and while they had quoted a price of \$35 per ton for apricots, they did not wish to enter into a contract with him for that price, preferring to take the chances of current prices by-and-by, be they greater or less.

As to sulphuring dried fruit, a member asked if there was any change in the demands of the market and whether there would be any call for unsulphured fruit.

The answer was that a proper and judicious amount of sulphuring would be required in first-class fruit; that over-sulphuring should be avoided. Sulphuring to the extent of killing the germs of ferment and decay and preventing the change of color by oxidation before the drying process had proceeded far, was undoubtedly a real benefit to the fruit. An exposure to sulphurous gas for 20 minutes would benefit rather than injure fruit.

The practice of dipping fruit in hot water before packing, and packing it while damp, the member said, was being cried out against in the market announcements of the dealers, and should be avoided if possible. Fruit so treated had changed color after reaching market, and partially spoiled. Another member said he had taken dipped fruit to the East and used it in his own family for several months, and kept it all winter without change. Others said that a quick dip into boiling water and drying carefully afterward was a benefit to the quality of the fruit. It was thought that the French method of curing prunes could be adopted with great profit.—*Mercury*.

The Assessment Question.

EDITORS PRESS:—I send a clipping from the Red Bluff *Sentinel* which I should like to bring before the farmers and fruit-growers, and I know of no better way than to have it placed in the Rural. The State Board of Equalization and assessors of the counties are doing the very best they can to rob the farmers, and if we stand quietly and make no effort to stop it, there is no telling where they will stop. It is very poor encouragement for us, after being at the expense of setting out an orchard and sowing alfalfa, to be subject to double taxation. If we should be so lucky as to find some other kind of grass better than alfalfa, they will want to make a treble taxation. We must fight then to the bitter end. N. MERRILL.

The following is the article to which Mr. Merrill refers:
State Board of Equalization and Assessors Condemned.

When I gave in to our county assessor my property tax for this year, and after all was completed, as I supposed, the assessor asked me the question, "Have you any alfalfa?" I informed him I had, also the number of acres and when sown; the first 20 acres in the winter of 1885, and the last sowing this spring.

What was my surprise when he (the assessor) informed me that he should levy another assessment of \$10 per acre on the old alfalfa and \$5 per acre on the last sown. I told him that was double taxation, and asked him by what authority he made such double assessments. His answer was, "By order of the State Board of Equalization," and at the same time produced the printed instructions. I read it carefully, but it said nothing about alfalfa; still he (the assessor) said that was the order of the State Board of Equalization, and he must make the assessment according to their instructions, even if it was in conflict with law.

The State Board of Equalization have usurped authority which they have no right to do. They plainly say, "We know the Legislature has enacted certain laws in regard to the assessment of property, but we are greater than the Legislature, and we pronounce the law unconstitutional, and we will instruct the assessors of the State to levy the taxes as we think best, regardless of law."

And it appears that our assessors think that the State Board of Equalization are to be obeyed, instead of the law which they have sworn to obey.

I wonder if they (the assessors) think of their oath of office? Was it to transact their busi-

ness according to law, or as the State Board of Equalization should dictate, regardless of law?

The State Board of Equalization is very badly afflicted with the "big head," and the sooner they are brought up with a round turn, and a great deal (not a little) of conceit taken out of them, the better. They not only disregard the law, but they instruct the county assessors to do the same.

As the law now stands, "no growing crops shall be assessed."

In defiance of the law, they assess a growing crop of alfalfa \$10 an acre, after the land has been assessed. They also assess fruit trees after the land is assessed, which the law plainly says shall not be taxed.

Now what will be the result of all this unlawful assessment? The whole assessment is made void, and no taxes can be collected.

Now I would ask the State Board of Equalization, Why do you defy the law and try to oppress the farmers of the State? Everything he has in sight, and you assess him up to the highest possible notch, and that does not satisfy. You assess some of his property twice; you defy the law and excite revolt; so does the anarchist. How much better are you than they?

Brother farmers, will you quietly stand with your hands in your pockets and be thus robbed (for it is nothing less than robbery) of your hard-earned money? Let every farmer and fruit-raiser see to it and refuse to pay this tax that is made in violation of the plain law. Yes, and would it not be a good lesson to our officers to bring them up before the court and have them explain why they are violating the law, and let them find out they must obey the law instead of a swell-headed State Board of Equalization who dare defy the law. N. MERRILL.

Red Bluff, May 26, 1889.

Fresno County First.

EDITORS PRESS:—That first and only carload of "May wheat" ever received in San Francisco was from Fresno and not from Tulare county, as in last week's Rural. Reedy, a thriving village built upon the new branch railroad running southeast from Fresno, by the energy of T. L. Reed, one of our enterprising big land-owners, is in Fresno county, just three miles east of Sanders P. O.

The Rural will remember O. L. Abbott, the first Overseer of Cal. State Grange. He is a large farmer and attorney of Reedy. The "76 Land & Water Co.," when land prices began to boom here, refused to their tenants the right to purchase, to which they claimed they were entitled. O. L. Abbott was one of their tenants and has taken the lead in litigation to secure the rights of the tenants. It looks now as though Abbott will win every case involving title to property worth hundreds of thousands of dollars. Success to him! W. A. SANDERS.

Sanders P. O., Cal.

HYDRAULIC MINING.—Judge Sawyer rendered a decision June 19th in the case of the United States Government against James Regan, Brick Hains, Too Good and others in favor of the plaintiff. The defendants had been working a mining claim on Cottonwood creek by a hydraulic process, and the Government brought suit to enjoin them from so doing. The defendants failed to appear at the trial and judgment was given in favor of the Government.

STATE FAIR.—The premium list for the 36th Annual Fair of the California State Agricultural Society has been issued in the form of a neat pamphlet, a few copies of which have been left with us for distribution. The fair opens Sept. 9th and closes on the 21st. Persons wishing to obtain the premium list by mail should apply to Edwin F. Smith, Sec'y State Board of Agriculture, Sacramento.

BRAZEN CHEATS.—The confidence man now gets on board a train in the character of an emigrant, tells a long story to the intended victim about a sick family, no money and nothing of value left except a ring (showing it) made of gold dug from their mines, worth \$20 or \$25, but which he will part with for less. He sells the ring, which proves to be brass.

THE PLACER COUNTY FAIR is to be held at Auburn, the week before the State Fair. The directors of the district have voted that for the fair of 1889 there shall be no purses offered for horse-racing and that no money shall be expended by the association in fixing up a track for racing purposes.

ASSISTANT EDITRESS WANTED.—Oregon furnishes a first rate editress for its Grange department. Why should not California? Who will recommend us an editorial assistant, not particularly handsome, but smart? Who recommends first?

MAKING HAY.—The Gridley *Herald* says that 25 men are constantly employed on the Ord ranch cutting and stacking hay. Over 2100 acres will be cut this season, 1500 of which is alfalfa.

THE publication of *Our Little Grangers*, Cincinnati, Ohio, has been discontinued, after ten years of existence.

EDEN GRANGE, as announced elsewhere, gives one of its well-reputed Harvest Feasts to-day. Let all Patrons who can, attend and be very happy.

AGRICULTURAL SCIENCE.

The Lakes of the San Joaquin Valley.

University Experiment Station, Bulletin No. 82

The rapid contraction by evaporation of the three lakes of the upper San Joaquin valley, the consequent concentration of their waters into alkaline lyes too strong for animal life, and the nature of the soils laid bare on their margins, have formed the subjects of investigation and discussion in former reports of this department, especially in connection with the reclamation and cultivation of alkali soils. (See reports for 1879, pp. 30 to 39; 1880, pp. 12 to 33; 1882, pp. 56 to 60; 1884, pp. 61 to 69; 1886, revised reprint from report of 1880: "Alkali lands, Irrigation and Drainage in their mutual relations," 45 pp.) It is a matter of regret that it has not been possible to pursue the subject by personal visits as systematically as its practical importance and theoretical interest might have warranted; for we are here in presence of a group of phenomena that have been repeated many times in past geological epochs, and for the study of which, in their physical, chemical and biological aspects, opportunity is not often afforded. Hence, while the information and data here given are of necessity incomplete and fragmentary, they are of interest as affording an insight into processes regarding which but little is thus far on record; and their communication may perhaps serve to incite others having the opportunity to do so, to a closer study of the progressive changes.

For a better understanding of the situation in the Kern and Tulare basins, the following statements from former reports are reprinted:

"A personal examination of Kern lake, and of the region lying between it and Buena Vista lake, as well as of the Mussel Slough country, made under the auspices of the United States census, in March, 1880, satisfied me that in none of these rich agricultural sections could the slightest increase of alkali be safely risked; and analyses subsequently made of the waters of both Kern and Tulare lakes prove that a very few years' use of the water then filling either of these reservoirs would be promptly fatal to the productiveness of the lands irrigated. As regards Kern lake, this was obvious enough from a casual examination and tasting of the water. Having been shut off from the natural influx of Kern river for a number of years, it has been rapidly evaporating and receding from its former shores, so that at the time of my visit a difference in level of over four feet had been produced in 15 months, leaving high and dry a boat wharf built at that distance of time. About 18 months before, all the fish and turtles in the lake had suddenly died, creating a pestilential atmosphere by their decay; and even the mussels were now mostly dead, a few maintaining a feeble existence. A strong alkaline taste and soapy feeling of the water fully justified their choice of evils. The tule marsh, laid dry by the recession of the lake, was thickly crusted with alkali, and the tules were dead, except where still moistened by the water of the lake, showing that the latter was not yet too strong for such hardy vegetable growth, albeit fatal to animal life.

"Buena Vista lake was stated to be in a similar condition, but not yet quite so far advanced in evaporation, and still maintaining some animal life in its waters, having lost its connection with the river more recently. Tulare lake is well known to be full of fish, and as it annually receives the overflow of Kern and the regular inflow of King's river, its evaporation and recession has been much slower; yet its water's edge is now distant several miles from the former shore-line, and as the water of the rivers is more and more absorbed by irrigation it will doubtless continue to recede until a point is reached at which the regular seepage from the irrigated lands will balance the evaporation. This epoch would seem, however, to be quite in the future as yet, for the rate of recession has, apparently, not sensibly changed in the last few years. It is not likely in any case that the water of the lake will be more abundant or less impregnated with mineral matter than is now the case, at the time when the state of equilibrium shall have been reached.

"With the lights now before us, it can hardly be regretted that the old Westside ditch, which was to irrigate the lower country with the corrosive waters of Tulare lake, was not successful. The lake level is now several feet below the bottom of that outlet, and the lake keeps receding annually, and its alkali becomes stronger as the mass of the water decreases. It is difficult to say where it will stop; but if, as is probable, a state of equilibrium is reached whenever the waters of Kern and King's rivers shall have fully filled the parched depths of the plains by a more general system of irrigation, it is not at all probable that the lake water will thereby become fresher; on the contrary, such seepage water will be likely to bring into it the alkali now dried up in the lower strata, and the annual evaporation will concentrate the solution more and more. It would certainly be most desirable to utilize the lake as a great reservoir for irrigation supply; but to render this practicable, it would be necessary first to empty out or displace the mass of alkaline water at present occupying the basin. The discussion of the feasibility of such an undertaking, however, belongs to the province of the engineer corps.

"The analyses referred to above gave the following results (in grains per gallon):

	Kern Lake, 1880.	Tulare Lake, 1880.
Date of taking sample.....	March.	January.
Total solid contents.....	211.60	81.80
Soluble after evaporation.....	182.75	71.16
Potassium sulphate.....	3.24	3.24
Sodium chloride (common salt).....	116.41	22.77
Sodium sulphate (Glauber's salt).....	17.93	17.93
Sodium carbonate (sal-soda).....	61.37	27.92
Insoluble after evaporation.....	0.29	8.80
Calcium carbonate.....	2.97	2.97
Magnesium carbonate.....	4.96	4.96
Silica.....	.44	.44
Organic matter and water.....	22.43	2.98

"To convey to those unaccustomed to the consideration of such matters an idea of the meaning of the above figures, it may be

stated that the solid contents of river water are usually from 10 to 20 grains per gallon. The water of Tulare lake, where it is undiluted by the inflow of King's river, is therefore about 10 times, and that of Kern lake about 26 times, stronger than an average river water. Even this, however, conveys but an inadequate idea of the relation sustained by these waters to organic life. The average sea water (containing mainly common salt) is about ten times stronger than the water of Kern lake as regards its solid contents, yet in Kern lake, fresh water fish live freely during part of the season, while in Kern lake the fish died at a time when, according to a minimum estimate, the water must have had about twice the strength of Tulare lake, or about one-thirtieth of the strength of sea water. This shows strikingly the deadliness of the Kern lake alkali as compared with sea salt, or, in other words, of Kern lake water as compared with tide water."

Condition of the Lake Water in June, 1888.

Early in June, 1888, at my request, Mr. B. F. Moore, Patron of the Experimental Station near Tulare City, sent a messenger to obtain a sample of the lake water in order to ascertain the progress of evaporation. The sample was taken 2½ miles out in the lake, 8 miles east of the mouth of King's river, not far from the Cross creek fisheries.

The water had a general greenish turbidity and considerable greenish sediment at the bottom of the bottles. This sediment showed under the microscope an abundance of green cellular plants, mingled with adherent fine silty matter, partly silicious, partly calcareous.

A partial analysis of this water (by Assistant Geo. E. Colby) resulted as follows:

	Grains per gallon.
Total solid contents.....	204.7
Soluble after evaporation.....	180.9
Sodium carbonate (sal-soda).....	4.4
Insoluble part.....	3.7
Organic matter and water.....	14.1

The soluble part consists chiefly of carbonate of soda and common salt with Glauber's salts.

The insoluble part consists of gypsum and carbonates of calcium and magnesium with some silica and alumina (probably clayey matter).

It will be seen from a comparison of this analysis with those made in 1880, that the solid contents of the lake water had increased very nearly 2½ times in the eight years, and that its concentration approximated closely to that of Kern lake in 1880. Yet it appears that an abundance of fish survived, at least of certain kinds, although, as will be seen below, the mussels had already succumbed.

The Condition of Tulare Lake in Winter of 1888-9.

Having been informed in November, 1888, that "the fish in Tulare lake were dying by shoals," I concluded that the water of that basin had by evaporation at length reached the limit of endurance of its inhabitants, who had probably found themselves unfit to survive the altered surroundings. Desiring to verify the facts, I in January, 1889, made arrangements to visit the lake in company with Mr. J. G. Woodbury of the State Fish Commission; but being delayed by imperative duties, I requested Mr. Woodbury to proceed alone, and while making his observations on the economic side of the question, to collect a sample of water and such other data as might present themselves. He accordingly visited the northeastern part of the lake, near the mouth of Cross creek, during the first week in February, and on his return communicated to me the following interesting account, which is here reproduced by consent.

"On the train I met several gentlemen who live along the railroad, opposite the lake, and was told by them that Tulare City was the best place to start from for a visit to the fishing-grounds. I engaged team and driver to take me to the fishery near Cross creek, a distance of about 25 miles, according to the driver's statement, and not less than 20 by my own estimate. At this point the lake receded last year about half a mile, and in consequence the fishermen were compelled to move their position about a mile farther into the lake. Their pound for the fish is half a mile from the shore and their seine is pulled 2½ miles farther out into the lake. It is afterward pulled in by a horse and windlass located about 200 yards from the shore, on a platform where the horse is also stabled.

"They catch about 125 pounds at a haul at this fishery; the fish come in on the seining grounds in warm weather rather than when it is cold; and as the same ground is continually seined over, it seems that the fish must travel considerably to keep it constantly stocked.

"I inquired about the reported dying of the fish. The fishermen said that it occurred last summer and autumn, and that it was mostly catfish, 'greasers' and some of the so-called trout, also some carp, but very few perch. Now it is the perch that is so much valued by the fishermen; in fact, the perch is what they fish for, as the catfish do not sell so well and the greasers are of no account. The 'trout,' of which I did not see any, they say are very soft and do not keep well, also are very insipid.

"The perch is certainly a very fine fish, large, bright and clean-looking; they are also very good eating, as I had occasion to verify. These perch have enormous mouths, and in that of every one in the pound can be seen a 'shiner,' (or 'sliok,' as they call the fish) with the tail sticking out of the great mouth, being drawn farther in as the process of digestion proceeds. One perch which I took along to have cooked, I took by the gills, and looking down his big mouth, I saw the tail of a fish, which I readily got hold of with my fingers and pulled out. It was six inches long and only its head partly di-

(Concluded on page 596.)

My Photograph.

The picture man's accustomed hand
Arranged me with celerity,
With judgment and dexterity.
He turned me right, he turned me left,
With wonderful rapidity,
Securing my inconstant head,
To give it due solidity.

He placed a river at my back,
And trees and rocks adjacently
Adjusted with artistic touch,
And viewed the whole complacently.
"Just drop your chin!" I dropped it, to
The best of my ability;
"But shut your mouth!" he added, which
I deemed an incivility.

Across the room, with dirty face,
A bric-a-bracket Psyche sat;
The artist backward jerked his thumb
And bade me keep an eye on that,
And eke to smile and also wink,
With dignity and suavity,
Whereat I smiled full solemnly,
And winked with awful gravity.

'Twas difficult—but now 'tis done,
With secret exultation do
I show to friends my photograph,
And note the admiration, too.

"How beautiful!" they cry, nor know
Their honest praise is praise of me,
Till, pressed to tell them whose it is,
"Tis mine!" I say triumphantly.

How I Wrote My Novel.

[Written for the Rural Press by MARGARET A. WORK.]

I made up my mind to write a novel, and as harvest was all over, and the wheat sold, and the work all done and everything quiet on the farm, I thought it was a good time to begin it; so I took my note-book and rocking-chair and went out into the orchard under the trees to think it over.

As I sat there eating figs, I decided who I should have for my hero; that was short work. Willie Kimball was my favorite of all the young men in the neighborhood. He was tall, well formed, frank and manly in his bearing, a little reserved for his age, but always kind and courteous, and as his father's large farm adjoined ours, I had seen enough of Willie to like him exceedingly.

Willie had a stepmother with whom I had no acquaintance, but Willie used to drop in sometimes on winter evenings, instead of going to town, to read our papers or play chess with the Granger. He was a favorite among the girls and was welcomed everywhere, but in selecting him for the hero of my novel I took into consideration the fact that his father was well-to-do and would probably deed him the quarter lying next to us when he was twenty-one. Then I fell to wondering if my stately friend Miriam Grey, who, being a city girl, would make a splendid heroine for my story, would in reality be a good match for him, when suddenly two soft arms fell about my neck and two cherry lips touched my cheek.

"My lady love, what are you dreaming about now?"

This was Dolly Dunton in her new blue calico dress, a bunch of white roses on her breast, smiling into my face as pretty as a picture, and bright and loving and fascinating as ever. I was always glad to see Dolly, though I should never think of putting her into my novel. She was such an every-day, friendly good sort of a girl, with nothing romantic about her. She was an orphan with no pecuniary prospects, but her aunt, my neighbor, gave her a good home and such advantages as the town school afforded.

Dolly loved flowers and colors, and as soon as I felt her soft kiss I knew what she wanted. She wanted that first lesson in painting I had promised to give her, for Dolly was always handy and willing to help me, and I was glad to impart to her my scanty knowledge of oils and coloring. I gave a little sigh over my interrupted thought as I slipped my notes out of sight. Dolly carried my chair in and we set up the easel in the spare room and went to work in good spirits. My pupil was very apt and happy in her work, so that I became newly interested in painting, and started another picture to fill up the spare moments. When it grew too late to work, it was time to hunt the eggs and get the supper; so I had no more time that day for my novel. I agreed, so loving and importunate was Dolly, to give her one day in the week for painting, in return for which she was to come on Saturday and do my baking and sweeping, while I drove to town and attended to my trading and society duties.

There was no more time that week for my novel, for one day I washed, and one day the Granger made over the chicken-house, and I spent the day talking to him and doctoring sick chickens. Then Saturday and Sunday came,

which are always crowded days, any way. Monday, some company came and spent the day, and Tuesday I washed and baked, and Wednesday morning everything looked fair for me to go to work on my novel. I had received a letter from my friend Miriam Grey saying she would surely come to the country as soon as the first rains had laid the dust, and I thought what a good opportunity I would have to write up a romance between her and my handsome Willie. Miriam's father was a lawyer with money, and I could easily work him up into a parent who would never, never consent to giving her to a plain farmer, and, with Miriam's fine culture and conscientiousness, she would worry herself to a shadow before she would disobey her father, whom she loved loyally.

So I sharpened my pencil and fell to work painting Miriam in a sky-blue tea-gown walking in my garden with Willie in his best, he saying bright, laughable things and snapping his riding-whip in the air. I had barely written ten lines when the Granger came striding into the house, evidently in a high state of excitement by the way he slammed the door. He rushed into the room with a gust of air.

"Betsy, I have engaged the barley-grinders, and they will be here to night."

I rose up in horror. Nine men to supper and not a loaf of bread or a pie or cake, or a bit of fresh meat in the house. "John, how could you? Why didn't you let me know?"

"Couldn't help it, Betsy. Kimball got through with his other job sooner than he expected, and he wants to do this and discharge his crew. They will be here all day to-morrow."

As I usually had help in harvest, I was naturally upset by this sudden invasion. But John was most obliging. "I'll do anything you want, Betsy, only set a good table; the Kimballs expect it."

It was no more than right that I should make an effort for my neighbor and his crew of men. I knew I could depend on Willie and his father for thanks and appreciation, any way; so while I rolled up my papers and hid them in a drawer I laid my plans for supper. I told the Granger to hitch up the cart immediately and go to town for fresh meat, and on his way to stop and ask Dolly Dunton if she would come over and help me out. Then I hunted the eggs, and built a fire, and skimmed the milk, and cooked three pans of sour milk and made some cottage cheese, and had my jelly cake partly done, when the Granger came back, his cart loaded with meat and grapes, and Dolly under a large sun hat as pretty and sweet as ever in a dainty white blouse, and all her skirts rustling as if they had come from a French laundry. In a twinkling she had her gloves off and her arms in the flour-tarrel and began mixing up piecrust without waiting or asking questions. And I admired her so much that I couldn't help putting my arm around her slim waist and giving her a good hug as I brought her a can of berries for the pies.

Our supper was a success. The biscuits were light, and the steak was tender, and everything just right, and Dolly and I stepped out into the cool of the evening to congratulate ourselves while the men filed into the lighted dining-room. Willie managed to spy me and came to give me his hand before going in. Dolly slipped behind me with her hand in mine as he came up, and I could see his face light up with pleasure at her pretty, modest action as he said: "And Miss Dunton, too; how shy you are!" She gave him her hand and said nothing, and when he went in she was still as a mouse by my side.

"Are you tired, Dolly?" I said.

"O dear me! no. I am so glad to come and help."

It was after nine o'clock before we had all the work done that night, though Willie insisted on coming in and wiping the dishes for Dolly, although I begged him not to trouble himself.

Then we took time after supper to have a few songs at the organ while the men sat outside in the moonlight to listen. But Willie and Dolly kept making mistakes over my shoulder—said they couldn't see the words; so I sent Dolly to bed and ordered Willie out of the house. He rushed back to thank me for a very pleasant evening. I was tired, and I fear Dolly was too, for as she stood in the stairway with the lamp in her hand to bid us good night I thought her eyes were over-brilliant and her cheeks too red.

Willie went home before dinner the next day, and as Dolly looked tired and dispirited in the afternoon, I let her go home too, and prepared the supper, the last meal for the men, myself. Then I had extra scrubbing and housecleaning to do, and I was just getting rested when the Granger took a notion to go over to Farmerton, about thirty miles distant, to visit several families of relatives we had there. He said he wanted to trade buggy-teams with a man over there, so we had best take the buggy and go over. So I had to look over our visiting clothes, and starch and iron our dusters, and cook up a lot for the hired man to eat while we were gone. So I hadn't any time to think of my novel then, and after we came home from our week's trip I was very tired for a few days, and then some friends came and spent a week with us, and then, before I knew it, County Fair came on, and we had promised to go, on account of the exclusion of bars by the temperance folks. I exhibited my grandmother's quilt, some old lace, and some canned fruit, and it all took time. We drove eighteen miles and staid three days, and when we came home from that, everything we

had was dirty or needed fixing over, so that the winter-seeding commenced on the farm and we began to have three hearty meals a day before I had any time to think of my poor neglected novel. But Willie went to the County Fair with us, and I took Dolly along too; and I noticed that he was growing more of a gentleman every day, so kind and honest and upright.

With the Ladies' Aid Society in town, and Dolly's lessons, and the winter flannels to make, I was busy for awhile, but I managed to get time for a little writing; so I fell to work describing Miriam Grey. She was a charming girl, pure and gentle and refined, and well-read; but thus far in life she had put her whole soul into her musical studies. I felt that now she needed an experience to find a soul; so I thought I would have them meet in Munich after their meeting at my house, she as a student of music, he as an American traveler, and there they would love and quarrel, and finally, after many sorrows and adventures, meet again at my house only to be parted by her father.

However, I had not made any progress in my work, when we had a lovely early rain and I knew Miriam would be up. Then I made up my mind to paper the spare room, and with going after the paper and everything, that took several days of time; then I cooked up a little in advance so as to have time to drive her around. She was coming on the morning train and I had to meet her myself, as neither the Granger nor his man could take time from the field. When the Granger went to hitch up Mary for me before going out to work, he found her so lame she was unfit to drive, so he came to the kitchen door to ask me if I was willing to drive Jo. Jo was a balky old horse, perfectly gentle as a usual thing, but he had spells of stopping in the middle of the road and standing there unmoved by whipping or coaxing till the spirit of horseflesh moved him to proceed. Once started, he would go furiously for fifteen or twenty yards, then jog down to his usual pace. Any one who did not know the horse would be frightened to death. I never liked to drive Jo when I had company, for fear of one of his tantrums; but there was no help for it, so I had him hurried off to look as well as he could and went to meet Miriam.

Miriam was there and looked as stately and stylish as ever in a black suit and an English walking-hat. I put her in the buggy and drove to the butcher-shop and bought some meat, and to the grocery and got some San Diego honey and some rushing, and then drove out of town in a hurry, for I thought I would be late about dinner.

When we were about half-way home, chatting gaily, Miriam let her veil float out of her hands into the air, and I stopped Jo to get it. When I was ready to go again, Jo wasn't. He wished to remain where he was. I was afraid to whip for fear he would kick, so I slapped the reins on his back and coaxed and clucked, but he only looked angry and stood still. Miriam began to look anxious, so I got down and took him by the bit to coax him a little. He was quite willing to go that way and almost trod on my heels. I led him along a few moments, then stopped him to go back to the buggy; but before I could get in, Jo suddenly decided to go and was off. Miriam screamed, and I saw her reach for the reins, but they slid over the dashboard. I knew at once that she would be all right if she only sat still, for I was sure Jo would stop inside of a mile. Nevertheless I was frightened enough, and hurried on as fast as I could. Then I saw a cart coming on ahead, and I was afraid Jo would shy to one side and tip the buggy over in the ditch. Then I saw Miriam stand up as if she would jump, and she did jump, but just at that moment the driver of the cart sprang out, caught Jo by the bit, and Miriam had hardly touched the ground when he took her in his arms. It was Willie, handsomer than ever in his blue working blouse, and when I reached them, Miriam was just opening her eyes from a faint and he was supporting her. I thought he showed good sense in not leaving her on the ground in that elegant dress.

When she had recovered, I saw that she was still afraid; so Willie said he would take her in his cart, and I drove off with Jo all right, and I said to him as I slid the harness from his high back: "Poor old Jo! you are not a prize horse, but you've given me quite a lift in my match-making scheme."

Willie came over that evening to see how Miss Grey was, and a few evenings after he came again, and while I was washing the supper dishes and making the hash and grinding the coffee for breakfast, Miriam found out that Willie's fine tenor blended well with her voice, and after that we had a feast of music; and I held my breath with joy when she told him to come over often, and she would send for some new music.

Miriam told me after he went away, and while I was resting on the lounge by the fire, that if she could help any one in music she considered her time well spent. She sat before the fire on a footstool, her soft gray draperies falling about her, her head resting on the cushioned arm of a chair, with her face thrown into the strong firelight, and I fancied I saw a new light on her face, a happy, sweet light, but toned down gently as if it dare not show itself.

(To be Continued.)

A solid chunk of wisdom was done up in a neat package by the Presbyterian delegate who said the other day that an ounce of taffy is worth a ton of epigraphy.—N. Y. Tribune.

A Forty-Niner's Yarns.

[Written for the Rural Press by Mrs. J. HILTON.]

As usual during the summer months, we have a number of men working for us. This year among the number is a little bit of an old man who is spryer than any of the young ones we have, and who always keeps us laughing by his droll ways and speeches. His has been an eventful life. He came to California in '49, and a life during the years of the gold excitement could not be tame.

He tells how he went to W—, of the life he led there as chore-boy, miner, Indian fighter and so on. I cannot reproduce his way of telling some of the incidents, as he points his stories by gestures, making them so telling, but will give you the words as nearly as I can.

In speaking of the temper of some men he knew, he tells of how, when he was chore-boy, the cook asked him to take a note for him to a young lady living a short distance off. He says: "Of course I went and took the note to the lady, and after she had read it I told her I was to get an answer to take to the cook. 'You tell Mr. Cook I do not live very far from him, and that he has a tongue, and if he wants answers to any business he has with me, he must come and tell it to me. I do not write to young men.'"

"So I goes back to the shanty and gives him her words. As it happened, there was a hen eating out of a swill-pail just inside the door, and when I gave cook the girl's answer he was so mad he grabs up the hen with both hands and pulled her right in two pieces and jabbed her down into the pail. I knew if I laughed at him he might try to serve me the same way, so I rushed out and had my laugh all by myself. When I told the young lady how he received her message, she looked as though she was glad she had not had anything to do with him."

"While we were at that place, a cry of 'Indians!' went up one morning, and we all made a break for our lives, for the Indians were on the warpath. One man would not go; he did not believe they would hurt him. I had a long shotgun and it was loaded with buck-shot. As I ran carrying my gun, I looked back to see how near the Indians were, and one was so close he shot an arrow so that it went into my breast. That made me mad, and I raised up my gun and gave him the contents of one of the barrels. He bounded into the air and dropped dead. I pulled the arrow out as I ran. It had struck a bone and did not kill me as that Indian meant it to; but I shall carry the scar to my grave. One of the men was so excited that as we were running across a shallow river he threw his gun into it and rushed along without it. As the Indians could not catch us, they went to the camp and killed the man that trusted to their kindly feelings. From all appearances he had been horribly treated before being killed. We raised a band of miners and returned to the place next day, and we did not leave many of the wretches to torture white folks, you bet."

THE LATEST AGRICULTURAL NEWS.—Jack (excitedly)—Mamma, you know that lemon-pit I planted last year that came up a pea-vine? Well, it's got string beans on it!—Life.

THIS MOT is attributed to Mr. Blaine: A friend met him and said, "How is your health, Mr. Blaine?" The Premier paused for a moment, rubbed his hand across his brow, and said, musingly, "Let me see, what newspaper did I read last?"

REV. DR. PRIM—Do you preach extempore, Brother Yallerby, or do you take notes? Brother Yallerby (from the South)—Well, sah, thar was once a time I took notes, but I've found it safest, down in my deestrick, to insist on habing the cash down.—Texas Siftings.

IN the parade the other day was a kilted Highlander. He made us wonder how they strike matches in that country.—Kansas City Sun.

A NEW YORK MURDERER, the first to be sentenced under the new law, says that he "would rather be hanged 40,000 times than to be executed by electricity." Perhaps so. After the first hanging he would become so hardened to it that he wouldn't dread the other 39,999 times.—Norristown Herald.

"THE trees are fast putting forth their garb- age," remarks a Canadian paper in casual recognition of the first signs of spring up there.

THE tower of Babel proved a failure because M. Eiffel was not there to build it. The Paris tower seems to have another attribute of Babel, for Rev. J. M. Buckley reports that 28 languages and dialects were heard recently at the base.—Christian Register.

AN UNNECESSARY ADMONITION.—A placard containing the following warning is posted conspicuously on the remains of the old barge at the foot of K street: "No Swimming Allowed on this Hulk." The author of that notice must have had a queer idea of the nature of the average boy. As if any one would care to take a dry swim on the rough deck of the old craft, covered with splinters and projecting nails, while the river flowed invitingly by! He probably was thinking of the Arkansas mother's warning to her charming daughter, who wanted to go out to swim.—Record-Union.

WATER FOR TEA OR COFFEE. *The Secret.*
American says: All tea and coffee drinkers can tell by their taste if the water from which the beverage is made has not boiled or has boiled too much. Either of these conditions will spoil the flavor of the costliest tea or the best coffee berry, but not every one knows the reason or how to avoid the result. The secret is in putting good fresh water into a clean kettle already warm and setting it to boil quickly, and then taking it right off to use in tea, coffee and other drinks before it is spoiled. If the water is allowed to steam and simmer and evaporate till all the good of the water is in the air, and the lime and iron and dregs left in the kettle, you must not expect a well-flavored cup of tea or coffee.

The Week.

The notes of the week are repeating themselves with slight variations. The Eastern telegrams are still charged with details of disaster—not the crowning casualty of Pennsylvania, for that has gone into history, fortunately, with a score of probably not more than 3000 lost lives, which is better than was hoped when estimates were running to four times that amount. The later misfortunes are, happily, smaller, but cover a large area of Eastern country. On June 15th dispatches from New Jersey, Delaware, Maryland, Eastern Pennsylvania, New York State and the New England States, as far east as Maine, indicate extensive damage to property and some loss of life by storms accompanied by lightning. Two days later, storms, cloudbursts and dambursts covered the area of Kansas, submerging towns, washing away railways and destroying human life. Crops have suffered not only in Kansas, but widely throughout the West, and the records of evil far exceed those of recent years.

In contrast to these again is the quiet of the elements on the Pacific Slope. The weather is all that could be desired for the ripening of field, orchard and vineyard crops, and the people are fully engaged in their several industries with nothing to molest or affright them. It is

true that there have been local losses by rust, and in many sections some fruits are light, and where fruit is abundant there is question as to the profit in its handling, because of low market rates and uncertain prospects; but these are minor evils compared with the disasters and misfortunes from which we are happily free. It must be a sad or deeply-afflicted being who cannot find occasion for thanks in California.

The Arid Lands Inquiry.

Evidently thorough and comprehensive work is contemplated by the Senate Special Committee on Irrigation and the Reclamation of Arid Lands, which will start westward from St. Paul on Aug. 1st. We have already noted the fact that timely attention is being paid to this matter by our State Board of Trade and other local organizations, but it is apparent that much valuable individual work may be done by those who have the facts and the inclination to bring them forward, and the committee desires the fullest recital of California experience and the results of enterprise.

The secretaries of the several State societies have just received a circular letter from the secretary of the Arid Lands Committee in Washington, which makes some pertinent suggestions as to what the committee especially desires to know, and as these points will be a guide to all who contemplate statements on the subject, we give them at length as follows:

(a) The extent of arid area in your section; that is, of land which for cultivation requires the artificial application of water to the same.

(b) The average precipitation, rainfall, etc.; the sources of water supply, and the means which, in the judgment of practical men, can be applied for its utilization by storage and distribution.

(c) The present extent of irrigation, if any; number of canals, reservoirs, weirs, dams, head-gates, etc.; their extent, length, cost, etc., and the area served; the duty of water per acre, and the measures thereof; the manner of holding water properly and of regulating its distribution; the rental or cost of water and all other related facts.

(d) The crops grown "under water," or without irrigation. Relations of pastoral and tree life to these questions, and in general any data that bear upon the subject.

The committee hopes to receive active co-operation, and also desires to again impress the importance of this great question. The address of the chairman, until the 20th of July next, will be: Hon. Wm. M. Stewart, U. S. S., Carson, Nev.

Another pertinent suggestion which is made on the part of the committee is that horticultural societies and associations consider at once, and as thoroughly as possible, the questions involved in the irrigation and arid land problems concerning their own districts, so that they may be able, through their intelligent representatives, to give the committee the benefits of their experience, knowledge and conclusions. Also, that a special effort be at once made to gather the facts and data in each neighborhood which bear upon the problems named, and that these be at once forwarded to the Senate Committee on Irrigation (care U. S. Geological Survey), Washington, D. C.

So far as the California State societies are concerned, they have already acted energetically in the matter, and will probably continue. We have received an interesting communication from Mr. Lelong of the State Board of Horticulture in which he calls attention to the proceedings of the recent convention in National City upon this subject, in the adoption of the following resolution:

WHEREAS, In the great State of California there are great areas of fertile lands, which are now more or less parched and arid, because of the uncertain and insufficient rainfall, and lack of moisture during a large part of the year, but which, with sufficient irrigation facilities, would produce abundant forage crops, and be especially suited to the production of the valuable fruits of the semi-tropics; and

Whereas, By impounding the surplus waters of the winter or rainy season in storage reservoirs, the water which now goes to waste may be utilized during the dry or summer season in producing sure and greatly increased crops; and

Whereas, The construction of such greatly needed works is entirely beyond the unaided efforts of our citizens (although much has been done by them), and the grand results desired can only be accomplished by aid of the General Government; and

Whereas, Following the example of older nations, Congress has undertaken the beneficent work of assisting in the building of irrigation works where needed; and

Whereas, The "Senate Committee on Irrigation" meets at St. Paul in August next to consider this important subject; therefore be it

Resolved, That a committee be appointed by the chair to meet the aforesaid Senate Committee and to present to them, by a manifest and forcible appeal, the pressing need that Government aid be granted our people in securing proper irrigation facilities for

those important sections of our State which contain large sections of arable but arid lands.

In pursuance of the above resolution, Mr. Frank H. Cunningham was appointed chairman of said committee. Communications may be addressed to him at Oceanside, San Diego Co., Cal.

All horticultural societies, commissions, and associations are especially urged to assist actively in the preparation of data. Mr. Cunningham has already presented a statement on the subject, which we will give at another time, and we have no doubt he would like as much more information as possible to present to the committee at some of the sittings in this State.

We are prone to claim in this State that Eastern people do not appreciate our Western conditions and needs, because they do not know the facts. The inquiry by this committee will give us the best possible opportunity to place all these things on official record, and it should be the pleasure of every one to do his share and duty in the matter.

Railway Rates Here and Elsewhere.

When California producers reflect how large a share of the gross receipts for their produce goes into the coffers of the railway companies, they are naturally led to wonder whether producers in other parts of the country have similar experience. Occasionally the claim is made that local charges are altogether too high and that the profits of the transportation companies are too large, and though such a general impression prevails, we are not aware that comprehensive data is offered to support the assertions. It is a very important matter, and it is desirable to have definite and authoritative statements that one may think clearly and speak intelligently. Fortunately, a document filed with the California State Board of Railway Commissioners during the present week contains many carefully prepared statements, which it is for the public interest to have generally understood, because they throw clear light upon a subject which is too little comprehended. R. G. Sneath of Jersey Farm, San Bruno, 14 miles south of San Francisco, makes an issue against the Southern Pacific Company that he is charged exorbitant rates for hay and grain from San Francisco and other points to his station, and fortifies his argument with many allusions to the general policy and charges of this corporation as compared with railway service generally in the United States. We have not space at this time to present a full outline of his argument, but its import so far as discrimination against his station is concerned cannot be perhaps more pointedly described than by the statement that he shows that while under an existing law (§ 489, Deering Civil Code, California Statutes) the charge from San Francisco to San Bruno should be \$4.50 per car, he is charged \$10 per car. This uncomfortable fact has set Mr. Sneath to investigating the subject of railway charges in this State as compared with those of some other States and of the country at large, and it is to the result of this investigation as laid before the Railway Commission that we wish especially to refer at this time.

Mr. Sneath shows that the charge of \$1 per ton in carload lots from S. F. to San Bruno, a distance of 14 miles, is at the rate of 7.14 cents per ton per mile; that the average rate for 100 miles south of San Francisco on the Southern Pacific is 2.58 cents per mile on hay and 2.94 cents on grain, and on general merchandise, in less than carload lots, is from 2.72 cents to 15 cents per ton per mile, according to the schedule of rates issued by the company. Compare with these figures the average rates elsewhere for similar service. According to Poor's Manual, an accepted authority, the average rate for the whole United States for all classes of merchandise and freight was only 1.063 cents per ton per mile for the year 1887. Compared with the average ton-per-mile rates in the following specified States, the overcharge in California becomes more glaringly apparent, viz.:

State or Territory.	Average ton rate per mile.
Vermont.....	.99
New York.....	.85
Pennsylvania.....	.88
Maryland.....	.59
Ohio.....	.65
Indiana.....	.70
Virginia.....	.80
New Mexico.....	.84

The average of the foregoing State averages is

less than four-fifths of a cent (.007966), while the lowest ton rate per mile of the Southern Pacific for 100 miles south of San Francisco is over 2½ cents. How the lowest Eastern rate would compare with the lowest Californian we are not told, but the fact that the lowest Californian is more than three times as great as the average in the States named is perhaps striking enough to occasion considerable thinking on the part of those who have to pay local charges.

But whenever the claim of high California rates is made, the friends of the corporation always set up counter-claim that railway conduct is more expensive in California, etc. How true is such a claim may be learned from Mr. Sneath's statement as follows: "The coast division of the Southern Pacific runs through a succession of rich, populous and productive valleys and numerous prosperous towns and cities, and that by reason of nearly a level grade, the cost and operation of such a road should be far less than the average road of the Eastern States, and which, together with the extremely favorable climatic conditions, should enable the company to afford transportation on equally favorable terms."

These remarks would apply to many other of the numerous divisions of the Southern Pacific Company's railways. The vast crops of hay and grain and fruits are rolled along the valley floors on a very even grade and over roads which must have been constructed very cheaply. Of course, the mountain divisions are not open to such characterization, but that is no reason why the valley producer should not get service over level roads to tidewater, or to and from the metropolis over such roads at a minimum rate.

Another serious charge which Mr. Sneath brings against the company, and which nearly all producers and shippers have also experienced to their financial sorrow, is the deficient equipment of the road in the commonest facilities for moving produce at times when there is greatest desire to reach the market and realize upon products. On this point the document "avers that from lack of rolling-stock and needful facilities, producers generally meet with large and irreparable losses by not being able to sell and deliver their products when the markets were favorable to them, or when they were in pressing need financially."

Such are a few of the charges now filed with the Railway Commissioners. They are worthy the consideration of all who desire the comfort and prosperity of our producing classes, and it would seem that no persons should be quicker to seriously consider them than the managers of the railway themselves, for their future business must largely depend upon the prosperity of their patrons. They are manifesting much enterprise in inducing immigration to California. They can in no way contribute more directly toward that desirable end than by ministering to the prosperity of those now endeavoring to gain a livelihood from products in the transportation of which they have practically no competitors.

A Silk Factory to be Started.

Some years ago about \$100,000 was expended upon the buildings and machinery of the Union Pacific Silk Factory, a few miles out of this city, on the San Bruno road, but the enterprise was not successful and the plant has long been standing idle.

It is now stated that the Japanese M. E. Mission, backed by Eastern capital, has bought the entire outfit for \$23,000, and will soon put the factory in operation. All the work is to be done by Japanese students, working in two shifts and spending half their time in the factory and half in school; the object being not so much to make money by the weaving of silk as to establish the mission on a self-supporting basis, and to teach the young men a valuable trade. Experienced men have been engaged as instructors in the work.

It is stated that the boys will be given their board and about \$3 a week at first, to be increased as they grow expert. About 150 of them will be employed, preference being given to those who are preparing for some mission in Japan.

The school, which is to be undenominational, will be under the charge of M. H. Nichols, who was for many years a missionary in India.

THE wool crop in the vicinity of Eureka, Nev., will this season amount to 150 tons.

FLORIST AND GARDENER.

An Announcement.

By an arrangement (which will we trust prove advantageous to the patrons of both journals) the *California Florist and Gardener* will henceforth be consolidated with the *Pacific Rural Press*. The *Florist and Gardener* was established by Mr. Emory E. Smith in May, 1888, and has been conducted by him with much devotion and intelligence, and to the evident satisfaction of his patrons. By consolidating with the *Rural Press* Mr. Smith secures a wider field for his efforts, gains for his old friends and patrons more than he could possibly furnish them in the monthly publication, and at the same time, by extending the work of the *Rural Press* in a direction which properly lies within its scope, he will aid us in making our journal broader and fuller in the important matters of gardening and floriculture than it has been hitherto. For these and other reasons we believe the new arrangement will prove of advantage and benefit to all concerned.

To all subscribers of the *Florist and Gardener* the *Rural Press* will be sent during their unexpired terms of subscription, and to those who have been hitherto subscribers to both journals an extension of time will be given on the *Rural* subscription, equivalent to the amount due them, dollar for dollar, from the retiring publication. Unexpired advertising contracts will be fulfilled through the columns of the *Rural*.

We sincerely welcome the circle of the *Florist and Gardener* to the ever-increasing community of *Rural* readers.

We trust to maintain with them the same cordial and friendly relations which have existed hitherto, and expect to put forth increased effort to aid them in their work, and to labor with them for the promotion of California horticulture in the special lines in which they find delight as amateurs or careers as professionals. We invite correspondence, by means of which the most distant can compare notes of gardening experiences and advancement, and thus prove mutually helpful and effective for the general good.

Gardening and Horticulture.

At present there are no more abused or misunderstood words than the two above.

In early history, all fruits, flowers, vegetables, etc., were grown in inclosures known as gardens, and all those to whom their culture was intrusted were called "gardeners." As the science and art of gardening became more extended, keeping pace with the growing enlightenment of the people, it became necessary to have a word of broader and more general meaning for application to things pertaining to gardening, and the word horticulture was introduced.

The time has now arrived, at least in the United States, when these two words have no longer a sufficiently specific meaning, and a great deal of confusion results. The tendency of the age to divide business into distinct branches has been markedly shown in gardening as we now have it. There are fruit-growers, farmers, ranchmen, florists, seedsmen, vegetable-growers, foresters, nurserymen, besides amateur gardeners, jobbing gardeners, public gardeners, landscape gardeners, and several other sorts. These are again subdivided into orchardists, small-fruit men, plants-men, cut-flower men, etc. Nearly all of these modern pursuits have an equal interest in and claim upon the use of the well-worn terms gardener and horticulturist. Still these several branches have become so distinct and so important that general terms are not only no longer applicable, but are sadly misleading. It would be well if we advanced a step and gave each branch a specific and recognized designation.

This tendency to specialists in these lines and others in the United States is much more pronounced than in leading European countries. Americans generally lack either desire or opportunity or both to thoroughly learn a whole trade or profession, and in restless haste to make money quickly follow out only that line of accomplishments which seems to in each case open up the shortest road to a substantial bank account without any regard to a well-rounded education.

It is indeed no longer possible for a man to be practically proficient in all branches of gar-

dening, and it is a public injustice to apply to a man following out only one or two branches a word which implies a fullness of knowledge or skill which is not possessed.

By clearly defining the occupations many ignorant pretenders who in a general way call themselves gardeners or horticulturists would be shown up, and the enlargement of the field would greatly encourage the acquirement of knowledge and skill. If the words horticulture and horticulturist are used at all, they should only be applied in the most general way to all gardening pursuits.

Cacti.

[Written for the *Rural Press* by MRS. M. M. CHILDS of Santa Barbara.]

The mild winter, abundant rains and warm sunshine have brought out a generous lot of cactus blooms, unusually large, and, as always, rich in color.

It pays to keep plants eight or ten years, or more, especially the better class of Phyllocacti, when you can have such lovely, fragrant blos-

SINGLE HIBISUS.

soms for so little care and labor. Nothing in plant life that we gather about us to adorn our homes will bear such neglect in the matter of water, food, and repotting, and then surprise one with such magnificent size and color. Phyllocactus America, Amaranthinus and Fallii give blooms that just cover a dinner-plate, and of the loveliest shades of glowing scarlet, with tints of rainbow hues of purple or violet, while Phyllocactus rosea-grandiflora, Dazzle, and Feastii outvie our lovely Duchess de Brabant roses in shades of rich rose color. When ama-

INDIAN BASKET MAKERS.

teurs shall have run through the various specialties one by one, they will settle down to a varied collection of the best of each species of plants to be obtained, and then add to each specialty as novelties make their appearance. Then we will have reached the perfection of gardening, when our roses shall not be neglected for the chrysanthemums nor our cacti, aloes, agaves, yuccas and palms for the dainty gracefulness of the ferns.

The Basket-Makers.

The accompanying engraving is a reproduction of a view of an Indian village on the borders of Mexico adjacent to San Diego county. The landscape and flora are distinctly characteristic of the country. The hut with its tiled roof is similar to many of those found in the district. The group of natives in the foreground are among the few remaining of their race, who have retained the art of making the peculiar baskets for the production of which they were once famous. The baskets are woven from a species of grass, made pliable by preparation. They resemble, when complete, the rounded crown of a hat and are water-tight, being used extensively for culinary purposes.

California Lilies.

[Written for the *Rural Press* by CARL PURDY, Ukiah, Cal.]

In all bulbs of the lily family California is rich. Of the true lilies there are eight species. The *Fritillarias* are also represented by eight species. The *Mariposa* and *Star tulips* are known botanically as *Calochortus*.

The Pacific Coast has over 25 species of *Calochortus*, and of these, the most beautiful and varied in color of our wild flowers, California monopolizes three-fourths. Close to the *Mariposas* in beauty, the *Brodiaeas* number over 15 species, in many striking forms. The *Fire-Cracker* is styled a *Brodiaea* or *Brevortia*, as botanists fancy, and is equally striking under either name. Three *Erythroniums* represent that beautiful genus, the *Dog-tooth violet* of other regions. The *Soap-root*, *Chlorogalum*, is too common to attract attention here, but the foreigner who, after great pains, brings one to blossom, can better appreciate the delicate beauty of its white, wax-like flowers.

History immortalizes the *Camassia* as the

commended them to the European florist, but it took long to learn how to grow them and why ripened bulbs were hard to obtain and costly. Still they grow in favor, and it is safe to say that our lilies, brodiaeas and calochortus are better known in England than they are here in their native home. It is not true that Californians should begin to encourage our native bulbs and give them the place in the flower-garden that their beauty deserves? A bed of calochortus or brodiaeas, a clump of lilies, or a well-grown bunch of trilliums, will vie in loveliness with the queens of the garden. In concluding this article I would call attention to the fact that our liliaceous bulbs are fast disappearing. In the valleys farming, and on the mountains sheep-raising, are fast killing them. For awhile they lingered along the fences and in neglected corners, but the barley grass, dog fennel, and other weeds, drove them out. It will not be many years before they will be rare where they formerly flourished by thousands, carpeting the earth.

Ukiah, Cal.

[Written for the *Rural Press* by FRANKS B. SAUNDERS.]

As a shrub for lawn planting, nothing that I have seen surpasses the hibiscus in beauty of flower and foliage, or shapeliness of form. It is a constant bloomer, and is one of the things that will survive much ill treatment, though no plant can be neglected with impunity. Being of symmetrical form, it requires little training, unless it be to prevent its branching too low down.

The foliage is very attractive, the leaves having a particularly fine gloss from which the dust is easily removed by the wind, a feature of no small merit in this country.

But its chief attraction is in its flowers, which are borne in profusion and are remarkably large and brilliant, and are thrust well out upon single stems. I have one of the sub-vioaceous variety, which has created a good deal of flattering comment among my friends, and indeed, many strangers have stopped to inquire its name. It was planted in May, 1888, and being a small mailing size, I had faint hopes of its success, as the season was so far advanced when it came. But how it did thrive! And almost at once it began to bloom and continued blooming until Christmas.

It requires good drainage and sufficient but not too much water. Soap-suds may be used freely as a fertilizer, ammonia added to the suds to the amount of a tablespoonful to a gallon of water. The soil should be well worked, and never allowed to bake. In this climate the hibiscus will grow to a height of three or four feet the first season, with wood well matured. Frost nips the buds and tender leaves but does not kill the shrub.

Redlands, Cal.

Canary Seed.

[Written for the *Rural Press* by HON. I. A. WILSON, Santa Clara.]

For the information of your Santa Clara county correspondent, I will state the following circumstance:

Stephen Abbot, my father-in-law, who resided in Fruitvale, Alameda county, and who gave name to that valley, there raised this seed by the quantity as early as 1856, and for several years thereafter. He sold the seed at the rate of 10 cents per pound, by the quantity, and realized as much as \$1000 a year from such sales. It was no more difficult to grow than a crop of wheat. The only difficulty was in thrashing out the crop. This was done with the flail to avoid bruising and breaking the seed, as was the case when he tried thrashing with the machine.

Wild canary seed grows in the fields in this county and in some other regions. The seed is smaller, but the seed-stalk on head has with this exception the same appearance as the cultivated kind.

No doubt other means for thrashing might be resorted to, making the crop a more profitable one. While the price was much higher than at present, the seed was superior to that usually sold in the market, and therefore more valuable.

It would be advisable to fit the ground well; to plow deep in land free from weeds, making it fine and in a condition to hold moisture. Sow seed broadcast or in drills, as with other grain, and harvest in same manner.

The beauty of our liliaceous bulbs soon re-

AGRICULTURAL NOTES.

CALIFORNIA.

Amador.

THE LAST FAIR IN IONE.—*Ione Echo*, June 15: The directors of the 18th District Agricultural Association of Amador and Sacramento counties met in Ione, Saturday, present, Directors Gregory, Frates, Peek, Borden, McFarland and Treasurer Woodley and Sully La Grave. It was unanimously decided to set the fair for Aug. 1st, 7th, 8th and 9th. This is the same week as last year, and, everything considered, is undoubtedly the best that could be selected. This season is a forward one, and there will certainly be a better display of fruits and other products than last year, and then the showing was a grand one. The board accepted the report of the Pavilion Committee and closed the bargain with A. J. Amick for the purchase of the Bloomington warehouse property. Price, \$2700. This property, with a few hundred dollars spent in alterations, can be made a fine pavilion. The speed program was considered at length. The list of races as agreed upon will bring many of the best horses in the State here. The purses are all liberal, and the different races of the most popular kind. The board resolved to permit no unlawful gambling games on the fair grounds. The premium list was revised and numerous increases made. The citizens of Sacramento county give assurance of taking an active interest in the fair, and many exhibits and a large attendance may be expected from there.

Contra Costa.

THE USEFUL LADYBUG.—*Antioch Ledger*, June 15: N. W. Smith informs us that from apple trees last year infested with codlin moth he is this summer gathering a fine crop of sound fruit. He attributes the freedom from the worm to the presence of a species of ladybug, described as having peculiar markings. Where Mr. Smith's fine orchard was beginning to be invaded by aphids this busy insect has done good work also.

Fresno.

TWENTY-FIRST DISTRICT FAIR.—*Fresno Republican*, June 14: The Third Annual District Fair will be opened October 1st, concluding on the evening of the 5th. The racing purses will aggregate \$10,000, and the display of canned and dried fruit is expected to be much better than that of last year.

NEW WHEAT.—*Fresno Expositor*: On Thursday, June 6th, Willett Gates delivered to the Fresno Milling Co. in this city, 120 sacks of new wheat, being the first installment of a purchase by the milling company of his entire crop of between 7000 and 8000 sacks. As an instance of push and go-aheadativeness, it may be said that this wheat was headed, thrashed, sacked, delivered and ground into flour, all in the same day. Last year the first wheat delivered in this city was on June 21st, showing that the harvest this year is some two weeks earlier.

THE FRESNO MILLING CO. last year handled no less than 130,000 sacks of wheat exclusive of all other grain, and this year it will handle at least 200,000 sacks. From one man alone the Milling Co. purchases from 60,000 to 80,000 sacks of wheat.

Inyo.

FAIR DIRECTORS' MEETING.—*Independent*, June 15: The directors of the 18th Agricultural District met at Independence last Saturday. A. W. Eibeshutz presented his credentials as successor to W. Walker, who failed to qualify. F. McIver also presented his credentials, both being accepted and admitted as members of the Board of Directors. Committee on Premiums presented a list which was approved. A committee, consisting of Directors Eibeshutz, Robinson, Shepherd, McIver and Miller, was appointed to prepare the racetrack for the coming fair. In order not to conflict with the State Fair of Nevada, the time for holding the fair of the 18th district was changed from the dates named at a previous meeting; the fair will be held Sept. 24-27. The secretary presented a report of the financial transactions of the association for the past year, which was accepted, approved and ordered on file. The total receipts of the association for the year were \$2939.50. The secretary produced receipts from the treasurer and from the bank of D. O. Mills at Sacramento, for the total amount of \$2945.15, leaving a balance in his favor of \$5.65, this amount having been advanced by him to help pay a certain warrant. The total liabilities of the association up to date were shown to be \$3182.09. The assets are the pavilion and grounds and racetrack at Independence. A meeting of directors was ordered to be held at Independence on Saturday, June 29th.

Los Angeles.

THE LAST OF THE ORANGES.—*Pasadena*, June 14: The last carload of oranges for the season was shipped yesterday. The total shipments have been 150 cars, 45,700 boxes. The value of the total orange fruitage for the season is about \$80,000 net.

APRICOTS ABUNDANT.—*Pomona Cor. Chronicle*, June 16: The apricot crop of Pomona valley is nearly ripe. The Pomona Horticultural Association has found by a personal inspection of the orchards that the total crop of the valley will amount to 475 tons. This is 15 per cent larger than was ever raised in the valley before.

fore. A heavy crop of apricots is reported everywhere in this vicinity, and scores of farmers report that the limbs are breaking away from the trees because of the heavy weight of fruit upon them. A larger part of the deciduous fruits here this year will be dried.

Placer.

A BIG CHERRY TREE.—*Newcastle News*, June 12: The Hector cherry tree is 83 inches in circumference 6 feet above the ground, and is over 60 feet high. When fruited, the branches have a spread of 65 feet, and without fruit they have a spread of 54 feet. Last year there were sold from the tree 300 10-pound boxes of cherries, which averaged \$2 per box, thus realizing to the owner \$600 from the crop of the tree.

San Bernardino.

SUGAR BEETS.—*Chino Champion*, June 14: Tests of sugar beets made yesterday were satisfactory, 14 samples from various parts of the ranch giving an average of over 14 per cent sugar, several reaching as high as 17 and 17½. From ten plantings from February 21st to 28th, miles apart and in the various grades of soil, yesterday's tests gave an average of over 14 per cent of sugar; and 14 samples from plantings from February 21st to about April 10th, of all sizes, gave an average of over 14 separately, and also from combined quantities of the juice. These separate and combined tests practically prove the high quality of Chino-grown sugar beets.

BEES AT BANNING.—*Herald*: There is no better place for bees in Southern California than the neighborhood of Banning. In a fair average year one stand of bees will store 100 pounds of comb honey or 200 pounds of clear honey. The bee season opens here in March. The willows are then in blossom. After the willows comes the Yerba Santa; then follow manzanita, buckthorn, green sage, mountain clover or wild alfalfa, white sage and wild buckwheat. The white sage makes the best honey of any flower named. The first honey is taken about the middle of May, and the last at the end of August. This is a late season and no honey has yet been taken. The swarming-time is in May. There is no trouble experienced in saving swarms, the old-kettle-beating and showering we used to have recourse to in the East to bring down a swarm of bees being unnecessary here. In this county bees need attention steadily from March till September. One man can handle 100 stands if the product is extract honey; 200 if the product is comb honey.

San Diego.

HONEY.—Mr. Cowden of J. B. Cowden & Co. lately informed the *Sun* that the county honey crop was very abundant this year, as numerous rains had provided great quantities of "bee material," especially of the white sage and wild buckwheat. San Diego county honey, he said, was famous for its superior qualities, and last year they sent it as far east as Salt Lake, and as far north as Juneau City, Alaska. An agent will be kept on the road throughout the season. He arranges with the stores in the various honey-producing neighborhoods to act for him, and in this way the product is received as soon as it is offered. On the north the honey centers are Oceanside, from which a large quantity of extracted honey was received; Escondido, Fallbrook, Murrieta and Temecula. On the south the largest supplies come from Dehesa, Dalzura, Campo and Jamul. The honey is all graded by the firm before it is shipped. When comb honey begins to come in they expect to send a good portion of it to the East. Last year the firm shipped out 4½ carloads.

San Joaquin.

JOINT WORMS.—*Stockton Independent*, June 12: Gen. Kethum yesterday brought into town samples of his wheat which has been seriously damaged by the joint worm. He estimates that about one-third of the average yield of one of his fields has been lost off this year by the worm. A farmer living near the Calaveras river says the joint worm has been destructive in his section for three or four years. He says the only way to clear a field is to change the crop or burn all the straw and stubble.

FIRES ON ROBERTS ISLAND.—*Stockton*, June 15: Big grain fires have been reported on Roberts island, but the fact is the losses do not amount to more than \$3000 and all the fires are out. One field of 150 acres of barley and another of 70 acres of wheat have been burned, but there were no further fires up to midnight. June 17: Peat fires broke out again yesterday on Roberts island, and 1750 acres of grain were burned, all of which was insured for from \$11 to \$15 per acre. It is thought tonight that the fires will not spread, men being employed to watch all sides. The great danger is in the high winds, which take up pieces of burning peat and carry it into the grain. There are about 12,000 acres in grain on the division of the island where the fire raged yesterday and to-day, and the farmers are very anxious. The fire which broke out had been in the past ever since last year's straw was burned.

Santa Barbara.

SANTA MARIA FAIR.—*Times*, June 8: The dates for holding the annual fair in Santa Maria have been fixed by the Directors of Santa Maria Valley Agricultural and Stock Association for Sept. 18th to 21st. Further information will be given from time to time.

AN UNWELCOME RARITY.—The forked lightning so common in the East reached our valley on Tuesday evening last about 5 o'clock, striking

and burning a stack of hay belonging to John McGuire, on the Dargie ranch, about 2½ miles from town. There was about 45 tons went into ashes. Fortunately the rain quickly followed, which prevented the fire from spreading.

Santa Clara.

THE COMING FAIR.—*San Jose Mercury*, June 16: The Agricultural Society met yesterday afternoon for the purpose of arranging a speed program for the fall fair. When President Topham called the meeting to order, Directors Boyd, Boots, Eas, Sargent, Quinn, Murphy and Secretary Bragg were present. Topham, Boyd and Murphy were appointed to prepare a premium list for the coming fair, with instructions to report at the next meeting. The committee was authorized to increase the premiums to the extent of \$1000 over those of last year if they thought it advisable. G. B. Polhemus, having offered to give a special premium of \$30 for milk cows, was requested to arrange for giving the premium in to the committee just appointed in time for them to report at the next meeting. The secretary was instructed to order the posters for the fair from the Stowbridge Lithographing Co. of Cincinnati. Pool-selling privileges were awarded to J. N. Killip for 65 per cent of the gross receipts, on a guarantee that these should amount to not less than \$1513.

Shasta.

FLOURISHING PEACH TREES.—*Anderson Enterprise*, June 6: The six acres of peach trees that John Hawes set out on his place a mile east of town, one year ago last February, make the best average showing in size and symmetry of any peach orchard of equal territory that we ever saw. The trees are all well shaped and nearly of equal size, standing six or seven feet high, the foliage dense, leaves large. They show perfect health. H. K. Pettygrove talks about three peach trees that he set out last February. They were taken from nursery stock here and were not out of the ground more than 20 minutes in transplanting. When transplanted, they were cut down to mere stocks, leaving but a few limbs. A measurement of the wood-growth in the main branches before the 1st of June, showed 110 feet of limbs (not counting any of the smaller branches, from a foot to two feet long, of which there are a great many), and the trees reach an altitude of more than eight feet from the ground. Trees beside them, received from the nursery below, show splendid health and a magnificent growth, but do not begin to compare with the trees taken from the ground here. This shows that they do much better by being planted as soon after unearthing as possible.

Sonoma.

RASPBERRIES.—*Petaluma Argus*, June 15: D. Hakes of Valley Ford brought in his first load of raspberries on Tuesday. His crop is very good this year, and he has increased his patch to 17 acres. The bushes he put out last year are now full of fruit. Mr. Hakes has 20 girls engaged in picking, and will soon have 25, which number he thinks can pick as fast as the fruit ripens. He will not have any except white help, and takes all girls when he can get them. There are so few engaged in the culture of raspberries that he finds no difficulty in disposing of his fruit at paying prices.

Sutter.

CANNING 'COTS.—*Yuba City Farmer*, June 14: The cannery here is now running with a large force of help and making a good daily average. The work is entirely on apricots, and the fruit mostly first class. During the last week the apricot crop has been ripening rapidly, and the numerous orchards will keep the cannery running in full blast for about 20 days, when the peach crop will take precedence. New machinery and more accommodations have been added to the various departments, which add greatly to the working facilities.

Tehama.

SHIPPING WOOL.—*Red Bluff Sentinel*: Cone & Kimball Co. has just finished grading and baling for S. Koshland & Co. about 500 square bales of wool, selected from the choice clips of this county, and have started by special train 11 cars which go by the C. P. and U. P. direct to Boston on fast time, so that our wool sheared in this county in May will be on the Boston market by the 15th of June. This is enterprise and dispatch.

COUNTY FAIR ASSOCIATION.—*Red Bluff Sentinel*, June 15: Articles of incorporation were filed in the Secretary of State office at Sacramento Tuesday for the Tehama County Agricultural Association. There is no capital stock. The directors of the association are G. G. Kimball, C. B. Aeburst, Isaac Rambo, W. W. Bates, B. W. Bidwell, E. C. Fortier, J. S. Cone, B. A. Bell, H. B. Shackelford, Geo. W. Vestal, G. C. McCoy, James H. Goodman. This association was formed about a year ago, at the time the organization of the county fair was being agitated. Articles were also filed in the County Recorder's office. The purposes of the association as set forth are to conduct and maintain an annual fair and to encourage agriculture, horticulture, stock-raising and manufacturing. The corporation is to exist 50 years.

Tulare.

FIRST WATERMELON.—*Delta*, June 13: B. C. Anderson, who owns a well-cultivated fruit ranch near Visalia, ate his first ripe watermelon this season on June 5th. This is about two months earlier than our Eastern friends can enjoy them.

HOG CHOLERA seems to be prevailing in all

parts of the county. John Frans has lost over 25 hogs. Geo. W. Francis gives the following remedy which he has found to be a sure cure for his own hogs: Throw one can of concentrated lye into water enough to soak a bag of barley in. See that the lye is dissolved, and let the barley soak over night. Then feed the soaked barley to the hogs.

SALTING ALFALFA AND STRAW SANDWICH.—*Visalia Times*: W. H. Dodds of Mussel Slough strongly recommends the practice of salting alfalfa when stored away for feed. He says the salt keeps the alfalfa tender and appetizing, and prevents it from sending forth the dust usually encountered in it when not salted—at least, he ascribes to salt the latter virtue. In putting the feed away he first forks down a layer of it and then salts it, pursuing this manner until the barn is full or the stack completed. This season Mr. Dodds will put by his straw with his alfalfa—a layer of straw and then a layer of alfalfa, and salting each layer. It is his observation that stock eat the feed closer when it has been salted.

FOR AN IRRIGATION DISTRICT.—*Tulare Register*, June 14: A petition asking for the formation of an irrigation district embracing Tulare City and between 60,000 and 70,000 acres of surrounding territory will be presented to the supervisors at their regular session on the 1st of July. The petition is signed by 133 as solid citizens as there are in the country and men who represent nearly half the land in the proposed district. Doubtless many more names, representing many thousands of acres more, could have been obtained could the parties have been seen; but some are absent and some who are known to favor the movement have not fallen in the way of circulators of the petition. Indeed, no project of public importance has ever been started that meets with such general and hearty approval. There is an abundance of water available from the Kaweah river to irrigate all this territory if it is properly utilized.

Ventura.

EDITORS PRESS:—The season for honey is advancing, and although the hives are pretty well filled it requires a fight to take it out, the bees are so cross these days following foggy nights. The indications are that the crop will not be more than half as large as last year, though the quality of the honey is very fine. As to fruit—apples will yield but about half a crop; pears are doing finely. The summer is cool.—S., *Fillmore*, June 10th.

SHORT BITS.—*Ventura Vidette*, June 15: More beans were planted this year south of the river than ever before. They are usually small white or navy beans, and are looking well. Supervisor Dudley reports crops in his section looking much better than ever, especially beans. Peter Rice informs us that his fruit trees, as well as others on the Las Posas, are full of fruit. It is thought that the yield in late-sown barley on the south side of the river will not be up to the usual standard, owing to a small fly that attacked it in the early stages. Peanuts from the ranch of H. K. Snow, New Jerusalem, are on sale in the grocery stores. They are as fine as grow anywhere.

NEVADA.

IN CHURCHILL COUNTY.—*A Gazette* representative recently paid a visit to Churchill county and Mason valley. The river is running nearly bank full, and the luxuriant fields of alfalfa that line its banks from Ragtown to the sink are nearly ready for the sickle, and every rancher is using his best shovel in an earnest endeavor to make the entire Carson river run through his own particular ditch. The first crop of alfalfa will be above an average, and a few weeks more of the present flow of water will make the second at least a fair one. The annual spring rodeo, just closed, shows the cattle on the ranges thin in flesh, with rather more than the usual percentage of winter loss, and far less than the usual percentage of spring calves.

ARIZONA.

CATTLE SHIPMENTS.—*Wilcox Stockman*: Geo. W. Stratton, Supt. of the San Simon Cattle Co., was in Wilcox the other day and stated that his company have shipped about 7000 head of cattle, nearly all steers, out of the Territory during the past two months. Of this number about 4000 head went to Montana. They had gathered together, at one time, in one herd, 5000 steers, which, we venture to assert, was the largest steer herd ever rounded up in the Territory by one firm. Grass in the San Simon was never better at this season of the year, and stock are all in good condition.

VERDE VALLEY ITEMS.—*Cor. Hoof & Horn*: The Verde river roundup ended May 24th, at Beaver Creek, after a long and tiresome siege, during which time the boys handled many thousand head of stock, under the supervision of Dolph Willard and Johnnie Bee, as captains of the river division, and Mitchell Borch, captain of Beaver Creek division. The boys will rest up a few days and then resume work on the Mogollon mountains. The farmers of this section are preparing to harvest their barley and alfalfa. Both crops are good. The stockmen never were in better spirits than now; spring feed is good, the calf crop is first-class, and all beef steers are already fat and sleek; all they lack is a market, and if something would burst Armour & Co., they would be supremely happy.

The Lakes of the San Joaquin Valley.

(Continued from page 559.)

gested. The fishermen say that all these perch when caught have fish in their mouths, in proof of which he pulled out one at random with a dip net, and showed the perch with a shiner's tail still out of the mouth.

"The fishermen state that no catfish are now caught, while two and three years ago they would get a wagon-load at each haul; also, that trout are now seldom caught, although they used to be very abundant. The men expressed no opinion as to the cause of the death of the fish, but stated that the catfish especially were drifted upon the shore, dead, by thousands.

"Catfish, however, are found by millions at present in the creeks and sloughs that run into the lake. A gentleman who lives on his farm fully ten miles from the lake, and who fishes in a small way for his own table, is of opinion that the destruction of the catfish and carp is caused by their being driven on the shallows by the wind, and left in shallow pools which, when the water recedes, soon become so hot that the fish die. I questioned him very particularly about this; and as he is very intelligent and his father was a fisherman whom he frequently assisted in his work, his views are entitled to weight. He has a boat and sailed around the lake last summer, and states that the deepest part of the lake, in the channel which runs from south to north in the direction of the old outlet into the San Joaquin river, does not exceed 20 feet; that outside of that channel it is generally not over four feet, gradually shallowing toward the shore. Notwithstanding this shallowness, the action of the wind should mingle the different portions pretty thoroughly and render the alkali about even throughout.

"Before starting on this trip he was told that he would have a good wind throughout his journey, as the wind blew from the center of the lake toward the shore. He states that he found it to be true; that he had the wind 'abeam' all the way.

"The two bottles of water I sent you were taken at various distances from the shore out to the fish-pound. Although the fishery is located off the mouth of Cross creek, as there is no water in that creek for several miles out from the lake, the water of that portion could not have been perceptibly freshened by its influx at this season, although some seepage doubtless occurs. The water of the lake is very muddy and has a nasty taste and smell; very much like that of a well about a mile from shore and 100 feet deep, which was, however, drank by the people at the farmhouse as well as by their stock, and left them all healthy. One of the horses of my team, however, was relaxed in its bowels all the way to Tulare, and the same happened to the driver and to myself.

"All the shore of the lake for miles, as far as I could see, was strewn with mussel or clamshells; the surface of the ground was white with them, and the wheels of the carriage crushed through them as though more than half the substance of the ground was actually made up of shells, as I have no doubt is really the case. They told me that these shells extend here, as thickly as on top, down to the depth of a hundred feet, as shown in the well referred to above. Not a live clam can be found in the lake now.

"I have subsequently been informed that ten years ago there were large numbers of live mussels in Tulare lake and that the hogs used to live on them then; that they would wade out into the lake and plunge their heads under water, get hold of a mussel and hold their noses up in the air and chew them up.

"All the (seven or eight) fisheries are located within four miles of Cross creek mouth; no fishing is now or appears to have been done near the mouth of King's river, 10 miles to northward, for the reason (according to the fishermen) that the water is too shallow.

"For the whole distance of 20 miles from Tulare City the country is of remarkable fertility, almost level, and where put into wheat the growth was strong, even to within two miles of the shore of the lake, where the land had been plowed through solid tule roots. The growth was very compact, strong, and of a beautiful green color, and had stood out abundantly; which, to my mind, showed that the rawness of the soil or the quantity of alkali had but little effect upon the growth. For long distances among the tules alfalfa covered the ground. I had no idea of the value and extent of the arable land of Tulare county until I rode over the immense extent of that plain to the lake. I think the time will come when Tulare will be one of the very best of the agricultural counties of the State.

"Speaking of the future of the lake—it must have been a good deal lower than it is now, for near the mouth of Cross creek there are many stumps which were under water only last year, and among which the fishermen used to get their nets entangled; these stumps are now just at the water's edge. Of course they could not have grown under water. Again, in a little surface well near the landing-place at the fishery, there is at the depth of about 18 inches, all around, a ring of blackish organic matter or mold, quite distinct from the yellowish clayey earth both above and below it. It looked as if it might be decomposed tules, and if so, the water must have been off the ground long enough to allow these tules to be decomposed and made into soil. There are now under this water about 200,000 acres of land of what might be made

the best quality, and this land under alfalfa would be worth many times what it is now under water, for fishes. Why would it not be a good idea to drain this lake down four feet lower, to the banks of that channel, into the San Joaquin river, through a canal that would at the same time serve as a water-way up to that old channel in the lake through which boats could go with freight? I think that by this scheme in a short time all the surplus alkali would be drained into the ocean from the lake and the surrounding country, for as the fresh water from the mountains is spread over the land it must sink down and gradually push the more alkaline waters down the canal. So the land would in time be freed from alkali and the canal would be kept full by underdrainage, which the lake now receives and evaporates."

Present Composition of Tulare Lake Water.

The sample of water sent by Mr. Woodbury was quite turbid, partly from fine mud, partly from the presence of greenish micro-organisms. Its taste was flatfish saline, and quite nauseous to the stomach. Exposed to the light, it soon became filled with rapidly increasing green gelatinous films and coecel, the exact nature of which was not investigated.

Upon filtration, which progressed very slowly, and did not clear the water completely (as is usual with waters impregnated with alkaline carbonates), considerable organic matter still remained in solution, and had to be removed by ignition before proceeding with the analysis. In presence of an excess of carbonate of soda, this ignition could not interfere with the accuracy of the determinations of acid ingredients.

The result was as follows:

Analysis of Lake Tulare Water.*

Specific gravity, 1.0050 at 62.5°.

	Grains per gallon.	Parts in 10,000.
Total solids.....	303.07	51.98
Soluble after evaporation.....		
Sodium chloride (common salt).....	292.96	48.84
Sodium sulphate (Glauber's salt).....	95.79	16.40
Sodium carbonate (sal-soda).....	73.76	12.63
Potassium carbonate (sal-soda).....	94.71	16.22
Potassium sulphate.....	15.68	2.63
Insoluble after evaporation.....		
Calcium sulphate (gypsum).....	6.97	1.19
Calcium carbonate.....	1.47	.25
Magnesium carbonate.....	1.07	.18
Silica.....	2.55	.44
Organic matter and water.....	1.87	.32
	16.12	2.76

The following table summarizes the composition of the Tulare lake water at the three different periods:

	1880.	1888.	1889.
Date of taking sample.....	Jan'y.	June.	Feb'y.
Total solid contents.....	81.80	204.7	303.07
Soluble after evaporation.....			
Sodium chloride (common salt).....	71.16	186.9	279.97
Sodium sulphate (Glauber's salt).....	22.77		95.79
Sodium carbonate (sal-soda).....	17.23		73.76
Potassium carbonate (sal-soda).....	27.92	74.3	94.74
Potassium sulphate.....	3.24		15.68
Insoluble after evaporation.....			
Calcium sulphate (gypsum).....	8.36	5.7	6.97
Calcium carbonate.....	2.97		1.47
Magnesium carbonate.....	4.95		2.55
Silica.....	.44		1.87
Organic matter and water.....	2.28	14.1	16.12

The figures in the above table hardly require comment unless it is to draw attention to the extremely rapid increase of the solid contents of the water between June, 1888, and February, 1889, as compared with the effect produced during the previous 7½ years. The latter was about 2½ times or 150 per cent on the whole, or an average of 13 per cent a year; while in the eight months preceding the last examination, the increase was nearly 45 per cent. It should be noted that these eight months were remarkable for very great evaporation elsewhere on the coast, also; and that they formed the end of three years of rather deficient rainfall in the State. The more abundant moisture of the season just passed, may have stopped or perhaps even reversed the process; a point which will receive attention within a short time. It will then be possible to predict with some degree of approximation how nearly the condition of natural equilibrium between the evaporation from the lake surface and the seepage from the streams and irrigated plains referred to above, is being approached, and to forecast the future of the lake and of its inhabitants if left to themselves.

Whether or not it will be expedient to interfere with the natural course of events, either for the establishment of a great irrigation reservoir, or (as suggested by Mr. Woodbury) for the reduction of the lake to a mere water-way in order to reclaim the lands now covered by it, is a question too complex to be discussed here. The answer will in a measure be determined by the decision of another question, viz.: whether the increased saline strength of the lake water is due wholly to evaporation, or in part to concentrated solutions of alkali extracted from underlying beds by the inward seepage. If a consideration of the area and depth lost by the lake within the last year shall show that there has been a distinct accession of alkali salts from the outside, the use of the drained lake-bed as an irrigation reservoir will be of very doubtful practicability, as it would imply an annual addition of such salts to those already contained in the natural soils irrigated therewith.

It is hoped that all persons who may, from their own observation, be able to throw light upon the history of the recession of these lakes, will communicate the facts so as to place them on record. It is with the hope of obtaining such additional data that this bulletin is issued in advance of the general report of which its subject-matter will form a part.

*Analysis by Mr. E. M. Hilgard, Special Student in the Agricultural Laboratory.

THE RUSHFORD WAGON
Will Carry the Earth!

[From the Montague Herald, Montague, Siskiyou Co., Cal., May 1, 1889.]

One day last week a huge landslide on Ball's mountain caught an Oregon teamster's wagon and buried it beneath several tons of earth and rock. The horses were not touched, and the teamster jumped in time to save himself. A force of men dug out the wagon, and as it was a RUSHFORD, with National Tubular Steel Axle, it was not injured. The "Rushford" is beyond contradiction the best wagon made.

PILE ON THE MOUNTAINS!
The King of Wagons Can Stand It!

Farmers, if you would be Happy and Contented, buy a "RUSHFORD" Wagon, with either Steel Skeins, Old Reliable Concord Steel Axles, or with National Tubular Steel Self-Oiling Axles, which are Stronger and One-Third Easier of Draught than any other.

These Axles have recently been adopted by the U. S. Government after a most severe and thorough test.

PUBLIC AFFAIRS.

Taxation of Fruit Trees and Vines.

EDITORS PRESS:—The Act of the Legislature exempting fruit trees and vines from taxation, and the action taken thereon by the State Board of Equalization, directing assessors to disregard it as unconstitutional, brings the subject of taxation prominently before the people.

As this is a question of law and not sentiment, it would be well for us to understand the legal principles involved in the controversy.

A Constitutional Question.

What property shall or shall not be taxed? is a constitutional question and is clearly defined in the Constitution, and the Legislature has no power to exempt any property from taxation.

The Supreme Court, passing upon an Act exempting growing crops from taxation under the old Constitution providing that "All property in the State shall be taxed in proportion to its value," decided:

"The revenue laws of the State are unconstitutional so far as they exempt private property from taxation, and all parts relating to such exemption must be disregarded."

"Growing crops are private property and subject to taxation, the provisions of said statute exempting them notwithstanding." (35 California Reports, page 677.)

The same court decided in the case of *The People vs. Eddy*, 43 California, page 333, that "it was not intended by the framers of the Constitution that the Legislature should have the power to exempt any kind of property from taxation."

What are growing crops under the new Constitution?

The new Constitution, Article XIII, Section 1, reads as follows:

"All property in this State shall be taxed in proportion to its value, to be ascertained as provided by law, provided that growing crops shall be exempt from taxation."

The important question arises, what property does the term "growing crops" exempt from taxation?

The Legislature immediately after the adoption of the Constitution defined "growing crops" as those crops which require an annual planting or sowing or annual harvesting.

The Supreme Court, in the case of *Cottle vs. the Assessor of Santa Clara Co.*, reaffirms the legislative definition and decides that trees and vines are not included in the term "growing crops" exempted from taxation by the Constitution.

This decision of the Supreme Court is the supreme law of the State, and is a final adjudication of the true intent and meaning of the Constitution, and is binding upon the Legislature, the State Board of Equalization, the assessors and every taxpayer of the State.

The fact that the Legislature has disregarded the decision of the Supreme Court does not authorize or excuse the like disregard of the supreme law of the land by the officers of the State charged with the lawful execution of the revenue law.

Wright, June 8, '89.

FRUIT GRADERS.—There is much being done in the invention and introduction of fruit-graders, and certainly no class of devices has apparently a wider field of usefulness in this State. G. W. Thissell, the well-known fruit-grower of Winters, has one of his own invention which is working admirably and effectively, of which the public will hear more in due time. The other day Joseph A. Hofmann of 208 Montgomery street showed us an Eastern grader which he has set up in his store and which he would be pleased to have fruitmen examine. It has an excellent Eastern record, and is worth the scrutiny of California growers.

CALIFORNIA FRUIT UNION.—At a meeting of the California Fruit Union held Friday, June 14th, Hon. W. B. Parker of Vacaville, president of the Fruit-Growers' Association of Vacaville, was elected a trustee in place of T. U. Buckingham, resigned. The office of R. B. Blowers as trustee was declared vacant, and John Boggs, president of the Newcastle Fruit Co., was elected to fill the vacancy.

THE MUIR PEACH.—Next week we shall give important documentary evidence throwing light on the origin of the Muir peach, and which will apparently be conclusive as to the fact of its being a seedling.

THE Sweetwater Nursery Company of San Diego has incorporated with a capital stock of \$25,000. Directors—J. T. Gordon, J. Munsell Brooks, George W. Hawkins, John Ginty and J. Daley.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, term of subscription, and give it their own patronage, and as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

THE VINEYARD.

Viticultural Commission Meeting.

The Board of State Viticultural Commissioners met in semi-annual session on June 11th, in Platt's hall. The following Commissioners were present: I. De Turk, George West, Dr. W. S. Manlove, L. J. Rose and Charles A. Wetmore. The following officers were elected for the ensuing year: President, Charles A. Wetmore; vice-president, I. De Turk; treasurer, Charles Krug; secretary, C. B. Turrill; chief executive officer, Charles A. Wetmore; manager of hall, Clarence J. Wetmore. By unanimous vote of the board all the appointed officers appointed by the Executive Committee were confirmed and continued. Chief Executive Officer C. A. Wetmore made an extended detailed report of the work of his department, calling attention to various channels through which the work of the commission can be greatly enlarged and improved, and by which great benefit will result to the viticultural interests of the State. He suggested that monthly lectures relating to grape and wine interests should be delivered in the hall. He also stated that he expected, as soon as his other duties will permit, to prepare for publication an extended original treatise, adapted to California, on fermentation and distillation.

The report of J. H. Wheeler, late Chief Executive Officer, was read and carefully considered. He reported at length on his examination of the Los Angeles vine disease. He has sent circulars to the leading vineyardists and requested them to send specimens of diseased vines. These specimens were submitted to Professor Dowlin for examination. Mr. Wheeler in his report uses the following language:

"My interpretation of Mr. Dowlin's reports leads me to understand that this fungus, which is common to all of the diseased vines of Los Angeles county, is the agent which performs the finishing work of destruction. The application of a fungicide arrests the decline of the affected vines, causing an apparent revival of the plant, which falls again into decline if left too long without a revival of the application. * * * In my judgment, the first cause of the evil is yet to be found, and until then vineyardists must operate with the Bordeaux mixture, or the powder proposed by Mr. Shorb, to prevent the fungus from accomplishing its final work."

The Chief Executive Officer was requested to visit the infected district as early as possible, which he agreed to do.

It was decided to hold a Grape-Growers' Convention this fall, probably in August, the exact time and all details being left to the judgment of the Chief Executive Officer.

American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Excursion to Ukiah.

EDITORS PRESS:—The recent excursion to Ukiah via North Pacific Railway was one of the most enjoyable and successful events of the year. The fare was placed at \$2 for the round trip, a distance of 120 miles. Eleven hundred people, made up of families and a goodly number of ladies, embarked on the steamer Tiburon at the foot of Market street. At Tiburon, two trains were made up and the excursionists sped over the road through tunnels and valleys at a high rate of speed, only stopping for water.

The Petaluma valley is 16 miles long and about 10 miles wide and one of the richest and most productive in the State. From Santa Rosa, the county seat of Sonoma county, northward through what is known as Russian River valley, there is one succession of villages, lovely homes and small farms under a high state of cultivation, surrounded by orchards, vineyards and fields planted in corn, vegetables and cereals. As you approach the attractive village of Cloverdale it appears to be walled in on the east, west, and north by great gray hills covered with bushes, stunted oaks and craggy rocks. From Cloverdale to Ukiah, a distance of 30 miles, the route is one of the most romantic, picturesque and interesting to the traveler in the United States. The railroad follows the Russian river about 10 miles of the distance, and considering the topography of the country, it may be classed as one of the triumphs of modern engineering.

The Ukiah valley in Mendocino county is walled in by high mountain ridges, the valley being from one mile to five miles broad, and the fertility of this section has become noted in the production of hops. This part of our State has been isolated from the traveling public, and the residents led a quiet and happy pastoral life, until the steam-whistle a few months since seemed to awaken them from their Rip Van Winkle slumber. Ukiah City is laid out on a plateau, and has special advantages in climate, fine water, and a rich country adjacent thereto that has the reputation of being one of the best fruit belts in the State. The Palace hotel, a large brick structure, kept by Mr. I. N. Stapp, is the headquarters for the stages that go out from this place, of which there are three lines, owned by Messrs. Force & Curtis, viz.: Ukiah and Mendocino, daily, except Sunday, fare \$5; Ukiah and Hydesville, 35 hours without stopping, daily, fare, \$15; Ukiah and Blue Lakes and Lakeport, daily, except Sundays, fare \$2. On this occasion, as these fine turnouts swung in front of the Palace hotel, the veteran Jehus reminded the excursionists of old times in California. It was hot, 96° in the shade, and the celebrated Vichy Springs, three miles distant, were well patronized.

The management was under Mr. W. H. Menton, general traveling passenger agent for the N. P. R. R., and no accidents or hitch occurred during the day. There were general expressions of pleasure and satisfaction among the excursionists, and a desire to take another ride to the city of Ukiah. This great concourse of people was landed at the foot of Market street at 8:50 P. M.

J. C. H.

Special Thanks.

SHEEP MEN,
ATTENTION!

ADMINISTRATOR'S SALE
By order of Probate Court, in the matter of the Estate of JAMES ROBERTS, Deceased.

I will sell at private sale to the highest bidder, for cash, on or after May 1, 1889, at the Ranch in Irvington, or at my office in Oakland, 946 Broadway, Alameda Co., Cal., the entire flock of Thoroughbred French Merino Sheep, consisting of 280 (Two hundred and eighty) Ewes, 79 (seventy-nine) Bucks, and 180 (one hundred and eighty) Lambs. These Sheep are the get of the original flock imported by Robert Blacow of Centerville. Mr. Roberts, as foreman, having charge of the flock for several years prior to Mr. Blacow's death, after which he became the owner of the entire flock, which he has kept purely for stock purposes.

All interested in Thoroughbred Sheep should be familiar with this flock, which has become famous under the care and management of Mr. Roberts; always receiving first premiums, having been sold to Europe, South America and all parts of the United States; individual members having repeatedly sold for from \$500 (five hundred) to \$1500 (fifteen hundred) each. Sheep Men should seize this opportunity to secure some, as they must be sold to settle up the Estate. Address, JAMES STANLEY, Administrator Estate J. Roberts, Deceased, Mission San Jose, or 946 Broadway, Room 17, Oakland, Cal.

S. H. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, June 19, 1889.

The past week witnessed continued activity in garden truck and fruits, with prices, as usual, governed from day to day by the receipts. Harvesting is under full headway. All returns continue favorable for large crops of cereals. At the East and abroad the wheat market has fluctuated to some extent, being largely controlled by weather influences. The following is to-day's cablegram:

LIVERPOOL, June 19.—Wheat—Steady. California spot lots, 6s 6½d to 6s 9½d; off coast, 33s 9d; just shipped, 33s 9d; nearly due, 33s 9d; cargoes off coast, nothing offering; on passage, quiet; Mark Lane wheat, few buyers in market; French country markets, quiet.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	June.	July.	Aug.	Sept.	Oct.	Nov.
Thursday....	68½d	69d	68½d	68½d	69d	69d
Friday.....	68½d	69d	68½d	68½d	69d	69d
Saturday....	68½d	69d	68½d	68½d	69d	69d
Sunday.....	68½d	69d	68½d	68½d	69d	69d
Monday.....	68½d	69d	68½d	68½d	69d	69d
Tuesday....	68½d	69d	68½d	68½d	69d	69d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday....	33½d	33½d	33½d	Quiet.
Friday.....	33½d	33½d	33½d	Steady.
Saturday....	33½d	33½d	33½d	Improving.
Sunday.....	33½d	33½d	33½d	Quiet.
Monday.....	33½d	33½d	33½d	Steady.
Tuesday....	33½d	33½d	33½d	Steady.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

Day.	June.	July.	Aug.	Sept.	Oct.
Thursday.....	84	82½	82½	82½	82½
Friday.....	84	82½	82½	82½	82½
Saturday.....	84	82½	82½	82½	82½
Sunday.....	84	82½	82½	82½	82½
Monday.....	84	82½	82½	82½	82½

The closing prices for wheat have been as follows, at Chicago for the past week:

Day.	June.	July.	Aug.	Sept.
Thursday.....	79	77½	75½	75
Friday.....	78½	76	76	76
Saturday.....	79	76	76	76
Sunday.....	79	76	76	76
Monday.....	79	76	76	76
Tuesday.....	79	76	76	76

NEW YORK, June 19.—Wheat—84½c for cash, 82½c for July, 82½c for August, 83c for September and 86c for December.

Foreign Grain Review.

LONDON, June 18.—The *Mark Lane Express* in its review of the British grain trade for the past week, says: Sales of English wheat during the week were 41,765 quarters at 28s 4d. Off-coast trade is slow since Whitsuntide. A sale of California wheat at 33s 4½d indicates steadiness. Much English wheat is offered under 30s. Russian is 15, Indian 6d and American Red 3d dearer. Flour is dull. May arrivals of Chilean and California have gone to consumers. Light oats are firm; heavy, flat. Corn is 3d lower.

Wheat Market.

NEW YORK, June 16.—Wheat is active and steady on reports of better markets and crop damage abroad. A cable to Henry Clews says: "Wheat in Liverpool is advancing. Sellers are holding off expecting higher prices. Heavy rains are reported. England will need 15,000,000 bushels of wheat before September 1st, which will have to come from America." Russian news has been one of the main factors of the market of late. It is alleged that the wheat crop there is likely to be over 20 per cent short of last year, or practically 51,000,000 bushels less than last year. An advance statement of the exports of breadstuffs during May, 1889, prepared by the Bureau of Statistics, shows that the principal Pacific Coast custom districts, Puget Sound, Willamette and San Francisco, shipped 1,626,894 bushels of wheat, 100,000 more than New York, and far above any other port.

California Fruits East.

NEW YORK, June 13.—California fruit contained in Central Pacific car 10,596 was auctioned to-day: 170 boxes Royal Ann cherries brought from 45c to \$2.15, only one small lot, 50 boxes, going at the first figure; 467 boxes Republican cherries brought from 85c to \$2.10.

The contents of the Union Pacific car 40,601 were sold as follows: 573 half-crates Royal apricots from 95c to \$1.50; 46 boxes Royal apricots at \$1.15; 96 boxes Alexander peaches from \$1.15 to \$1.60; 39 half-crates Red plums at \$1.30; 41 half-crates apricots at 95c; 7 half-crates plums at \$1.30 to \$1.75; 170 boxes Royal Ann cherries from 80 to 90c.

NEW YORK, June 14.—In the California fruit auction sales to-day 880 half-crates of Royal apricots were sold at 90c to \$1.70, and a small lot of plums at \$1.40. A small lot of peaches were sold at 25c.

NEW YORK, June 17.—The latest arrivals of California fruit are in poor order. This accounts for the prices obtained to-day at the auction at the Fruit Exchange. Union Pacific car, No. 40,609, marked California Fruit Union: To Frank H. Buck, 425½ crates of Royal apricots, from 65 cents to \$1.10; to Frank B. McNeill, 20 ditto, at \$1.10; to L. W. & F. M. Buck, 101 ditto, at \$1; to W. R. Strong & Co., 68 ditto, at \$1.25; to Frank H. Buck, 30 boxes peaches, at 75 cents; to F. Herbert Buck, 71 ditto, at \$1.05; to W. Smith, 15 ditto, at \$1.20; to L. R. Strong & Co., 64 ditto, at \$1.05; to L. W. & F. M. Buck, 14 boxes Royal Hative plums, at \$1.30; to W. W. Smith, 24 ditto, at \$1.90; to W. R. Strong & Co., 15 ditto, at \$1.15. Oregon and California car, No. 1004, consigned by Fruit-Growers' Association of Vacaville: 434 half-crates Royal apricots, at 95c to \$1.40, to O. Garlich; 129 ditto, at \$1, to R. H. Chinn; 100 ditto, at \$6.50, to Robinson Bros.; 14 ditto, at \$1, to Wm. H. Buck; 43 ditto, at \$1.70, to Fruit-Growers' Association; 3 boxes peaches, at \$1.15, to O. Garlich; 2 ditto, at \$1.15, to O. Garlich; 6 half-crates Royal

Hative plums, at \$1.25, to Fruit-Growers' Association, and 53 ditto, at \$2.20, to ditto.

CHICAGO, June 13.—To-day's sales by auction were: Three carloads of cherries, peaches, apricots and plums. Cherries sold at \$1.80 to 75c; peaches at \$1.85 to \$1.05; plums at \$4.50 to 55c, and apricots at \$1.15 to 50c. The cherries were mostly in poor order.

CHICAGO, June 14.—To-day's sales by auction were: Two carloads of peaches, apricots and plums. Peaches sold at \$1.70 to \$1.15; apricots at \$1.05 to 55c; plums at \$3.70 to \$1.35. A good many apricots were in bad order to-day.

CHICAGO, June 17.—To-day's sales by auction were two carloads of apricots, peaches and plums. The apricots sold at 80 to 55 cts., peaches at \$1.20 to 95 cts., plums at \$3.10 to \$1.85. The market is very weak.

CHICAGO, June 18.—The agents of the California Fruit Union sold two carloads of fruit to-day as follows: Peaches, 300c to \$1.05; apricots, 55c to 85c; cherries, 50c to 60c; Bartlett, \$4.50. Peaches and cherries were in very bad order.

Eastern Wool Markets.

NEW YORK, June 16.—Wool—Most operators concede the firmness of the present situation, with a very solid front shown among producers in all localities. Manufacturers, too, have of late exhibited not only increased interest, but actual investing intentions so that sellers experience no special difficulty in retaining the major portion of advantage. Foreign advices are generally strong. A movement was reported here during the week. Sales include 15,000 lbs. spring California at 18¢ to 20¢; 35,000 lbs. do do, 12,000 scoured do, 5,000 lbs. Territory, 6,000 lbs. Eastern Oregon.

Mark Lane Express, May 28, says: At the present time manufacturers are experiencing exceptional demands on their resources, and they are encouraged to anticipate even further development of trade by reason of the extraordinary activity which characterizes the iron trade and the vast contracts which have been entered into by Clyde and Tyneside shipbuilders. Let us give one or two instances of the improved condition of trade—and these facts we take to be the grounds on which woolen and worsted manufacturers rest their hopes as to increased business in the future. At the present time the Clyde shipbuilders have on hand over 150 vessels of an aggregate of nearly 300,000 tons. On the Tyne there are 80 vessels building, and on the Wear, 60. It is interesting to note the quarters from whence this gratifying multiplicity of employment emanates. The vessels now being constructed represent about 80,000 tons for Germany, 17,000 for Portugal, 10,000 tons each for France, Norway and our colonies, 7,000 tons for Belgium, 9,000 for South America, 5,000 for the United States, and so on. With these orders in hand, and the prospect of an early distribution of Government orders in connection with the strengthening of the Navy, woolen manufacturers may well be confident of future trade prospects. As the result of this feeling among wool consumers, London importers, merchants and brokers are naturally sanguine of animated competition at the ensuing sales, and look with perfect confidence to even a higher range of values being reached than were current at the May sales. To a certain extent both buyers and sellers are justified in entertaining these cheery assurances, for it is over ten years since shipbuilding was so brisk and workmen were so highly remunerated for their labor. But London wool merchants do not only look for an extensive consumption at home; they anticipate a very large demand from France. They have had already communications to the effect that the Exhibition has had a magical influence on the woolen and worsted trades, and as the season advances a very much larger business will be experienced.

California Wine.

NEW YORK, June 16.—The *Wine and Spirits Circular*, the organ of the wholesale Liquor Dealers' Association, has this to say: "Trade in California wines in the East is steadily growing. There are many people of wealth and taste in this city who buy California wines for home use. Many of these people have been in California, visited the vineyards and learned more of their wines from personal inspection. But the bulk of California wines is used by the middle classes, who desire good wine at reasonable prices. Though not fully equal to the best French wines, good California wine compares favorably with foreign wines. Most of it is shipped by way of Cape Horn. The four or five months' trip around Cape Horn improves the wine provided it is warm. Dry white and red California wine retails in this city at from 85 cents to \$1.50 and higher per gallon, and sweet wines at from \$1.25 to \$3 and higher. Prices are lower now than they have been for years."

Miscellaneous.

All prime hogs show hardening values. Best washing 1½ cent better; good Red Pacifics, 16¢ to 18¢; poor, 13¢ to 15¢. Many old lots were cleaned up at 5½¢ to 6¢ for 87s; 3¢ to 4¢ for '86s. Exports from New York for the season to date are \$7,400 bales.

New honey would sell at 6½c.

Samples of California beeswax are shown fully up to the standard required at the East.

Lima beans are strong at \$3.40; small white, \$1.70; the latter slow.

Fruits—Pacific Coast dried—Though the market is not characterized by important action, yet in jobbing quantities there is a fair distributive trade going on, and as a rule at well-sustained prices. Turkish prunes continue firm and in fair demand. Figs are not wanted, and for nuts the inquiries are limited to jobbing quantities.

Raisins—California, L. U., two crown, \$1.40 to 1.60; California, L. U. three crown, \$1.75 to 2.10; California, London, three crown, \$2 to 2.24.

Lemons are held rather high, but dealers report their distributive trade as yet light, though they count upon an early increase in consumptive requirements.

Oranges are in better demand, and the market is stronger in tone.

Local Markets.

BAGS—The market has declined under freer offerings until 7½c is touched for fair-sized parcels—jobbing by the bale or two at 7½¢ to 8¢. The cause for the decline is reported to be the free offerings of outside holders who have become nervous at the inactive demand. Farmers naturally would like to see them still more nervous.

BARLEY—The market shows growing strength

under a freer demand and farmers more confident. In futures, trading has been active at hardening prices. The following are to-day's Call Board sales:

Morning Session: Seller 1889, new—100 tons, 72½c; 200, 72½c to ctt. Afternoon Session: Buyer 1889—100 tons, 80½c. Seller 1889, new—300 tons, 72½c; 100, 72½c. Buyer season—100 tons, 87c to ctt.

BUTTER—The market is overstocked with fair to good, but gilt-edged is scarce and wanted at full prices. The demand is quite light; said to be about 25 per cent less than at this time in 1888. It is a source of speculation among dealers what is to be done with the large supply of poor to fair. The quantity pickled is said to be largely in excess of former seasons.

CHEESE—The market is strengthening under lessened offerings by outside parties. The stock now here is well concentrated and held for better figures. The demand is good.

EGGS—Receipts are increasing, but the demand is still good.

FLOUR—The market is lower under free offerings.

WHEAT—The sample market for immediate delivery is very strong. It is claimed that quite a number of vessels' lay days are either up or about up, and to save expenses, exporters will pay an advance for wheat on spot or for immediate delivery. For July delivery \$1.27½ is bid for No. 1 white shipping and \$1.25 for August delivery. In futures trading the past week was fairly active, with at times quite attractive turns noted. The following are to-day's Call Board sales:

Morning Session: Buyer 1889—3200 tons, \$1.33½; Buyer 1889, after August 1st—100 tons, \$1.32½; 300, \$1.33½; 200, \$1.33. Seller 1889, new—1000 tons, \$1.25½. Buyer season—300 tons, \$1.39; 100, \$1.39½ to ctt. Afternoon Session: Buyer 1889—500 tons, \$1.33; 400, \$1.32½; 200, \$1.33½. Buyer 1889, after August 1st—100 tons, \$1.32½ to ctt.

Buckwheat, sks....

Cereals.

Harvest advices continue favorable to a large output. It now looks as if the estimates of from 1,800,000 to 2,000,000 tons will be fully realized, notwithstanding many localities report a half crop. The grade, taken as a whole, is better than for several years past, which ought to cause new crop No. 1 white shipping to command relatively more than the No. 1 white shipping season just drawing to a close. The barley output is large to the acre, but there is a decreased acreage. The buckwheat, rye and oat output will be about an average. The corn crop promises to be above an average.

From Oregon and Washington the writer's advices continue favorable for a very large output of all kinds of cereals, with the general grade good.

The wheat market the past week for sample parcels has held to strong prices, with buyers fighting against an advance, and holders indifferent, except at full asking prices. There is no doubt but buyers have been compelled to pay an advance over last week's quotations, and are even yet to secure desirable parcels, necessitated to pay an advance on bids. In new, some trading for July is reported on the basis of \$1.27½ for good white shipping. The general feeling appears to prevail that farmers, as a rule, will prefer storing to selling.

In barley, there has been more pronounced buying of the better grades. The buying is said to be chiefly in the interior and in the interest of exporters, although speculators and home dealers are operating. At current low prices, the cereal is looked upon as a good investment. Walla Walla advices report the outlook of the very best for a good crop and a good quality.

Oats have been fairly steady, under a moderate demand and lighter receipts. The incoming crop on this coast promises to be above an average and of good quality, too.

Corn has not shown any material change. The general feeling with dealers appears to be bearish.

Rye continues in buyers' favor.

Feedstuff.

Ground barley is firmer, with a strong tone. The demand is improving.

Bran and middlings are without essential change. The demand is increasing and so is the supply.

In hay, the movements continue to be of a bearish character for all grades, except strictly choice. Even the latter appears to be shading off. More

new is offering, which begins to be given preference by large consumers. In the present condition of the market, reliable quotations are hard to give, for prices will fluctuate from day to day, according to receipts. Buyers, particularly at this time of the year, always take advantage of sellers' necessities.

Fruit.

Heavy receipts of apricots and canners holding off forced sellers to the former's terms. The low prices of 1 to 1½c (sales of extra choice well-selected for standard fruits have been made at the latter prices) have had the effect of cleaning up each day's receipts. The buying is on the basis of 1½¢ to 1¼¢ per lb., with 1¢ to 1½¢ as the extremes. Canners are still in the market for blackberries, strawberries, cherries and currants. The latter are reported to be scarcer, with prices creeping up. Gooseberries are higher and scarcer.

Several crates of cherries destined for New York and sent from San Jose, were transferred at Niles one day recently. The unusual fact regarding the shipment was that each cherry was separately wrapped in fine tissue paper after the manner of fine varieties of oranges.

The quality of both pears and peaches is improving, but as receipts enlarge, prices shade off. Plums are coming in more freely, with several varieties in the market.

It is very difficult this season to obtain correct information regarding contract prices paid by canners to orchardists. Why this is so, it is hard to say. It looks as if this is done so as to keep down competitive buying and good prices being paid to orchardists.

In dried fruits, the market shows no material change. The stocks of old are well cleaned up, and in consequence new will come in on a comparatively bare market. The low prices toward the close of the season stimulated the consumptive demand in distributive centers east of the Rocky mountains, which will materially create a larger demand for the coming season's crop. It now looks as if the quantity that will be dried will be larger than last year, which was more than ever before.

Raisins are without any special features to report. The market is about bare, with from three to four months yet before new come in on the market.

Live-Stock.

The market for bullocks shows a steadier tone for handy sized that cut up without much wasting. Mutton sheep are doing better, owing to more driving to the mountain valleys. Veal are also improving. Hogs are still weak, with the demand confined to the block and Chinamen's wants. In horses there is nothing new to report. The inquiry is said to be better for single-footers and general utility, with a fair inquiry for matched teams. It is claimed that there will be a better inquiry soon for medium to large draft horses.

The market for dressed cattle is quoted as follows: To obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent.

HOGS—On foot, grain fed, 5½¢ to 6¢ per lb.; dressed, 8¢ to 9¢ per lb.; stock hogs, 5¢ to 6¢ per lb.

BEEF—Stall fed, 6¢ to 6½¢ per lb.; grass fed, extra 5½¢ to 6¢ per lb.; first quality, 5½¢ to 5¾¢ per lb.; second quality 4½¢ to 5¢ per lb.; third quality, 3½¢ to 4½¢ per lb.; bulls and thin cows, 2¢ to 3¢ per lb.

VEAL—Small, 7¢ to 8¢ per lb.; large, 5½¢ to 7½¢ per lb. MUTTON—Wethers, 5½¢ to 6¢ per lb.; ewes, 5¢ to 5½¢ per lb.; lamb, spring, 7½¢ to 8½¢ per lb.

Vegetables.

Potatoes have held steady at full prices, with a continued improvement reported in the quality. The call is both for near-by and distant orders.

Onions continue to meet with a good demand. Good keepers are wanted at a slight advance. Silver skin has put in an appearance.

In garden truck there is a free movement, with peas, beans and summer squash doing better under lighter receipts. Cucumbers and tomatoes are weak at lower prices, under freer receipts. Picklers are taking the smaller cucumbers, while canners are preparing for tomatoes. In other vegetables there are no particular changes outside of an easier feeling in green corn.

Miscellaneous.

Poultry has held barely steady throughout the week. Choice, young, well-conditioned, large-sized fowls are wanted, and command an advance on quotations.

Hops are scarce, with a good inquiry reported for choice. Growing crop advices continue favorable. Growers are not inclined to accept buyers' bids for new crop hops.

The following are the leading shipments in pounds, by the overland railroads for the month of May: Beans, 325,070; green fruits, 6,596,000; dried fruits, 284,050; hops, 248,210; mustard seed, 20,400; raisins, 223,480; wool in grease, 2,020,770; scoured, 154,590; pulled, 86,550. Wine, gallons, 497,905. The wool market continues active at full prices, with at times desirable clips fetching a slight advance on outside quotations. The advance in prices this year over those of 1888 is about 10 per cent, which is equal to the prices that obtained in 1887. The demand this year is chiefly for medium-fine, which fetch proportionally more than fine grades.

From the *Commercial News* of June 19, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port.....	237,140	315,293
On the way to neighboring ports 29,013		116,093
In port, disengaged.....	10,991	47,103
In port, engaged for wheat....	54,052	

Domestic Produce.

Table with multiple columns listing various domestic produce items such as Beans and Peas, Broom Corn, Chioory, Dairy Produce, Eggs, Flour, Fruit, and Vegetables, along with their respective prices and grades.

PACIFIC COAST WEATHER FOR THE WEEK.

Table showing Pacific Coast weather for the week, including dates (June 12-18) and weather conditions for various locations like Portland, Eureka, Red Bluff, Sacramento, S. Francisco, Fresno, Keeler, Los Angeles, and San Diego.

EXPLANATION.—Cl for clear; Cy, cloudy; Fr, fair; Fy, foggy; Cm, calm; — indicates too small to measure. Temperature, wind and weather at 12 M. T indicates trace of rainfall. Observations taken at 5 P. M. instead of 12 M.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if requested the following articles (while this notice continues), at the very greatly reduced figures named at the right:

- 1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price \$1)...\$0.25
- 2.—Beautiful Poetic Review, entertaining and instructive; 35 pages (a handsome and pleasing present)...\$0.25
- 3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt...\$0.50
- 4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages, illustrated...\$0.25
- 5.—Kendall's Treatise on the Horse and Diseases, 89 pages, instructive illustrations...\$0.05
- 6.—To New Subscribers, 12 select back Nos. of the RURAL PRESS, "good as new"....Free
- 7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per ct. off regular rates.
- 8.—Pacific Coast and Eastern Dailies and Periodicals, except special publications, we can usually give 10 to 15 per cent off advertised retail rates.
- 9.—March of Empire, by Mallie Stafford...\$0.25
- 10.—Life Among the Apaches, 322 pages, stiff cloth...\$0.25
- 11.—\$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application...\$0.25
- 12.—Dewey's Pat. Newspaper Fileholder (18 to 36 in.)...\$0.50
- 13.—European Vines Described, 63 pages...\$0.05
- 14.—Webster's Dictionary, 684 pages, with 1500 illustrations; very handy and reliable...\$0.50
- 15.—Architecture Simplified, 60 pages...\$0.05
- 16.—Mother Bickerdyke's Life with the Army; patriotic and ably written; 168 pp., cloth, \$1.00...\$0.50
- 17.—Ropp's Easy Calculator, cloth, 80 pp...\$0.25
- 18.—How to Tell the Age of a Horse...\$0.05
- 19.—Percheron Stud Book—French—bound in leather, 192 pages (full price, \$3)...\$1.00
- 20.—What Every One Should Know; a cyclopaedia of valuable information; 510 pp.; cloth; (full price \$1)...\$0.50
- 21.—Knitting and Crochet, by Jennie June; 144 pp., 200 illustrations...\$0.25
- 22.—Needle Work, by Jennie June; 12 pp., 200 illustrations...\$0.25
- 23.—Ladies' Fancy Work, by Jennie June; 152 pp., 700 illustrations...\$0.25
- 24.—The Way to do Magic; illustrated, 60 pp...\$0.10
- 25.—The Taxidermist's Manual; illustrated, 64 pp...\$0.10
- 26.—A Dictionary of American Politics; comprising accounts of political parties, measures and men, and explanations of the Constitution, divisions and practical workings of the Government, together with political phrases, familiar names of persons and places, noteworthy sayings, etc., by Everit Brown and Albert Strauss. (Full price \$1)...\$0.50

NOTE.—The cash must accompany all orders. Address his office, No. 220 Market St., S. F. In writing correspondence, items of information, or on other business, please use a separate sheet. Sample copies of this paper mailed free to persons thought likely to subscribe. Send for free circular describing most of these premiums, and any further information desired. Inform your neighbors about our offers and paper.

HEAD-QUARTERS AND GENERAL AGENCY OF THE EAST, FOR THE SMALLLEY CUTTERS

which are unequalled for their strength, durability, and most powerful cutting improvements, including the latest machinery and specialties.

Advertisement for Dewey & Co. Patent Solvents, featuring the company name in large stylized letters and text describing their products and services.

Advertisement for THREE WONDERFUL SEWING MACHINES, featuring an illustration of a woman sewing and text about the Singer Automatic, Vibrator, and Oscillator models.

Baling Hay.

In order to test the difference in Bale Rope, about which there is much discussion, we to-day used one coil Eastern made rope, 59 lbs, which baled 67 bales hay, weighing 8 1/2 tons, taking about 7 lbs rope per ton, and one coil of TUBBS CORDAGE CO.'S make, 57 lbs, which baled 88 bales, weighing 11 1/2 tons, taking 5 lbs per ton. These facts prove that it takes about 40 per cent more of Eastern rope to bale a ton of hay than it does of the Tubbs Rope. We used six strands to a bale and not a strand of the Tubbs Rope broke.

Advertisement for The Singer Manufacturing Co., featuring text about their products and agents, including Ricord's Restorative Pills.

California Products at Chicago. CHICAGO, June 19.—California green fruits were a shade firmer under somewhat smaller receipts and the influence of better weather. Cherries, 10-lb boxes, sound, \$1@1.20; Peaches, 20-lb cases, \$1.25@1.50; Apricots, 20-lb cases, \$1@1.25; Cherry Plums, 20-lb cases, \$1.25@1.50; Plums, 20-lb cases, Royal Hative, \$2.25; Pears, 7 box, \$4.50@5. Oranges were steady and firm; there is only a moderate supply on the market and the demand is fair. Fancy mountain fruit, 7 box, \$4@5; Los Angeles Duarte, smutty, \$3@3.50. Hops are firm and are in but limited supply. The demand is moderate for choice grades, but otherwise it is light. Choice Washington Territory and Oregon, 25c; Pacific Coast, prime to choice, 20@23c. Beans—For several days the market has been without new developments; there continues a light business at late prices, and the market is notably steady; offerings remain small, with very few beans coming in.

THE walnut crop of the Santa Ana valley promises to be very large. The trees are said to be loaded with nuts.

Useful Facts.

The following list of agricultural districts in California, as at present constituted, is taken from the "Legislative Guide," compiled by Donald Bruce and just issued from the office of the *Political Record* in this city. This pamphlet, by the way, is packed full of information (condensed and handy for reference) in regard to our State Senators, Assemblymen and other officials, with tables showing the fate of all the bills introduced at the last session of the Legislature—which passed and were approved; which were vetoed; which failed in either house—etc.

Mr. Bruce has done a good work in reducing matter so varied, vast and complicated to a form so compact and accessible; and we hope the little book will meet with sales enough to reward him.

Agricultural Districts.

1. San Francisco, Alameda.
2. San Joaquin, Stanislaus.
3. Butte, Colusa, Tehama.
4. Fresno, Kern.
5. Santa Clara, San Mateo.
6. Los Angeles, Ventura.
7. Monterey, San Benito.
8. El Dorado.
9. Humboldt, Del Norte.
10. Siskiyou, Trinity.
11. Plumas, Lassen, Modoc, Sierra.
12. Mendocino, Lake.
13. Sutter, Yolo, Yuba.
14. Santa Cruz, except SE of line beginning at junction of Aptos creek and Monterey bay, NE to Santa Clara Co.
15. Tulare, Kern.
16. San Luis Obispo.
17. Nevada.
18. Alpine, Inyo, Mono.
19. Santa Barbara.
20. Placer.

24. Santa Cruz, all not included in Dist. 14.
25. S. Iano, Napa.
26. Sacramento, Amador.
27. Shasta.
28. San Bernardino.
29. Calaveras, Tuolumne.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3.00 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

CONNECTICUT is a great oleomargarine manufacturing State. In that State and Massachusetts more of the bogus butter is manufactured than in any other of the Eastern States. But hereafter the "land of wooden nutmegs" will quit being the "land of ball butter," as well. The Legislature has passed a law prohibiting the manufacture of oleo in imitation of butter, and consequently the manufacturers are giving up the business. This is another proof of the fact that the only hold the stuff ever had upon the market was its resemblance to and being sold for butter.—*Jour. of Agriculture.*

THE HONEY LAKE WATER CO. has incorporated for the purpose of distributing the waters of Skidaddle creek, in Lassen county, for irrigation, etc. Directors—W. A. Clark of Berkeley, S. W. Fuller, G. D. Cooper, J. B. Jardine and D. E. Hayes of S. F. Capital stock \$50,000, divided into 50,000 shares, of which 30,000 have been subscribed by 26 stockholders.

"FARMER" AND "AGRICULTURIST."—"Uncle Jerry Rusk" not long ago remarked: "There is a difference between a farmer and an agriculturist. A farmer is a man who has a piece of land and makes his living off it. An agriculturist is a person who makes money in some other way and spends it on his farm."

Successful Patent Solicitors.

As Dewey & Co. have been in the patent soliciting business on this Coast now for so many years, the firm's name is a well-known one. Another reason for its popularity is that a great proportion of the Pacific Coast patents issued by the Government have been procured through their agency. They are, therefore, well and thoroughly posted on the needs of the progressive industrial classes of this Coast. They are the best posted firm on what has been done in all branches of industry, and are able to judge of what is new and patentable. In this they have a great advantage, which is of practical dollar and cent value to their clients. That this is understood and appreciated, is evidenced by the number of patents issued through their SOUTHERN PRESS Patent Agency (S. P. A.) from week to week, and year to year.

MERY'S IMPROVED PIONEER BARLEY CRUSHER

Using the Benoit Corrugated Rollers.

STILL AT THE FRONT.

This Mill has been in use on this Coast for 8 years.
TAKEN THE PREMIUM AT THE STATE FAIR

Four years in succession, and has met with general favor,
there now being

Over 250 of them in use in California, Nevada & Oregon.

It is the most economical and durable Feed-Mill in use. I am sole
manufacturer of the Corrugated Roller Mill. The Mills are all ready to
mount on wagons.

ORLAND, CAL., August 5, 1887.

Mr. M. L. Mery—DEAR SIR: In reply to yours of
August 1, 1887, regarding the mill I bought of you, would
say that the No. 2 gives perfect satisfaction, and that I
can crush from 1000 to 1200 sacks of Barley per day. I
will recommend it to the public for good work and lots
of it.

M. C. DILLMAN.

TRAVEL, May 3, 1887.

Having used one of the Barley Crushers manufactured
by M. L. Mery, of Chico, Butte county, I can say it will
do all that is claimed for it, and to those wishing an A
No. 1 machine, I would recommend it as the very best.
I have crushed 35 tons in 11 hours' work.

J. D. GOLDEN.

M. L. MERY, Manufacturer, Chico, Cal.

I thank the public for their kind patronage received thus far, and hope for a continuance of the same.

M. L. MERY, Chico Iron Works, Chico, Cal.

OSGOOD & THOMPSON, Binghamton, N. Y.

PETER SCHUTTLETT'S WAGONS.

Superior in Strength, Durability and Lightness to any Wagon Manufactured.

SCHUTTLETT HEADER WAGON GEARS,

Complete with Whiffletrees, Neck Yoke, Stay Chains and Wrench.

The Schuttler Wagon has been built expressly for the trying climate of California and the rough usage of the mountains, for over FORTY YEARS, and in consequence of the SPECIAL EXPERIENCE thus achieved, as well as the UNRIVALED CARE bestowed upon its workmanship and finish, it stands SUPREME AND WITHOUT A RIVAL AMONG WAGONS.

IT GIVES BETTER VALUE IN RETURN FOR THE MONEY LAID OUT than any other known. The USER gets his money's worth, besides the saving in time, temper, trouble and repair bills, and the DEALER has equal reason to be pleased with a wagon that gives him no annoyance after it leaves his store.

THE HOWARD PATENT ADJUSTABLE BOLSTER SPRING.

IMPROVED PATENT 1889.

WILL TRANSFORM A COMMON WAGON into an easy platform spring, to ride easy with or without a load. They have been thoroughly tested throughout the United States and proven reliable and durable. They have the slow, easy motion that is absolutely necessary to carry all kinds of farm products in perfect condition.

Shows Center Spring in Position for Light Load.

Shows Center Spring in Position for Heavy Load.

They will save 25 per cent in wear and tear on wagon and team. Every spring is warranted to carry its full marked capacity. No alteration or expense in adjusting them to the wagon. Carrying capacity 1500 to 6000 pounds.

Seedling Roses.

At the recent flower show there was exhibited a large number of California seedling roses. Luther Burbank of Santa Rosa had quite a large collection, all of which had good points, but unfortunately the flowers were damaged in transportation, and the judges were unable to decide as to their specific merits.

The seedling which attracted the most attention was produced and exhibited by E. Gill of Oakland. The accompanying illustration was engraved from a photograph, and is somewhat reduced in size. It is a pure hybrid perpetual, a dwarf, healthy, compact grower, and produces on each shoot clusters of erect buds, which bloom in long succession. The flowers, which are good when expanded, are large to very large, with petals of great substance, which do not fade easily. In color, the flower resembles the Jacqueminot, but of a more pronounced red color. It is a most excellent rose, and California should feel proud that a second rose of undoubted merit should be introduced this year. John H. Sievers' "Rainbow," which was brought to public notice a few months ago, has fully sustained its reputation so far. The growing of new varieties of roses in California may yet become a great industry, and fortunately there are several of our most skillful floriculturists giving attention to it.

The Pharmacists.

The latest national visitation to California consists in the delegates to the convention of the American Pharmaceutical Association, which is holding its sessions in this city as we write. Delegates are present from all parts of the country and they are being entertained and welcomed according to the established California style of treating visiting organizations. The work of this association, although but remotely connected with agricultural arts, is still of great importance to agriculturists because they constitute a large part of our population and naturally pay vast sums of money to the compounders of medicines, etc., though possibly they do not bestow as much upon the shady side of the soda fountain as some other kinds of people.

We are glad that the association is in existence. Its work tends toward the elevation and improvement of the dispensing business and makes it less likely that we shall get morphine when we wish quinine, etc. Its labors are in favor of pure materials intelligently compounded and against the great prevalence of fraud in the debasement of all medicinal substances by adulteration. We are glad the pharmacists have come to California and we hope their general health will be such that they will not need to swallow any of their own decoctions.

A CALIFORNIA SEEDLING H. P. ROSE.

Close of the Volume.

The appearance of the index upon the last page of this issue will remind readers that we have reached another turning-point in our work, and that another volume is ready to go upon the shelves. A study of the index shows that the Rural is growing not only in number of pages, but in wealth of practical information upon timely and important topics.

The number of pages, 628, indicates that the old standard of a 16-page paper weekly, upon which we labored for a number of years, has been increased by 50 per cent, and the almost exclusive presentation of California facts and opinions to which we are compelled by the vast growth of local enterprise and quickening of local thought is evidence of the advancement the State is making in industrial lines.

In closing another volume we desire to return thanks to the hundreds who have aided us by the communication of their thoughts, observations and experiences. Our host of contributors are, as we have frequently gratefully acknowledged, the backbone of the publication. We desire to fully acknowledge our obligations to them and urge them to go forward with the assurance that they are doing genuine public service.

We have plans for the new volume which will be developed as its numbers appear. We feel that success brings its responsibilities as well as its gratifications, and we are resolved

that so far as constant effort on our part can insure it, the Rural Press shall never forfeit the high praise and confidence which its vast parish of readers so generously accord it.

CLOVER CREEK FALL.—We give on this page one of the smaller gems of the scenery of the Shasta region, the falls in Clover creek, which are situated about 40 miles northerly from Redding. The scene, as the engraving shows, is wild in the extreme, and is made up of rocks with their scanty, clinging vegetation, as the environment of the waterfall, which is of no mean dimensions. The scene has elements calculated to please the romantic, the nature-loving, or the piscatorial mind, and is another reminder of the delights of the mid-summer outing upon which the Rural has frequently expatiated.

AGRICULTURAL DIRECTORS.—The Governor has appointed members of District Boards of Agriculture as follows: No. 19 (Tuolumne and Calaveras) D. R. Oliver, T. C. Birney, D. W. Berger, J. A. Goodwin, Otto Dolling, T. J. Solinsky, Lewis C. Horey and Adam Keibar. No. 24 (Pajaro valley), James Waters, Geo. W. Silly, A. P. Roache, A. N. Judd, H. S. Stipp, J. A. McCane, H. L. Jessen and P. J. Thompson.

SENATOR STANFORD does not allow the use of overchecks on his horses at Menlo Park because they torture the animals.

CLOVER CREEK FALLS IN THE SHASTA REGION.

THE DAIRY.

Keeping One Cow.

Pacific Rural Press.—G. H., in the *Rural Press* of June 1st, asks for some hints "on the milking and keeping one cow." A dozen readers of the *Press* might answer his questions, and each give a different one. When I commenced keeping a cow, I asked a number of my former acquaintances for information on these points, and each gave me a different answer. I made a note of all they said, and with some ideas of my own, I adopted the following plan, and my four years' experience has proved satisfactory to myself, at least.

The selection of a cow for family use is of great importance. There is as much difference in cows as in people. It is not every man who can make a speech, or has brains enough to run a business, and it is not every cow that carries her good looks on the surface that gives the best quality of milk, or makes the most butter. When you buy a cow, don't go to a large ranch or employ an agent. The former will sell you his poorest stock, and the latter only works for his commission. Make yourself thoroughly familiar with all the points of a cow, and in your selection use good judgment and sound common sense. A good family cow has a long face, wide between the eyes, the eyes clear, bright and expressive, and placed a long way below the horns. She should have a large muzzle, a slim neck, and a bright yellow skin, especially inside the ears; the breathing should be regular, the back and abdomen strong, the udder wide where it connects with the body, the teats squarely placed, tail slim, and the fore legs shorter than the hind legs. When milked, the bag should give way and become limp and soft when the milking is finished. A cow with a fleshy bag is not a good milker, and her bag is apt to become badly caked when she is fresh.

Feeding the cow—Two quarts of bran, one-half pint of middlings, and few carrots or beets cut up in it morning and evening. Be sure to scald your bran. When you get up to build the fire in the morning (of course you don't let your wife do it), put on a kettle of water and let it come to a boil, then pour it on your bran. Be careful not to give more than half a pint of middlings at a time, for it might founder your cow (I speak from experience); also give her an apple-box full of chopped hay. A hay-cutter (one worth \$10 will answer) is a necessary appendage to keeping a cow, for the sake of economy. A cow will eat only so much, and if the hay is long she will waste more or less of it any way.

In dry weather, when there is no grass, two or three gunny sacks of green feed a day will help to keep her in milk. Sow corn and barley in drills, about August or September, and keep it well irrigated until the rains fall. A patch of barley thus sowed, and irrigated, say 50 by 100 feet, will keep a cow well. From my little patch I get from three to four crops during the season, by irrigating as fast as I cut it.

Never sit down to milk without first speaking a pleasant word to your cow. If you are in the habit of it, she will always look for it. If your cow should step aside, or raise her foot when you are milking her, because you happen to give her teats a wrong twist, or should happen to flop her tail in your face, to drive away some stray fly that is annoying her, don't take a club and hit her over the head with it, and yell at her as if she was a wild beast; nothing will sooner ruin the disposition of any cow than such treatment; besides, she might pay you back by holding up her milk. Speak kindly to her, call her by name, and let her know that you are her friend, and she will prove a true friend to you.

Keep your cow clean. A cow takes kindly to a nice brush, and a good brushing of ten or fifteen minutes every morning (and no one knows how much dust and dirt will come out of a cow's hide till he has tried it) will not only add to her good looks, but will keep her healthy, and also add to your milk and butter account.

As to what an average cow ought to give is a hard question to answer, as no two cows are alike. I have what would be called an average cow. Besides what milk and butter we use in our family, of which we keep no account, I have sold in the last six months one hundred and twenty pounds of butter for which I realized \$30.85, and also \$18 worth of milk, making a sum total of \$48.85, and my cow was not fresh, either. The gentleman from whom I purchased my present cow told me that from April, when she became fresh, till the middle of August, when I bought her, he had sold \$50 worth of milk, which would make a sum total of \$98.85.

With a good hay-cutter and using every time you feed, a ton and a half of hay for the year will be sufficient, providing you have some pasturage during the winter months—otherwise, two tons.

I prefer wheat hay, as it is considered best for milk; next to that, wheat and oats mixed.

A cow should not be confined in too small a yard, as she needs exercise.

I do not think of any more suggestions at present. If G. H. can think of anything more he would like to know, I will try and help him out. I don't pretend to be an expert at the business, and what I have written is simply derived from my own experience.

We (which includes the good wife, for what man does not owe all that he is and all that he

is worth to the advice and good judgment of his wife?) keep a cow, not only for our own comfort and benefit, but to make her pay her own way.

By carefully following the suggestions which I have given, she has afforded us a handsome profit, besides a great deal of satisfaction.

ROGER CONANT.

Santa Cruz, June 18, 1889.

[This is an admirable paper. What can other one-cow men or women add from their experience? The subject can be profitably pursued.—EDS. PRESS.]

Cheese-Factory Rules.

The stockholders in the Hanford cheese factory have adopted the following rules to be observed in transacting the business of the institution:

1. Milk shall be delivered at the factory clean and sweet every morning (Sunday mornings excepted), and not later than 8:30 o'clock. It shall not be skimmed or watered, but shall be strained at home when put into the carrying cans.
2. Carrying cans shall be thoroughly cleansed every day by being first well washed with warm water and a very little soap and then scalded with boiling water and put where the sun can shine upon them.
3. An auditing committee shall be appointed whose duty it shall be to keep themselves informed concerning the general business of the factory so as to be able at all times to give such information to the patrons and to audit the cheese-maker's accounts. They shall also constitute a grievance committee, and should any patron or the cheese-maker make complaint of any grievance, they shall make investigation and adjustment as they deem proper.
4. The cheese-maker shall receive milk every morning (Sundays excepted), and he shall weigh each patron's milk by itself and give credit for the weight and keep a record of the same, which shall always be open to the inspection of all patrons. He shall make the milk into cheese, and if any poor cheese is made through his neglect he shall take such cheese and pay for it the same as the regular price for good cheese.

BRITANNY BUTTER.—The British Vice-Consul at St. Malo, in his report on the agriculture of his district for the past year, states, "for the benefit of agriculturists in general," that the Breton peasants make all their butter from sour milk. The milk, as drawn from the cow, is emptied into a large earthenware jar, and allowed to remain, in the summer, till it is sour. In winter it is continually warmed at a moderate fire until it has turned. The whole contents of these jars are emptied into a churn worked by hand or horse-gear. The butter from this, if properly handled, is as sweet as that made from cream in the usual manner. "This would tend to show that very unnecessary trouble and expense is incurred in England in butter-making, the Breton system being simple and requiring little or no outlay."

THE STABLE.

Percherons in Lake County.

EDITORS PRESS:—Your correspondent was greatly surprised to find one of the leading draft-horse breeding farms of America away back over the hills in Lake county. Who says climate has not a money value when it brings such enterprises into a country? The enterprise was started at a beautiful suburban stock farm fourteen miles west from St. Louis. As Mr. Collier's health failed there, travel in search of a balmy climate resulted in the purchase of a house on Clear Lake and naturally the horses were forwarded. What could Capt. Collier have afforded to pay if he could have had the climate there that he has here? In other words, what would he give here in Lake county climate for a place with as good land and improvements so near to a large city and so well advertised as his old home?

There the breed is known and appreciated, and the colts are in steady demand. They find about as ready a market for grade Percheron colts as for steers, the cost of producing less than twice as much, and the price from three to four times as high. The market value of grades, based upon their usefulness, is the foundation for value of thoroughbreds everywhere. On this basis Percherons have a steady market all through the Mississippi valley, and Mr. Dunham, the great importer, has been able to build up his colossal trade and sometimes to sell as high as seventy thousand dollars worth of horses in a single day. To this herd Mr. Collier went for his foundation stock, first selecting from the catalogue 35 of the best pedigrees, and from that 35 he chose 15 for individual merit and bought them for \$19,600 cash, and certain reserved privileges of breeding which would figure up about \$2500 more. Of this purchase he has thirteen grand brood mares, all registered in the Percheron stud-book, both in France and America, and the produce of such noted sires as Brilliant, Success, Vaillant, Coco and Favori. These are the most noted horses of the breed. Brilliant's blood predominates, and besides having been made famous by Rosa

Bonheur's pencil, he is generally supposed among Percheron breeders (who do not own a rival) to be, for pedigree, style and action combined, the best Percheron that ever lived. Secretary Judson, of the Minneapolis State Agricultural Society, told the writer that he had seen Brilliant clear the ground by six feet when jumping in play as they led him from the stable. Capt. Collier has been driving some of his colts, only partially broken, at a 12 mile an hour gait. In following one to Upper Lake the writer had to urge his driving horse, of thoroughbred stock, into a trot every few rods to keep up with Francisco's walk.

Of this famous herd the four-year-olds are by Brilliant 1271 (755); three-year-olds and two-year-olds by Cesar 3526 (601); one-year-olds by Monarque 5149 (2428). All told, there are now 41 thoroughbreds either registered or eligible and to be entered when of proper age.

A Home Market.

As Capt. Collier is by no means an old man and counts himself a fixture here for life, he has wisely determined to build up a home market and to begin with has put his prices so low that buyers here can save from \$500 to \$800 in cost of sire laid down at their ranch. Nor is this the only advantage, for in buying here they get a horse that is acclimated and avoid a large part of the risk of transportation. He will be very glad to duplicate prices of Eastern breeders with animals of equal worth. Capt. Collier has not yet built upon his own place, but with his family is occupying the beautiful villa of the Rodman Bros., where they have the finest lake view to be had on its whole shore. Two of these gentlemen are graduates of West Point and one of Yale, while near them live Chas. Hammond, G. G. Hammond, Jr., and Wm. Edmonds, all graduates of Harvard '83. With a few more accessions to their colony they might revise the old university regattas on a far more beautiful lake than the old course, and I presume they still retain their old-time enthusiasm for the red of "Fair Harvard" and the blue of "Good Old Yale."

By contrast Capt. Collier has lately bought from that old friend of the Rural, W. C. Myers, of Ashland, Ogn., a pair of Shetland ponies. His friend, Capt. Rodman, has a trio of Java ponies, lately imported from Australia. These are smaller than the Shetland even and built more like trotting horses. The stallion weighs about 400, but feels as big as any horse. In bringing him from Ukiah (30 miles) he was too playful to lead and unbroken to drive. So they had to ride him home, and with a man weighing 150 pounds on his back he was as full of play at the end as at the beginning of the trip. To see him you would think it no more than fair for the man to carry him half the way. If all are as hardy as this, no wonder they are in common use in Java.

A Miniature Stage-Coach

Is on the program. When Captain Collier has time to train the ponies, he means to have a little Concord coach built to match, and then let the children load it up and drive to Lakeport. They are as bright-eyed a crowd of young folk as you often see, and it would not be strange if they sometimes visited Highland, Saratoga, Blue Lakes, Soda Bay, or even Bartlett, in their drives, as all are within driving distance. Our first choice would be to return to boyhood if we could hold the ribbons on that outfit, and the next to have a picture of it for the Rural to show our other boys and girls what fun they have up among the lakes and mountains.

A Great Loss.

Cesar 3526 (601), whose picture appeared in the Rural some time ago, weighed 2040 pounds, and had a great record in the prize-winning, first as a two-year-old in France, then at the World's Fair in New Orleans. At the great St. Louis Fair of '85 he not only took first in his class, but was pronounced the best horse on the ground and the finest draft horse ever shown there. When a little more than four years old, he died of heat apoplexy. Twelve of his get owned by Capt. Collier and a few by Mr. Dunham are all the Cesar colts that can be had. He was a wonderful horse.

Lack of Appreciation.

In talking with other farmers of Lake county, they did not seem to realize that these horses amounted to much. They thought they were too big to travel over the hills, were not fast drivers, etc. Some of Capt. Collier's neighbors have actually clubbed together and contracted for the service of that scrub horse whose owner would bid lowest for their united patronage.

They forgot that they are raising horses to sell and that there is about as steady a market for horses weighing 1300 pounds and upward as for mules. No danger but there will be enough small horses to drive over the hills. For logging teams, for heavy drays, for fire-engines and heavy omnibus horses they want the strength of four horses rolled up in two.

No matter how good a little horse may be, it is no use to hitch a pair of them to a truck where they are expected to draw a regular load of four tons over the cobbles. It is the same way with the twenty passengers and baggage that go on the big bus, and if one of the big fire engines wants to be on hand first we don't know how they can do better than with a pair of broad-chested, flat-limbed, round-barreled, short-backed Brilliant horses, weighing nearly a ton apiece, and all horse at that. Bred to the common small mares of the country, they are liable to get a colt weighing 1300 instead of 900, and that makes a great difference at the

end of a day's plowing or in getting up a hard grade, or through a soft stretch of adobe road.

It would be a pleasure to describe some of the grand animals of this herd, but there is no place to stop. It would be too tedious to name all, and there are not adjectives enough in our language to go around. One interested in such horses will send for a catalogue and then visit the place. There will be some of the horses at the State Fair and a far better showing when the new railroad shall have removed some of the difficulties in taking them to Sacramento. Mr. Rodman has a standard-bred trotting sire, said to be a worthy rival of Electioneer, and a fine lot of high-bred brood mares. He was away at Yale attending his "Decennial" class-meeting and had no chance to describe the stock. We hope to have the pleasure of meeting him and describing the stock at another time. Any one interested in Percheron or standard-bred horses would do well to visit Lakeport, or to address Capt. Wm. B. Collier at that place. F. S. C.

HORTICULTURE.

The Muir Peach.

Its Origin Settled.

EDITORS PRESS:—After several months of delay, I am happy to be able to give the public the true historical facts concerning the origin of the Muir peach. I feel confident that the readers of your excellent paper will be pleased to know that the Muir is a genuine California seedling and that it came from the Crawford variety.

It seems very fortunate that Mr. Thompson of Vacaville pitched into the Muir. Had he not done so, I should never have taken the pains to hunt up its true history or origin. The letters below will explain why Mr. Thompson could not follow the trail of Pool's Late Yellow from Mr. Wolfekill's to Mr. Muir's ranch. In conclusion, I trust no hard feeling exists between Mr. Thompson and myself growing out of the controversy, and I am glad that it has so happily ended. G. W. THISELL.

Winters, Cal.

Letter From John Muir.

Mr. Thissell—DEAR SIR:—In regard to the origin of the Muir peach you speak of, I must say that I never got any buds of Sashel Wolfekill, or of any one else, or ever budded any trees. The fruit in question was on the place when I bought it from Mr. Stewart. You are at liberty to have this statement published if you so desire. JOHN MUIR.

Pampa, Whitman Co., W. T., Feb. 9, 1889.

Letters from J. M. Stewart.

Mr. G. W. Thissell—DEAR SIR:—Yours of October 28th at hand. Contents noted. In regard to those peaches, they were all seedlings. I had no budded peaches on the place. Those seeds were planted in the spring of 1866 and in the winter of 1867. They were transplanted, and in the summer of 1868 they bore fruit for the first time; the best or choicest one was growing along the turn row or road running west from the house. In the spring and summer of 1869 I gave those trees extra care by thinning the fruit and summer-pruning, and every one that sampled the fruit said that they never before had tasted such fine peaches. There were some parties down from El Dorado county that told me they never in their life had tasted such fine peaches as those.

Those yellow freestones were seedlings from the Early Crawford variety. The cling and some white freestones I obtained from Jasper Ogle, who joined ranches on the west. They were all seedlings; he had them in nursery rows and I dug them up in the spring of 1867. I sold the place to John Muir in the fall of 1869; gave him possession after the first of December, 1869. Mr. Muir told me after he moved to Lake county, where I was at his house, that he thought he had raised the finest peaches from those trees that were on the place when he bought it of any in the State; at least they were pronounced so by fruit-growers and packers.

This statement I am willing to certify to before any magistrate, and have no objection to it being made public. J. M. STEWART.

Walnut Ranch, Nov. 20, 1888.

Second Letter From Mr. Stewart.

Mr. G. W. Thissell—DEAR SIR:—Your favor of 7th instant is at hand and contents noted. In regard to your inquiry about the seeds or pits that those peaches grew from at the date that I wrote you about first, I made a practice of saving seeds from choice peaches or plums, and I frequently bought peaches from a German peddler, whose name was Reester, who bought chickens and eggs and took them to Sacramento, and on his return would bring out fruit to any one wanting it. Another vender of fruits was an Italian or Portuguese. He also brought fruit from Sacramento. But by whom those peaches were grown, I know not, neither can I swear positively which of those peddlers sold me the fruit, but to the best of knowledge and belief it was the German Reester. Yours truly, J. M. STEWART.

Fillmore, Dec. 17, 1888.

RECIPE FOR AXLE GREASE.—An excellent home-made axle grease is said to be made of two parts tallow, two parts castor oil, and one part of pulverized black lead.

POULTRY YARD.

My Neighbor's Chickens.

Of all the nuisances that make
A rural life accursed,
My neighbor's chickens take the cake
For being just the worst.

I rise betimes to plant a bed;
As soon as I'm away
Those hens, by the big rooster led,
March in and spend the day.

And when I hasten home at night
To see my labors crowned,
Those chickens, with a cyclone's might,
Have scratched my pretty ground.

My wife the baby leaves alone
To shoo those hens away,
But as she cannot throw a stone,
They laugh at her and stay.

Around my house is little seen
But dusty holes and dirt;
They eat the grass before it's green
And all my flowers hurt.

My neighbor has a garden, too,
And keeps it looking fine,
For he has trained his pirate crew
To fly right into mine.

In case I shoot the feathered plagues,
I go to jail, alack;
If in my yard they drop some eggs,
My neighbor wants them back.

Beneath my window ere the dawn
His rooster comes to crow,
Till I, half crazy, seek the lawn
And chase it with a hoe.

I live in strife and misery,
Because my neighbor tries
To handle chickens that should be
Upon a farm of size.

—H. C. Dodge, in *New York World*.

Death Traps.

EDITORS PRESS:—This is an excellent time of the year for the poultry keeper to have a watchful eye open for chicken death traps. It does not pay to go to all of the expense, time and work of getting a nice breed of chicks up to the feathering-out stage of chickenhood only to have a thrifty cockerel or pullet accidentally killed. Nothing is more exasperating in poultry raising than this, and regrets are vain after the deed is done. Although it is not always possible to guard against such an untimely taking off of the feathered youngsters, as some of them seem determined to run into danger, still the ordinary death trap is easily made harmless. A pail, tub or trough, half full of water, into which a chick occasionally plunges is a common peril seen standing innocently around the stable or dooryard of the ranch. If the vessel is brimming full of water, or if there is but little in it, the unlucky chick may manage to struggle out, but usually the little thing drowns surprisingly quick. An open-air barrel is a most deadly pitfall. In its lower depths many a too eager chick has perished miserably. One such, to my knowledge, caught every one of a fine brood of thirteen chicks. It was an unlucky number to be sure, but nevertheless the barrel should have been provided with a cover.

If water is left standing in troughs, etc., where chicks are liable to tumble in, put a board, or a brick, or anything, into it so that the victims can reach it with their feet, and they will not drown. It is only when they cannot touch bottom of some sort that they flutter in vain. Even so simple and apparently harmless a thing as an ordinary two quart tin pail two-thirds full of water, put out especially for the chicks to drink out of, is dangerous. A downy toddler perches on the edge, loses its balance and pitches in. Its feet cannot reach the bottom of the pail nor its head the top. It is a death trap.

The pig pen is another snare for the unwary. Chickens disappear mysteriously and the cat, or the dog, or rats, must be guilty. The pigs are often the last to be suspected, while really they are the only culprits. Once they get a taste of tender chicken flesh and they constantly watch for more. Greedy, cunning, and quick as any cat in snapping up its prey, a chicken-eating pig will decimate a young poultry flock in short order. It will pay to make the pig pen chicken-tight with wire netting or laths.

Even so simple an arrangement as two fruit trays, standing on edge together by a fence, trapped a fine chicken of mine the other day. Into the narrow space between the trays the little fellow pushed his way, apparently bent on committing suicide, but probably after flies or bugs. It could go only about half the length of the tray, and in struggling to go on it wedged its body in so that it could not turn to go back, and so it died before any one knew that it was caught in the queer trap.

In keeping poultry for profit one should aim to get all the money there is in it. It is, after a little, less trouble to be cautious than careless. No one really does the necessary work about the poultry-yard so easily as he who does it right. "A penny saved is a penny earned," and though the loss of a young chick now and then may seem trivial, it is preventing just such small losses that makes the business profitable in many instances. It is all well enough to sit down with pencil and paper and figure out that if one hen returns a profit of four bits a year a thousand hens will pay \$500 at the lowest estimate.

But, possibly, at that minute some one of the thousand is gasping its last in a swill tub or water bucket. The moral is plain to poultry keepers: at this season look out for death traps!

In this connection just a word to Mr. E. H. Schaeffle, who, in the *Rural Press* for June 8, notices my observations on chicks dying in the shell. Mr. S. advice is excellent, but it doesn't apply at all to me. I was not complaining, but simply stating facts which had no bearing on my own case this season, but which were gathered from a somewhat wider field of experience, perhaps, than Mr. S. has ever wandered over. Isolated exceptional instances, such as he cites, of an incubator which hatched 240 out of 280 eggs, does not settle the question. I have tried nearly every incubator of any note ever manufactured. I have seen good, bad and indifferent hatches, and still I ask why do so many chicks die in the shell at about the 18th day of incubation? Of course each different incubator has its defender. I am arraiging not one but all machines, and on this particular point only. As to Hammoniton (not "Hammondsport") the founder of that unique community, Mr. Jacobs, has explained to me the methods followed in the New Jersey hamlet. That such methods have been highly successful, is true. But if Mr. S. thinks the Hammoniton or any other incubator has settled the "dead in the shell" difficulty, let him try it. I think he will acknowledge that the eggs are not wholly at fault; the machine is just a little to blame.

Santa Clara, Cal.

CHAS. R. HARKER.

Raising Mongolian Pheasants.

Several persons, among them a professional breeder of fancy fowls, having written to the *Oregonian* to state that it is impossible to raise Mongolian pheasants in confinement, that paper says:

This theory is proved to be false by Mr. Ferry Henshaw, of this city, who has raised two broods in a back yard right in town. At least, he has raised them so far that there is no doubt of his making a success of it. One brood is a month old, and the little fellows are so completely feathered out that their wings have been clipped. The other brood is a week younger, and they can run and fly like any thing. Out of 41 eggs, placed under two hens, 36 chicks hatched out.

Mr. Henshaw has 21 of these alive and says not one of the others died from natural causes. The old hens who claim the broods are kept in large boxes with wire netting in front, through which holes are made to let the little pheasants run out. These boxes are in a coop about 8x16 feet made of laths placed close together to keep the little fellows from flying away. The three-weeks' old birds fly around like sparrows, and when a worm is thrown to them will snatch it from one another and run and race like young turkeys. The month-old ones fight like game chickens, and all of them are so tame they will take their food from a person's hand and allow themselves to be picked up and handled.

No extra precautions have been taken in rearing these birds, and the circumstances and surroundings are certainly not so favorable as they are in the country. Mr. Henshaw thinks that his success arises altogether from feeding, and he uses some kind of a mixture which they eat heartily and thrive on. So it will be seen that Mongolian pheasants can be raised in confinement if one only knows how to feed them.

Dead in the Shell Again.

EDITORS PRESS:—I will give Mr. Schaeffle my method—if method it could be called—relating to the "dead in the shell" piece in your issue of June 8th, page 543.

With our first two incubators we had the same trouble, finding fully a quarter of the eggs in the condition he speaks of, and so we decided to experiment a little.

We bought our eggs of our neighbors, not having the fowls to breed from ourselves, and let them lie spread out on the floor for 24 hours after getting them home, thinking that the jar of the wagon might injure the germ and that quiet might restore it.

Next we added two large sponges to the machine, thereby increasing the moisture, and last but not least, we kept the thermometer one degree higher (104°) than in the two previous hatches, thinking that it might not register correctly, and the result mentioned through your paper followed, showing, I think, very distinctly that the fault was in our machine. This makes but two cases; let us hear from others.

I would like to hear from some one on the subject of allowing roosters to run with hens when the eggs are not used for breeding, as I have been thinking that they are not a necessity and only worry the hens; and again, how many hens to one rooster, when used for breeding?

F. S. BRIGHAM.

Kelsey, Cal., June 14, 1889.

DISPOSING OF GLANDERED ANIMALS.—The San Diego supervisors have this month ordered the County Veterinary Surgeon, E. Backenstose, whenever he finds a horse or mule with the glanders, at once to notify the owner or party in charge of such animals to kill and bury the same within ten hours; and if the owners or parties in charge of said animals fail to kill and bury the said animals, the veterinary surgeon is ordered to kill and bury them forthwith.

THE APIARY.

The Alley Hive.

EDITORS PRESS:—In your issue of June 15th, Mr. Norton gives a description of and recommends Mr. Alley's closed-end frames and hive, which looks very nice on paper, but is of no use for real business.

Ever since Langstroth brought out the movable frame there have been every now and then individuals advocating having the frames at fixed and regular distances, that the bees may be obliged to build their combs of exact thickness. Many systems have been tried, but the majority of large apiarists and men who follow the business for profit agree that combs as they are usually found are better handled without being fastened at fixed and regular distances. I agree that some of these systems have decided advantages, such as having the frames solid and substantially held when hives are to be moved, doing away with a honey-board, etc. But, alas! the frames are not "movable," and although thousands of such hives have been introduced and sold, nearly all of them have been laid aside. The Langstroth arrangement is the only one that stands the test of years. I can assure Mr. Norton that Alley's hive will never supersede or equal the Langstroth for this reason alone: that it places the frames at fixed distances, which will always remain a great objection so long as the bees will persist in building combs of such irregular thicknesses. If any one thinks this can be easily got along with, let him take two heavily filled combs with bulged cells along the top bars and try to make them come up together. With suspended frames this can be easily got along with. Also try to close up a hive made of so many loose pieces and try to do it quickly without killing bees. In short, try using such hives in the apiary for one season by the side of suspended frame hives, and I will venture to say that one season alone will satisfy the most ardent admirer of the closed-end frames.

WM. STRAN.

Arizona Bee-Keepers Organize.

The *Phoenix Herald* gives the following account of a protective movement undertaken by the bee-keepers of Salt River Valley. J. A. R. Irvine presided at a meeting on June 8th and J. L. Gregg was secretary. The Committee on Organization made the following report, which was adopted:

WHEREAS, We, the bee-keepers of Salt River Valley, find that owing to the want of organization and concert of action (for united we stand and divided we fall) we are unable to raise honey and bees for the present prices offered; and

Whereas, all other trades and pursuits have united for protection against all other combinations and unions; therefore

Resolved, That we, the bee-keepers of Maricopa county, do hereby organize ourselves for our mutual benefit and protection, the said organization to be known as the Maricopa County Bee-Keepers' Association, and do hereby adopt the following constitution and by-laws for our government:

SECTION 1. The officers of this association shall consist of a president and three vice-presidents—one for Phoenix, one for Tempe and one for Mesa City, secretary and treasurer, who shall hold their respective offices for the term of one year, and until their successors are elected and duly qualified.

SEC. 2. It shall be the duty of the president to preside at all meetings of this association when present, but in case of the absence of the president one of the vice-presidents will preside, or in case of all being absent, then the members can elect a *pro tem* to take the chair.

SEC. 3. It shall be the duty of the secretary to keep a correct account of all the proceedings of the association, receive all moneys, and keep a correct account for the same, and pay them over to the treasurer and take his receipt.

SEC. 4. It shall be the duty of the treasurer to receive all moneys from the secretary, giving a receipt for the same, and to pay them out by order of the association, taking a receipt as a voucher.

SEC. 5. It shall be the duty of the presiding officer to keep order, and see that the rules are obeyed.

SEC. 6. All persons disobeying the rules and by-laws are subject to a fine of not more than \$25 nor less than \$1; provided, that they have been tried and found guilty, according to Section 7.

SEC. 7. Any member accused of disobeying the rules and by-laws must be tried by a court of three judges, appointed by the presiding officer, which court shall take all the evidence pro and con, and if found guilty, pronounce sentence.

SEC. 8. A quorum to transact business shall consist of at least seven members of this association, and in taking the vote on any subject a majority of members present shall rule.

SEC. 9. Our stated meetings shall be held on the first Saturday in each month, and called meetings can only be called by order of the president, through the secretary, by giving due notice.

SEC. 10. Any person can become a member of this association by paying one dollar (\$1) to the secretary, and by signing his name to the roll of membership, and his receipt from the secretary shall be his credentials of membership.

Signed by John L. Gregg, J. M. Cosby, W. L. Osborne, B. F. Johnson, J. A. R. Irvine, A. Graham, J. H. Broomell and G. J. Smith.

SMALL FRAMES FOR COMB HONEY.—The *Riverside Press* says that last season Griffin & Skelley shipped to New York a carload of choice white sage honey, and found difficulty in selling on account of its being put in two-pound section frames. They urge that beekeepers use the

small frames as far as possible, and not be so busy arranging to use the one-pound section, which is the popular size in the market. If the use of a properly constructed comb separator the filled sections can be put into neat and attractive paper boxes and placed on the market in the most salable shape. In this form honey will command from two to three cents a pound more than in the ordinary manner of shipping. Griffin & Skelley recently imported from Ohio a carload of these small sections, which they have disposed of to the beekeepers near Riverside.

ENTOMOLOGICAL.

Scale Insects in the Island of Mauritius.

EDITORS PRESS:—On the 14th of October, 1887, I sent specimens of the cottony cushion scale and of the red scale to our consul for the Island of Mauritius, requesting information concerning these and similar insects found upon that island; not being familiar with this subject, the consul, Mr. Thomas T. Prentiss, submitted my letter to Mr. J. M. Horne, Director of Woods, Forests and Gardens in Mauritius, and under date of Feb. 21, 1888, Mr. Horne writes as follows:

Mr. Horne's Letter.

"Dear Sir: I would have answered your letter sooner had time permitted. In regard to the subject of the inclosed letter, the 'cottony cushion scale' seems to be the same as what is known on badly kept hot-house plants in England as the 'white bug' or 'mealy bug'. We have it or a species very like it here, but it never or seldom gets into notice. Our great enemy is the large white one (the 'Pou Anglais' of the Creole French people here, the *Dortheia seychellurum* of Westwood) so common sometimes on rose bushes; and the 'Pou Blanc,' which is generally found on the leaves of badly grown canes in the dry localities in the island. The ravages of these pests are nothing here now to what they were formerly. I attribute this to the increase in the island of the ladybird, a species of *Trimera*, which preys upon them and keeps them in check. Rodrigues is infested with these pests just now; they are killing the citrus trees there, and lately I have caught a large number of ladybirds here and sent them to Rodrigues, but, of course, some years will likely pass before the result can be appreciated.

"As to the 'red scale,' I doubt if it is here. However, we have another one of the same genus here on the leaves of the cocoanut palm, which by destroying the leaves injures and kills the palm. It still exists, but is not nearly so abundant as it was ten years or so ago. I do not know the cause of this, but it may be owing to one or two things, or both; preyed upon by another insect, or destroyed by rain driven violently against the leaves by wind; this would not injure the old ones, but it would destroy and wash the young ones off the leaves, and a few good showers repeated at short intervals during say about two weeks almost clears a tree of these insects. These insects—such as the cottony cushion scale, mealy bug, etc.—have so spread now that it is impossible to say without a degree of doubt what country they are natives of. It is well known, however, that the Pou Anglais (*Dortheia seychellurum* Westwood) was brought here from Seychelles on some young palm trees that were sent from Seychelles to the gardens at Pamplemousses about 35 years ago. Its native land is therefore well known, but I know not what country the scale on the cocoanut-palm came from, nor do I know the insect, if any, that preys upon it.

"In summing up, then, I would recommend the ladybird (*Trimera*) as a cure for the cottony cushion scale, and the washing of the trees well and frequently with water from a force-pump for the red scale, and a law of the State should compel every one to make use of measures for destroying these pests.—J. M. HORNE."

While Mr. Horne's knowledge of insects is somewhat imperfect—as evinced by his confounding the cottony cushion scale with the mealy bug—yet his statements that the two kinds of scale insects—the "Pou Anglais" and the "Pou Blanc"—are preyed upon by a species of ladybird, and that the cocoanut-palm scale has been greatly reduced in numbers probably from the attacks of some kind of insect, is well worth investigating; and if an agent is sent to foreign lands to collect and import specimens of scale-eating insects, the Island of Mauritius should by all means be visited.

D. W. COQUILLETT.

Los Angeles, Cal.

BERKSHIRE SALES.—Phil M. Springer, Springfield, Ill., sends us information of transfers of thoroughbred stock reported to the *Berkshire Record*: Elen Bay 18137 by Henry P. Mohr of Mount Eden, Cal.; to Henry B. Marlin of San Lorenzo, Cal.; Stockton Chief 21217 by Austin B. Sperry of Stockton, Cal.; to Chas. A. Stowe of Stockton, Cal.; Annette 20786 and William 20791 by R. W. Carey of Macleary, Oregon; to H. W. Cottle, of Salem, Oregon; Duke II 20787 and Mollie Magee 20790 by R. W. Carey, to Wm. Fuqua of Parker, Oregon; Oregon Chief 20789 by R. W. Carey, to S. G. Reed of Portland, Oregon; Matilda 20994 by R. W. Carey, to T. D. Allen of Silverton, Oregon.

BEAUMONT has organized a board of trade and agriculture to look after the interests of the San Geronimo valley. Judge A. McCoy is president and C. M. Ross secretary.

THE strawberry crop around National is large this season. O. Walker markets about 2000 boxes per week from three gardens.

Organize That We May Be Strong.

Mr. Stephen A. Smith of Illinois at one time said: "Legislators are elected to carry out certain purposes." This is the case the Union over. Legislators are elected to carry out certain purposes. But instead, they perjure themselves, betray the trust, and sell the rights and trusts of their constituents. The interests at home are not alone those that suffer. Our National legislators betray the sacred trust. Gold and flattery dim their consciences, and they sell the interest of the laboring-man and producer to the monopolist or corporation.

It is claimed there is no law to punish such perfidy. But there is a way out of such conditions if the American people ever rise to the true level of freemen, and that is by the ballot. Men get these positions of trust through the ballot, and may they not as surely be left in the background by the same means?

We often hear the question, "Why are farm products so low?" We grant that one of the dearest privileges that may come to the American producer will be to fix the price of his products. And why may it not be? Are farmers less able to plan and know the cost of their products than other workmen? Are they less appreciative of labor? Why, may we ask, is it that other industries agree upon prices? Do our manufacturers not meet together and fix prices in their line? Do not wagon-makers, plowmen, machine-men and other skilled workmen have their conventions and fix their prices? If this is possible among other classes of laborers, why is it not possible for the farmer? Is it not worth our while to have a union of interests and come together in fraternity as well as name?

This is an age of combination, and combination will beat combination. By no other means can farmers compass this end. It is the farmers' interest to come together in the Farmers' Clubs, Wheels, Alliances, Congresses and Granges for the common purpose of self-protection. Let them here agitate a common convention whose duty it shall be to fix prices and suggest methods by which their plans may be consummated. The farmer has got to come out of his shell and plan for more than to buy; he must plan to sell. Mr. Smith truly says: "The wheels of the world will not go unless you grease them with the products of your toil."

Reforms begin among the common people, and if redress comes to the farmer, he must demand it intelligently; and before it can come he must become cognizant of the errors and dangers that surround him, and, by the light of enlarged perception, point from darkness to light and show the way.

To do this he must organize, that he may combat with equal strength, energy and strategy those combines that sap his very life-blood, as it were, and sip in his cup. While separated, isolated, he is weak. Get the forces together, concentrate the purposes, and who will question the result?

Will some of the brothers give their views upon the possibilities of a National Convention to fix the price of wheat? For, in this convention, the whole creation of producers must not enter. A convention must fix the price of some one product, a second convention, of another, and so on down the list of commodities that boast a market in the marts of the world.

One Thousand New Members.

One thousand or more new members should be enrolled in California before the first of October. There are twice that number of practical husbandmen and matrons in the State who would rejoice at having entered our subordinate Grange gates, received the sixth degree in the State Grange and become instructed in the beautiful lessons and mysteries of the seventh or National Grange degree.

Patrons, take in at once all eligible in your own families, and extend information and a welcome hand to all who are well qualified in your whole neighborhood.

THE NATIONAL GRANGE.—Encouraging letters have been received during the past week, which make it seemingly certain that the National Grange will hold its next session in California. We are very anxious to say, and that soon, that its coming is a positive fact.

Travels of the Worthy Lecturer.

No. 3.—En Voyage to Europe.

MESSRS. EDITORS:—We left N. Y. on the Anchoria May 25th, 3 P. M., bound for Glasgow. Mrs. Ellen E. Flint of Massachusetts was added to our party at New York, so we consist of five persons now. Passengers going over here want to provide themselves with warm clothing, overcoat, woolen cap for men and women, a folding-chair to sit in on deck.

Mrs. F. purchased six tallow candles to light up the dark places of our pilgrimage. I wanted to get something to make the obscure places more bright, but preferred to purchase on the other side. I thought perhaps Diogenes had found his honest man by this time, or given up the search, and would be out of employment. So I could engage him with his tin lantern and tallow dip.

Outward Bound.

We discharged the pilot off Sandy Hook about 6 P. M., with a smooth sea and fair prospect of pleasant trip. Sunday was quite pleasant. The fog began Tuesday and was quite thick. Extra men were put on the lookout, and the fog-horn was blown every three minutes continuously night and day. Then the north wind set in and blew a cold blast, nearly a gale; then the wind came from the southeast and we had a severe gale for three days. Seasickness, wind, rain and fog has been the chief topic of conversation. Persons on board who have crossed several times say they never met with a more disagreeable passage. But a very little of the time was the weather pleasant enough to sit or walk the decks.

We had a light list of passengers, but extremes as to age—one gentleman 82 years, one infant eight weeks, and all nations, Ethiopian and Mongolian.

Columbus and His Fishing Smack.

The drift of conversation outside the weather, etc., seemed to be the great feat they or their friends had accomplished or seen. One of the passengers went on extolling the great achievements of Columbus for having crossed the Atlantic in such a frail bark and his great discovery. I gave assent and thought of the splendid statuary in our State Capitol, etc. I said he was a bully boy and deserved monuments and great praise until there came on a severe blow and the ship began to heave and roll for all there was out. Soon I began to look down into the wash-bowl and take a panoramic view of my breakfast, and it changed the whole theme of my thoughts. I envy him his fame, but if he had continued to run his fishing smack in the transportation of sardines and macaroni it would have saved me some disagreeable feelings, for I probably would have been born on the other side of the great waters, or not born at all.

Entertainments.

On Wednesday, the 29th, the younger members of the cabin passengers got up an entertainment with regular written program, part in German text, of readings, recitations, vocal and instrumental music. In looking around for a chairman, I was finally selected to fill the position. Some on board found out that I was a Granger. So the fact that I was a Granger brought me into prominence once, if it never does again. The entertainment was pronounced a success, and a collection was taken up for the benefit of the life-boat service.

We had services on Sunday by a young man who was going out to Florence as an instructor in the Methodist Church. Tuesday morning, at three o'clock, we sighted land on the north end of Ireland. At six we came to a little town called Moville, and lay in the stream for one hour, when about one-third of our passengers got off. We steered away again for Glasgow, passing, as we rounded the many prominent points, green and well-tilled fields, with frequent villages. As we crossed the channel, the mainland or some of the island was always in sight.

Nearing Scotland.

We passed some beautiful country places and villages before we arrived at Greenock, the mouth of the Clyde.

Arriving at Greenock about 4 P. M., and learning the tide would permit the steamer to go to Glasgow, she took on a pilot and with the assistance of two tug-boats, one forward and one aft, to assist in pulling her around some of the sharp turns in the channel, she proceeded up stream.

There has more been done and being done for 20 miles than on any river I have yet seen. The river is not near as large as the Sacramento, yet it builds and floats the largest of ships. Its banks are walled for miles and miles, and powerful dredgers are at work deepening its channel. Some of this debris is taken to deep water and dumped, while some is put upon the land to make fertile fields. Small, sharp, swift passenger-boats are flying in every direction.

On the Clyde.

At some places the iron skeleton frames of steamboats are huddled together, and the sound of the riveting hammer is heard above the din of everything else.

Now the hills are low, green, smooth, and sloping toward the river.

Considerable timber is seen, and sleek, fat cattle are taking their ease on the green turf, or lying under the large trees. We pass Dumbarton castle on the right bank, with relics of its old fortification.

It is a cone-shaped crag, springing up from the banks of the river, of perhaps 300 feet high,

and as much or more in diameter. Its prominent historical point, as near as I can learn, was its being taken from the English by Wallace.

Glasgow, Scotland.

We arrived at Glasgow a little after 6 P. M., and after having our luggage examined by officials, went to the Waverley hotel.

I have a kind word for the good ship Anchoria that brought us safely over through storms and fog.

She rode the billows like a cork, and severed their threatening attitude as a swordsman does his adversary. The officers were gentlemanly and efficient, the cooking and supplies unsurpassed. We had fresh salmon from Columbia river for breakfast Sunday morning. The Anchor line may be a little slow in some respects, but I believe they aim to be sure and safe.

D. FLINT.

Steamship Anchoria, May 30th.

Condition of the Order.

Bro. John Trimble, Worthy Secretary of the National Grange, in corresponding with an organizing deputy in Mississippi, said:

Permit me to say, in deep earnestness and with perfect accuracy of statement, that there has never been, in the history of the Order, a time when the Grange was in a more healthy condition than it is to-day. We do not hesitate to acknowledge, on the contrary we state the fact, that in some of our lives the Grange cause—the cause of the farmer—seems dull; and the farmer seems indifferent to his own interests, but these lives are exceptional. Looking over the entire field, I see the farmer aroused to the issue, I see the Patrons, here, there, everywhere, constituting themselves, as they ought, missionaries and instructing their neighbors in the aims, objects and virtues of the Order, and thus bringing them within the influence if not within the honored precincts of the Grange. New organizations have sprung up. I have not one word to say against them, except that, so far as I can see, they have no cohesive principle in them, and cannot, therefore, control and command State and National legislation, in the pure interest of the farmer. The Grange has done this, is doing it, and will continue to do it with a power, even more powerful than in the past. The Grange is a permanent institution; others are temporary, but will do good in drawing the attention of the farmers to the importance and necessity of organization.

San Miguel Grange.

MESSRS. EDITORS:—San Miguel Grange held quite an interesting meeting on Saturday, the 15th. Bro. Rhyne, Lecturer of Paso Robles Grange, paid us a visit and favored us with some appropriate remarks. Under Good of the Order our own Lecturer, Sister Fiske, read an interesting poem that was well received.

The principal subject discussed was, "How to interest the farmers in the Grange movement." Most of the brothers and sisters took part in the discussion, and from the interest and enthusiasm displayed, I hope for good results in the future.

At present, we are a small Grange in a new but growing community, but we expect to grow with the country. We have already initiated one member, but hope to have a class soon, at the close of which we can have a regular old-time Harvest Feast and open meeting, and perhaps have Bros. Webster, Steele and others of S. L. O. county Granges with us.

These new Granges particularly need some of the older workers with us occasionally as an inspiration and to instruct all in the duties, benefits and privileges of a Granger.

There are a number of Granges here within a radius of 25 or 30 miles, and when picnic-time comes another year I hope we shall be able to have a union picnic, equal to any in the State.

Now, brother and sister Grangers, let us all work and make a rousing success of the Granges of Southern California.

E. A. F.

San Miguel.

THE OLEOMARGARINE matter is awakening great discussion now in Sweden. A bill prohibiting the importing of oleomargarine from foreign countries and placing severe restrictions upon its manufacture at home has passed the Riksdag, and there is no prospect that it will be vetoed. Its passage was advocated by the protectionists and opposed by the free-traders, both acting on general principles. The farmers on the one hand reinforced the protectionists, and on the other side, the workmen in the large cities almost as a unit opposed the bill, saying that it would deprive them of the only kind of butter they could afford to put on their bread. The farmers rejoice that the protection to which they are entitled has been given them. It is of special interest to farmers here after the sturdy fight they carried on in this direction.—*Massachusetts Ploughman.*

A. D. LOGAN, president of the Grangers' bank of San Francisco, paid our town a visit on Monday last. Many years ago Mr. Logan was a resident of Sutter county, near Gaither, and has ever since cherished a kindly feeling for the county and his old neighbors.—*Sutter Co. Farmer, June 21st.*

MEXICO GRANGE has two applications for membership on file.

Letter-Notes, Etc.

From San Luis Obispo.

Judge Steele writes June 22, 1889: *Dear Bro.:*—Yours of 17th duly received. The die (changed for seal) came all right. Accept many thanks for the promptness with which you attended to the business of our Grange. Our Grange is getting on as well as could be reasonably expected at this busy season of the year. I think we have very encouraging prospects for a large and active Grange at the Arroyo Grande. I am going to do my best to persuade all families at least belonging to our Grange to subscribe and pay for either the Rural Press or the Patron, for I believe by so doing the good of the Order will be largely promoted, as well as the interest of your invaluable papers. I have strong faith in the educational feature of the Grange work. We (P. of H.) should, in my opinion, exert ourselves to induce all the members of the subordinate Granges to become reading and thinking men and women as well as laboring. I believe the Rural Press especially is well calculated to inspire a taste and desire for the right kind of reading for the farmer and his family.

Calaveras County Prospects.

MESSRS. EDITORS:—We are on the eve of getting the first Grange started in Calaveras county. Bro. Northrup has been doing some missionary work, and has requested the members of Washington Grange to assist in organizing when they are ready, which we readily consented to.

Now, can a Master or Past Master organize a Grange without being deputized by the Worthy Master of the State Grange? If not, could not you send a commission with the name blank for Washington Grange to fill, as we want the honor for the work that we are trying to do? After the fruit festival we intend to move on the next dormant Grange, and we believe that we can set the ball a rolling.

S. C. W.

[The Master or Past Master cannot organize a Grange without appointment as a regular deputy or a special deputy for the purpose. We say, all honor to the wide-awake Patrons who have gone so far with the work of organizing, and who are desirous of rolling the work along.]

We hereby refer the matter to the Master of the State Grange, who will, no doubt, arrange things to the entire satisfaction of all concerned. Let Patrons in other parts of the field take notice of the action of Washington Grange and govern themselves accordingly.—[EBS.]

Better Than We Knew.

Bro. John Trimble, Secretary N. G., writes from Washington, June 20th, good news as follows:

DEAR BRO. DEWEY:—In the Pacific Rural Press of June 15th you say "the Darden memorial fund amounts to \$1185.95." I have receipts from good Patriarchal Bro. Saunders, treasurer of the fund, amounting to \$2280.64, leaving a balance in my hands of 88 cents, and subscriptions coming in almost daily. I know you will be rejoiced to learn that I make a better showing than you do in the Rural. If you think I don't read the Rural, you are mistaken. I do, and with pleasure and profit.

Bro. Hooper Improving.

Mrs. Edgebreiten, daughter of Bro. T. T. Hooper of Bird's Landing, notes June 24th: Mr. Hooper is improving rapidly, and can move his left leg and arm by straining a little. I think in the course of time he will be out and around. He hopes to be able to attend the National Grange, and if nothing serious happens he doubtless will. We hope his recovery will be rapid.

See the Cat?

MESSRS. EDITORS:—I am glad to see that the action of the State Board of Equalization and the county assessors together are awakening the sluggish land-user to the fact of double, treble and quadruple taxation by levying on personal property, growing crops, etc. When a farmer gets to see this he begins to see the single-tax "cat."

I note what Mr. Merrill says, and when he says the board and the assessors are violating the law he may or may not be right—according as the court shall decide—for be it remembered that not only the Board of Equalization and the county assessors, but the judiciary also, have a hand in this matter, and on the same side; vide a case on trial two years ago before the Superior Court here, in which the assessor was prosecuted for not assessing certain mortgages as ordered by the Board of Supervisors, amounting to about \$200,000, held by parties outside the county. The decision rendered held, practically, that it was at the option of the assessor to assess or not. Here was a clear case of evading the plain language of the law, and the court sustained it. The law says he shall assess all mortgages, etc., and provides for paying the assessors therefor, and they draw pay therefor; but the court says they are guilty of no crime and subject to no penalty if they do not assess even when ordered to do so by the Supervisors.

E. M. D.

Tulare, June 22, 1889.

PENNSYLVANIA has a new Grange.

Watsonville Grange Meeting and Pomona Feast.

We rejoice to learn that the open meeting of Watsonville Grange last Saturday was a first-rate success. Having a Pomona Feast and open meeting and inviting all farmers and friends of agriculture in the manner adopted by Watsonville Grange is a new feature of the times. It was an experiment which has happily materialized, we trust, in a standing example to be followed happily and profitably by many another Grange in our circle. We learn that the attendance was good and very creditable.

Bro. Pilkington of Santa Cruz Grange made one of his effective magnetic speeches. Although we have not the word for it, we have no doubt that Master Edith Z. Roache and Bro. A. P. Roache, deputy, added much by their talent to the interest of the occasion. We hope to have a fuller report of the whole proceeding.

We give the address of welcome, which was delivered in an excellent and touching manner, richly imagined by all who have listened to Sister Josie Roache's recitations at the State Grange meetings. This able address will give an inkling of the quality of the literary entertainment. The Pomona Feast we know must have been well up in the scale of good Grange "fixings." The best thing of all that we can say of the occasion is that seven or more applications for membership have already been secured, with a prospect of half as many more. Let the good work go on.

Address of Welcome.

The following is the address of welcome delivered at the Watsonville Pomona Feast by Miss Josie M. Roache:

Gentlemen and Ladies, Friends, Brothers and Sisters:

The pleasant task has fallen upon me of welcoming you to our hall and our midst. How cheerfully I respond, for my heart is swelling with joy and pride to see the bright, happy, intelligent faces with us to-day. Faces? Ah, yes:

Faces that are old and wrinkled;
Faces that are young and dimpled;
Faces that bear traces of sadness and sorrow;
Faces that care naught for the morrow;
Faces in whose depths we see trials and misery;
Faces looking forward into life's mystery.

Yet there is a link that binds us all together in one common cause, and it is the magical power of this golden link that brings us here on this bright June day. To friends and acquaintances living in our beautiful valley, but almost strangers (for we see you so seldom), how glad we are that you have made an effort to be with us on this occasion. And we welcome you in the cause of agriculture and in the cause of humanity to our gathering. To you, worthy officers of the State Grange, and our worthy brother from Santa Cruz, and other visiting Patrons that have traveled the weary mile in the cause you love, and in the interest manifested in a sister Grange, need we tell you that you are welcome? Did not you feel in the Patron's grip, in the look of the eye, in the words from the heart, that you were in a Grange home among those who respect and love you? Ah! yes, yes! we hear you answer. And to you, who have just been newly made "Patrons of Husbandry," and are only beginners in the great web to be woven—who are still mystified in the labyrinths of its great workings and undertakings—who almost tremble and wonder, "What it is that comes next?"—shall we lift the veil?—do you see our faces—don't you hear our happy voices saying again and again, Welcome, welcome to our Order, welcome to our shrine, where we pledge fraternal love—sacred and divine. In the name of our glorious Order—in the name of Watsonville Grange—in the name of the people of Pajaro valley—in the name of the brothers and sisters of our golden chain—we extend to you all a most cordial welcome. Open your souls and hearts, catch the gleam of sunshine and happiness, if only for one brief day, carry it to your homes and let its influence be felt there long and lasting.

San Jose Grange Discusses Prunes.

San Jose Grange met at the usual hour on Saturday, June 22, with O. F. Alley as presiding officer and H. A. Brainard as Secretary.

The Secretary presented for examination some samples of prunes cured in San Francisco by the French Prune-Curing Company, in imitation of the real French product. He also presented a very fine late dark cherry from the Quito olive farm, from scions sent two years ago from Italy. It had very firm flesh and seemed admirably adapted to shipping. Though it resembled in form some other cherries, yet its quality was such and its size so large that almost all united in declaring it a new variety to this country, and a very desirable one.

The prunes were examined and tasted by the members, and nearly every one seemed to think they must have been artificially colored and the natural flavor somewhat destroyed by the process to which they had been subjected.

Mr. Wingate expressed himself as decidedly opposed to any method of curing except preserving the fruit in the quickest and simplest way.

The Secretary said it was not entirely a

question of the best way of preparing the fruit, but of preparing it for the market which you will seek. If you are trying to compete with the best French prunes, which are eaten very largely as a confection, without stewing, you must imitate their product as nearly as you can. The taste for the partially cooked French prune is an acquired one. People have been in the habit of eating the sun-cured raisin for the last hundred years, and it is well known that it undergoes a sort of fermentation while curing which must really make it less wholesome than a raisin dried in a day or two in a drier. Yet people have learned to love the old raisin taste, and will not give way to a different fruit, even if it is better. It is, therefore, best to prepare such a portion of the crop as is to compete with the French in the French method.

Mr. Feely said it might take a long time to educate people to like California-cured prunes the best, even if they were better. He did not think the prunes shown were equal to some he had seen and tasted which were prepared by Mr. Leib. He thought we should investigate and find out the best way.

Captain Dunn said he believed it was best to go right on and prepare them in the way which really made the best fruit, and they would win their way into any market. He said that years ago there was no pork in the world which stood as high as the Irish pork, and he had carried cargoes of American pork over to England where it was repacked and branded as Irish and returned to America to be sold at a price which paid for the double voyage. Yet the packing-houses at Chicago and Cincinnati had kept right on packing pork in the American way till this pork was now recognized as the best in the world. We have seen American cheese sent to Europe and returned as the best Cheshire, and yet in time the American cheese won its way to be the best in the world. He had seen the time when a Westphalia ham must be procured when something nice was wanted, but now an American ham suited the most fastidious. So it would be with the California prune if we kept on putting them up in the best way and taking pains to have them neat and in the best order.

The question of co-operation came up, and it was decided to invite a gentleman who had been in charge of a co-operative store to address the Grange on that subject. The theory was well enough, but we needed some practical knowledge on the point.

The attendance was good and the members seemed to enjoy the meeting very much.—*Mercury.*

Literary Committee.

As before mentioned, last year's committee has been reappointed for the coming session of the State Grange, viz.: W. Walter Greer, Sacramento Grange, chairman; Sister M. B. Lander, Alhambra Grange; Sister S. H. Dewey, Temescal Grange; Sister W. Johnston, Franklin Grange; Sister S. J. Cross, Roseville Grange; Sister E. Z. Roache, Watsonville Grange; Sister C. E. Kinney, Temescal Grange; Bro. Norman Alling, Stockton Grange; Sister N. Alling, Stockton Grange; Sister T. W. Maples, Tulare Grange.

Brothers and sisters, it is time to be at work for the meeting at Sacramento, October 1st. We trust that the work of the committee will be ably assisted by many of our best thinkers and writers without waiting to be called upon.

We advise the committee to be active, however, and stir up the dormant pens and voices that all may be well prepared for the coming literary feast.

Washington Grange.

MESSRS. EDITORS:—At the meeting of Washington Grange June 22, 1889, it was resolved to have a free exhibit and fruit festival August 23d, in the town hall at Clements. The exhibit will be in readiness on the 23d, at 3 P. M., and close at 5 P. M.; open at 9 A. M. on the 25th for inspection by the public. At 1 P. M. literary exercises commence, after which all will be invited to sample the fruit. Every one is cordially invited to be with us on this occasion.

SAM C. WATERS, Sec'y.

"CRESTON GRANGE."—Bro. J. V. Webster has made application to Temescal Grange for demits for himself and three other members of his family. He expresses their regrets at withdrawing from the Grange of which he was a charter member, and has been so long faithfully affiliated with. As a corner pillar of that Grange, all Temescals are sorry to part membership with Bro. W., also Sister W., son and daughter, but they still rejoice in the fact that he has long been and still remains a strong pillar of our State jurisdiction; and further, with others, will soon institute a new and vigorous Grange at Creston, his new home in San Luis Obispo county. He expects Creston Grange to be ready to organize on or before the first of September next. Really, it looks as if San Luis Obispo county is destined to become the "banner" Grange county of California unless the Patrons in some other counties look well and early to their laurels.

WORTHY MASTER OVERHISER informs us that he was unable to attend Watsonville Grange last Saturday as anticipated. He is rebuilding his warehouse and irrigation works.

National Lecturer's Bulletin.

Bro. Mortimer Whitehead, Worthy Lecturer of the National Grange, takes up the subject of agricultural statistics in his latest bulletin, as follows:

Farmers in the past have in their business depended mainly upon muscle and too little upon brains. They have worked hard to produce a crop, but have left the business part of its distribution and sale almost entirely in the hands of others. The Grange is slowly, but surely, teaching the farmer that it is just as much a part of his business to sell a crop as it is to grow it, and that he should have as complete a knowledge as possible of all the conditions that affect markets at home and abroad.

Go to a leading manufacturer of wool, iron, or of any article in general use, and he can—mainly through statistics gathered through his organization—tell you the whole business in that line with almost as much minuteness as he can the details of his personal plant. How many are engaged in the production of the same article as himself, amount of capital invested, the "output" of each and all collectively. The supply and the demand, the home and the foreign demand, percentage of tariff protection, average wages, etc. In fact he is thoroughly posted, and his knowledge is power to advance his individual interests.

How many farmers have placed themselves upon an equal footing with the manufacturer or merchant in the statistics of their business? How many farmers can tell the number of farms in their own county, the average acreage of any leading crop, number of head of cattle, sheep or hogs, the probable supply and the probable demand; or even the cost of production upon his own farm? In the old way did not ninety and nine "go it blind" and trust to luck and some one else in these important business matters?

The one great central idea of the Grange has always been education. Helping the farmer to use his brains as well as his muscle. "To systemize our work and calculate intelligently upon probabilities." And as muscle united makes a stronger team, so brains united give a strength and power to farmers that they never knew before.

The practical application of one of the declared "purposes" of the Grange, viz.: "To systemize our work and calculate intelligently upon probabilities," has already brought forth many good crops, as in the purchase of farm and farming supplies in a local way, or the sale of some staple crop in a better market where our State organization has prevailed, as in the sale of the peach crop of Delaware and New Jersey; the wheat of California; the maple sugar of Vermont; potatoes in Maine; hogs and cattle in the Western States. It has been done, it is being done, and will be put into practice more and more, as farmers learn the advantages offered them through that complete organization that has stood the test of 22 years—the Grange.

But even into a still broader field have farmers of the Grange lately extended their inquiries with a view to a more intelligent "calculation upon probabilities."

At the last session of the National Grange the following, introduced by Leonard Rhone, of Pennsylvania, was adopted:

Resolved, That the Commissioner of Agriculture be requested to inquire, through the consular system of Government or otherwise, what foreign nations are now importing agricultural products, and ascertain what possibilities there would be to establish trade relations for the disposal of our surplus agricultural products; also to inquire what agricultural products are now imported that our country and climate are capable of producing, and lay the same before Congress, and publish for the information of farmers.

Acting upon this, Hon. J. M. Rusk, Secretary of Agriculture, in the May report of the Department upon the condition of the crops—"Report of the statistician, New Series, Report No. 62"—takes up the subject, and in some twenty pages of valuable tables and statistics gives our farmers much upon which they can think and study, and "calculate intelligently upon probabilities."

This is an excellent beginning of a great work in the interest of agriculture, and if followed up by intelligent action of organized farmers in the Grange, co-operating with the Department of Agriculture, must result in great good to agriculture.

The Lecturer of the National Grange suggests that members of the Grange and farmers generally send at once to the Department of Agriculture—address Hon. J. M. Rusk, Washington, D. C.—and get a copy of the May report—No. 62—as before noted and read and study it carefully. Let Subordinate and Pomona Granges make its facts and figures a matter of discussion at their meetings. Learn what other countries are producing, what their surplus crops, what they need, what the demand, and then we, with our vast territory, knowing the "probabilities" can "calculate intelligently," and place agriculture in a business way somewhat upon the same footing as other great industries.

PAST POMONA, Clara Deming MacLise, gave birth to a second daughter, last week. She has been dangerously ill during the present week in Oakland, and anxiously attended by her parents, Bro. and Sister Deming of Vallejo. It is now hoped that she will recover.

Intelligent Voters' Appreciation

News from the State.—I am gratified in your issue of June 15th that Mrs. Flora M. Kimball had been elected school trustee for National City, received 112 votes and was the first woman elected to that position in the State. Allow me to correct slight errors. Mrs. Kimball received 121 votes out of 191, there being four candidates, and is not the first lady elected school trustee. Mrs. Flora L. Thomas served one term as trustee in Alameda district, a few miles farther south, and was defeated by one vote at the last election. Mrs. H. H. Thompson, of the County of San Bernardino district, has just been elected school trustee. The San Diego bay region is peopled with progressive men, and they show their appreciation of intelligent working women by their votes. Most of them regret that the women cannot vote, too.

—S. F. Bulletin.

[Mrs. Flora M. Kimball was for some years editress of the Matrons' Department of the California Patron. She was also a member of National Grange, and takes much interest in the Grange cause.]

Sediment in Suspension.

One-eighth of one per cent seems to be a small proportion of sediment to be held in suspension in water, but it makes a liquid as muddy looking as the Sacramento river in flood. A single hydraulic mine in Nevada county, when worked by the "elevator" process and dumping its heavy debris into a receptacle prepared for it, sends down from that basin annually about 500,000 cubic yards of sediment thus held in suspension. That would cover more than 300 acres of land a foot deep with slickens, or it would fill up the Sacramento river a foot deep for say about five miles. Pretty good for one mine worked by a process which professes to retain its debris. A number of mines worked by that process would make very serious changes either in water-courses or agricultural lands, or both. Yet this process is permitted on the ground that it does no harm. It looks like a bad condition of affairs at the best, but there is credible authority to the effect that this process at times gives way to the more primitive method of running the debris away without subjecting it to the "elevator" process. It is reported that when anti-debris "spies" or Government officials are around, the "elevator" is used; but it is expensive to raise dirt 90 feet by water-power, and when there are no persons in the vicinity to ask awkward questions, the "elevator" takes a rest. These facts will probably be brought to the attention of the Government when the report of the commission, appointed by Congress to investigate this question, is received. But in the meantime, what are our local authorities going to do about it? —S. F. Bulletin.

WHAT CRIMINAL LAWYERS COST.—The Visalia Delta says: Several days ago a stranger by the name of James Wilson stole a small clock from Andrew Belz, proprietor of the Pacific House here. After his arrest he desired to plead guilty, but his attorney advised him not to do so. A special venire of 20 jurors was ordered. They were called this morning. Their mileage averages nearly 30 miles each. Thirteen of those jurors live 30 miles and over from Visalia, the greatest distance being 56 miles. The first day's expense to the county on this miserably insignificant case was \$183.75 for jury fees alone. The clock is worth about \$250. Tax-payers, how do you like such things?

THE GRANGE IN INDIANA.—Bro. M. Truesler, Master of the Indiana State Grange, reports to the Grange Bulletin as follows: The outlook in Indiana is certainly encouraging. Within the last three months we have had the pleasure of welcoming back into the Grange fold four counties that were not entitled to representation at the last session of the State Grange. It does seem to me that if each officer and deputy would be willing to give a little time and labor in the good work, Indiana must soon come to the front, for farmers everywhere are asking, What shall we do to be saved? The answer should be repent, and join the Grange.

CINCHING THE SADDLE.—Gov. Francis of Missouri has signed the "Newberry" bill, which prohibits music, cards, dice, billiard tables, pool tables, bowling alleys and boxing gloves in saloons. The bill goes into effect July 1st. This is the most stunning blow the saloon has ever received in Missouri. A forfeiture of license and the closing up of the place is the penalty of a violation of the law.

We should like to hear from the Granges in Nevada, Plumas, El Dorado, and Placer counties, which seem to have been more than usually quiet lately. We hope correspondents in other counties will take the hint. Call out some vigorous meetings, and give us a good report to repeat around the circle, and inspire new life in all quarters.

BRO. A. P. ROACHE, we see, has been appointed by the Governor as one of the Agricultural Board of his district. A splendid appointment.

THE TEXAS STATE Grange Fair is receiving large attention from the Patrons of that State, and a grand exhibit is expected.

Our Flag.

[These patriotic verses, written by Mary A. Griffin and delivered at the Decoration Day exercises of the Grass Valley public schools, well befit the anniversary of Independence Day also.]

Flag of our country! so gracefully turning,
Floating and catching the breeze in each fold;
Waving to-day o'er our temple of learning,
How many a song its spirit thy glories untold!

Breathe we such love as the soldier who bore thee
Onward through shot and shell, fearless and proud,
Only to fall on the battle-field gory,
Pulseless and stark, with thy stripes for his shroud?

Lived we in days when our stalwart young nation
Struggled, nigh hopeless, 'gainst tyranny's tide?
Saw we the hour when, thro' war's desolation
Thou wert borne safely to victory's side?

Sings not the world of thy rescuing mission?
Needs there a voice to proclaim what all know?
Need the freed slave paint the heart-cheering vision
Seen in thy folds twenty-six years ago?

Need we tell how the late cyclone terrific,
Sinking the war ships in Apia's bay,
Saw thee unfurled o'er the dark, drear Pacific,
Only to mirror our sailors' dismay?

How cheer on cheer pierced the storm's wild com-
motion,
Ship answering ship when "our flag" burst in
view?

Doomed were the many to graves in lone ocean,
Yet, e'en in death, they were patriots true.

Hail, dear-loved flag! List, our glad exultation!
In this, thy "growing year," fair eighty-nine,
Forty-two States in our Union hold station,
Four bright new stars in thine azure now shine.

O'er soldiers' tombstones fond watch thou art keep-
ing:
Blood-red, snow-white, blue as heaven o'erhead;
While children yearly beneath thee are heaping
Blossoms, tear-gemmed, on the graves of our dead.

Crave not our eloquence—history's pages
Praise thee far louder than man's feeble voice.
Beautiful flag! thou wilt gleam down the ages,
Bidding all peoples be free and rejoice;

Bidding them work for man's betterment ever,
Banishing hatred and ignorance far,
Bowing to worth, but to tyranny, never!
Loving sweet peace, yet intrepid in war.

Land far and wide now sing freedom's hosanna;
Yet, of all flags thro' this wide earth unfurled,
None can compare with our own starry banner—
Liberty's beacon enlightening the world.

How I Wrote My Novel.

(Concluded from last issue.)

[Written for the Rural Press by MAID-OF-ALL-WORK.]

The Granger went away for a week and I had Dolly come over to help me while he was gone, and I was surprised to see what an interest Miriam took in her. One day, when I sent Dolly out to collect the eggs, while I worked over some mistakes in her picture, Miriam said: "She is a lovely girl, isn't she? and she paints well, too—she is so fresh and original, and so innocent. How could any one ever do her an injury? I would as soon think of wronging an angel."

"On yes," I said, working on; then later: "You rather fancy fresh and bright people, do you not?"

Miriam laughed. "I confess I do like them. I am tired of flirts, and I am tired of flirting."

Miriam came to stay two weeks and she stayed six and went out with Willie a great deal for moonlight drives and Sunday walks, and although she tried to look languid and uninterested, I could see her growing happier and healthier every day. When she was about to go to the train to go home, she said:

"Now you will be down soon, won't you? When Mr. Kimball is there, we—"

"What! is Willie going to be there?"

"Well, yes, I believe so." She was carefully smoothing on her gloves. "He wants to read law a little; he says every farmer needs some knowledge of law, and if mamma will consent to board him I will see that he gets into good society."

"You are a darling," I said; "how kind you are."

After she had gone, I worked faithfully on my novel for awhile. It was easy to work, as I believed I had a genuine love-story to work from. But Willie did not go down immediately, and in a few weeks something came up to again call my attention from my own work. The young people wanted to form a Chautauqua Circle, and wanted me to get it into working order. Willie was deeply interested in it. He said to me one evening over my front gate: "You know there are some very bright young people here who cannot go away for improvement, and we must help them."

"But," I lamented, "they will need so much urging."

"There is Miss Dunton; she will help; they will all come for her."

"Dolly?" I said. "I hadn't thought of her."

"She will be a great help," he said eagerly.

So I organized a class of ten, and it was quite a sacrifice on my part, for they branched into all sorts of musical and literary entertainments in aid of the W. C. T. U. and the Church Aid Society, and it was nearly spring before I could settle my mind down to a creative condition. And then Dolly worried me, too. She worked faithfully enough, dear girl; she was the best Chautauqua reader we had; she even read all the reference-books and wrote lovely little essays in her class-work, but she seemed so different from my bright, loving Dolly. I was so busy I did not notice the change till after Willie went away; then I began to see that she was sad and listless and worked more for the work's sake than with any interest and pleasure. I tried to cheer her up by reading Miriam's letters to her. Miriam gave glowing descriptions of the concerts and musicals which she and Willie attended. She always spoke of what great things society was doing for him and how his voice was improving. Dolly never made any comment to these letters, but always sat silent with her eyes downcast, so I concluded that, like myself, she was not greatly interested in music.

When haying-time came we disbanded our C. L. S. C. until after harvest. Dolly resumed her painting, very pale, but gentle and lovely. And the next I saw of Willie he was cutting hay in the field adjoining us, and when I received a note from Miriam that she was coming up to see the beautiful haying-time, I was quite afraid that my novel would terminate before it was written.

So I postponed the washing one day and dashed into a new chapter with "Willie and Miriam in Tuscany." They were seated on a stone fence under the vines of an old chateau, her pure, spirituelle face lying in fine relief against his square, manly shoulder. He was saying tremulously:

"Is there not yet some mysterious fate that will out this golden thread of happiness? Sometimes in my dreams, darling, a shadowy hand—"

Just here I was interrupted by a noise of wheels and a sound of laughter and merry voices, and several said "Whoa," and several said "I'll get out," and I had barely time to hide my manuscript under the rug when, with a gust of merriment and a swish of starched skirts, three of my favorite girl friends rushed in.

"Come on; we are going for a picnic. Put on your hat."

"But my dinner for the men," I gasped.

"Oh, never mind; set a luncheon—we'll do it."

And they rushed out and set my table in a twinkling, and the naughty girls wrote a saucy note and pinned it on the table, and one got my shoes, and another found my sketching-book, and in ten minutes they had me tucked into the three-seated wagon with a crowd of boys and girls, and we were rattling off toward the hills.

After they found a place by the creek, they left me to make tea and watch the horses, and the whole party rambled off. I made a good chaperon, because I would rather sketch than watch anybody.

Very soon another wagon-load drove up, and in it was my dear Dolly. She looked so pale and sad that I hardly knew her, but she kissed me lovingly and sat down by me while the rest of her party wandered off also.

"Dear Dolly," I said, "you are not yourself. I fear you will be sick; you are studying too hard. When Miss Grey comes up you must stop your painting for a time."

Here Dolly threw herself down in the grass and put her face in my lap and began to sob.

"Why, my dear, what is the matter?" I cried.

"Oh, yes," Oh, so slowly and sadly!

"But, my child," I said, "you are not jealous of Miriam, are you? She is a lovely girl, but she never can be to me what you are. You are my dearest friend and helper."

Dolly sat up and put her head lovingly on my shoulder, but she sighed and said nothing.

"Why, here is Miriam now!" I exclaimed, rising. For there was Willie in a fine new buggy with Miriam by his side. I ran forward to meet them. Miriam was so gay; she had telegraphed me of her coming, she said, and as I wasn't at the station to meet her, Mr. Kimball kindly volunteered to bring her out, and as he was already coming to the picnic, she was glad to come too. Willie lifted her out with quite an air of ownership and I made them welcome, but Dolly had disappeared. After a few moments they also wandered away. Willie was unusually grave and quiet, and I wondered if he had not been saying something serious to Miriam. As no one came back, I took my sketch-book and went off to one side in the shadow of a great rock, where I had a very good view of the camp. I laid out my sketch, and was progressing nicely when I heard the crackling of brush and some one came up behind the rock. In a moment I heard Willie's richly modulated voice:

"Now you shan't doubt me any more. You must listen to my story. I am not half good enough for you, but I love you. Listen, I do love you. Look up."

I couldn't hear the answer, but it was something gentle. Then he continued:

"You have treated me wretchedly; you have pretended to like everybody and everything

else but me. If you hadn't come here to-day I should never have tried again."

I had been calculating my chance of escape, and when I saw a crowd coming into camp with noise and laughter calling for tea, I gathered up my skirts and ran. We all had a merry lunch together. Miriam was quiet, as I thought a newly engaged girl ought to be. Dolly was shy as ever and Willie was merry with everybody.

Miriam went home with me in the wagon I came in, and as I had to go to work immediately getting supper, I supposed that in the evening she would tell me of her engagement. But she said not a word, though she looked calmly happy in her plain gray silk dress, and after she had sung one song for us she threw a lace scarf over her head and went out in the moonlight. I thought probably she had gone out to meet Willie in the lane, so I took my sewing (I always sew when I am nervous) and sat down by the Granger.

It wasn't long before I heard the sound of Willie's buggy. I dropped my work and rushed out then. I knew he would tell me. He was tying his horse under the locust trees, and sure enough there she was in the buggy. I went out to the gate and Willie came and took my arm.

"I came to tell you of my happiness," he said, "and to ask you to be a mother to my bride that is to be."

Then he lifted her out of the buggy and put her in my arms, but it wasn't Miriam—it was Dolly, and she lifted her old happy face to be kissed.

Surprised as I was, I kept my senses. "Then there won't be any more pale face and sad eyes," I said.

"Nor any more melancholy law students," said Miriam, appearing by magic. "I just came up to patch up those broken hearts. I knew they never would do it alone."

"Not while I was so jealous of you," whispered Dolly, drawing her up to us.

"Well, dear, I forgive you," said Miriam, caressing her.

That evening, while Miriam was brushing out her long hair in our room, she became very communicative.

"You know I became engaged to Whistler, the artist, before he went abroad, but I declare I almost lost my heart to your handsome Willie, but I found her picture in his Civil Code, and that saved me."

Sweeping-day I found my novel under the rug, and for Miriam's sake I put it in the fire. And Miriam came no more to the country.

Sauce for the Gander.

NOTICE—MY WIFE BETSIE, HAVING LEFT my bed and board, all persons are hereby warned from harboring or keeping her and from trusting her on my account, for I am determined to pay no bills of her contracting. JOHN DOE.

Very well, then, we shall trust Betsie on her own account. Her word is good for anything she may order at our store. You doubtless imagine that you have been supporting her in the past; but we all know that she has paid her way all these long years that she has been cooking your meals and sewing on your buttons.

But now Betsie and you are out, and she is about to retire from the old firm, of which she has so long been a silent partner, and go out into the cold world to fight the battles of life alone. Would it not, then, be more manly of you, instead of handicapping her with this public notice, to sit down and write her a "recommendation," as you would a time-tried servant who was about to leave your employ to look elsewhere for a situation? You could say to whom it might concern that the bearer, Betsie Doe, had kept house for you for a long time; that she is careful and economical; that it has been mostly owing to her principles of protection to home industry that you have been enabled to keep the balance of trade in your favor and to thus accumulate quite a surplus; that her charges are very reasonable, in fact, during the twenty years or more she has been with you her only wages have been her board and clothing, and that you can recommend her to any one wishing the service of a good housekeeper. There now, sign that! And let's have done with these contemptible beware-of-the-wife notices.

In nine cases out of every ten there is not as particle of danger of the wife running a bill on the husband; and in the other case it would but serve the old man right if she did. The men appear to have had a monopoly of this style of advertising for some time. The other day, in looking through an old newspaper published in 1799, we observed one of these notices. How seldom the wife comes into print to repudiate the husband's debts. How frequently the husband leaves his wife's "bed and board" until the small hours of the morning, to stay downtown with the boys and squander community property. It might be mentioned in this connection that the last Legislature passed a law which holds saloon-keepers responsible for all damage done to the husband from selling him liquor. This law in substance says that a wife may serve notice on saloon-keepers not to sell her husband liquor; and if they should sell and he gets drunk, and damage ensues, the saloon-keepers are liable. Good enough. So in the future we hope to see the ladies take a hand and give more variety to the advertising columns of the papers by a few beware-of-the-husband notices.—C. Y. H. in S. J. Mercury.

The Cheer of the Trenton.

[About the conduct of our American sailors during the terrible Samoan cyclone, the London Telegraph says: "Consider the scene and the matchless heroism of this Yankee crew. Almost sure of instant death themselves, they could see the Queen's ship fighting the hurricane and appreciate the gallantry of the effort with the generous pleasure of true mariners. We do not know in all naval records any sound which makes a finer music upon the ear than the cheer of the Trenton's men. It was distressed manhood greeting triumphant manhood, the doomed saluting the saved. It was pluckier and more human than any cry raised upon the deck of a victorious line-of-battle ship. It never can be forgotten by Englishmen speaking of Americans. The dauntless cheer to the Calliope was the expression of an immortal courage."]

Our anchors drag and our cables surge
At every shock of the huriling sea,
While the mist of the breakers veils the verge
Of the reef of coral under our lee.

From east by north to the north-northwest
The wild typhoon veers sweep on sweep,
And from moment to moment the cross-wave's crest
Buries our waist in its sidelong leap.

Under the blows of our plunging screw
The whitening breakers foam and churn,
But for all that steam and steel can do
We are drifting slowly, astern, astern!

On our starboard quarter close aboard
We see the stanch Calliope loom,
While the black flood from her smokestack poured,
Covers the sea like a pall of doom.

Her topmasts struck and her yards braced sharp,
She is headed out for the open main,
While her shrouds, like the strings of a giant's harp,
Scream to the touch of the hurricane.

We from our flagship Trenton's decks
Are watching her battle in hope and dread
As she threads the throng of the tossing wrecks,
Now beaten backward, now forging ahead.

She with the red-cross ensign aloft,
And we, our starchy banner below,
Lie beam to beam as the frigates oft
Ranged in old sea fights long ago.

We watch the weight of the tempest fall
On her flooded decks and her reeling bow,
And our hearts are beating one and all
For we both go down should she foul us now.

Through the darkest night there's a gleam to break;
Fathom by fathom she forges past,
Till we know by the swirl of her eddying wake
That her seaward struggle is won at last.

The Admiral tosses his sea-cap high,
As from station to station is passed the word,
And over the uproar of wave and sky
The thunder roll of our cheer is heard.

And back from the Briton's taffrail came
The gallant, grateful and proud reply,
That stirred our hearts like a pulse of flame,
The seamen's and brothers' last good-by.

Oh, blood is thicker than water, and long
Will England's memory hold it dear,
And the tale be told in fo'castle song
Of the flagship Trenton's parting cheer.

—Walter Mitchell in New York Sun.

The May Storm in the Sierras.

[Written for the Rural Press by MARY P. ARMS.]

When the early May days came to us, and the farmer had well-nigh finished sowing his grain, he began to feel that the heavy March storm was quite insufficient for his needs. The outlook gave no promise of any hay crop throughout the greater portion of our valley, and the newly plowed fields were already thirsty for moisture, when heavy winds, lowering skies, and numerous twinges of pain felt by those given over to rheumatic affections, all seemed premonitions of an approaching storm, which began May 4th, with what the farmer calls a "squally day," in which those who "were not up to the season's front" worked persistently to get their grain into the ground. When night came we found ourselves glad over the day's storm, and not anticipating its continuance.

But on Sunday morning, May 5th, to our surprise "we gazed upon a world unknown, on nothing we could call our own." The green of meadow and grain, and the newly plowed earth, were alike covered with snow—not a soft, light mantle, but a mass of heavy, wet, clinging whiteness. The fragrant lilacs with their budded plumes of purple were laid upon the ground.

The plum trees, whose white blossoms had been scattered like snow in the last days of heavy wind, were more heavily loaded with moist snow than they will ever be with fruit. Snow was everywhere, mingling with the pink and white of the apple-blossoms and the tender green of the poplars, which were weighed down in fantastic shapes.

This storm continued into the fifth day, storming every day, and more or less at night, until the oldest residents here "agreed that such a thing had never been thought of, heard of, much less seen."

Another fact remarked upon was the unusual warmth of the storm. To the farmer in many cases with empty barns who was obliged to find shelter and food for cold, hungry animals, and the housewife put to her wits' ends to find comfortable places for a hundred or two young chicks, the storm brought work and inconvenience which were borne with fortitude; for all those days of snow were fraught with so many promises of good that their disappointments might well be accepted. Among the prettiest sights those five days of storm offered was on

Sunday forenoon. On going to the door, a silver-leaf poplar tree was literally filled with robins. Who that has read Whittier's exquisite rendering of the beautiful myth concerning this little bird can ever see "the poor brown ruddy the breast-burned bird" without recalling it? The poor little creatures had come to seek their summer lodgings. Many of them found their death instead. How I longed to gather them all into the warm home-rooms! The number and variety of birds which came during those days of storm showed us how poorly we realize the extent of our possessions. We had thought there was a poverty of our feathered friends here, supposing few of the smaller birds were to be found with us in large numbers save the blackbird and the swallow; while the meadow-lark and dove were next most numerous, with apparently a small number of half a dozen or more other varieties. But the birds which came with those days of storm were a revelation to us of the extent of our riches—robins, bluebirds, orioles, merry little snowbirds, swallows, with their "twitterings foolish and sweet," meadow-larks with the glad notes of their spring songs; all of these and more were on trees and fences and the snow-covered earth until we thought with John Hay, "How did they get there? Angels."

Another thought the storm has brought to us. How readily the forces of either human or plant life often recuperate after having been disturbed. It seems but a little behind yesterday that the budding roses lay flat upon the ground. To-day they are blushing red with the heart of the June and reflecting the gold of the summer's shine.

Beckwith, Plumas Co., June 9th.

A Mother's Experience in the Flood.

The accounts of the great Pennsylvania disaster which are arriving by mail are full of sadness, and to enable one to better understand the deep woe of the afflicted people, we take the following from the New York Tribune:

A pretty, pale little woman told part of her sad story to-day, as she nervously clasped and unclasped her hands and cried in a quiet, heart-broken way. Years ago in the Virginia valley, somewhere near Winchester, this sad little soul met and loved a hard-working engineer, named Fenn. They were married some years ago and came to Johnstown, where they had a neat, comfortable home. Fenn made good wages; their seven children were always well clad, and the mother lived with her life concentrated upon them. On the afternoon of the flood, Fenn went to the butcher's and passed out of this short history in the waters. When the tide came into the Fenn house, the mother gathered the little ones in the parlor and told them not to be afraid, as God was there and would guard them. Then they went to the second floor, and again the little mother talked of hope and bade them be of good cheer, for papa would come soon in a boat and take them away. At last the family were forced to the top story. The rooms were low, and soon the heads of the mother and children were beating against the ceiling.

"Mamma," said the eldest child, a girl, "wouldn't it be better to go outside and die in the open air?"

"Yes, dear," said the mother; "we'll make a raft and all go down together."

She sought her own and the children's way to the window and opened it. She caught a piece of plank, and on it put the eldest child, with a hasty kiss and a "God bless you." Then she let it float away into the darkness and roar of the waves. Six times were these frail barks freighted with precious cargoes and argosies of pious trust. The children were frightened, but obedience was part of their creed and they made little protest. Now came the turn of the last child, Bessie, the four-year-old. One can fancy what it meant, the last and dearest. There was scarce breathing space in the room below, and if haste was not used death would come at once. To a broad plank Bessie was fastened securely and was blessed as had been the others.

"I loved them all; oh, I loved them all," said the mother, "but I had two kisses for Bessie, for she was Tom's favorite and was such a good child. She put her arms about my neck and said: 'You know you said God would take care of me always, mamma. Will He take care of me now?' I told her He would and she need not fear, and then she was carried away. 'I'm not afraid, mamma,' she called out, and I heard her, although I could not see her, and that's all, except that the roof was torn off and I floated off on it, and some Italians saved me at Kernville, sixteen miles from here."

"And the children, Mrs. Fenn? I hope they all escaped."

"We have found two of them dead, Bessie and George, and there is not a mark on Bessie's face, and oh, I am so tired! They're all gone, every one, eight of them, and I'm going home to Virginia, after all these years, to rest and try to think."

A LITTLE child, playing with her kitten, got a rather severe scratch from her pet. Her lips trembled for an instant, and then she assumed the commanding attitude which her mother had assumed toward her under somewhat similar circumstances, and extending her hand, said sternly:

"Kitty, dive me that pin!"

YOUNG FOLKS' COLUMN.

The Faithful Workers.

[Written for the Rural Press by ALICE McCABE, aged 15 years.]

"Well, girls, as long as we have succeeded in graduating, we must not be idle, but help the poor people. I, for one, intend to be very busy."

"Oh, that's just the brightest idea in the world. I, for one, will help you, and I know all we girls will do a great deal of good," answered Katie Ray.

The reader will doubtless want to know where these girls were, and who and what they were, so we will leave them talking together and endeavor to find out.

The name of the place, for it is only a small town, is Haverhill, in Western New Hampshire, and the girls are daughters of the townspeople, who are all well-to-do, kind, good, generous, and hospitable, and, as a general thing, well educated for the people of so small a village, and there probably never lived a happier lot.

Everybody knows everybody else, and many a jolly evening was spent in an old-fashioned dance or party, where they all went for a good time, and not to see the way Sally's new dress was made, if it looked nice; or how Mrs. Smith's hair was dressed. Those people never had such ideas in their heads.

It was a very prosperous place. It had only one church, and the good clergyman could not come more than once in two months, but the people were faithful and did not complain.

The schoolhouse was built of logs, and the children who attended it learned reading, spelling, arithmetic, a little geography, and if they were well versed in these branches, they received their papers and graduated.

But I am afraid we are leaving the girls talking too long, and not knowing what they say, so we will now return to them.

"Cecil, how do you always think of such nice things? Of course we must get up a club right away. We can make dresses and everything else for those poor children in Lancaster. Papa said last night that they were like crows and didn't look much bigger than a corn-cob. We'll have you president and Miss Dale secretary," replied Lulu Hawster.

So without more plans it was agreed to, and the girls were making up their minds as to whether it would be a good plan to have the young men drop in after tea and help them "cut the dresses and run the machine," as one of the girls roughly expressed it.

Cecil Stafford was always the leader of the girls, and a better girl or a prettier one never lived. She was innocent of sin and the great cruel world. She was a good friend and daughter, and another person, whom we will hear of later, thought she would make "a splendid partner."

After many consultations and no end of good-natured bantering among the girls, the society was organized under the name of "The Faithful Workers," and the first meeting was to be held at Cecil's residence the following Wednesday afternoon, promptly at 1 o'clock.

The day and time arrived, and with the hour of one the girls were busy having a good time cutting and making the various articles which President Cecil gave them. How those busy fingers and tongues (the latter especially) worked, and at the end of the afternoon what work had been accomplished!

They had decided at their first meeting that for one month the sessions should be strictly private. Thereafter once a month the young men would come in the evening and they would have a general social time.

The first month passed so quickly that the girls were really astonished when one day Secretary Dale informed them that the next week would be their social. The afternoon of that day was also the time set for the distribution of their month's work. Gathering their things together, they found they had three gingham aprons, two skirts and three pairs of knitted stockings.

And now the question arose as to what disposition they should make of them. It was finally decided to give them to a poor woman whose husband had gone to California five years before, and as the poor lady had received no tidings from her absent one during all those dreary years of poverty and distress, she now believed he had gone to his eternal home.

Accordingly the "Faithful Workers" betook themselves to the lady's humble home, which they found even more destitute than they had expected.

Two of the children had been ill, and the presents brought a balm of comfort to the sore heart of the mother, while the children were almost frantic in their great joy.

That evening, after the young folks had enjoyed themselves to their heart's content, with games, dancing, music, and all the usual accompaniments that youth knows so well how to enjoy, they seated themselves around a little table, laden with all the delicacies the season could supply.

In the midst of their gay chatter, one of the young gentlemen said:

"Well, girls, this is jolly! Is this the kind of charity your society is organized for? It is appreciated, I assure you. Eh, boys?"

Whereupon Lu Claves exclaimed: "No indeed! I should think not! If you could have

seen us this afternoon, you wouldn't have asked that question."

"I'll wager," said Rob Chester, the tease of the crowd, "you girls spent the greater part of the afternoon sympathizing with the looking-glass."

This brought forth a volley of reproach from the girls, and the story of their afternoon's adventures was told in full.

The sympathy of the boys was at once enlisted, and Rob was the first to say, "See here, boys! We mustn't let the girls get the best of us. We can't make aprons and knit stockings and such, but we can take down a load of provisions to keep them from starving."

The proposition was heartily accepted by all the boys, all of whom were earning good wages.

The boys thought they would be too busy during the day to attend to it themselves, so the girls agreed to get the things most necessary and the boys would settle for them. So the following evening the girls and boys brought down the things and the lady was once more made happy. Thus ended the first good month, and many others like it followed.

Not many months after, several of the young men were on their way together to one of the socials, when one of them remarked: "I say, boys, don't you think we have right here in our own little town the finest set of girls to be found anywhere?"

"I do that," said Rob heartily. "Especially one," chimed another of the boys.

Rob made no reply, but he gave them a look that spoke volumes.

An announcement that appeared in the county paper before another year had rolled around told very plainly what Rob's thoughts had been.

This announcement was followed by another and another, until not one of the original circle remained.

Rob and Cecil were the first to break the chain, and after that the circle dissolved rapidly. The good work went on, however, for other girls and boys took their places, and the good seed sown grew and blossomed.

Turlock.

GOOD HEALTH.

THE CURE OF ANGINA PECTORIS, OR BREAST PANG.—Angina pectoris (agony of the chest) carries off many people, the last of whom, according to the newspapers, was the novelist Rev. E. P. Roe, who expired in one day because of its crushing anguish, writes Montrose A. Palmer, M. D., in *Belford's Magazine* for November, 1888. Major-Gen. George B. McClellan (according to the published reports of that time) likewise succumbed after 24 hours of uncontrollable pain. Just how these patients were treated I am unable to say; but Dr. Richardson of London, long before Gen. McClellan's death, had received a prize of 25,000 francs from the Academy of Medicine in Paris, for having discovered an almost infallible remedy for angina pectoris by the administration, in the very small doses, of 1-100 to 1-25 of a grain of nitro-glycerine! This discovery entitles Dr. Richardson to the never-ending gratitude of every suffering man, woman or child, afflicted with angina pectoris. I know a number of persons who always carry tablets of nitro-glycerine with them, and I am equally certain that all these people, by the use of nitro-glycerine, are living in comparative comfort, who would otherwise have fallen under the insupportable torture of that form of heart neuralgia, the most dreadful of all pains.

HEADS UP.—An erect bodily attitude is of vastly more importance to health than most people generally imagine. Crooked bodily positions, maintained for any length of time, are always injurious, whether in the sitting, standing, or lying posture, whether sleeping or waking. To sit with the body leaning forward on the stomach, or to one side, with the heels elevated on a level with the hands, is not only in bad taste, but exceedingly detrimental to health; it cramps the stomach, presses the vital organs, interrupts the free motion of the chest, and enfeebles the functions of the abdominal and thoracic organs, and, in fact, unbalances the whole muscular system. Many children become slightly hump-backed or severely round-shouldered by sleeping with their heads raised on a high pillow. When any person finds it easier to sit, or stand, or walk, or sleep in a crooked position than a straight one, such may be sure his muscular system is deranged, and the more careful he is to preserve an upright position and get straight again the better.

SEVERAL COMMON MISTAKES.—Here is a list made by an exchange, of mistakes which it characterizes as "serious," and into one or more of which the reader will probably find he is in the habit of falling more or less frequently. These mistakes are: To labor when you are not in a fit condition to do so. To think that the more a person eats the healthier and stronger he will become. To go to bed at midnight and rise at daybreak and imagine that every hour taken from sleep is an hour gained. To imagine that if a little work or exercise is good, violent or prolonged exercise is better. To conclude that the smallest room in the house is large enough to sleep in. To eat as if you only had a minute to finish your meal in, or to eat without an appetite, or continue after it has been satisfied, merely to satisfy the taste. To believe that

children can do as much work as grown people; and that the more hours they study the more they learn. To imagine that whatever remedies cause one to feel immediately better (as alcoholic stimulants) is good for the system, without regard to the after-effects. To take off your proper clothing out of season because you have become heated.

WHAT MEATS POISON.—When people are poisoned by eating tainted meats it is not because there was poison in the meat before the can was opened, but because the meat had been allowed to develop the poison of putrefaction after the can was opened. For instance, it was not the tinned salmon that poisoned a family who had eaten it with impunity the first day after it was opened, but it was salmon that was spoiled by 48 hours' exposure to the hot and humid atmosphere. It is very rare that any one is made sick by metallic salts in canned foods. The only metal that may cause poisoning in the case of these foods is lead, and this is not likely to be found in tinned foods. It is, however, possible that poisoning may occur from the solder, but it is highly improbable, from the excellent manner in which the tins are made.

DOMESTIC ECONOMY.

A Cooking-School in S. F.

The Women's Industrial and Educational Union have cooking classes, which meet every day at 325½ Geary St., in this city, and are taught by Miss Kate Whitaker, formerly a teacher in the London International Cooking School. Miss Whitaker lately told a *Call* reporter: "You would be surprised to see how much interest the girls evince in learning to cook good, wholesome food and prepare it in an attractive manner for the table. I do not give my pupils a mere set of rules to learn by heart, but make them learn how to cook by their own attempts and by watching and helping others. Of course I allow them to take notes occasionally, but I try especially to awaken in them a perception of the right and wrong of cookery, and to make them cook independently of exterior rules."

"The first thing my pupils do is to learn how to make, attend and regulate a fire. This is their first lesson, and they have to learn it before going a step further. Then they learn the proper manner to set a table and the order in which the various courses of a meal should be served."

"Bread-making is another important lesson. The pupils learn how to make yeast, to mix dough, how long it takes for the dough to rise, how to knead it and make it into loaves, how a loaf should look and feel when it is thoroughly cooked—in short, when they finish the lesson they must be able to make bread that is fit to go on a king's table, without any possibility of its being heavy or sour."

"Roasting and boiling of joints is another thing which they learn, together with the preparation of gravies and sauces. Soup is a specialty, and all who taste our dainty potages pronounce them perfection. All styles of preparing potatoes are taught, besides attractive and palatable ways of dishing up cold meats. The more intricate branches of cookery are taken up later."

NUT CAKE.—One-half cup of butter, 1½ cups of sugar, 3 eggs, 2½ cups of flour, 1½ teaspoons of baking powder, ½ cup of milk, 1 cup meats or any nuts preferred.

BROILED HERRINGS.—Scale and cut off the head; clean and wash them dry in a clean cloth; dredge with flour, salt and pepper, then broil over a good bed of coals. Serve with onion sauce, or a little drawn butter.

GEMS.—Three cups of flour, one teaspoon of salt, two eggs, half-cup of lard, two cups of milk, two teaspoons baking powder; sift the flour with the baking powder and salt, stir, add the lard, then the eggs beaten, and last the milk. Bake in gem-pans.

GOOD COFFEE.—Take the amount of water you generally use for coffee, put into a saucepan, add coffee (ground), two spoonfuls for each cup. Just before the water boils, throw in a few drops of cold water; take the pan off and strain the liquid through a piece of muslin.

RYE BREAD.—Make a sponge of one quart of warm water, one teaspoon of yeast thickened with rye flour; put in a warm place to rise over night. Scald one pint of cornmeal; when cool, add it to the sponge. Add rye flour until thick enough to knead, but knead it but little; let rise, mold into loaves, place in deep pie-tins, let rise and bake.

EGG SALAD.—Cut in very thin slices six hard-boiled eggs. Place in salad bowl with one-fourth of a cabbage shredded fine. Mix well together, then pour over it the following dressing: Three tablespoonfuls melted butter, one teaspoonful pepper, salt to season, one teaspoonful made mustard, one-half teaspoonful sharp vinegar. Mix well through salad and serve at once.

RAISED GRIDDLE CAKE.—Take a quart of sweet milk, warm it enough to melt a large tablespoonful of butter, add two teaspoonfuls of salt and flour to make a pretty stiff batter. Dissolve one-third of a cake of yeast in tepid water and stir it into the batter. Cover closely and keep in a warm place until morning, when fry on a griddle. If found to be too stiff thin it with a little tepid milk.

The Week.

The midsummer season is approaching its culmination in the National holiday. The observation of the event bids fair to be rather

less elaborate than usual, because the April commemoration of the Washington centenary, which was so hearty and general, seems to have afforded a good escape valve for the annual accumulation of glorification. Still the event retains its deep interest to every American, and we expect to offer matters pertinent to the occasion in next week's Rural.

Harvest work progresses. The disastrous field fires, against which we have sounded so many warnings, continue to devastate, though probably this year's experience does not exceed the average. Fruit is gradually being disposed of, though shipping in large amount has not yet attained last year's figures. The later fruits are now ripening, however, and larger amounts will be recorded at different centers. The fruit crop is, however, on the whole, a little off this year, though some varieties are abundant. Matters are, as a rule, quiet, and our people generally are busy and contented.

April Rains and the Wheat Crop.

We have been much interested in looking over a vast amount of information collected by Albert Montpelier, cashier and manager of the Grangers' Bank, for the preparation of the statistical tables which will soon be issued to the patrons of the bank. These tables have been prepared with Mr. Montpelier's usual disregard of labor required in such matters, and are therefore full and will be of lasting value. Accompanying them there will be a circular alluding to the service of the bank in advances on country-stored wheat and its growing business with all classes of agricultural producers.

A point which we desire especially to refer to at this time is the relation of the rainfall of the spring months to the year's crop of wheat. By his protracted studies of natural conditions and statistics of production, Mr. Montpelier has arrived at the firm impression that the rainfall during, say 30 days following the vernal equinox, or the first 30 days of the calendar spring, has a marked effect upon the outcome. In his circular are the following words:

The year 1880 may properly be called the bonanza year of all the wheat crops ever harvested in California; it amounted to over 1,700,000 tons. The next largest yield was in 1884, when we harvested 1,500,000 tons. The present year, 1889, may possibly reach about the same yield as in 1884, though over 1,000,000 acres more have been seeded than in the years referred to above. In the opinion of the writer, this remarkable anomaly is due to the fact that in 1880 the rainfall in the winter months was certainly favorable for seeding wheat; but behold, from the 6th to the 15th of April we had from 3 to 12 inches of rain, and in 1884, from March 20th to April 15th, we had about the same precipitation, according to localities. Therefore it may be conceded that abundant spring rains in the latter part of March, but in the first part of April especially, is what makes the largest crops in California.

This is taking the two great years and noting the heavy spring rains in connection with them. We compile from Mr. Montpelier's data the following table, which shows the same idea more in detail and cites the record for the years of small product as well as of large, and gives the acreage seeded and the average yield per acre for each of the years named, as well as the local rainfall for March and April of each year:

Crop of	Yield per Acre, Bushels.	Acre Seeded.	Crop of the Year, Tons.	Rainfall, Mar. and Apr., Inches.	Total Rainfall.
1880	32	2,240,000	1,700,000	14.32	24.32
1881	14 1/2	2,367,000	1,030,000	2.80	21.04
1882	12 1/2	2,767,000	1,040,000	4.42	13.56
1883	12	2,800,000	1,018,000	4.21	16.75
1884	14 1/2	3,900,000	1,500,000	10.10	19.40
1885	10	2,800,000	851,000	7.76	16.47

1887	10	3,200,000	950,000	3.47	11.56
1888	3 1/2	3,180,000	900,000	2.62	10.31
1889*	3	3,300,000	1,500,000	6.30	18.14

*Estimated.

In making these comparisons we have taken the figures of the Sacramento rainfall as a sort of average of the interior points. The figures show in a marked manner the importance of the spring rains which Mr. Montpelier points out. Take, for example, the yield per acre in 1883 at 12 bushels per acre, and that of 1885 with 9 1/2 bushels per acre. The total rainfall for the two years was similar, between 16 and 17 inches, but in the former year there was about 4 1/2 inches in the spring and in the latter less than an inch. Many such deductions can

be made. The fact appears to be, as, of course, many wheat-growers have already observed, that it is the spring rain that makes the crop, fills the heads, etc., and that really we can get along through the winter with light favors from the clouds—just enough for seeding and vegetation and fair, slow growth, providing there is plenty of water in the spring to finish upon. These facts are of much interest to the wheat-grower both for producing and marketing considerations.

Undesirable Immigrants.

Now that attention has turned to the desirability of checking the immigration to this country of the vicious, imbecile or otherwise objectionable portions of the human race, it is well to think of restricting the entrance of minor pests as well. Something has already been done in causing the cleansing of insect-infested plants and fruits, and yet the matter is very imperfectly provided for. Sometimes larger animals likely to prove pestiferous have been drowned on arrival, as for example some rabbits from Australia and some mongooses from Hawaii, but in this department the gates should be more carefully closed.

The great calamity that has befallen our agricultural industries in the importation of the English sparrow, should serve as timely warning to an intelligent people and lead to legislation restricting the importation of foreign birds and mammals.

It seems desirable that a law be enacted conferring upon the Commissioner of Agriculture the power of granting or withholding permits for the importation of birds and mammals, except in the case of domesticated species, certain song and cage birds (to be specifically enumerated), and species intended for exhibition in zoological gardens and museums, which may be brought in without special permits.

The question of the desirability of importing species of known beneficial qualities in other lands is one which sooner or later must force itself upon our notice, and it is highly important that when such experiments are made they should be conducted by or under the control of the Department of Agriculture. And it may be suggested that isolated areas, such as islands of suitable size and character, be selected for this purpose, so that the spread of the species may be prevented if the result renders this course desirable.

This matter is all the more important because, if we are correctly informed, California has recently appropriated \$2000 for the purpose of importing and setting at liberty within the State certain game and other birds. What may happen in our case unless care is taken can be learned from the experience of our sister State Oregon in the importation of Asiatic pheasants. The report of Dr. Merriam, ornithologist and mammalogist of the Department of Agriculture for 1888, gives interesting facts concerning these birds and shows that they have multiplied with great rapidity and are becoming destructive to grain-fields, gardens, etc., and are driving out better birds. Dr. F. S. Matteson of Aumsville, Oregon, writes as follows:

This pheasant is well adapted to take care of himself, is increasing fast, and has evidently come to stay. He is voted a nuisance by the farmer, and I am afraid his introduction will prove a calamity to the country, whatever it may be to the sportsman. He is destructive in gardens, and in patches of berries and small fruits. I am of opinion that he robs the nests of other birds. The quail have nearly disappeared in this locality since his advent, and I think he is to blame. He is pretty good eating, about like our native pheasant, but I am inclined to regard him as a gaudily painted deception and a fraud. But we have got him, and our State law for his protection has yet four years to run. Happily, however, it is fast becoming "more honored in the breach than in the observance." That he will overrun the United States, at least all but the heavily timbered portions of it, I have no doubt. The State that protects him will make a grave error, for he is of no use except as a "game bird," and will crowd out many other useful kinds.

The same facts are reported by others. They show clearly that listening to sentiment and sportsmen is not a safe guide in the introduction of foreign species in the first place, and that to hedge about imported species with long terms of special protection is the second error. We certainly begin to know enough of the character of birds and mammals to form good judgment beforehand whether we are likely to

pay millions in the shape of destroyed crops to procure shooting for coming generations of sportsmen and to preclude the possibility of such a disastrous trade by resolutely shutting out such importations. We are glad that the matter is now receiving public attention, and that the new Assistant Secretary of Agriculture, Prof. Willits, is vigorously promoting the wise suggestions of the ornithologist of the Department in this regard. California with her vast interests in cereals and fruits certainly should be careful what marauders she permits the sportsmen to introduce. Intelligent action in the interest of the whole country should certainly be had from the Department of Agriculture, and some wisely guarded power in the matter should be vested in this branch of the General Government.

PROF. W. A. HENRY, of the University of Wisconsin, with his nephew, Mr. E. K. Adams, of San Bernardino, were in National City last week. The Record says they have been looking over the Professor's twenty-acre tract at Chula Vista, and are very highly pleased with it. They are discussing the advisability of planting the whole tract in lemons, and in case it is decided to do so Mr. Adams will be left in charge of it, when Prof. Henry returns to his post of duty. The latter has been commissioned by the Governor of Wisconsin to visit the California University to transact some business for his State, and will soon visit Berkeley for that purpose.

QUERIES AND REPLIES.

Alfalfa and Egyptian Corn.

EDITORS PRESS:—Will some of your experienced readers answer the following questions? 1. What is the average yield of alfalfa on irrigated land? 2. What is the yield of Egyptian corn? 3. How many hogs will an acre of alfalfa keep, and for how long?—READER.

EDITORS PRESS:—In answer to the questions which you send me, I would state that average land in Lucerne Vale, with a fair set to alfalfa, will yield six tons of hay to the acre for the season, or four crops at an average of 1 1/2 tons at each cutting. The first crop will be taken off about the 20th of April and the fourth about the 20th of September. From the 20th of September until the 1st of March the land will furnish good pasturage; the quantity will be governed by the severity of the weather during the winter months. Much larger yields are often realized, but I give you an average.

An acre of average land well set to alfalfa will keep 20 large hogs rolling fat from March 1st until November 1st, and during the winter months a less number, according to the severity of the weather, as alfalfa will stop growing when heavy frosts are experienced.

Very little Egyptian corn is at present grown in Lucerne valley, but about 10 years ago, when it was grown here extensively, the average yield was about 50 bushels to the acre, but it often went as high as 70 bushels to the acre. It was generally sown in July right after a wheat crop was taken off, thus being the second crop on the land for the year.

All the above answers, of course, have reference to lands well irrigated.—A. F. JEWETT, Hanford.

Killing Morning-Glory.

EDITORS PRESS:—Our motto is, if you wish any information upon topics of interest, inquire of the Rural patrons. And therefore will ask Mr. Orth (under "Hop Notes," page 575, June 8th) in what successful manner he eradicated the miserable morning-glory. I, myself, can give a little experience with the curse and have failed to rout it. Not knowing the evil of the plant until it was well located and spreading rapidly, and not to be exterminated by constant cultivation and hoeing, we then proceeded to devise ways of killing on the spot, as to plow or use a cultivator would scatter and continue its depredations. And just being determined to boss the stuff, we experimented with water 212° Fahrenheit, 60 gallons to the square yard in trenches. In ten days thereafter we looked for results, and found it coming to the surface smiling in all its glory. We have since been told that it can be exterminated by smothering by water or straw covering to the depth of three or four feet. Now will Mr. Orth please rise and explain his method?—A. L. A., Temperance, Fresno Co.

Green Fruit Not Mailable.

A subscriber at Pasadena asks: Can specimens of green fruit be sent by mail? We often see the fruitmen say: "Specimen received by mail."

The question has been referred to the S. F. postmaster, who returns the following answer: No green fruit can be sent by mail. Dried fruits can be sent. Nothing of a perishable nature is mailable. Wm. J. BRYAN, P. M.

Poplar Grove Breeding Farm.

Readers of the Rural are already aware by allusions in our columns and by his attractive advertisements that P. N. Straube is developing his commendable enterprise known as Poplar Grove Breeding Farm with much skill and

records of 2:30 and better. 1st dam, Sweetbriar by Thorndale (2:22½), sire of Edwin Thorne (2:16½), Daisy Dale (2:19), May Thorne (2:22). 2d dam, Ulster Queen, dam of Volmer (2:22) by Ryedyk's Hambletonian, sire of Dexter (2:17), George Wilkes (2:22). 3d dam by Thomas Jefferson, he by Toronto Chief. 4th

Miss Caudle, dam of Erricson (4-year-old record 2:30½).

This mention of distinguished ancestry taken in connection with the forms of the animals as sketched by the artist will give the reader a good idea of the trotting stock which Mr. Straube has on his place, but it is only a small

Combined Harrow and Cultivator.

Mr. S. W. Kilpatrick of Gilroy, Santa Clara county, California, superintendent of Henry Miller's orchard and vineyard near there, has obtained a patent for a combined harrow and cultivator, the invention being the result of his

CLOVIS 4909—THE PROPERTY OF S. N. STRAUBE, ESQ., POPLAR GROVE BREEDING FARM, FRESNO, CAL.

with liberal outlay. The farm is situated about 16 miles southeast of Fresno, two from Wildflower, and eight miles from the line of the S. P. railway. It is improved in the highest sense of the term, as its broad acres of rich alfalfa pasturage, its fine buildings with their modern equipment and the herds of improved cattle and bands of fashionable horses testify. Mr. Straube has done wonders in the development of his laudable breeding establishment during the short time he has given his attention and capital to it, and he is doing a good thing for the advancement of agriculture in the valley, and we trust for his individual fortune as well. By his system of feeding he is showing clearly how a large number of animals can be kept without having a whole county to range them on, and this is a very important matter in the present growth of California.

But we have not space at this time to review the general features of Poplar Grove Farm, but desire rather to present portraits of two of the famous sires which are transmitting their excellent points and qualities to the young stock of the ranch and the vicinity. First is Clovis, whose form the artist has sketched in the engraving on this page. Clovis is seven years old, a beautiful black, 16½ hands high and weighs 1260 pounds. He is a horse of beautiful symmetry and magnificent action. Clovis was got by Sultan (record 2:24), sire of Stamboul (2:14½), Ruby (2:19½), and 15 others with

dam [by Mambrino Paymaster, sire of Mambrino Chief.

Another famous sire of Poplar Grove farm is Pasha, whose portrait appears on page 621. Pasha is a year older than Clovis, also a beauti-

part of his possessions, for he has also Apex, a beautiful bay, somewhat smaller than the blacks which we show this week, and very well bred. He has also a band of 65 brood mares, of which 24 are standard mares and

KIRKPATRICK'S IMPROVED CULTIVATOR AND WEED CUTTER.

ful black, and about the same height and weight as Clovis. He is also a son of Sultan and his first dam Lady Baldwin—both sire and dam being by The Moor, sire of Beautiful Bells, dam of Hinda Rose (2:19½), and Sable, dam of Sable Wilkes (3-year-old record 2:18). The Moor's 1st dam, Sultana by Delmonica, sire of Derby (2:16), by Guy Miller, sire of Whipple's Hambletonian; 2d dam by Mambrino Chief; 3d dam by Downing's bay Messenger; 4th dam

the balance highly-bred trotting mares. Mr. Straube's place is well worth a visit from those interested in fine stock and the keeping of them.

IRRIGATION IN EGYPT.—A project is being considered for adding 250,000 acres to the irrigated area in Egypt, the water being taken from a point so high upon the Nile that the canals shall never run dry.

22 years' experience as an orchardist and vineyardist. The merits claimed for this invention are its practicability and the thorough manner in which its work is accomplished. The machine is light, durable, and yet inexpensive. It can be handled by one horse, or a full team of four animals may be used with it. This is owing to its method of construction, which by a simple arrangement can be made to depress or elevate the drag-beam, thus cultivating or harrowing light or deep as may be desired.

The frame is V-shape, as shown in the engraving, and is constructed of wood, heavily braced with iron. Sixteen chisel-pointed steel teeth are so placed that no two are at precisely the same angle of direction, the effect being to turn the soil rapidly in different directions and give it more thorough cultivation than could be done by old methods. This also leaves the soil perfectly level by the use of a weed-cutter, which cuts all weeds below the surface, and at same time drags over the soil, smoothing it down while perfectly stirred beneath.

Mr. Kilpatrick has added to the upper portion of the machine a system of tree protectors, which renders it almost impossible for careless plowmen to injure young trees and vines. The V-shape has been utilized to make it possible to easily and quickly change the size of the harrow from large to small spread angle, as may be found most convenient. Very close

cultivation can be done by the peculiar position of the teeth, and also by two revolving side-cutters, which are removable at pleasure, and are indispensable for side-hill work, as they keep the machine from sliding sidewise. Further information can be had by addressing S. W. Kilpatrick, Gilroy, Cal.

AGRICULTURAL NOTES.

CALIFORNIA.

Colusa.

THE CANNERY.—Colusa Sun, June 22: We have a cannery, and it is a novelty to us, and we are as proud of it as the small boy with his first pair of red-topped boots. Thursday morning a reporter was out there bright and early, but already the steam was sizzling in the boiler, and men, women and children were hurrying to and fro with boxes of fruit in all stages of preparation from the orchardist's wagon at the door to the man who handled the soldering iron at the further end of the cannery. There were about 100 operatives, and under the experienced management of the foreman and forewoman the work seemed to be going along in perfect order, and the look of happiness on the faces of the many who were earning their first ten-cent pieces gave evidence that a little with contentment is great gain. The rules of the cannery are very strict, but owing to the large number employed and the chances for loss through any neglect or carelessness on the part of the operatives, they may not be too much so.

Humboldt.

SITE OFFERED FOR A SUGARIE.—Eureka Times: Some weeks ago Wm. Perrott, who owns a fine tract of land on Table Bluff and at Swanger's station, communicated with J. D. Spreckels, offering to donate sufficient land at that station to the Occidental Sugar Co. for a factory, if the company would establish a factory there. Swanger's station is particularly well located for an enterprise of that nature. It is the first station on the E. R. & E. R. R. in the Eel river valley, and therefore the nearest shipping point to tide-water on this bay. The station is about seven miles from deep water at Field's landing. It is just on the border line between the rich alluvial bottoms of Eel river and the productive bench land of Table Bluff—both long noted for their vegetable products, and there are thousands of acres surrounding the station that we presume farmers would gladly devote to the raising of beets. There is an ample supply of pure spring water at the station, and the surrounding country will afford an abundance of cheap fuel. The station is accessible from all directions, and the land is level and therefore convenient for teaming. Altogether perhaps no better locality could be found for the establishment of a sugar-beet factory. Mr. Spreckels, in acknowledging the proposition, says that the locations for the factories will not be selected until Mr. Claus Spreckels returns from Europe.

DAIRY ITEMS.—Ferndale Enterprise: S. Bragdon of Guthrie is milking 16 cows. He has an abundance of feed, but does not think it will pay him to buy more cows until butter comes up. Roadmaster Flint is milking 80 cows. Genzoli Bros. on the Harkins ranch, Bear river, are milking 100 cows, and putting up a 100 pound keg of butter every day. Dablin Hights, the old Delaney place, is run by Mr. Lefranc, who milks 80 cows is a good dairyman, and is making 1½ pounds of butter a day to the cow. The Mountain View dairy, the only ranch belonging to the Russ estate that is rented, is where Gus Martello holds forth. Gus is milking 80 cows and doing nicely.

Kern.

GRAIN SAMPLES.—Bakersfield Echo, June 20: Saturday, some specimens of fine grain—wheat, oats, and barley—were received from W. A. Berry, a well-known farmer on Poso creek. He tells us that the sheaves sent are fairly representative of the grain growing on 4000 acres of land in that vicinity. He did not look for a bit here and a bit there that had made an extraordinary growth, but endeavored to get fair representative samples. The oats stand from 7 to 7½ feet high, and have well-filled heads measuring 15 to 16 inches in length. The wheat measures five feet in height, with heads 5½ to 7 inches long, and perfectly filled. The barley is of equally good quality.

Mendocino.

TALL OATS.—Woodland Democrat, June 20: Wash Lambert sends us by to-day's mail a sample of oats grown in Mendocino county, eight feet six inches in length. He says these oats are still growing, and if we want a sample nine feet long, he can furnish one by July 4th.

San Benito.

GOOD GRAIN.—June 11th W. P. Steinbeck, Supt. of the Victor Mills, took a trip to King City by way of San Benito and Bitterwater. Learning this, a Free Lance reporter interviewed him as to the grain prospect for the county. Mr. Steinbeck said: "Everywhere I went the crops were fine. Al. Leonard, at San Benito, told me his crop was the finest in ten years, and many others could probably have said the same thing. The best crops I saw were in Bitterwater. There the wheat looked to be in simply perfect condition, and a large yield of grain is assured. Looking at the grain crop from the standpoint of a miller, it can be said that the crop is very satisfactory."

San Diego.

TIMBER CULTURE.—El Cajon Star, June 22: A few days ago, in company with Mr. A. L. Knox, we were driven to that gentleman's tree claim at the east end of this valley. To our surprise we saw a growth of trees of the Blue Gum, Catalpa, and other varieties, which indeed speak well for the productiveness of our soil. Mr. Knox has over 20,000 trees on the claim, all looking healthy and making a vigorous growth—indeed a young forest has been started. He has been working hard, for years, to make this claim come within the law relative to improvement, and we are inclined to think that he has exceeded all requirements and has now a tree claim which he should feel proud of.

San Joaquin.

LODI MELONS.—Sentinel, June 22: It is reported that the watermelon crop of this season will be fully up to the standard of this locality. The late rains have caused considerable more labor in the patches than was anticipated, but the growth of the vine is excellent, and the young melons are doing well. If the present warm weather continues, with a few warm nights thrown in, early melons will be the result.

THE ISLAND FIRES.—Stockton, June 24: Saturday's fire on Roberts' island swept 300 acres of stubble and consumed 12 stacks of grain, aggregating 8000 sacks. It belonged to Martin J. Lund. Loss, \$5000. At 11 o'clock this morning another fire started near here, and at noon it had swept over between 300 and 400 acres of grain, and was threatening several stacks, houses and barns, and would burn as much more before meeting a road. A series of fires for two weeks has destroyed the grain of more than 3000 acres all told. To-night the fire is under control. Yesterday and to-day it destroyed 520 acres of grain.

Shasta.

FOR LIGHT AND MOISTURE.—Redding Democrat: Jack Conant proposes to take a large body of water out of the Sacramento river near Copley and convey it through a ditch, five feet across at the bottom, to the old Reid place he recently purchased. He intends to irrigate this place, and also utilize the water for power for driving machinery. In connection with this scheme we hear the electric light proposition talked of again. Surveyor Zoellin, with assistants, has been for several days at work surveying the ditch, which we are told will run high enough on the hillside north of Reid's old residence to develop 150-horse power. This would certainly run a large dynamo. We hope to see the scheme fully materialized. It is both practicable and feasible. With water, the old Reid place could be made a garden-spot second to none in the State, and an electric-light plant over there, that would furnish Redding with an abundance of illumination, would be a grand achievement.

Sonoma.

THE FRUIT OUTLOOK.—Santa Rosa Republican, June 20: The summing up of the fruit-crop prospect of the county places the apple and prune far above the average. A shortness of all other fruits is certain. The apricot is almost a total failure, and while there will be a few peaches, there are not more than will supply the local demand. A good crop of blackberries will be gathered. It is doubtful if any of the canneries of the county will make an extended run this season. The prices offered for what fruit there is seems to be considered by the orchardists as not commensurate with the local scarcity. Grapes as usual will be in abundance, and low prices will undoubtedly rule for both table and wine varieties.

GRASSES FOR HAY.—Mr. Loring some six years ago sowed a small piece of his property in town with timothy seed. This grew and has produced two crops of hay each season since, and without irrigation. The growth has been rank, and he has now just harvested the second crop for this season. The growing of these grasses for hay has the merit not only of being the best for feed, the easiest and cheapest raised, not having to be re-sown each year, as grain, but it commands a good market price. This subject should receive the careful investigation of the practical farmer in this part of the country.

Stanislaus.

FIELD FIRE.—Modesto News, June 20: Yesterday afternoon a fire started on the land of James S. Witherell, about three miles southwest of Ceres. Owing to a strong wind from the north, the fire made rapid headway across a narrow strip for three miles, crossing the lands of W. L. Canfield and Levi Carter, and was finally checked at the county road leading from Key's switch to Grayson, by means of the road and plowing down by I. W. Uptake along the side of the roadway. At this point back fires were lighted and guarded with wet sacks by about 60 men who worked like beavers. Mr. Witherell's loss was about 30 acres of growing winter-sown grain, valued at \$120, and insured for about one-half the amount. Mr. Canfield had about 100 acres of winter-sown grain destroyed, valued at \$500, and insured for \$250. Mr. Carter's land was all stubble, which burned over rapidly, and caught two very large stacks of wheat of late-sown grain. This grain was especially fine, and the stacks were valued at fully \$1000, with an insurance of \$6.75 per acre, held by the Grange Co. Mr. Carter places his loss at 160 acres that would have yielded 30 bushels per acre. The fire caught at the side of the roadway leading from Ceres

along the section line, passing the land farmed by Mr. Witherell, and is supposed to have been caused by the careless throwing away of a lighted cigar stub.

WHEAT YIELD.—Modesto Herald, June 20: A few grain crops which have been put in the sack have yielded as much or more than had been figured on by the owners. The yield from 110 acres, only 40 of which were summer-fallow, on the farm of Mrs. M. A. Lucas, two miles south of Oakdale, was 1030 sacks. The surrounding crops in that vicinity will perhaps not average so well. Charles Eardly, who is one of Stanislaus' successful grain-growers, informed the writer the other day that the late crop in the neighborhood of Waterford was greatly damaged by the hot wave which prevailed a few weeks since, but that on the whole the crop was a good one.

Sutter.

SUGAR BEETS FOR COWS.—Appeal, June 21: Fred Haus of Sutter county has made arrangements to plant an acre of bottom land in sugar beets this season. He has sold the crop in advance to a dairyman, who will use the beets to feed his cows, for which purpose they are especially well adapted. Mr. Haus will keep an exact account of the expenses and the yield for publication, so that farmers may judge for themselves of the advantages of the crop for this part of the State.

THE HORTICULTURISTS.—Sutter Farmer, June 21: Wednesday's meeting of the Horticultural Society was one of the most interesting ever held by our fruit-growers. The subject for discussion was "Picking, Drying and Packing Fruit," and this proved of such profound interest as to call for a further discussion at the July meeting. These questions were most ably handled by Messrs. Kells, Davis, Aaron, Stabler, Bogue, Campbell and others, all of whom shed much light, to us at least, on very important branches of fruit-growing, showing that it was quite as necessary to know how to market fruit as to know how to raise it. To get the full benefit of these meetings, it is necessary to attend them. They cannot be reported for the press as they deserve. Work in the field is, of course, now very pressing, and yet we feel sure a half-day devoted to these discussions and reports in a month is quite as necessary and beneficial as any work in orchard and vineyard.

Tulare.

BADGERS AS SQUIRREL TRAPS.—Visalia Delta, June 20: This morning, J. T. Cannon killed a badger in the front yard at Mrs. Fulgham's. The animal was a large one, weighing 20 pounds. Badgers are valuable where squirrels abound and destroy quantities of the pests, and it is not advisable to exterminate them.

COMBINED HARVESTERS.—Traver Advocate: The first combined harvester ever used here was brought in by T. L. Reed four years ago, and the number has constantly increased, until this year there are 21 of the costly but money and labor-saving machines in active operation, gathering in the golden grain of the 76 country. There is no better evidence of the grain yield of this section than the fact that this large number of combines is at work in our harvest-fields, besides the numerous headers now in operation which will have to be followed up later by thrashers.

CATTLE AND BAD WATER.—Cattle on the ranch of D. Barrie, in Excelsior district, have been dying off very rapidly during the past week, over 75 head having already died. The band attacked was small and was formerly in a field in which the water was bad, and we think that the mortality is due to the stagnant water which the animals have drank and not to any infectious disease. A few years ago Mr. Sanborn of Mussel Slough lost about 40 head in the same way. The animals die suddenly, and apparently without any previous illness. Mr. Sanborn used the following remedy, with the result that he saved all the cattle to which it was given: Add copperas and salt in the proportion of four ounces of copperas to a pound of salt, to water in a trough; put in enough of the mixture so that each animal will take at least a tablespoonful of copperas a day. The cattle, when the remedy is being given, should be kept in a corral, fed dry feed and allowed no water save that which has been medicated. The same remedy is said to be good for cattle having diarrhea. D. C. Hayward has used the remedy on his cattle when they were suffering from the effects of alkali water, and found it sure. It is a strange fact that cattle will drink warm alkali water in preference to clear, pure water, consequently the animals, to be properly treated, must be kept away from impure water until a cure can be effected.

FRUIT-DRYING ON A LARGE SCALE.—Tulare, June 20: The drying of fruit at the 1000-acre orchard of Paige & Morton is now thoroughly started. At present they are working on apricots, of which there is an immense yield, averaging 200 pounds to the tree, and of good size. Fifty tons have been put out thus far, but this is only a start. Besides a large number of men, there are about 100 women, boys and girls employed. Peaches will be next operated upon, and 200 hands will be employed; one mile of railroad has been laid through the drying-grounds.

HANFORD CHEESE FACTORY RUNNING.—Sentinel, June 20: The Hanford Cheese Mfg. Co. started business last Monday. The first batch of milk turned to cheese like a charm, everything working very satisfactorily, which put all hands in

good spirits. The superintendent, J. G. Cohoe, reports good milk in very fair condition, and that the machinery works completely. We give below a list of the patrons up to yesterday morning, with the number of pounds furnished by each. [The list comprises 21 names and foots up 2597 pounds of milk.—EDS. PRESS.] Considering that all farmers are in the midst of harvest and that the time is as unfavorable as it well can be, the above is very gratifying. The Lakeside patrons, who live from eight to ten miles away, have proved on the start that it is possible to move the milk that distance safely in hot weather. Other additions will be made to the patronage next week, and it is hoped that after harvest the milk delivery will reach 5000 pounds daily.

PECANS.—Geo. Fisher, superintendent of the Lone Oak ranch, owned by E. Hutchinson, has had good success in making his pecan plants grow this season. J. E. Tilton has a limited number of pecan plants which he grew from the seed this season. He intends to put out a nut orchard soon.

RASPBERRIES.—It has often been said that raspberries do not bear well in this valley, but one day this week Mrs. B. C. Anderson brought to the Delta office a box each of Blackcap raspberries and the common red variety. They were large and of excellent flavor, and we have seen no better ones grown in other parts of the State.

ALFALFA PASTURES.—Visalia Times, June 20: W. H. Parr has 73 acres of his ranch, adjacent to this city, seeded to alfalfa, and says it pays him 12 per cent on a valuation of \$100 per acre; in other words, his 73 acres give him a return of \$876 per annum. This is derived from pasturing stock at so much per head per month; hence there is no necessity for hired help, and the proceeds are sufficient to support a family comfortably.

Yolo.

NEW WHEAT.—Woodland Mail, June 22: The first new wheat of the season was received Monday for storage at the warehouse of C. T. Bidwell. It was delivered by Al. Bourn, and was harvested with his new harvester. The wheat was of the "Snowflake" variety, and a very fine lot.

TEXAN BLACKBERRIES.—A two-horse wagon-load of blackberries is brought to Woodland daily and offered for sale. The berries are raised on C. Nelson's land, near Cache creek. They are the wild berry of Texas, cultivated by J. S. Houser, who bought the Card orchard on Tom Laugenour's ranch. They are said to be the finest berry in the world for canning purposes.

SHIPPING MELONS.—Winters Express, June 22: H. and W. Brinck from their Yolo county ranch have shipped a crate of watermelons and canteloupes to S. F. each day this week, beginning with Wednesday. This is two weeks earlier than such fruit has been shipped from here. The melons were perfectly ripe and brought fancy prices.

Yuba.

MARYSVILLE LEMONS.—John L. Steward brought to the Appeal office the other day, as a sample of the product of a tree in his garden, a lemon measuring 10½ by 11½ inches in its two circumferences. The tree is budded of the Sicily variety, and was planted in 1868. In some seasons it has borne as many as 2000 lemons, all large and fine, the crop being very valuable.

OREGON.

CROP PROSPECTS.—Oregonian: The following is compiled from reports received from different counties by the Oregon State Weather Bureau for the week ending June 15th: The temperature has been above the normal during the week from 8 to 12 degrees. There was no rainfall. The winds up to Friday noon were northerly, warm and very dry, in sections being almost a "norther." On Friday and Saturday the winds were southerly. The effect of these conditions on the wheat crop has been injurious, especially in Eastern Oregon. In the Willamette valley the fall wheat continues its promising outlook, while in localities the spring wheat is slightly injured. Along the coast nothing has prevented the flattering prospects of one month ago being realized. In the Umpqua valley more than an average wheat crop will be harvested. In the Rogue river valley the weather has, to a certain extent, injured the wheat; in many sections, however, an average crop will be realized, while in other sections the crop is badly "fired," and much grain that looked well two weeks ago will have to be cut for hay. In the Lake region much of the wheat is only from 6 to 12 inches high, and is turning yellow, and will hardly make hay.

While the prospect for the wheat harvest is not so good, the other crops show signs of large yields. Barley and oats are promising good crops. The fruit crop will be the largest ever gathered in the State. The strawberry crop is about over in Western Oregon, while in the Eastern part of the State it is now being gathered. Cherries are yielding enormously. Raspberries are plentiful, and large crops of blackberries are indicated. Prunes, plums, peaches, pears, apples, etc., present a most promising appearance, and indicate large yields. Cooler weather has prevailed for the past three days, and yet the wheat crop may make a more favorable showing. Wheat harvest will begin in many parts of the State by the 25th inst.

FLORIST AND GARDENER.

Tell What You Know.

Never before in the history of the Pacific Coast has there been such a clamor for practical knowledge of horticultural matters. A great drawback to the glorious results which would naturally follow this awakening is the clamlike tendency of a certain class of men to keep to themselves any information they have gathered, while they greedily devour whatever knowledge may be set before them by their more liberal co-workers. The fabled dog in the manger well represents this class of men. The dog in the manger, however, was not only slighted, but he went without his dinner. Since knowledge is not a positive quantity, and there is no such thing as exhausting the supply, there is certainly no wisdom in everlastingly keeping a tight rein upon its pursuit.

Only men of the most limited mental ability need fear to give out information for fear of exhausting themselves, since friction of minds, like that of flints, is a creator of light. As to the circulation of information being a detriment to personal business, it is certainly true that those who are driven to the acquirement of knowledge by experience are much more dangerous rivals than others.

Those who impart information most readily are, as a rule, wide-awake, successful men, who are real elements in the prosperity of the country. They read and are willing to be read, and their whole lives are broader and richer. The man with a secret method, especially in horticulture, is generally a bother to himself and those about him. The keeping of his secret so monopolizes his energies that he has little time left for his legitimate business. Not only this; he is generally the subject of remark by his associates, who recognize that he would be much better off if he would be more communicative.

Flowers for the Johnstown Sufferers.

As usual, California has used its flowers to good advantage, and is ahead of all the rest. On June 12th the ladies of Eureka opened a floral festival for the benefit of the Johnstown sufferers. The ladies of Arcata, Ferndale, Bay-side and Hydesville also contributed liberally of their garden treasures, and deserve their pro rata of praise.

There were a great many beautiful designs, and music lent its charms to the occasion. The following were the prize-winners:

For the best floral piece, Miss A. Ohman, the "Tower of Babel," \$15.

The best display of geraniums, Mrs. Wm. Brown, \$10.

The best display of roses, Mrs. R. Sweasey, \$12 50.

The best bouquet, Mrs. Wm. Brown, \$5.

THE AGAPANTHUS.—There are so few blue flowers of a really robust nature that the *Agapanthus Umbellatum* (African lily) is particularly worthy of notice. It is one of the most gracefully foliaged of our lily-like plants, having long, shiny, persistent leaves produced in great profusion. The bulbous roots multiply by offsets rapidly, forming in a few years a large oval clump. Large clusters of graceful lily-like flowers of an exquisite lavender-blue color are profusely borne on smooth, erect stocks about 2 to 2½ feet high. The plants are adapted to rockeries or shady places, but will thrive in almost any location. When once established they require no further culture. The plants are hardy, and have a protracted blooming season as far north as San Francisco, but whether hardy in still cooler counties the writer does not know. Perhaps some of the Rural's readers can throw light upon the subject.

CUT WORMS.—W. E. Collins states in the *Ontario Record* that he has, at least partially, solved the cut-worm problem. He cuts up cabbage leaves into thin strips, and soaks them in a solution made in the proportion of one pound of Paris green to 50 gallons of water. The poisoned strips he sticks into the ground in an upright position, and close to the base of the plant or shrub in the evening. The cut worm referred to is the large, gray, mottled, fat grub familiar to us all.

MRS. R. B. DAVIS of Oakland asks readers for a remedy for the big red ants which trouble her garden.

The State Flower Show.

California's claim to the title, "the Floral State," was thoroughly vindicated in the first effort of the State Floral Society to hold a show which would set forth the floral resources of the State. The show was held in Irving hall, San Francisco, the middle of May, and lasted three days. Now that the workers have rested a little, and can view the affair calmly, it is perfectly evident that their enthusiastic confidence in the State Floral Society and in the flower-loving public has received a pronounced stimulation. The society has given a show which could in many particulars compare favorably with any ever seen in the United States.

The obstacles to be surmounted were formidable. The society was but eight months old. Its members had, most of them, never even had an interest in any similar enterprise, much less worked side by side. There was no concerted action of the professional florists, and many professionals and amateurs, whose aid the society had a right to count upon, failed when it came to action. There were many of these who even went so far as to select space, yet gave neither their presence, exhibits, nor excuse. Those who were most delinquent were, of course, the greatest grumblers at the work others did for them. Some of these, of course, received just censure, while others, having only acted in accordance with a constitutional weakness, were excused. That mistakes were made is true, and not at all surprising, but the blame belongs to those whose assistance was withheld. Among those who did what they could there was no disappointment or dissatisfaction whatever.

Valuable lessons have been learned, and the committee having in charge future exhibits will be under great obligations to those who so faithfully and successfully labored to give the series of shows a worthy standing among the great exhibitions of the world, and the labors hereafter will not be so delicate or so arduous.

California had this year nearly three times as many flower fairs as any other State in the Union, and all should be faithfully maintained as regular institutions by those who wish to see the State take undisputed its proper rank at the head of the procession. All should be tributary to the State Flower Show, which can now certainly be made a worthy exponent of the floral advancement of our people. By sufficient painstaking preparation we could surely equal, if not surpass, the world in exhibiting cut roses, rhododendrons, pelargoniums, palms, orchids, ferns, evergreens, hard-wooded plants, peonies, chrysanthemums, and many other classes that might be enumerated.

State Floral Society.

The tenth monthly meeting of the State Floral Society was held in the parlors of the State Horticultural Society, San Francisco, on the 14th of June. Thirty-two members were present.

The following residents of various parts of the State were elected members: Mrs. F. M. English, Mrs. S. A. Eldridge, Mrs. Nathaniel Paige, Mrs. L. A. Booth, Mrs. M. B. Pratt, Mrs. E. C. Campbell, Mrs. Henry B. Williams, William Whitney, Charles Haselbacher and John Becanne.

The Executive Committee which had in charge the spring-flower show of the society made their official report. It demonstrated that, notwithstanding the fact that this was the first effort of the society, and that unusual expenses had been incurred for permanent fixtures, etc., the affair had been a great success. The actual cash deficit of about \$250 was more than offset by the material on hand ready for future exhibitions.

Mr. E. J. Wickson gave an interesting lecture on "Friendly Insects," and exhibited a number of living specimens in various stages of development.

A paper by John Gabler of East Oakland was read by Horace G. Platt. Its title was "Landscape Gardening," and it treated generally of the demands of the coast for more intelligent efforts in this direction.

A vote of thanks was given John Rock of Niles, Chas. V. Parker of Fruitvale, and John H. Sievers and Fred A. Miller of San Francisco for extra efforts in behalf of the recent exhibition.

The full list of exhibitors was as follows: Madame Michell, new striped rose; Mrs. R. Townsend, collection of carnations; John H. Sievers, new rose, "Rainbow;" Mrs. T. L. Walker, roses, the Bride, Sunset and Adam, pelargoniums, Piedmont, Emperor William, Occident, and a seedling variety, lily, Longiflorum, Coral Lily of Siberia; Mrs. C. G. Athearn, new pelargonium; King Brothers, Iris Kampher, Dieletra Spectabilis; H. T. Greenough, new rose, "The Queen;" Mrs. J.

N. Bailey, sassafras and black birch leaves, John H. Sievers showed a specimen of his new rose, "Rainbow," which attracted much attention.

A motion was passed fixing life membership of the society at \$25, and the names of Horace G. Platt and A. L. Bancroft were offered as the first of the class; Mr. Bancroft's proposition being conditional upon the obtaining of a list of ten, which would entirely obliterate the obligations of the society.

The committee stated that the medals and certificates awarded would be engraved and written as speedily as possible.

At the next meeting there will be read papers on "Plant Life," and "Trees and Shrubs Without Irrigation." A discussion will be held as to a fall exhibition.

Facts and Fancies About Flowers.

Blood Plants.

There are certain plants and flowers which bear spots or stains resembling blood, and with them is associated some legend of the Savior or of some saint. In England there is a variety of Arum known as Gethsemane, because it is said to have been growing at the foot of the cross, and to have received on its leaves some drops of blood from the wounds of Christ.

"Those deep, unwrought marks,
The villager will tell you
Are the flowers portion from the atoning blood
On Calvary shed. Beneath the cross it grew."

A similar legend has been attached to the purple-stained flowers of the Wood Sorrel, which by some Italian painters have been placed in the foreground of their pictures representing the crucifixion. Another explanation of this has been derived from the fact that this plant is called in Italian "Alleluia," and may have been for this reason associated with the cross.

Thorpe, in his "Northern Mythology," says that in the flax-fields of Flanders there grows a plant called the Blood Selkin, the red spots of which on its bright, green leaves betoken the blood which fell from the cross, and which neither snow nor rain has ever been able to wash off.

A species of St. John's Wort has red spots on its root, which tradition says appear always on the day of his beheading, hence the name of Blood of St. John has been given to it in some parts of Norway. The leaves are said to have been pierced with minute holes by the devil with a needle. We are told that St. John's Wort, coming into blossom about St. John's Day has been regarded by the superstitious as powerful to avert evil and has been used as a preservative against thunder, evil spirits and witchcraft; various curative properties are also attributed to it.

There are several traditions respecting the origin of the red Rose. One is that it sprang from the brands which had been lighted at Bethlehem for the purpose of burning to death a holy maiden who had been wrongfully accused, and who, in the hour of peril, called upon God for help. The fire was miraculously quenched, and the brands originated the first red Roses.

Another legend is that Cupid, dancing among the gods, upset a cup of nectar upon a white rose and it became red. Yet another says that it sprang from the blood of Adonis; another, that it was from the blood of Venus, who, in her haste to relieve Adonis, pierced her foot with a thorn. Thus Spenser says:

"White as the native rose before the change
Which Venus' blood did on her leaves impress."

The French have a legend on this wise respecting the rose-colored Sainfoin: "When Jesus was lying in the manger at Bethlehem this plant was found among the dried grass and herbs which served for his bed. All at once the plant began to unfold its pretty flowers and form a wreath around the head of the Savior.

The Adonis, says the legend, owes its origin to the blood of Adonis which Venus changed into this flower.

The prophet Mohammed having one day washed his shirt, in order to dry it threw it upon a plant of the mallow. When the shirt was taken away the mallow was found to have been transformed by contact with such a sacred garment into a magnificent Geranium. This was first told by Sir G. Temple in his "Excursions in the Mediterranean."

An interesting anecdote is told of Madame de Stael and a geranium. One day a young Swiss officer of prepossessing figure was introduced to her. Madame became very much interested, and said many charming things for his entertainment. After an hour had elapsed without any response on the part of the officer, she began to put to him some direct questions that he was obliged to answer, but alas! they were very silly answers. Vexed at having wasted her time and wit, she turned to the man who had inflicted upon her such an annoyance and said: "In truth, sir, you resemble my gardener, who thought to do me a pleasure by bringing me this morning a pot of geraniums; but I can assure you that I returned him that flower, begging him not to show it to me any more." "And why?" asked the stranger, quite astonished. "It was, sir, since you wish to know, because the geranium is a beautiful scarlet flower which, while you look at it, pleases the eye, but when you slightly press it, it emits a disagreeable smell!" Madame de Stael then arose and at once swept from the room, leaving

the cheeks of the foolish officer as red as a coat and the flowers to which he had been compared. The fact that the language of the geranium is *stupidity*, gave greater significance to the keen reproof.

A traveler says: "I was passing through some fields a few miles from Torquay one day during the summer of 1881, plucking flowers and discussing their names and peculiarities with a friend, when a woman who was passing by observed in my hand a bunch of wild geranium (*Robertianum*, or Crane's Bill). She accordingly informed me in her peculiar Devonshire brogue that in this neighborhood: 'Us calls that Arb' rabbit. The oal people gathers 'en an' lays 'en up for winter to make 'Arb tay.' It was some little time before I fairly recognized in the name Arb rabbit the more classical form of Herb Robert, but I was none the less thankful for the information."

Venus' Looking Glass is a story and with in modern gardens. The ancient name was *Speculum Venes*, from whence the botanical name *Specularia*. *Specularia* is a pretty species with purplish-lilac flowers, varying to rose-colored and white. A hardy annual growing readily from seed. The derivation of the name is variously stated. Some suppose that the resemblance of the blossoms set upon their cylindrical ovary, and the round mirror of olden time, made of polished metal fixed at the end of a straight handle," suggested the name. Another says that it was suggested from its spreading open so widely in the daytime. A pretty legend, however, explains it in this wise. It is related that Venus one day let fall to the earth one of her mirrors; a shepherd found the jewel, and as soon as he had cast his eyes upon the glass, which possessed the power of embellishing whoever looked upon it, he forgot his mistress and only thought of admiring himself. Love, fearing the consequences of so foolish an error, broke the glass and changed the fragments into this pretty plant; hence the name—*Venus' Looking Glass*. Its language is flattery.

MRS. M. D. WELLCOME.

Botanical Notes of Travel.

(Written for the Rural Press by B. F. LEADS of Santa Clara.)

On the Mississippi recently, at Prairie du Chien, I found a single plant of the hoary verbena (*V. stricta*) with pure ivory-white flowers, the normal color being blue. The flowers of this species are larger than those of the other native species and their color is clear and noticeable.

The white-flowered specimen was a conspicuous object, seen against a close, unpainted board fence, about 300 or 400 feet south of Dousman's hotel, a well-known house, directly at the railroad station.

At the same station, with *V. stricta*, which is abundant, is to be found *V. bracteosa* as well as the ordinary blue verbena (*V. hastata*) of the Atlantic States.

At Rochester, N. Y., a blotched-leaved chickweed (*Stellaria media*) was seen, every leaf being white spotted. This was a large plant and was among and overlying other herbs and grasses, none of which were correspondingly varied.

Six miles from Rochester, by the lake's side, on the rising ground, between Summerville and Windsor beach, a blotched-leaved *Brunella vulgaris* was observed, with one or two leaves perfectly white, or cream-white, and most of the others more or less marked.

On the 12th day of April, just past, two or three hundred yards up the creek from the main street of Los Gatos, I found growing around an old stump some 100 or more plants of *Melilotus parviflora*, all with yellow and white blotched leaves. They were growing in a close group, and were doubtless the progeny of one plant of the year before, or it may be that they were two removes from the original variegated plant, as the area they covered was as much as four or five feet square. Several of the more completely marked individuals I carried home and they are now growing nicely in my yard. From the seed of one of these now in flower I will, perhaps, be able to determine ten months hence whether the attractive leaf markings are to be permanent.

M. parviflora, it will be understood, is an annual, though, like some other so-called annual herbs, it is not unlikely in this State, especially if the winter is mild, to continue to grow for a part of the following year.

Santa Clara, May 2, 1889.

CHINESE BOTANY.—Messrs. F. B. Forster, E. L. S., and W. B. Homeley, A. L. S., are engaged in the preparation of "An Enumeration of All the Plants Known from China Proper, Formosa, Hainan, Corea, the Lucho Archipelago, and the Island of Hongkong, With Their Distribution and Synonymy." It is being published by the Linnean Society.

H. H. BROWN & Co. state in their fall trade list of bulbs and seeds, just received, that Japanese bulbs come packed in heavy clay. They are, however, upon arrival here sorted and packed in sawdust for delivery in this country. Freight rates on such imports from Japan have recently been doubled.

It is not generally known that the Australian tree ferns, such as attracted so much attention in the exhibit of E. L. Reimer at the recent State Floral Society Show, are bought and sold definitely at so much per foot.

PISCICULTURE.

Salmon-Hatching on the Pacific Coast.

Learning that the veteran pisciculturist, Livingston Stone, was in San Francisco, we recently sought an interview with him and secured the following interesting narrative:

My attention was first called to the U. S. Fishery Commission in the spring of 1866, 23 years ago, and that fall I started the Cold Spring Trout Farm in New Hampshire. I was the first one who engaged in fish breeding in New England, and the second in the country, the other being Seth Green. Then I carried on the Cold Spring Trout Farm for several years in Charlestown. In 1872 was invited by Prof. Baird of the U. S. Fish Commission to come out to California to select places for breeding salmon. It was the first attempt in the U. S. at breeding salmon. Thus I became connected with U. S. Commission in 1872. In the fall of 1872 I made the location on the McCloud river, California, in August. It was selected for a great many reasons which combined to make it a good place, and subsequent events have proved it to be the very best place in California for the purpose. We are very fortunate in that respect. The first year, 1872, we only got about 30,000 eggs, and they were sent to the East to hatch and they secured about 10,000 breeding salmon out of those eggs. These were the first California salmon ever introduced into tributaries of the Atlantic ocean.

That experiment demonstrated the possibility of getting salmon eggs here in California and of getting them across the continent into the Atlantic ocean. The next year we went to taking salmon on a larger scale. In 1873 we got 2,000,000 eggs, and our experience enabled us to adopt better methods in every way. The next year we got 5,000,000 eggs. They all were sent to the Atlantic side to be hatched, and so we went on from year to year until one year we got as many as 14,000,000.

About that time, which was about 1875 or 1876, we began to hatch eggs in the Sacramento river, and we have kept this up ever since. In 1872 we had buildings put up, and every year after that we have made improvements and additions. It is singular that the hatching of the salmon for the Sacramento river increased the salmon very much indeed, but that the salmon we sent to the rivers of the Atlantic Coast were never heard of again. We never knew where they went to. It was very remarkable and very discouraging. When it was found that the salmon we sent to the Atlantic Coast disappeared entirely, the Commission gave up the plan of sending these salmon to the Atlantic, and decided for the future to hatch all the salmon for the benefit of the Sacramento river, and this is being done now. We do not send any salmon East except for some experiment.

When we first went to the McCloud River station there were no white people at all and no settlement, and the Indians were very hostile and did everything that they could to prevent us from settling on the McCloud river. In fact, we were the first white people that ever settled there. They tried to drive us away, but they learned that the white people were too strong for them. We built hatching-house and a mess house for the employees and quite a large dwelling-house, and one or two other small buildings. When the great flood of 1881 came, it carried away all the buildings. In the summer of 1881, we went to work again and rebuilt the station, and then we put up a mess-house and a large and convenient hatching-house, stable and a building that was used for the postoffice. Since that time we have put up an engine-house and another building that is used for a store and postoffice; and besides that, one or two other small buildings, blacksmith-shop, etc. This summer we are going to put up a very good building for a residence with the object of having a place that will be suitable to live in during the winter. The other buildings are down close to the river. Although they are very convenient and comfortable in the summer, they are too damp in the winter, as I know personally, for I lived there last winter. The new dwelling-house will be on higher ground.

We generally employ about 20 men when the salmon come up, that is, while they are running. During the rest of the year, we keep generally two or three, because there is always something to be done. When the work is over we begin to get ready for the next year. The salmon begin to deposit their spawn about the latter part of August. The eggs are taken from the fish. When the eggs come from the fish, they are like shot. They are taken in pans and properly treated, and then taken to the hatching-house and put into troughs, and there they are kept until they are hatched. The period of hatching depends upon the temperature of the water. If the water is very cold, they are sometimes several months hatching, as, for instance, in New England, they are sometimes four or five months because the water gets very cold; it is almost ice-water, but on the McCloud river, even at the coldest, they are not generally over eight or nine weeks. The McCloud river is fed by springs and retains its warmth in the winter, and there is not much variation in the temperature of the water, not over 15 degrees difference, or at most 18 degrees. That was one reason why it was selected. It is quite remarkable.

If the water is warm, the fish develop quite rapidly, and I think they ought to be put into the river a little before they begin to feed. For the first few weeks after hatching they live by absorption of the sac, which is attached to their bodies when hatched, upon which they live for several weeks. This is called the yolk sac. They are from 1 1/2 to 1 3/4 inches in length when they are ready to go out. In placing them in the river, we generally try to scatter them as much as possible. If we put them all in together, their enemies would all gather around that spot, and they would fall an easy prey, and the young salmon would not have food enough. We carry them up and down the river and adopt several means to scatter them. The big fish would get the whole of them if we did not.

I have always been in favor of putting the fish into the river before the yolk sac is gone, because then they do not have to come out to feed. When they come out their enemies discover them and the trout and everything is after them, and they are more likely to get destroyed. But if you put them into the water before they have begun to feed, they dive right down and hide, and they can stay there as long as they please. They get used to their surroundings, and the places, and everything, and are more likely to get along better afterward.

The expense has always been borne by the United States Government, but of late years the California Fish Commission has contributed toward the hatching of the salmon, and putting them into the river. The State has a hatching station up at Sissons. We send quite a large quantity of eggs up there after they are taken. We sent over 3,000,000 to the State station and they hatched them. The California station spent nearly \$9000. That was for putting the station in repair, catching salmon, taking the eggs, and that includes taking the eggs from two runs of salmon.

We never took any eggs from the fall run of salmon until this year. The eggs have always been taken from the summer run before this, that is, the run that comes up in September. We continue taking nearly through the month of September. This last year we took eggs from the fall run of salmon which come up in November and got a great many eggs. They did just as well and of course we got more eggs on account of it, but it was double the expense. Instead of closing up the station as we usually do in October, we kept it running until March. We shall take both runs hereafter. Sometimes the water will be too high in the fall, but whenever we can get the eggs they will be taken in the fall.

The supply of salmon can be kept up if they will only give us laws to protect enough salmon to come up. It is very important to pass State laws. The last Legislature did about right on that subject. I think they passed almost all the laws necessary except that they did not make the close season quite long enough, but I am not quite sure about that. They enforce the laws pretty well in California, and the fishermen will understand after awhile that it is for their interest. We do not care much how they catch them if they will only let enough salmon come up so that we can get the eggs. There are various ways of catching salmon. They are caught with gill nets mostly on this coast, but also with weirs, traps, pounds, wheels and sweepnetes. That is about everything. I do not know which is the most destructive to the small fish, but think the wheels take the most small fish. If the small fish went up they would all die. So there is really no great objection to catching the small fish. The wheels are usually put a good distance up the river and perhaps all the fish that get up as far as these wheels are would never come back any way. I do not see much difference between one way of taking fish and another. One is about as bad as another.

The supply of salmon can be increased very much indeed. Nearly 5,000,000 fish were turned loose from the McCloud station last year into the Sacramento river. The fish came from our station originally.

The station in Oregon is on the Clackamas river, about six miles above the mouth. I selected the station there in 1877. The necessary buildings were put up in that year. The buildings are very much better than they are on the McCloud river. They have nice grounds around them. I was at the McCloud station four months last year and then went to the Clackamas for about a month and to Alaska for three months.

The salmon are diminishing every year in almost all the rivers where there are any canneries. I think if it were not for the artificial hatching, salmon would become extinct and the canneries would have to be closed. There are so many boats out when you look down the Columbia river it is like looking at the flakes of snow in a snowstorm. It is a wonder that any fish get up there at all. If they get past the gillnets they have to run the gantlet of the pounds, etc. So if something is not done by the artificial hatching they would almost become extinct. The increase or decrease of the salmon depends entirely upon the amount that are hatched and the number of people that catch them. The sole cause of their decrease is because they are all caught. If you could limit the catching of the fish, nature would take care of it.

Oregon has one station. The State assists that the same as California does. The Government furnishes all the eggs and hatches quite a number the first part of the season, and then

the State comes in the winter and hatches the eggs and distributes them. The Government appropriation for the Oregon station is \$10,000 for building it and \$5,000 for operating it. The \$10,000 is a special appropriation for building and getting the place in order. They only acquired the place this last year. The annual appropriation will be \$5000. About 4,000,000 were hatched there. We took 5,000,000 eggs. If we get 4,700,000 fish we shall consider it a good average. One cannery in a single day on the Columbia river cuts up and cans fish that would create 20,000,000 eggs. If we could only have one day's salmon, we could hatch so many that it would be impossible for them to catch them all afterward.

There are eight canneries on the Sacramento river, 30 on the Columbia, 3 on the Siu-law river, 1 on Smith river, Cal., 1 on El river, Cal., 1 on Rogue river, Oregon, 2 on the Umpqua river, Oregon.

The Legislature of Oregon passed just the laws we wanted right through. In the Senate the vote was unanimous and in the House only five or six dissenting votes, but Governor Penneyer vetoed the whole thing. The Fish Commissioners were Republicans and the Governor was Democratic. He said that he did it to pay back the Fish Commissioners for what they did for him. Political reasons were at the bottom of it. It is going to set back the salmon culture in Oregon two years. The next Legislature will surely correct it. It was a great disappointment. They passed laws that would enable us to take 20,000,000 eggs at that hatchery, and now it will be with great difficulty that we can get 15,000,000. We have to keep two watchmen there all the time.

The Columbia river salmon are larger and grow more rapidly than those in the Sacramento, and they are better fish for some reason. There is no known cause except that it is a larger river. The larger the river, the bigger the salmon. On the Columbia river, I have known salmon to weigh 93 pounds; the largest salmon on the Sacramento weigh about 50 pounds. One station is not sufficient for Oregon. There should be two other stations just as large as the Clackamas. We have never found any other station like the Clackamas, and the only two places that we know of on the Pacific Coast are the Clackamas and McCloud rivers. Now that railroads are building and running across the headwaters, they may come across others. The sooner they go about building stations the better. There should be about three stations just as large as the Clackamas. One station is enough for the Sacramento river, and even if they wanted more we would not know where to find them.

I expect to leave for Alaska immediately in company with Dr. Bean, the scientist of the expedition, the ichthyologist. He studies up the scientific part of the work and I attend to the fish culture part. We will visit the Kodiak Islands first. When we get there we shall go up a little river called the Karluc. The island is about 100 miles long and about 50 miles wide. We shall make quite a study of the river. It is navigable. There are a good many canneries there, and there are more conveniences for study than anywhere else. Then we shall charter a vessel and go up into Cook's Inlet; will take a tent and camp. We will be gone three or four months, and we expect four to make the party. There will be one man to draw maps and charts, so as to locate all the places we describe. We will examine all the available streams, with a view to establishing Government stations, and will examine everything we can get at. This order to examine these streams was the result of a resolution passed by the last session of Congress to make an investigation of the fisheries of Alaska, with a view of improving them if necessary. A station may not be established at either of these places. We shall not start one until we get a good place. It may be a year and perhaps longer. This year we shall barely have time to get around and look. There are streams up there fed like the McCloud river by springs, so that they will be warm enough.

The further north you go, the larger the fish. On the Yukon river, they catch salmon that weigh 100 pounds. They are immense. This river empties into the Behring sea. It will be more difficult to conduct a station up there because it is so inaccessible. So many unexpected things come up when running a salmon station that a place with which communication can be had only once or twice a month will not answer. The Government is going to give a good deal more attention to Alaska. They have not begun to decrease the Alaska fish and the Government wants to get up there before the people do, to be beforehand instead of behindhand, and can then do its work unrestricted. Laws will not be necessary in Alaska at present. There is plenty of fish and plenty of room. The only people there are the cannery men, and they want the supply kept up. The development of the industry is practically unlimited. There are 20 canneries in Alaska at the present time. I think there is a Fish Commission in Washington Territory, but they have not done much. There are nine canneries in Washington Territory.

THE CALIFORNIA STATE FAIR

OF 1889 AT

SACRAMENTO,

SEPTEMBER 9th to 21st, Inclusive,

WILL EMBRACE, as usual, A WORLD OF CHOICE EXHIBITS, comprising AGRICULTURAL, HORTICULTURAL AND HOUSEHOLD PRODUCTS, as well as MACHINERY, IMPLEMENTS AND LIVE-STOCK.

NO BETTER CHANCE is offered to show individual progress in the various arts of productiveness than at an ANNUAL EXHIBITION of this character.

AMPLE SPACE FOR BOTH EXHIBITORS AND VISITORS and every endeavor will be made to secure comfort and convenience for all.

NEARLY \$53,000 OFFERED IN CASH PREMIUMS in the Various Departments.

EXHIBITORS should now begin preparations. Don't forget to plan Original and Instructive Displays. The more attractive your exhibits are, the more attention they will command.

REMEMBER YOUR PRODUCTIONS WILL BE VIEWED BY THOUSANDS that know not California's capabilities, and as a source of profit we would urge the producers to come forward and make the

GRANDEST DISPLAY OF COUNTY EXHIBITS EVER SHOWN.

A BOUNTIFUL HARVEST, A SUCCESSFUL YEAR AND A GRATEFUL PEOPLE are resources any commonwealth may well feel proud of. No more favorable year to advertise your locality could be wished for, nor better opportunity offered. Let it not pass unheeded; show the character of the products your County brings forth.

PROGRESSION, NOT PROCRASTINATION, can make every county in this State celebrated. The study of the management of these annual gatherings is to provide not only a source of information, but of amusement as well, to the end that those who look forward to a holiday of recreation may not be disappointed.

THE EXCITING SPEED CONTESTS,

Wherein the choicest of our numerous breeding farms take part, are not excelled in any State.

GRAND MUSICAL CONCERTS

And other kindred amusements will be provided for the entertainment of the sight-seeing public.

The Board of Directors will give the same special attention to details that has contributed to success in the past. It but remains for the exhibitors to achieve increased results from the exhibition of the present season.

PREMIUM LISTS are now ready and may be had on application to the Secretary, who will also furnish applicants with any other information respecting the business of the Fair.

CHRISTOPHER GREEN, President.

Space should be applied for as early as possible; do not put it off until the best locations are selected.

Remember, THE SOUTHERN PACIFIC COMPANY

TRANSPORTS EXHIBITS FREE OF CHARGE

To and from the Fair, and gives EXCURSION RATES TO ALL THAT ATTEND.

EDWIN F. SMITH, Secretary.

Injurious Insects of the Orchard, Vineyard Field, Garden, Conservatory, etc.,

—WITH—

Remedies for their Extermination.

By MATTHEW COOKE.

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price \$4, postpaid. For sale by Dewey & Co., publishers, 220 Market St., San Francisco.

Althouse Windmill.

Althouse Vaneless Windmill.

Its chief points of merit are: Its ability to take care of itself in the severest gale, being so arranged that no increase of wind increases its speed. The material used in its construction and the quality of workmanship being the best, the simplicity of its machinery making it almost impossible to get out of order, therefore, when once erected no further expense is attached to it.

We also manufacture all kinds of Cistern, Well and Force PUMPS,

Adapted for every kind of requirement for both hand and power use. Railroad Pumps, Steamboat Pumps, Mine Pumps, Windmill Pumps, Rotary Pumps, Fire Engines, Hydraulic Rams, Press, Garden Tools and Pump Materials. WIRE and SPRAY PUMPS a Specialty.

Send for No. 16 Catalogue. Mailed Free on Application.

WOODIN & LITTLE, 509 and 511 Market St., S. F.

WICKSON'S ORCHARD AND VINEYARD SINGLETREE

Fruit and Vine Growers,

Here is Something that Interests Every One of You.

Those who have purchased say they would not be without them at any price.

PATENTED JULY 8, 1881.

FRUIT PRESERVATION.

Dried-Fruit Industry.

NUMBER I.

(Written for the Rural Press by J. R. F.)

Probably no farm industry appeals more directly to the producer than that of fruit, particularly that of stone fruits and, outside of specialists, no industry receives so little attention from the large majority of farmers. A few trees bearing choice fruit on the farm, well cared for, give an abundance of green fruit in their season, besides admitting of the drying and also of the preserving of all that are required for late fall, winter and spring use. The drying of the fruit, like that of canning or preserving, requires care in preparing the fruit and careful attention while being dried. In their selection the overripe, fully ripe and barely ripe should be kept separate, dried separately and packed separately for future use. Over-ripe fruits when dried have a darker color, and, as a rule, are reported to be poor keepers. Fruits barely ripe when dried are said by experienced dealers to be the best, as they have a better color, being lively and bright, besides not so apt to become either wormy or moldy. Over-ripe are more subject to the former, while fruits too green are said to be more apt to become moldy in certain climates. These remarks necessarily apply to sun-dried fruits, for evaporated fruits have not been tested a sufficient number of years in all their various phases to allow of the giving of an unqualified opinion, although it is only reasonable to conclude that which will give the best results in sun-dried fruits will also give the best results with evaporated fruits.

As this article is more applicable to farmers who grow fruits as an auxiliary rather than as a specialty, I will confine myself more to sun-dried fruit. In doing this there are suggestions that can be safely if not profitably followed by those who make a business of evaporating fruits for market.

One of the most essential requisites is to see that the fruit trees are kept properly pruned and in healthy condition; for without this, like all else in nature, the product will be more or less diseased, or, if not diseased, not so healthy and fit for use as the fruits plucked from well-preserved and thoroughly healthy trees. The fruit should, as before stated, be well selected, making from three to four grades, if necessary, according to their ripeness. Besides this the fruit should be of a uniform size as possible, for in packing this has as much to do with their keeping quality and generally favorable appearance as does their condition when picked for drying. Why this so appeals at once to every one's reason, and does not admit of remarks. In peeling and slicing, the fruit should be handled carefully, for bruises tell on their keeping quality, besides showing itself in the color when dried.

The writer's experience in drying fruits demonstrated that the safest and far the best plan was to have raised platforms, say about three or four feet high, made of rough boards from half an inch to one inch in thickness, laid parallel to a width of four or five feet. Over this platform, place or stretch white sheeting (after the season the cloth can be washed and otherwise used). The coarser material will answer, on which to spread the fruit when ready for drying. The white cloth is used for two purposes: first, to insure clean fruits, and second, to assist in drying. It is a well-established fact that white reflects or reflects the rays of the sun, while black absorbs them; therefore, white cloth aids very materially in drying the fruits more evenly and also more quickly. No set rules can be laid down for how often the fruits have to be turned, or how long a time is required for thorough curing, for on these two points much depends upon the state of the weather—the humidity and dryness of the air. Fruits properly dried in the sun, when attractively packed, command in all distributive centers good prices, owing to their retaining a flavor that appeals to the appetite. I have seen in the mining districts well cured and selected dried fruits taken for cooking purposes in preference to the green or fresh fruit sent to market. As for that, I have seen at mountain hotels, in days long gone by, cooks make from soda crackers and tartaric acid a better flavored apple pie than was made from the fresh fruit itself. For all I now know, this way of making fresh apple pies may yet be in vogue where the latter cost too much money.

There is much complaint against California sun-dried fruits' keeping quality. Many who have shipped it to distant foreign ports in the Pacific ocean claim that they become unduly wormy. While not prepared to gainsay the charge, yet they should admit that poor dried fruits do not become wormy any more than poor cheese becomes full of skippers. It is the better grades that are subject to worms. Whether an entire prevention can be had against the fruits being infected with worms in certain climates remains a question, yet it seems possible, and probably no better plan can be adopted than was done in the early days by Chileans, who dried and packed peaches for this market. The first shipments of dried peaches sent from Chili to this city were packed in bulk without any protection outside of the wooden boxes, but they did not keep well, for they either became moldy or wormy. This led them to pack

the fruit in small cakes in coarse cloth wrappers. It is the writer's impression that the cloth was oiled or so prepared as to exclude, to a very great extent, the air, by which the fruit would not be subject to the changes in climate or become wormy. These fruits fetched high prices throughout the State, owing to their superior flavor and admirable keeping qualities. They were only driven out of this market by cheap native fruits, both fresh and dried. While it is impossible, owing to cost, for driers to prepare their fruits for market as did the Chileans, yet the same principle can be adopted in a modified form. Worms no doubt are bred from the eggs or larvae of some kind of fly; then before packing the fruit in boxes, prepared paper or cloth to exclude, as far as possible, the air, should be laid at the bottom and sides of the boxes, and after packing, over the fruit should be carefully laid the same kind of paper or cloth before nailing on the top of the box. It is by excluding the air that the fruit is made impervious to climatic changes and breeding of worms. The writer has had no experience in this direction, neither has he been able to meet with any one that has, therefore the above suggestion is based on the results attained in earlier days by Chileans in preparing dried peaches for this market. At any rate, it is deserving of experiment and may be the means of overcoming a serious objection raised by some against the keeping qualities of our dried fruits.

The curing of fruits by evaporation has become an important industry and is destined to attain a still higher standing as perfection (through competition) is reached. The first successful evaporator, or as then called fruit-drier, was perfected by a man named Plummer, living in Oregon. At first it was laughed at, but actual tests of the fruits dried made him friends among dealers and consumers; but the high prices asked for the dried product restricted the sales. Within a year or two after introducing his evaporators in Oregon, he came to this State and engaged in their manufacture. Others also brought out machines for drying fruits, which contested the field with the original. Many improvements have been made by the various manufacturers until the dried fruits turned out are about as attractive in appearance, when properly selected and cared for in drying, as can be desired by the most fastidious connoisseur. Besides this, the cost of drying has been materially reduced. It is the latter, no doubt, that is bringing the fruits into so great favor and enlarging the distribution centers in this country, and also causing them to get a footing in several of the foreign markets in the Pacific, all of which will be more fully set forth in a succeeding article on this subject.

Besides the lessened cost of drying playing an important part in the consumptive demand and enlarged distribution of dried fruits, that of low freight tariffs of two or three years ago cut no small figure. The overland railroad competition reduced freights to the Central and Eastern distribution centers to such rates as to admit of the cleaning up of our market all carry-overs, good, bad and indifferent, from former seasons. The cleaning up of all kinds of stocks put the industry on better footing for the future. This has been attested in its growth and the remarkable favor with which the product has met wherever properly introduced.

The Truth About California.

EDITORS PRESS:—I read with much satisfaction your report of Mr. Cook's essay on "Unprincipled Packing." I have always admired in the Rural the entire absence of that misrepresentation which seems to exist to an unusual extent in lauding California climate and crops; and I wish you would use your influence positively to put down that pernicious method wherein, after the analogy of Mr. Cook's fruit packer, the general California box is nicely topped with glorious climate, the best lands, exceptional crops, and exceptional prices, while the high winds, fleas, bad years, and fruit rotting for want of a market, make the lower layers to be discovered only after purchase. Our county pamphlets are particularly full of this sort of misrepresentation.

Apart from the morality of it, such work is not good business; and it hurts in immigration as much as in fruit selling.

I wish you would take up the matter and urge common sense and common truthfulness. California's really great merits are so much clouded by the distrust which exists among the Eastern readers of such literature.

San Buenaventura. ALFRED GUILLOU.

All California Fruit-Growers

No doubt wish to send to old friends in the Eastern States or foreign countries attractive pictures and stories of our fruit-growing scenery. In the new work, *California Views in Natural Colors*, one can now send postpaid for but the price of a single ordinary photograph a book containing over 80 views taken expressly to illustrate this subject, with more interesting information about the State than could be written in 100 letters. Ask news dealers, or send 50 cents for one copy or \$5 for a dozen, with list of addresses, to California View Publishing Co., 12 Montgomery street, San Francisco. Agents wanted all over the United States. Send two-cent stamp for elegant circular in colors. Mention this paper.

\$500,000

TO LOAN IN ANY AMOUNTS AT THE VERY LOWEST rate of interest on approved security in Farming Lands. A. SCHULLER, 106 Leidesdorff street, San Francisco.

Highly Commended.

W. M. King, a journalist of experience, and recently Chief of the Seed Division in the Dep't of Agriculture, writes from Washington: "The Pacific Rural Press is a paper which no California agriculturist can afford to do without, and is acknowledged authority on this side of the mountains as to horticulture and other agricultural and Grange matters on the Pacific Coast."

Ready-Made Houses.

We have been requested to give the address of a firm in this city, or elsewhere in the State, that sells cottages in sections. Our correspondent thinks that such buildings were made some years ago in the redwoods and that there was an agency here for their sale.

We do not know of any concern that is furnishing them, but would be glad of information on the subject. We think it would be well if more attention were paid to the manufacture of portable houses.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

THE AFRICAN NEWS.—We have received a copy of a very interesting publication entitled the *African News*, containing information from and about Africa. Bishop Wm. Taylor, resident in Africa, is editor and proprietor, and the journal is published at Vineland, New Jersey. The subject-matter of the publication is fresh and acceptable to those who rejoice in light breaking upon the dark places of the earth.

The Mysterious Vine Disease.

Expert Ethelbert Dowlen, of the Viticultural Commission, who has for some time past been in Los Angeles county investigating and experimenting with the vine disease, has forwarded to Executive Officer C. A. Wetmore samples of diseased vines, consisting of leaves, wood growth, etc., taken from the vines at different periods while under treatment. The following letter will fully explain his success in the experimental treatment:

SAN GABRIEL, June 12, 1889.

Chas. A. Wetmore, Esq., President Viticultural Commission.—DEAR SIR:—I have this day, at Mr. Shorb's suggestion, forwarded you, by express, some samples of diseased vines, labeled A, B, C, showing the effects produced by the powder recommended in Report No. 29 (published in the Rural Press April 27th).

a. A badly diseased branch with new growth just starting from the bases of the leaf stalks, and from the tip of the branch.

b. Shows considerable new growth from above the label, and also from the bases of the leaf stalks.

c. Shows new growth from the bases of the leaf stalks.

The specimens are taken from Sultana vines. The last application of powder was made about two weeks since, and it is to be noticed that the disease has made no progress since the application, the new growth starting out instead. Some Burger and Mataro vines which were affected have shown similar results.

The vineyard from which these specimens were taken contains about 500 acres. It has been dressed three times this year; first, just before the starting of the vines, second, just after starting, and third, about two weeks ago, when only the vines showing disease, very few in number, were treated. The whole vineyard now looks remarkably healthy. I am, yours faithfully, ETHELBERT DOWLEN.

The powder alluded to is the Ongerth Insecticide Powder No. 2.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

Baling Hay.

In order to test the difference in Bale Rope, about which there is much discussion, we to-day used one coil Eastern made rope, 50 lbs, which baled 67 bales hay, weighing 84 tons, taking about 7 lbs rope per ton, and one coil of TUBBS CORDAGE CO.'S make, 57 lbs, which baled 88 bales, weighing 114 tons, taking 5 lbs per ton. These facts prove that it takes about 40 per cent more of Eastern rope to bale a ton of hay than it does of the Tubbs Rope. We used six strands to a bale and not a strand of the Tubbs Rope broke.

J. R. WRIGHT, Owner. MARTIN WOLLESON, Baler. Calistoga, June 6, 1889.

I this day baled my hay with TUBBS CORDAGE CO.'S Bale Rope, five strands to the bale, and it took less than four pounds rope to bale a ton. Not a strand broke. Calistoga, June 6, 1889. J. O. BUTTERFIELD.

Fryer's Remedies are guaranteed to give satisfaction or money returned. They consist of:

Dewey & Co.'s Scientific Press
Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

ORANGE CULTURE IN CALIFORNIA.

Now that the interest in the culture of the orange is extending so as to embrace nearly all parts of the State, a book giving the results of experience in parts of the State where the growth of the fruit has been longest pursued will be found of wide usefulness.

"Orange Culture in California" was written by Thos. A. Garey of Los Angeles, after many years of practical experience and observation in the growth of the fruit. It is a well-printed hand-book of 196 pages, and treats of nursery practice, planting of orange orchards, cultivation and irrigation, pruning, estimates of cost of plantations, best varieties, etc.

The book is sent post-paid at the reduced price of 75 cents per copy, in cloth binding. Address Dewey & Co., Publishers "Pacific Rural Press," 220 Market St., S. F.

From Vaca Valley Orchards.

EDITORS PRESS:—The weather is hot and dust plenty. The people of Vacaville have made arrangements to have the roads near Vacaville, say within one mile, sprinkled. They have a tank built, which will hold about 1200 gallons, and will start a four-horse team Monday morning, sprinkling. They have two pumps, and will have two wells as soon as they find where they are wanted. The water will be pumped by horse-power, and they calculate to fill the tank in ten minutes.

A water company has been formed in Vacaville to erect water works to cost about \$8000.

A new fruit company has started in Vaca, a branch of the Golden Gate Co. They claim

for cutting. Mr. Dickson has a young railroad about 200 feet long, from his cutting-shed to

The Sulphur-House.

Which is in the drying-yard. He has two cars, 16 feet long by 6 feet wide, which hold 300 trays of fruit. The trays are taken from the cutter and placed on the car. When the car is loaded, four men run it into the sulphur-house; the sulphur is put into a hole in the ground, and chunks of iron (such as old axes), which are kept hot in a stove near by, are thrown on the sulphur. The smoke will fill the house in a few seconds, burning much quicker than if lighted with a match.

Parties here have been smoking their vineyards to drive off the hoppers. They fill old

wet, and sold at nine cents. To another party he says fruit sold, but gives no accounts to show at what price or to whom. The company threaten to bring suit for the money, but will probably do no more than try to scare somebody. They will have a chance, as the parties have consulted a lawyer, and his advice was to tell the agent to go to blazes. Much indignation is felt among the people here at the attempted swindle, which is not regarded as quite so honorable as horse-stealing.

Vacaville, June 23, 1889.

Capital and Labor.

The following, from the Philadelphia Record

be added \$4,182.39. Total, \$104,345.68. 1. year's distribution, \$100,439.68. Total distribution for the year, \$104,345.68.

"This plan was intended to enlist more fully the heart and soul of our people in the business of the house, to lead to greater zeal in economy of time, faithfulness of effort, diligence, patience and educated clerking, unity of purpose and general interest in the extension of our business.

"I proposed to do two things by this plan:

"First. To give actual proof of manifest interest to our people.

"Second. To solidify the people into one mighty and perfect force to increase this business for the benefit of themselves and their employers.

PASHA—THE PROPERTY OF S. N. STRAUBE, POPLAR GROVE BREEDING FARM, FRESNO, CAL. -See Page 613.

they will ship cheaper and give their consignors more advantages than any other company. Hope they will, as we need all the advantages we can get. The past week there was

Shipped from Vaca

To S. F. from 8 to 10 cars daily of fruit and vegetables. The Vacaville Fruit Association sent East six cars, besides from one to three tons daily by express to different points. The Vacaville Fruit Co. moved their headquarters from Winters to Vacaville last week, and have sent off two cars.

There is to be a grand celebration here on the 4th of July.

Nearly everybody who has apricots is drying or will commence this week. There are a large number of families camped out in the orchards here, and scores of men, looking for work, who will not get it. Men come here from the East, and say that Vacaville is cracked up all over the Eastern States as the boss place to get work, but when they get here they are disappointed and take it out in cursing the country and the newspapers. Fruit will dry away about one-sixth more than last year on account of there being so much water in it.

John Dickson of Lagoon valley calculates on having 90 tons of dried 'cots. He has about 30 cutters at work and is paying 25 cents per 100

sacks with stable manure, mixing sulphur with it, and putting a row on the windward side of the vineyard, fire them. A sack so fixed will burn 12 hours, and certainly

Drives the Hoppers Away;

But whether they will stay away remains to be seen.

A man was here last week for the Lusk Company, trying to buy apricots to can. He offered two cents per pound, but wanted the 'cots to go 12 to the pound, which few will do. He said he had bought one small crop, which is all the fruit I have heard of being sold to canners from this valley.

Misplaced Confidence.

Last summer an agent of a Chicago firm induced parties to send dried fruit to his house to sell on commission, offering to advance 12 cents on 'cots and five cents on peaches. He got several crops on these terms, saying he could sell at 18 cents, and agreeing when the fruit was sold to forward the balance, after taking out his commission and the freight. Now he comes on and says the fruit did not sell for as much as he advanced on it, and he wants several hundred dollars from each party. One party he bought of was offered 13 cents here for his 'cots, and the fruit was pronounced by good judges to be A No. 1. The agent reports that the fruit was

of May 18th, contains a lesson for both employers and employees. There ought to be an end to strikes when the laborer feels that he properly receives a direct benefit from the success of the business he is engaged in:

John Wanamaker, shaking off the cares of the P. O. Department for a short time, last night conducted the distribution to his employees of the dividends which they have earned during the past year under his plan of profit-sharing. The amount was \$104,345.68, and the distribution of this handsome sum was made in the large carpet-room, on the second floor. Nearly all the employees of the big store were present, and Mr. Wanamaker made a little speech to them, in which he said:

"It is a great pleasure for me to be here to-night. Nothing alters my interest in this business, which for a lifetime has had a good deal of the best red blood of my heart.

"I come here especially to stand by my partners in making good the words I spoke to you a year ago, proposing a distribution of part of the profits to such of you as have been in our employ for seven years and upward.

"The sum paid out in monthly payments to salespeople, over and above regular salaries, was \$58,263.29. With what has been already paid and what shall be paid to-night there will

"I regret to admit that I do not see much that has been gained by the experiment we have made, except the satisfaction of making the effort and the pleasure there is in the giving you a share in our returns.

"There is a great deal of foolish talk about the relations of capital and labor. You keep your savings and they become capital. You are entitled to all that such capital produces, so long as you pay current and proper wages to those who work for you. When you have done that, no man has any right to ask or expect you to let him have a part of your profits any more than he has to live for nothing in a part of your house.

"We do not intend to do any walking backward, but we want to go forward with all the intelligence we can command, and already the road we have started on leads toward a closer relationship between employer and employed."

At the conclusion of the speech, the names of those entitled to dividends were called off by Mr. Ogden, and Mr. Wanamaker handed each one in turn an envelope containing a check.

The business being properly conducted, employees well treated, and a reasonable division made, the above must prove a good example to be followed by all employers.

Second dam (the dam of Henderson, 2:27) by Brignoli, a son of Mambrino Chief, the sire of King Wilkes, 2:22, and Lady Turpin, 2:23. Third dam by Cripple, a son of Medo (thoroughbred). Fourth dam by American Eclipse; he by Duroc.

Strathmore by Rysdyke's Hambletonian, the sire of Dexter, 2:17, and of the dam of Trickett, 2:24, and Tamboul, 2:42; Almont by Alexander's Abdallah, sire by Goldsmith Maid, 2:14.

First dam by Mambrino Chief, sire of Lady Thorn, 2:18, and sire of the dam of Director, 2:17. Second dam by Pilot Jr., sire of the dams of Maud S, 2:03, and Jay Eye See, 2:10.

TERMS, \$25 for the season.

CHARLES DERBY 4907.

2-year-old trial, 2:36.

Sired by Steinway (1808), record 2:25, the sire of Strathway, 3-year-old, record, 6th heat, 2:26.

First dam Katie G (the dam of H. R. Covey, 3-year-old trial, 2:27), by Electioneer, the sire of Mansineta, 2:16, and of Sunol, 2-year-old record, 2:18, and of eight others with records of 2:20 and better. Second dam Fanny Malone, record, 2:36, trial, 2:23, by Niagara (sire of Cobb, 2:31, double team record, 2:26), and of Lady Hoag, trial, 2:18. Said to be by Mambrino Chief, the sire of Lady Thorne, and of the dam of Director, 2:17. Third dam Fanny Wickham, record 2:43, by Imp. Herald (thoroughbred). Fourth dam by Imp. Trustee (thoroughbred).

CHARLES DERBY will be limited to 10 approved mares. Terms, \$100 for the season.

CLEVELAND BAY.

BARON HILTON.

No. 584 E. C. B. Stud Book.

Vol. 1, American C. B. S. B.

Winner of Sweepstakes at Golden Gate Fair, 1888, and Sweepstakes open to all breeds and ages at California State Fair, 1888.

Sired by Luck's All (189). First dam by Sportsman (291).

Second dam by Luck's All (188). Third dam by Cardinal (47).

Fourth dam by Emulator (103). Baron Hilton is a grand, rich bay with black legs, a noble crest and carriage; is perfect in style and action and has proved himself a great breeder.

TERMS, \$25 for the season.

ROYAL STUDLEY.

No. 68, Vol. 1, A. C. B. S. B.

Foaled 1883.

Winner first premium Illinois State Fair, 1885; first at Contra Costa Fair, 1886; first at Sonoma County Fair, and first at the Sonoma, Marin and Napa, and Solano District Fairs, and second at Golden Gate Fair in "all work" cases, 1887, and first at Golden Gate and first at California State Fair, 1888.

Sired by Young Candidate, winner first premium at Gt. Yorkshire, beating 20 others.

First dam Whalebone (355), first premium Gt. Yorkshire. Second dam by Luck's All (188).

Third dam by Summercock (302). Royal Studley is a very handsome, bright bay, 163 hands high, weight 1600 pounds, with superior style and action.

TERMS—\$25 for the season.

NAPOLEON 754, E. C. B. S. B.

Foaled 1885. Imported 1887.

Sired by Luck's All 189; he by Luck's All 188, by Cardinal 47; he by Emulator 103.

First dam Daisy by Luck's All 188. Second dam by Providence 249; he by Master George 203, by King George 160; he by King George IV 163.

Napoleon is a fine, rich bay with black legs and very superior action. He is very deep in the girth and has wonderful style. He took the premium at London, England, and also Silver Medal where he was shown against horses of all ages. He also took first premium at Middleton in Teesdale, and second premium at Bowes, England, in 1885; first premium at Illinois State Fair and first at Fat Stock Show at Chicago, 1887.

TERMS, \$25 for the season.

The Standard Bred and Cleveland Bay Stallions

Will serve Mares the present season, commencing Feb. 1st and ending Sept. 1, 1889, at Cook Farm, Danville, Contra Costa County. All bills payable before the animal is removed. Mares not proving in foal will have the privilege of return the following season, providing the same parties who bred the Mares still own them, and the Stallions are still owned by the Cook Stock Farm.

PASTURAGE, \$4 per month; Hay and Grain, \$10. Best care taken, but no liability assumed for accidents or escapes.

Mares sent to Fashion Stables, Oakland, Benne's Stables, Martinez, or to Geary & Grindie's Stables, Hayward, will be forwarded to Farm Free of Charge.

Address:

SHEEP MEN, ATTENTION!

ADMINISTRATOR'S SALE

By order of Probate Court, in the matter of the Estate of JAMES ROBERTS, Deceased.

I will sell at private sale to the highest bidder, for cash, on or after May 1, 1889, at the Ranch in Irvington, or at my office in Oakland, 946 Broadway, Alameda Co., Cal., the entire flock of Thoroughbred French Merino Sheep, consisting of 280 (Two hundred and eighty) Ewes, 79 (seventy-nine) Bucks, and 180 (one hundred and eighty) Lambs. These Sheep are the get of the original flock imported by Robert Blacow of Centerville. Mr. Roberts, as foreman, having charge of the flock for several years prior to Mr. Blacow's death, after which he became the owner of the entire flock, which he has kept purely for stock purposes.

All interested in Thoroughbred Sheep should be familiar with this flock, which has become famous under the care and management of Mr. Roberts; always receiving first premiums, having been sold to Europe, South America and all parts of the United States; individual numbers having repeatedly sold for from \$500 (five hundred) to \$1500 (fifteen hundred) each. Sheep Men should seize this opportunity to secure some, as they must be sold to settle up the Estate. Address, JAMES SPANLEY, Administrator Estate J. Roberts, Deceased, Mission San Jose, or 946 Broadway, Room 17, Oak and Cal.

S. H. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, June 26, 1888.

Trading the past week in farm products was active in all branches except cereals. The latter kept dull, owing to conflicting reports set afloat chiefly by a strong bear clique. The European and English wheat markets have been steadily moving up, while ours is kept down. The following is to-day's cablegram:

LIVERPOOL, June 26.—Wheat—Fair inquiry. California spot lots, 6s 8d to 6s 11d; off coast, 34s; just shipped, 34s 3d; nearly due, 34s 3d; cargoes off coast, nothing offering; on passage, firmer and held higher. Mark Lane wheat, turn dealer; English country markets, generally dearer; French, firmer; wheat and flour in Paris, firm; weather in England, brilliant.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	June.	July.	Aug.	Sept.	Oct.	Nov.
Thursday.....	6s 10d	6s 10d	6s 10d	6s 10d	6s 10d	6s 10d
Friday.....	6s 10d	6s 10d	6s 10d	6s 10d	6s 10d	6s 10d
Saturday.....	6s 10d	6s 10d	6s 10d	6s 10d	6s 10d	6s 10d
Monday.....	6s 10d	6s 10d	6s 10d	6s 10d	6s 10d	6s 10d
Tuesday.....	6s 10d	6s 10d	6s 10d	6s 10d	6s 10d	6s 10d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	33s 9d	33s 9d	33s 9d	Quiet.
Friday.....	33s 9d	33s 9d	33s 9d	Firmer.
Saturday.....	34s 0d	33s 9d	34s 0d	Strong.
Monday.....	34s 0d	33s 9d	34s 0d	Advancing.
Tuesday.....	34s 0d	34s 0d	34s 0d	Improving.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

Day.	June.	July.	Aug.	Sept.	Oct.
Thursday.....	82 1/2	82 1/2	82 1/2	82 1/2	82 1/2
Friday.....	82 1/2	82 1/2	82 1/2	82 1/2	82 1/2
Saturday.....	82 1/2	82 1/2	82 1/2	82 1/2	82 1/2
Monday.....	82 1/2	82 1/2	82 1/2	82 1/2	82 1/2
Tuesday.....	82 1/2	82 1/2	82 1/2	82 1/2	82 1/2

The closing prices for wheat have been as follows, at Chicago for the past week:

Day.	June.	July.	Aug.	Sept.
Thursday.....	77 1/2	77 1/2	77 1/2	77 1/2
Friday.....	77 1/2	77 1/2	77 1/2	77 1/2
Saturday.....	77 1/2	77 1/2	77 1/2	77 1/2
Monday.....	77 1/2	77 1/2	77 1/2	77 1/2
Tuesday.....	77 1/2	77 1/2	77 1/2	77 1/2

NEW YORK, June 26.—Wheat—86 1/2¢@87¢ for cash, 85 1/2¢ for July, 85 1/2¢ for August, 85 1/2¢ for September and 89¢ for December.

Foreign Grain Review.

LONDON, June 24.—The *Mark Lane Express*, in its review of the British grain trade for the past week, says: Weather favors the wheat crop except in the heavier soils, which will need dry weather during July. The foreign wheat trade is improving. Foreign barley is 3d dearer. Oats are firm. In off-coast trade Danubian wheat touched 28s and Californian 33s, although they closed firmer on the week 1s dearer. American and Californian tended in sellers' favor.

California Fruits East.

CHICAGO, June 21.—Auction sales of California fruits to-day are: One carload of peaches, apricots and plums. Peaches sold at \$1.10 to \$1.75; plums at \$1.08 to \$1.25; apricots at 65¢ to \$1.10.

CHICAGO, June 22.—The agents of the California Fruit Union sold to-day one carload of fruit. Plums, \$1.95@1.55; apricots, \$1.35@75¢; peaches, \$1.35@1.45.

CHICAGO, June 24.—The agents of the California Fruit Union sold four carloads of fruit to-day as follows: Peaches, \$1.10@1.45; apricots, 65¢@1.30; peach plums, \$1.60@2.75; Royal Hative, do, \$1.30@1.85; pears, \$3.70; pines, \$2.70.

CHICAGO, June 26.—Porter Bros. Co. sold to-day through the Adams & Lewis Auction Co. three carloads of apricots, peaches, plums and pears. Apricots sold at \$1.10 to \$1.50, with the exception of a few lots in bad order, which sold at 60¢ to \$1. Peaches sold at \$1.60 to 95¢, plums at \$2.45 to \$1. Bartlett pears at \$3.85 to \$4.40. Good stock in demand.

Eastern Wheat Markets.

NEW YORK, June 23.—Breadstuffs are higher than last week and the demand is fairly active, based on sales and demand from the other side of the water. Heated reports of bugs in Indiana and Illinois wheat are strength to the demand for Western wheat. The truth is, the bears have been trading for best and early this on the prospect of the biggest, or has proved the best ever made. The wet weather was a report on "chance" of the latter already. There of flour for the Argentine the sale of 50,000 barrels failure of the crop. public, owing to the

Eastern Wool Markets.

BOSTON, June 21.—The wool outlook for the week has been the best since the first of the year. Prices have picked up and all offerings were quickly taken. This was caused by manufacturers who have been holding off to the last for the lowest possible figure, and who became convinced that the bottom is reached, and they are now buying.

NEW YORK, June 22.—Country rates are noticeably reflected upon all Eastern wool markets. A fair manufacturing demand exists. Sellers obtain full rates, and some buyers insist that they are paying more than recent figures.

Another telegram says wool is stiffening. Buyers have to add a fraction to their bids every time they come into the markets to duplicate their purchases. Stocks here are daily becoming further reduced, with little in the way of new wool starting forward as yet, and none at a price that will give a margin in this city until the line of valuation is still further advanced. Accounts from all sources of supply are still more brilliant this week, and the trader suggests that at

the rate growers are marking up costs it looks as though they did not care to sell. The movement this week was fair and at full rates. The absence of desirable assortments was a retarding influence.

Miscellaneous.

NEW YORK, June 22.—A good movement is reported for attractive prunes.

Raisins are active for the warm weather. Accredited information from Malaga speaks of the ravages of the phylloxera, and says the pack is not likely to exceed 600,000 boxes. Valencia, which competes with home Crowns, exports rather more than an average crop.

A growing interest extends to the Pacific industry which promises to produce olive oil in shipping quantities. A pure article would soon work into a successful position. Consumers are tired of the many adulterated specimens, and Italian importations fail to fill the full wants of the genuine.

Hides are steady at 15¢ for California; Central America, dry, 16¢; other best, 10¢@14¢; common are strong.

Lima beans close at \$3.60; nearly out.

Hops continue to be rated good property, and the brewing business derives more or less encouragement from the sentiment expressed against prohibition by the Pennsylvania and Rhode Island elections. Prices for all useful grades are firm, while the 23c grade of State and 21c Pacific seem shaping for more money. Exports for the week, 855 bales.

—After August.

BAGS—A large importation of Calcuttas came to hand the past week, but their importation had been discounted. The market is reported steady at 7 1/2¢@8¢, with jobbing parcels quoted higher.

BARLEY—The second schooner-load of new-crop came to hand to-day (Wednesday), but up to this writing had not been placed on the market. The sample market shows continued strength. The heavy rains in the Central States, it is claimed, will injure crops there and cause a market for our gut-edged. In futures trading has been fairly active. The following are to-day's Call Board sales:

Morning Session: Seller 1889, new—100 tons, 72 1/2¢; 100, 73¢. Buyer season—100 tons, 88¢ cwt. Afternoon Session: Buyer 1889—600 tons, 81¢; 200, 81 1/2¢; 400, 81 1/2¢; 100, 81 1/2¢. Seller 1889—new—100 tons, 73 1/2¢. Buyer season—100 tons, 88 1/2¢; 100, 88 1/2¢ cwt.

BUTTER—Gilt-edged butter creeps up, but fair to good creeps down, while choice keeps fairly strong. Receipts continue free, with shipments from Central States coming in semi-occasionally.

CHEESE—The market is still gathering strength under light receipts and a fair demand.

EGGS—Extra fresh laid are wanted; choice selected are strong. Fair to poor are hard to sell. Receipts are light and demand good.

FLOUR—The market is reported to be unchanged.

WHEAT—The English and Eastern markets have advanced the past week from 3 to 50 per cent, while ours has been kept down, with freights no higher. Evidently either the wheat or ship ring, perhaps both, intend getting all the cheap wheat they can before they are compelled to advance prices. Crop returns indicate that the yield of this State will be all of 1,500,000 tons, and may go to about 1,700,000 or even 1,800,000 tons. The crop of the United States is now estimated by some authorities to be less than that of 1888. In futures, trading has been fairly active at advancing prices. The following are today's Call Board sales:

Morning Session: Buyer 1889—600 tons, \$1.36 1/2; 800, \$1.36 1/2; 500, \$1.36 1/2. Buyer 1889, after August 1st—800 tons, \$1.36 1/2. Seller 1889, new—100 tons, \$1.28; 100, \$1.27 1/2. December—100 tons, \$1.33 1/2 cwt. Afternoon Session: Buyer 1889—800 tons, \$1.38; 200, \$1.37 1/2; 100, \$1.37 1/2; 600, \$1.37 1/2; 100, \$1.37 1/2. Buyer 1889, after August 1st—200 tons, \$1.37; 100, \$1.37 1/2. Seller 1889, new—200 tons, \$1.28 1/2. Buyer season—100 tons, \$1.42 1/2; 200, \$1.42 1/2; 400, \$1.43; 500, \$1.43 1/2 cwt.

Cereals.

H. Kains Jackson writes to the *London Farmer*, June 8, as follows: Forecasts of very hot weather for June may, if fulfilled, rush on the crops even to make a July harvest, and undoubtedly as cutting of wheat is reported from the earliest States of America, as well as from Spain and Italy, we may consider prospects are already under the influence of harvest weather. What such weather may be cannot certainly be foretold, but what it has been in the last

ten days we are getting to know, as reports arrive. Most English counties have had brightness and heat since last week, enough to carry off the rank moisture generated by the previous heavy rainfall. Matters are therefore improved upon preceding good prospects. From France the reports are irregular, and in some departments serious damage has been caused by storms and floods. Nor is the account from Central Europe or from Southeast Russia favorable to crop prospects, and late in May the Canadian wheat-fields were visited by sharp frosts. The latter, however, may not have done serious harm, since in England even June frosts have been suffered, and the wheat crop has proved good. California and Oregon rejoice in excellent crop prospects up to the time of cutting. But, notwithstanding the general expectation of good crops, a little feeling of market-mistrust has been noticeable in the past week, that is, mistrust in carrying depressed prices further. Value is low enough to be reckoned safe, even with all the world's harvest a full one. Of late years the world has been denuded of grain stocks, and it may be that the time has come for each country to replenish their stores. Price invites reasonable storage, and it may be said that if England and France alone put by stocks to only the extent of very recent years, their demand would absorb all the wheat surplus that the next harvest can supply. Rumor of war, disaster from weather threatened by this abnormal season, might easily start speculation when wheat is at 30s. to 34s., maize 18s. 6d. to 21s. per qr. Meanwhile only small retail business passes at the exchanges, and millers sell flour very lowly.

Wheat crop returns are coming in more freely, but in such a contradictory manner as to make it hard, as yet, to form a correct estimate of the output. While the returns are seemingly contradictory, still they are undoubtedly correct. This contradictory character lies in the fact that while some fields in the same locality return from 8 to 12 bushels to the acre, there are others, again, in the same section that give from 15 and over bushels to the acre. These are the returns from localities or sections giving the lightest yield, for there are many sections that give from 15 as the lowest to above 25 as the highest. As near as can be figured at present, the crop of the State will average between 15 and 18 bushels to the acre, provided no devastating hot winds set in. The quality of the berry will be above an average, although there will be a great deal of pinched and some smutty from several of the counties.

The local wheat market has ruled extremely dull and inactive the past week, with export buyers doing all they can to force values to a lower level, and that, too, in the face of a higher and more active market abroad. It is claimed that tonnage is against them, that is, ships hold for too much money. The writer of this some time ago gave correct crop returns which were of sufficient importance to induce ships coming, but this information was neutralized by two rings, ship and wheat, giving out indifferent crop reports and couched in such language as to deter many vessels from coming here the forepart of the season. Our advices from foreign shipping ports indicate that the tonnage to come here will be largely increased for at least two months to come. This is made the more certain with foreign wheat markets advancing. Sales the past week were made for immediate delivery as high as \$1.31 1/2 for choice shipping, and as low as \$1.28 1/2 for fair to good. For July delivery, \$1.27 1/2@1.30 is paid, according to grade of wheat and time of delivery. Buyers are expecting that after next week, heavier deliveries will be made by farmers.

Barley has shown a steady but strong tone throughout the week. The returns from harvesters indicate a large output to the acre, with the general grade good. The consumption in the agricultural districts is estimated by conservative parties to be fully ten per cent more than last year. The increase is based on more teams employed for the larger cereal crops, hay crops, and more fruit trees and vines coming into bearing. Besides this, all cities and towns have more freighting, which will call into service more teams for its hauling. Choice to gilt-edged barley is largely inquired for for shipping.

Oats are without essential change. The buying for Australasia gave some tone to the market, but with free offerings and harvesting under way in this State, cause a weaker feeling with buyers offish. Oregon and Puget Sound advices report the crop outlook to be a full average.

Rye and buckwheat are unchanged. Corn is fairly steady. The demand is of an offish character. The outlook for the crop in this State is said to be from fair to good. The yield to the acre will probably not equal last year's.

"Northwest," under date at Chicago, June 18th, writes as follows: "The winter wheat harvest has been progressing for the last ten days in Tennessee and Kentucky, but has been greatly interfered with by heavy and continuous rains. Nearly 50 per cent of the winter wheat in Tennessee is in shock, and the remaining 50 per cent is dead ripe. Considerable harvesting has been done in Southern Kansas and Missouri, but rains in these States have also interfered. Rains in Illinois and Indiana have been excessive, so that corn cannot be worked, and the fields are getting weedy and grassy. As the season advances the rainfall seems to increase, which keeps the crops very backward, and we have lost all we gained from early planting. The oat crop, where it has grown rank is beginning to lodge, which is not favorable for a heavy crop of well-filled grain. The situation in the spring wheat States of Minnesota and Dakota is, in many areas, very discouraging. The drought has been very severe, and in many counties the wheat promises to be even poorer than it was last season. We yet have time, with good weather, safely to gather winter wheat, which is now nearly ready for the sickle; spring wheat is in a more doubtful condition, owing to the short time it has to make a crop; corn is growing, but greatly needing cultivation and dry weather."

Fruit.

Watermelons, canteloupes, nectarines and Bartlett pears are in the market. The market for all kinds of fruit has held fairly steady with only slight changes in quotations noted from to day. The cool weather is against a free consumption. Cherries are going out. Oregon is sending us a few consignments. Currants are doing better, under the same receipts. Apples are still meet with a good demand at full figures. Strawberries and raspberries are generally easy. Plums

are coming in fairly well. Apricots are stronger owing to the low prices offered by canners, inducing orchardists to dry, rather than to sell green.

In dried fruits of last year's curing, there is nothing new to report. The demand is almost nil, as are the stocks. New crop apricots have put in an appearance. They fetched 10 to 10 1/2¢, with quality only fair.

It now looks as if there will be a larger drying this year than there was in 1888.

Raisins are unchanged. The feeling is very hopeful for the new crop, particularly for the better established brands.

Feedstuff.

The consumption of all kinds of feedstuff is steadily growing, causing a gradual strengthening for bran, middlings and ground barley. The price for the first was marked up the past week. Ground barley shows an advancing tendency, although dealers do not look for much of an upward movement for the present.

Hay is in heavy receipt, with considerable selling pressure. The consumptive demand is increasing, while the shipping movement by sea gains in volume.

Live-Stock.

The market is without any special features to note in bullocks and mutton sheep. The consumption is still light, but the offerings do not appear to be so excessive. Hogs have a stronger tone, in sympathy with cured meats, which are higher under a good consumptive call. In milch cows, there is nothing new to report. Horses are without change. There is a good inquiry for roadsters, single drivers, single footers, general utility horses and also matched teams.

Vegetables.

Garden truck continues to move off quite freely. Green peas, string beans and asparagus are stiff under light receipts. Cucumbers, tomatoes, green corn, okra and squash are weak, with lower prices for the first three. Green corn is coming in in poor condition. Tomatoes have receded to such figures as to bring in canners. Choice well-conditioned, good-keeping vegetables are given the preference by buyers.

Onions are coming in fairly free, with their general quality and condition greatly improved, which naturally causes more trading.

Potatoes are strengthening. This is due to their improved and better keeping qualities. The demand is chiefly for home consumption, although some shipping is still noted. Cabbages and root vegetables are without essential change to note.

Live-Stock.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, grain fed, 5 1/2¢@6 1/2¢ lb.; dressed, 8¢@9¢ lb.; soft, 5¢@5 1/2¢ lb.; dressed, 8¢@9¢ lb. Stock hogs, 5¢@6¢ lb.

BEEF—Stall fed, 6¢@6 1/2¢ lb.; grass fed, extra 5 1/2¢@6¢ lb.; first quality, 5 1/2¢@5 3/4¢ lb.; second quality 4 1/2¢@5¢ lb.; third quality, 3 1/2¢@4 1/2¢ lb.; bulls and thin cows, 2¢@3¢ lb.

VEAL—Small, 7¢@9¢ lb.; large, 5 1/2¢@7 1/2¢ lb. MUTTON—Wethers, 5 1/2¢@6¢ lb.; ewes, 5¢@5 1/2¢ lb.; lamb, spring, 7 1/2¢@8 1/2¢ lb.

Miscellaneous.

Poultry has a steadier, firmer tone, under lighter receipts. The demand is only fair.

Beans, owing to unfavorable crop prospects at the East, are doing better. The movement appears to be of a speculative character.

Seeds are without any special features to report. Hops are very strong, in sympathy with the Eastern markets. English mail advices report the vine attacked by flies, Continental crop advices are only fair. Eastern crop advices and also on this coast are uniformly good.

The wool market is very strong for the more desirable clips. Buyers, when suited in grade, cleanliness, life and strength, do not haggle over a slight advance. Eastern telegrams report a continued improvement, with light-weight woolen goods doing better. This improvement in goods encourages wool holders.

The export movements by sea the past week were as follows: Wool via C. P. R. to Boston, 134,689 lbs; to Hartford, 45,386; to New York via Panama, 406,933. Wine to New York via Panama, 276,988 gals.; brandy, 15,300 gals.

The demand for immediate loading is light, but for forward loading there is a fairly good inquiry. The nominal spot price for iron ships may be quoted at \$1.13 9d for orders, with \$1.15 obtainable for iron carriers not over 2000 tons register, for any loading up to the end of December. Small iron vessels, August-September canceling, are quoted firm at \$1.16 3d for orders.

From the *Commercial News* of June 26 the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port.....	248,234	304,619
On the way to neighboring ports.....	29,226	115,650
In port, disengaged.....	11,455	47,103
In port, engaged for wheat.....	46,511	13,834

Totals.....335,426 481,206

To get the carrying capacity, add 60 per cent to the registered tons as given above.

From July 1st to June 26, the following are the exports from this port:

	1889.	1888.
Wheat, cts.....	12,731,000	8,473,050
Flour, bbls.....	819,544	776,398
Barley, cts.....	1,298,153	694,325

MUTUAL LIVE-STOCK INSURANCE.—The formation of two companies for the insurance of live-stock is reported. The Pacific Coast Mutual Live Stock Association has incorporated on the mutual plan, without capital stock, "to reimburse each member for any loss sustained through the death or disability of their live-stock, but not for profit

PRIME PEACH APRICOTS.

Last week's Farmer spoke of R. C. Kells exhibiting at the Farmers' Union, in Yuba City, a specimen lot of apricots rarely excelled in size and quality. Eight of them weighed 26 ounces, and five 18 ounces, according to the scales at the corner store.

As the variety was not stated, we dropped Mr. Kells a note asking him to name it, and he replies that they are Peach Apricots, grown on five-year-old trees without irrigation, and that he has been offered three cents a pound for them for canning. Not content with replying verbally, he also sends us by express a sample of the fruit itself, handsome and delicious. We thank him for the twofold answer.

THE STATE BOARD OF TRADE has just received from Los Angeles county a very fine exhibit of specimen fruit-packages—boxes, crates and baskets—fruit green, canned and dried, and miscellaneous products.

PACIFIC COAST WEATHER FOR THE WEEK.

(Furnished for publication in this paper by NELSON GOROM, Sergeant Signal Service Corps, U. S. A.)

DATE: June 19-25.

Portland, Eureka, Red Bluff, Sacramento, S. Francisco, Fresno, Keeler, Los Angeles, San Diego.

WEDNESDAY, June 26, 1889.

EXPLANATION.—Cl. for clear; Cy., cloudy; Fr., fair; Fy., foggy; Cm., calm; — indicates no wind to measure. Temperature, wind and wave on at 10 A. M. Pressure at 10 A. M. with amount of rainfall in the preceding 24 hours. T indicates trace of rainfall. Observations taken at 5 P. M. unless otherwise noted.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING JUNE 11, 1889.

405,215.—COIN ACTUATED RECEPTACLE—E. J. Jones, S. F.

404,988.—STRETCHER BAR—Erich Schmidt, Marysville, Cal.

404,973.—GATE—Hyde & Dotterer, Davisville, Cal.

405,132.—PISTON FOR STEAM ENGINES—W. J. Thomas, Sausalito, Cal.

405,193.—CART SPRING—L. E. Walberg, Hollister, Cal.

404,983.—SHIP'S WINDLASS INDICATOR—David H. Rivers, * * *

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

California Products at Chicago.

CHICAGO, June 26.—California green fruits are in good request and rather steady for all stock in good order. Cherries were small and common and had to be sold low. Cherries, 10-lb boxes, small, poor, 65¢@85¢; peaches, 20-lb cases, \$1.25@1.50; apricots, 20-lb cases, \$1.00@1.25; plums, peach, 20-lb cases, \$2.00@2.50; do, Royal Hatve, \$2.00@2.50; do, large black, \$3.00@3.25; Bartlett pears, 7-lb box, \$3.00@3.50. Oranges are steady with only a small stock on hand. Fancy mountain fruit, \$3.25@4.50 7-lb box; Los Angeles Duarte, smutty, \$3.00@3.50. California dried fruits are quiet, for there is nothing of consequence left in stock excepting a few apricots, and they are moderate sale at late prices. Values, which are little better than nominal, range as follows: Apricots—Evaporated, bleached, bxs, 9¢@11¢ 7-lb; do, sun-dried, according to quality, 6¢@8¢; do, in sacks, 6¢@8¢. Peaches—Bleached, unpeeled, boxes, 9¢@10¢ 7-lb; do, 8¢@9¢ 7-lb; do, sun-dried, unpeeled, 5¢@5 1/2¢; do, peeled, bxs, choice, 11¢@13¢; just fair, 9¢@10¢; 9¢@12¢. Nectarines—White, evaporated, bleached, bxs, 7¢@8¢ 7-lb; do, sun-dried, 6¢@7¢; do, red, evaporated, bleached, bxs, 6¢; do, sun-dried, 4¢@5¢. Plums—New, pitted, sacks, 5¢@6 1/2¢ 7-lb. Prunes, according to size, in sacks and dry, 7¢@10¢ 7-lb; damp, 3¢@4¢; Silver, 10¢@12 1/2¢; Hungarian, 8¢@9¢. Raisins—Loose Muscatels, new, 7¢ box, \$1.40@1.60; do, London layers, new, \$1.65@2.25. Beans—Conditions previously reported continue to prevail. Small offerings, light arrivals and uncertainty of the crop tend to give holders confidence in the market. A firmer feeling prevails with a fair demand from the trade. Lima beans, California, 5¢@6¢ 7-lb. Hops are firm and in good demand with offerings meager and few coming. Besides this, holders of hops in first hands are very firm in their views. Choice Washington Territory and Oregon, 24¢@26¢ 7-lb.; Pacific Coast, prime to choice, 20¢@23¢.

FROM A FAMOUS TREE.—On Tuesday Mr. N. W. Winton of Oakland, who is greatly interested in Butte county orchards, handed us two oranges which were picked last week from the historic tree at Bidwell's Bar—the parent of the Oroville seedlings. The samples are of medium size, shaped much like a Mediterranean Sweet with stem and blossom ends exchanged, have rather a fine skin and (judging by the one we have cut) few seeds and a good flavor. Mr. Winton says the old tree has 3000 oranges on it this year. They begin to ripen in December and will keep on till the new crop matures.

FIRST AGRICULTURAL DISTRICT.—The directors of the 1st District Agricultural Association met in this city June 25th and elected officers as follows: Pres., R. T. Carroll; V. P., Rob't McKilloan; Treas., Union National Bank of Oakland; Sec., Joseph I. Dimond, 109 Front St. The annual fair will be held at the Oakland Trotting park in August.

A SOCIALIST settlement up in the Tulare foothills is known as the Kaweah colony. It comprises 10,000 acres, among which is a portion of the giant forest.

Huntington Hopkins Co.

REMOVAL TO THEIR NEW BUILDING.

For several days past the Pacific Rural Press windows have overlooked an interesting and busy scene in the removal of the immense hardware stock of the Huntington Hopkins Company, from their former place of business at the junction of Market, Bush and Front streets, to their handsome and commodious new building on Fremont street, between Market and Mission, Nos. 18 to 24 inclusive. The new building has a frontage of 93 feet on Fremont street, and in height is five stories and basement, extending back 137 1/2 feet, where it joins the rear of an older four-story brick structure, also owned by the company, and having a frontage of 137 1/2 feet on First street by a depth of 137 1/2 feet. The two buildings are connected by a paved court, roofed with glass and iron, and make a total depth of 275 feet. This arrangement permits of a double driveway through the entire premises, thereby enabling heavy trucks entering from either street to load and unload and pass through without turning.

The new Fremont-street building presents an imposing front and reflects much credit upon the taste of the architect. It is very substantially constructed of granite, brick, iron and steel.

The interior of the building has been fitted with a special view to the requirements of an immense business, nothing having been omitted that would contribute to this end. Five hydraulic ram elevators and two hand elevators are in constant service, raising and lowering goods between the basement and the floors above.

Well-lighted and commodious offices are situated at the rear of the main salesroom, which is on the ground floor of the Fremont-street front. In this great salesroom, while containing many self goods may be seen conveniently arranged samples of nearly every line of hardware, etc., that the house carries. These consist of a great variety of agricultural implements, miners', blacksmiths' and carpenters' tools, and extensive line of builders' hardware, the best grades of cutlery and sporting goods of all kinds. In heavier goods there is constantly on hand a large stock of bar, bundle, sheet and plate iron and steel, wrought and cast-iron pipe, plumbers', blacksmiths', milling, mining and railroad supplies. The company gives employment to 90 men—salesmen, accountants, correspondents, porters, etc., in the San Francisco house alone. A history of this great business enterprise, from its establishment by C. P. Huntington in Sacramento forty years ago to the present time, would fairly illustrate the commercial progress of the Pacific Coast, as embodied in its own energy and successful achievements.

For many years the original house at Sacramento, as well as the business in San Francisco, has been conducted under the firm name of Huntington, Hopkins & Co., but on February 23, 1888, it was incorporated under the name of the Huntington, Hopkins Company, the officers of the corporation being Albert Gallatin, president, Charles Miller, vice-president, W. R. S. Foye, secretary, and Collis P. Huntington, treasurer.

Notwithstanding the immense business transactions of the company, which extend over the entire Pacific Slope from the Isthmus of Panama to Alaska, a visitor to the establishment will not fail to be impressed by the perfect order with which the details are conducted and the absolute discipline and system which prevail. An unsurpassed record of 40 years for integrity and straightforward business methods has earned for this house an enviable reputation, which does credit to the city and State alike.

A NEW PAPER BINDER.—A. T. Dewey's patent elastic binder, for periodicals, music and other printed sheets, is the handiest, and very cheapest of all economical and practical file binders. Newspapers are quickly placed in it (as received) and held neatly, as in a cloth-bound book. It is durable, and so simple a child can use it. Price (size of this paper, Harper's Weekly, and Scientific American), 75 cents; postage 10 cents. Postpaid to purchasers of this paper, 50 cents. For sale at this office. Send for illustrated circular. Agents wanted.

FRUIT GROWERS' PROCEEDINGS.—The proceedings of the Convention of California Fruit Growers, held at Chico last November, will be ready for distribution in the course of a week.

JUDGE FOX.—The Governor has appointed Chas. N. Fox of Oakland, Associate Justice of the Supreme Court, vice Jackson Temple, resigned.

Inducements to Subscribers.

To favor subscribers to this paper, and to insure new patrons to the next publication, we will furnish, to those who pay fully one year in advance of date, if requested the following articles (while this notice continues), at the very greatly reduced figures named at the right:

1.—The Agricultural Dictionary of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price \$1)..... \$0.25

2.—Beautiful Book of Recipes, containing and illustrating; 85 pages (a handsome and pleasing present)..... 25

3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gold..... 50

4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 134 pages, illustrated..... 25

5.—Kendall's Treatise on the Horse and Diseases, 89 pages, instructive illustrations..... 05

6.—To New Subscribers, 12 select back Nos. of the RURAL PRESS, "good as new"..... Free

7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per cent off regular rates.

8.—Pacific Coast and Eastern Dailies and Periodicals, except special publications, at an unusually low price, 10 to 15 per cent off advertised retail rates.

10.—March of Empire, by Mallie Stafford..... 25

11.—Life Among the Apaches, 322 pages, still cloth..... 25

12.—\$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application..... 25

14.—Dewey's Pat. Newspaper Fileholder (18 to 36 in.)..... 25

15.—European Vines Described, 63 pages..... 05

19.—Webster's Dictionary, 634 pages, with 1500 illustrations; very handy and reliable..... 50

Improving Fences (Good)..... 1.50

Olive Culture (Morris)..... 1.50

Olive Culture (Tanner)..... 1.50

Grasses and Forage Plants..... 2.00

VETERINARIAN.—Prof. H. W. Rike, veterinary surgeon and graduate of Ontario Veterinary College, Toronto, Canada, and also of McPherson's School of Veterinary Dentistry and member of the Ontario Veterinary Medical Society, has located at San Jose. He cannot well be recommended in his profession, and no doubt will be welcomed by the people of this section who have large interests in raising fine cattle and horses.

BOUND VOLUMES.—Back files of this paper bound in substantial cloth binding with leather back, containing six months' numbers each, indexed, can be had at this office at \$4 per volume.

Concerning Moths.

Regarding moths, says the *Upholstery Trade Review*, many are not aware that the damage done is when the millers commence to fly, as their very presence indicates the absence of the worm. It is to prevent the miller incubating that precautions should be taken. A large proportion of the millers never hatch eggs, but die without causing any harm. The male miller, which does not fly, but runs very rapidly, is quite easily detected by his triangular shaped figure, but, keeping himself out of sight, he is not so easily found. His hiding explains the devious flights of the female in her search. The killing of one male is equal to the extinction of many ordinary millers. The male miller is commonly known by the name of "silver fish."

Carpets are seldom troubled with moth worms except where hatched in a dark, unprotected space, and where it is moderately warm. It is for this reason, no doubt, that carpet houses are seldom, if ever, troubled by them, the stocks in the larger houses being disposed of between seasons. Nearly all the trouble from moths emanates from the furniture, the burlap inside the outer covering being their best field for work, where they can be free from annoyance and find plenty to eat. Many furniture dealers realize their danger, and cleanse the burlap used with naphtha.

It is when the worms are either tired of their food or it lacks the nourishment that they desire, that they seek an outlet and drop upon the carpet.

Cleansing carpets by the naphtha process is regarded as the surest and most satisfactory, where there is the slightest suspicion of moth eggs or worms. It is especially adapted to pile carpets. Caution should be exercised as to the purity and clearness of the naphtha used and the thorough extraction of the grease, else the dirt adheres more easily than before. Where carpets are to remain in storage some time, the odor can be left in the carpet. A more thorough cleansing can be assured by having the carpet beaten first. A surface application of naphtha will drive the impurities through the article to be absorbed by that which is under it.

How to Kill Gophers and Rats—A Los Angeles county farmer, says the *Chino Champion*, has discovered that the little beasts of gophers love celery, and that putting poison on this vegetable and placing it in their way is a sure method of killing them. Asa Kimble of Chino says the poison should be put on what they are eating at the time; that is, if they are eating potatoes, put it on them; if trees, put it on the place eaten, and so on with any root, tree or vine they are destroying. An irresistible bait for rats is alluded to by the Washington correspondent of the *Cincinnati Commercial Gazette* as follows: An interesting, not to say valuable, discovery has been made by Capt. Weedon, in charge of the animals at the Zoo. The building is infested by rats, and how to get rid of them has long been a perplexing question. Traps were used, but nothing would tempt the rodents to enter. In a storeroom drawer was placed a quantity of sunflower seeds, used as a food for some of the birds. Into this drawer the rats gnawed their way, a fact which led the captain to experiment with them for bait in the traps. The result was that the rats can't be kept out. A trap which appears crowded with 6 or 8 rats is found some mornings to hold 15.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3.00 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Successful Patent Solicitors.

As Dewey & Co. have been in the patent soliciting business on this Coast now for so many years, the firm's name is a well known one. Another reason for its popularity is that a great proportion of the Pacific Coast patents issued by the Government have been procured through their agency. They are, therefore, well and thoroughly posted on the needs of the progressive industrial classes of this Coast. They are the best posted firm on what has been done in all branches of industry, and are able to judge of what is new and patentable. In this they have a great advantage, which is of practical dollar and cent value to their clients. That this is understood and appreciated, is evidenced by the number of patents issued through their *Scientific Press Patent Agency* (S. P.) from week to week and year to year.

Housewives. Attention!

MERY'S IMPROVED PIONEER BARLEY CRUSHER

Using the Benoit Corrugated Rollers.

STILL AT THE FRONT.

This Mill has been in use on this Coast for 8 years, TAKEN THE PREMIUM AT THE STATE FAIR

Four years in succession, and has met with general favor, there now being

Over 250 of them in use in California, Nevada & Oregon.

It is the most economical and durable Feed-Mill in use. I am sole manufacturer of the Corrugated Roller Mill. The Mills are all ready to mount on wagons.

CHICO, CAL., Feb. 1, 1887.

Mr. M. L. Mery, Esq.—DEAR SIR: The No. 14 Barley Crusher bought of you and used in the California Mills, gave entire satisfaction; have crushed 8000 pounds an hour. I have also crushed as much or more on a No. 10 machine when working for General Bidwell, which set me in using in his mill to-day. Yours truly,

GEORGE SHAND.

I thank the public for their kind patronage received thus far, and hope for a continuance of the same.

M. L. MERY, Chico Iron Works, Chico, Cal.

Having used one of the Barley Crushers manufactured by M. L. Mery, of Chico, Butte county, I can say it will do all that is claimed for it, and to those wishing an A No. 1 machine, I would recommend it as the very best. I have crushed 35 tons in 11 hours' work.

J. D. GOLDEN.
